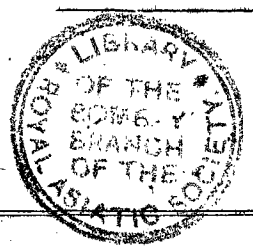
EAST INDIA (FINANCE).

RETURN to an Address of the Honourable The House of Commons, dated 29 July 1874;—*for*,

108158

'COPY of a PAPER entitled 'OBSERVATIONS on some Questions of INDIAN FINANCE, by Sir *John Strachey*, K.C.S.I.'

India Office,
21 July 1874.



HENRY WATERFIELD,
Secretary,
Statistics and Commerce Department.

OBSERVATIONS on some Questions of INDIAN FINANCE, by Sir *John Strachey*, K.C.S.I.

THE subjects to which I propose more particularly to refer in the following Paper are connected with the system inaugurated by Lord Mayo in December 1870, under which fixed annual grants were assigned to the Local Governments in India to meet the charges for certain provincial services, and with the measures of taxation for local purposes which have been adopted during the last few years. I think that no clear account of what has been actually done in regard to these questions has been laid before the Committee of the House of Commons which has been lately sitting. I claim no special consideration for any opinions which I may offer, but having been a Member of the Government of India during the whole period of Lord Mayo's administration, I may fairly say that I have had access to sources of information as to the facts which were available to hardly any of the witnesses who have given evidence on these subjects before that Committee.

I shall conclude with some remarks on the future prospects of Indian finance. It is natural that more than usual anxiety should be felt on this subject at the present time. In addition to the ordinary difficulties experienced in the past of maintaining a proper equilibrium between income and expenditure, the complication of a severe famine has arisen, which will require a large immediate outlay; and, what is financially far more serious, there are indications that future large expenditure will become obligatory on the Government, in order to provide against the effects of calamitous droughts, the recurrence of which, at frequent intervals, experience shows to be certain.

Before speaking of the special matters which I have mentioned, I must state briefly what seem to me to have been the main causes of the financial difficulties of which we have heard so much. To appreciate these causes properly we must look back, and must picture to ourselves what India was, and how it was governed, some 30 or 40 years ago.

It is not too much to say that there was then, comparatively speaking, little in India of what we now think the first necessities of a civilised administration. When I went from Calcutta to my first station in the North-Western Provinces, I was carried about a thousand miles in a box on men's shoulders; there were no other means of travelling through the richest and most advanced and most important parts of India. Speaking broadly, roads and bridges had but begun to appear; there were no canals to save the people from destruction by famine, or those that existed were on a very small scale; there were few barracks in which English soldiers could live with tolerable health and comfort; there were few jails in which a sentence of imprisonment did not carry with it a serious

probability that it would prove a sentence of death. The country at that time was entering on a phase of rapid change. The energies of the Government and its officers, which had at first been unable to do more than secure the bare existence of British power in India, by degrees rendered it paramount. Then they were applied to its consolidation, and to the evolution of an organised system of administration, out of the chaos bequeathed to us by the old rulers of the country. The firm establishment of order was followed by improvements in all directions. At the period of which I speak a vigorous impulse had already been given to material progress. Among the most active causes of change must undoubtedly be ranked the establishment of new and rapid means of communication. These not only stimulated greatly the internal vitality of the administration, but brought England and India closer together, and English influence became stronger and stronger. This was felt in every branch of Indian administration. People set before themselves a new and higher standard, and men who were frequently brought into contact with European habits and civilisation were no longer satisfied with the old style of Indian life and Indian government.

Even before the mutinies of 1857 this process of change had made great progress. After that great revolution, which for a time almost swept away our Government through a large part of India, the change went on with enormously accelerated speed. Thousands of Englishmen, not only soldiers, but Englishmen of almost every class, poured into India. Ten thousand things were demanded which India had not got, but which it was felt must be provided. The country must be covered with railways and telegraphs, and roads and bridges. Canals must be made to preserve the people from starvation. Barracks must be built for a great European army, and every sort of sanitary arrangement which could benefit the troops must be carried out; for we did not choose to let our soldiers go on dying like sheep in the old fashion. In fact the whole paraphernalia of a great civilised administration, according to the modern notions of what that means, had to be provided.

This was not only true in regard to matters of Imperial concern. Demands for improvement, similar to those which fell upon the Central Government, cropped up in every city and in every district of the country. I wish, for example, that the Committee of the House of Commons could have seen what Calcutta was 12 or 15 years ago, and what it is now. This city, the capital of British India, affords an excellant type of what has been going on throughout the country, and furnishes a good illustration of the causes of the financial difficulties of India in modern times.

Twelve or 15 years ago, in Calcutta there was no drainage. The filth of the city rotted away in the midst of the population in horrible pestilential ditches, or was thrown into the river, there to float backwards and forwards with every change of tide. To nine-tenths of the inhabitants clean water was unknown. They drank either the filthy water of the river, polluted with every conceivable abomination, or the still filthier contents of the shallow tanks. The river, which was the main source of supply to thousands of people, was not only the receptacle for ordinary filth; it was the great graveyard of the city. I forget how many thousand corpses were thrown into it every year. I forget how many hundred corpses were thrown into it from the Government hospitals and jails alone, for these practices were by no means confined to the poor and ignorant; they were followed or allowed, as a matter of course, by the officers of the Government and of the municipality. I wish the Committee could have seen the sights which were to be seen in Calcutta in those days, in the hospitals, and jails, and markets, and slaughter-houses, and public streets. The place was declared by myself, in official reports which I sent to the Government, when Sanitary Commissioner in the year 1864, of which, the language, although strong, was not, and could not be, stronger than the truth required, to be hardly fit for civilised men to live in.

I do not mean to say that Indian cities generally were so bad as Calcutta. This was very far from being the case, but Calcutta affords, not the less, a good illustration of what has been and still is, to a great extent, going on in India. I might easily multiply illustrations of the same sort. Only about a year ago, for instance, the Chief Commissioner of British Burmah reported that in the great city of Rangoon, containing more than 100,000 people, with half a million tons of shipping, there was not a single public lamp, no supply of wholesome water,

water, not a single drain except the surface drains at the sides of the streets, and no proper means of removing the night-soil and filth out of the town.

When I say that, to a great extent, the requirements of civilised life and of modern administration have had to be provided for India, for the first time, within the space of a few years, I do not speak only of material objects, of roads, and railways, and canals, and barracks, and city improvements, and so forth. The demand for improved administration has been so strong that it is not too much to say that the whole of the public services have been reorganised. Thus, for example, the police, which was in a shameful condition throughout India, has been placed on a completely new footing. The changes in the judicial service, and in the laws which it administers, have hardly been less great. Lord Lawrence, when he was Viceroy, declared that the inadequacy of the pay given to the native judges, and other subordinate officers employed in posts of importance in the courts, was a public scandal. Among more than four thousand of these officers in the Bengal Presidency, the highest paid of all, and of these there were very few, received 180 *l.* a year. The great majority received from 12*l.* to 24*l.* a year, sums less than those earned in many parts of India by common bricklayers and carpenters. No even tolerably honest administration of justice was, under such conditions, possible.

Causes of this kind, demands for every sort of public improvement, moral and material, brought with them constantly increasing demands for the expenditure of money. It is easy to say that the demands ought to have been resisted, but resistance was practically almost impossible, and, if possible, it would often have been little less than criminal. For example, the Royal Commission appointed to inquire into the sanitary state of the army in India declared that thousands of the lives of our soldiers had been and were still being sacrificed in consequence of bad and insufficient barrack accommodation and neglect of essential sanitary precautions. I do not myself believe that the rate of avoidable mortality among the troops had been nearly so great as the Commission supposed, but there can be no sort of question that, after all, their main conclusions were perfectly correct, and that there had been a great and lamentable amount of preventible mortality and disease. Lord Lawrence and the Government of India, as well as the Government at home, felt that whatever might be the cost, and however great might be the aggravation of our financial difficulties, a remedy must be provided in the most complete way possible, and in the shortest possible time. The remedy was provided at, doubtless, an enormous expense, but the results are seen in the extraordinary improvement which has taken place in the health of the army.

So again, about the same time, the Government was told, and in many parts of India it was certainly true, that, in consequence, of the insufficiency of jail accommodation, the prisoners were dying at a rate which was frightful to think of, and that the necessary proceedings of our courts of justice thus involved consequences utterly repugnant to humanity. Some people may think that soldiers and prisoners ought to have been allowed a little longer to go on dying, and that more gradual remedies would have been better. They may think so, but I, for my part, honour Lord Lawrence and the Secretary of State for having thought and acted otherwise. So also, when Lord Lawrence saw a scandalous condition of things which, as he and everybody else was satisfied, made the honest administration of justice an impossibility, and when he resolved that such an iniquity should not continue a day longer than he could help, I, for my part, decline to blame him, although there may have been really no sufficient funds available to meet the increased expenditure that was involved.

The demands for improved administration, which were made in behalf of every branch of the public service, and which were so real and so urgent that they were often practically irresistible, have been, I am satisfied, at the root of all our financial difficulties. It is easy to blame the Government for having attempted too much, and I quite admit that it might have been better, in regard to many of the reforms which have been carried out, if a longer time had been devoted to them, and the work of improvement had been more gradual. But the fault has been one on the right side. I believe that a greater or more admirable work was never undertaken in any country than that which has been

undertaken, and, in a great degree, accomplished by Englishmen in India during the last fifteen years, and which is still going on.

That mistakes should have been made in dealing, with most inadequate means, with a country as large and as populous as civilised Europe, was inevitable, and I have no doubt that a good deal of money has been needlessly or wastefully expended. If the object be to pick holes in the proceedings of the Government, it is as easy to do it as it would be in the actions of most people. Nevertheless, the work that has been done has been, on the whole, excellently done, and with this further merit, that there has been little talk about it. And when I say this, I by no means intend to praise the Government in particular. We have been fortunate in our Viceroys, but still more fortunate in the possession of the most admirable and hardworking body of public servants that I ever heard of.

Besides the demands for every kind of public improvement, such as those to which I have been referring, there have obviously been, during the last fifteen years, other serious causes of increased expenditure. The mutinies of 1857, for example, led to a great increase in the strength of the European army, and to a great and permanent addition to our military expenditure. The same causes led to a large and unavoidable increase in the public debt. Again, the expenditure of the Government was very greatly increased by measures which, it is very easy to see now, were mistaken, but which were adopted deliberately by men most competent to judge, and which were generally approved at the time. There is, for instance, in my opinion, no doubt that we have spent upon our railways in India at least twice as much as we need have spent. They have been constructed on a most uselessly expensive scale, and have been, and still are maintained, under an extravagant and mischievous system—that of the Guaranteed Companies. Nevertheless, it may fairly be said that this was, in the first instance, a mistake for which no one deserves blame. It was forced upon the Government by the irresistible pressure of the English superstition (not the less a superstition because it has a solid basis of truth) in regard to the value of so-called private enterprise; and when the Government had to choose between railways on an imperfect and expensive system, and no railways at all, it was perfectly right to choose the former.

Another cause, which has had a most unfortunate effect upon Indian finances, had a somewhat similar origin. I refer to the opinion, which at one time was so strong, that it was a wise policy to borrow money for every sort of permanent or quasi-permanent improvement that India required, and which could not be at once provided out of her annual income. Even in its present modified form, when we profess to borrow only for reproductive and remunerative works, such as railways and canals, which will repay hereafter not only the interest but the capital expended upon them, this policy of incurring debt is one which requires to be applied with the extremest caution. But, not many years ago, it was held that it was right to borrow immense sums of money not only for directly reproductive works, but for such works as barracks and jails and Bombay municipal improvements. Not only was the public debt largely increased, but a general extravagance of feeling was fostered. I am sure, for example, that there would have been a much stronger check upon the great expenditure on barracks and other military works, if there had not been a common feeling, never, however, shared by Lord Mayo, that they ought to be paid for with borrowed money and not out of the taxation of the year.

Another powerful and obvious cause of financial difficulty has been the great rise in prices, which has gone on far more rapidly than the increase of the revenues, and has added to the expenditure of the Government in almost every department of the public service.

The effect of all these combined causes of increased expenditure was, unfortunately, aggravated by other circumstances. In the time of the East India Company, before the mutinies of 1857, there was no Financial Department that deserved the name. The officers of the Civil Service who, by Act of Parliament, were alone eligible to all the more important public offices, had seldom received any training, or possessed any knowledge which enabled them to deal with matters of finance and of account. The organisation of an efficient Financial Department was thus a matter of great difficulty, and it was a difficulty which even the best Indian officers were hardly likely to appreciate. Their

Their imperfect knowledge of financial matters allowed them and the Government to drift on from year to year without recognising the real gravity of the position to which we were coming.

While I believe that the main causes of the financial difficulties of India have been causes most honourable to the Government and its officers, causes arising from the desire and determination to improve the administration, and to increase the prosperity of the people, I think it is impossible to deny the fact that the finances have been managed in a very imperfect manner. I believe that Lord Mayo was thoroughly justified in the conclusion at which he arrived very soon after his arrival in India as Governor General, that our financial position was unsatisfactory, that, if we continued much longer in the old course, our difficulties would become most serious and dangerous, and that stringent measures were at once necessary to place the finances in a safe condition.

Although there is no danger that the financial work which Lord Mayo did in India will be forgotten, or its value misunderstood, I wish to describe briefly the general state of affairs when Lord Mayo took these things in hand. I shall then be the better able to speak of the remedies which he applied, and of those measures to which, as I stated in the beginning of this paper, I desire now particularly to refer.

"In only two years since the commencement of the present budget system," the Government of India wrote to the Secretary of State on the 20th September 1869, "had there been anything more than a nominal surplus of income over "expenditure." The accumulated deficits, from 1860 to 1868-69, exceeded 10½ millions sterling. The chronic condition of our finances was one of deficit, things seemed to be going from bad to worse. In the three years ending with 1868-69 the total deficit was 6¼ millions. During this same period the public debt was increased by 6¼ millions, and the cash balances were reduced by 3½ millions. Lord Mayo satisfied himself, during the autumn of 1869, and the accuracy of the conclusion was proved by the result, that, if immediate precautions were not taken, the year would certainly close, as previous years had closed, with a deficit of at least 1¾ millions. He took such precautions. Of his measures of taxation I shall not speak in detail. They consisted in a temporary increase to the income tax, and in a small increase to the salt duties in Madras and Bombay. Their permanent financial effect was not very great; the effect of his other measures was far more important.

Lord Mayo made, in the first place, a great reduction of expenditure, and, as the event has proved, a reduction which may fairly be called permanent. I call it permanent, because it was not a mere temporary reduction to meet a temporary difficulty, but the commencement of a process of reduction which, during the last four years, has been constantly going on. The total expenditure in 1868-69 charged against the revenues of the year was 52 millions. It fell in the following year, the first of Lord Mayo's administration, to 50¾ millions, and in 1871-72 it was about 47 millions, rising again to 48½ millions in 1872-73. It is not always easy to compare particular heads either of income or expenditure at different periods, for it often happens that there have been changes of system or of taxation which make such comparisons misleading, but of the main fact there can be no doubt that, since Lord Mayo undertook his financial reforms, there has been a total reduction in expenditure of between three and four millions a year. The largest savings have been in the Public Works Department, the charges for which have fallen from more than 6½ millions to less than four millions. But there has been more or less reduction of expenditure, or, at worst, cessation of increase, under almost every head. Not the least satisfactory reduction is that in the military charges, which, although still far beyond what Lord Mayo confidently believed and repeatedly declared, in accordance with the highest military authorities, to be necessary, are now three quarters of a million less than they were four years ago.

I believe, however, that the most important of all Lord Mayo's financial reforms, and that which will have the greatest results hereafter in preventing the increase both of expenditure and of new taxation, was that by which he made over to the Local Governments the responsibility for the management of certain branches of provincial expenditure, and assigned to them for this purpose certain sources of income. In a Minute on Lord Mayo's administration, written by myself in April 1872, which has not hitherto been published in England, I gave the following

lowing account of the main objects with which this change of policy was carried out:—

"Under the system which Lord Mayo found in force when he became Viceroy, "the Local Governments, which practically carry on the whole administration of "the country, had almost no powers of financial control over the affairs of their "respective provinces, and no financial responsibility. Everything was rigor- "ously centralized in the Supreme Government, which took upon itself in "detail the provision of funds for every branch of the public service throughout "India. The business of supervising in a central office all the details of the "receipts and expenditure of the empire had become so enormous that its "proper performance was impossible. 'I do not think,' wrote Sir Henry Maine "in 1867, 'that anybody can have observed the recent workings of our system "'of financial control without coming to the conclusion that, if it be not on the "'point of an inevitable collapse, it is at all events in great danger of going to "'pieces unless the strain be lightened somewhere. The rules imposed on the "'Local Governments depend for their force, like all laws, on the efficacy of "'the penalty which they threaten in the event of disobedience. The penalty is, "'in the present case, a reproof from the Government of India. But if any "'Local Government has become, which any Local Government might become "'at any day, entirely callous to the rebukes of the Government of India, "'through discovering, which any Local Government may at any time discover, "'that these rebukes lead to no ulterior consequences, what impediment re- "'mains to the employment of one or more among the hundred expedients by "'which the Central Government may be morally compelled to condone in- "'fractions of its rules, and to allow the share of its revenues which it has "'allotted to a particular province to be exceeded?'

"For many years before Lord Mayo became Viceroy, the ordinary financial "condition of India had been one of chronic deficit, and one of the main causes "of this state of affairs was the impossibility of resisting the constantly in- "creasing demands of the Local Governments for the means of providing every "kind of improvement in the administration of their respective provinces. "Their demands were practically unlimited, because there was almost no limit to "their legitimate wants. The Local Governments had no means of knowing "the measure by which their annual demands upon the Government of India "ought to be regulated. They had a purse to draw upon of unlimited, because "unknown, depth. They saw on every side the necessity for improvements, "and their constant and justifiable desire was to obtain for their own provinces "and people as large a share as they could persuade the Government of India "to give them out of the general revenues of the empire. They found by ex- "perience that the less economy they practised, and the more importunate their "demands, the more likely they were to persuade the Government of India of "the urgency of their requirements. In presenting those requirements they "felt that they did what was right, and they left to the Government of "India, which had taken the task upon itself, the responsibility of refusing to "provide the necessary means.

"The Government of India had totally failed to check the constant demands "for increased expenditure. There was only one remedy; to prevent the "demands being made; and this could only be done by imposing on the Local "Governments a real and effectual responsibility for maintaining equilibrium in "their local finances. There could be no standard of economy until apparent "requirements were made absolutely dependent upon known available means. "It was impossible for either the Supreme or Local Governments to say what "portion of the provincial revenues was properly applicable to local wants. "The revenues of the whole of India went into a common fund, and to deter- "mine how much of this fund ought fairly to be given to one province, and how "much to another, was impracticable. 'The distribution of the public income,' "Major General R. Strachey wrote, 'degenerates into something like a scramble, "'in which the most violent has the advantage, with very little attention to "'reason. As local economy leads to no local advantage, the stimulus to "'avoid waste is reduced to a minimum. So, as no local growth of the "'income leads to an increase of the local means of improvement, the interest "'in developing the public revenues is also brought down to the lowest "'level."

"The

" The unsatisfactory condition of the financial relations between the Supreme " and the Local Governments led to still more serious evils. Constant diffe- " rences of opinion about petty details of expenditure, and constant interference " of the Government of India in matters of trivial importance, brought with " them, as a necessary consequence, frequent conflicts with the Local Govern- " ments regarding questions of provincial administration of which they were " the best judges, and of which the Government of India could know little. The " relations between the Supreme and Local Governments were altogether inhar- " monious, and every attempt to make financial control more stringent increased " an antagonism the mischief of which was felt throughout the public service.

" To Lord Mayo belongs the honour of applying the only effectual remedy " for these serious evils. He resolved to give to the Local Governments the " economical standard which they required; to make over to them a certain " income by which they must regulate their local expenditure, and to leave to " them, subject to certain general rules and conditions, the responsibility of " managing their own local affairs.

" From the commencement of the official year 1871–72 the financial control " of the following services was transferred to the Local Governments:—Jails, " Police, Education, Registration, Medical Services, Printing, Roads, and Civil " Buildings. The views of Lord Mayo were stated by himself in the Legislative " Council on the 18th March 1871, as follows:—

" ' Under these eight heads, it is proposed to entrust the administration under " ' a few general conditions to the Provincial Governments, and a fixed contri- " ' bution will be made from Imperial revenue every year. * * It is impossi- " ' ble to prophesy or say at present what can be done in the far future; but I " ' should be misleading the Local Governments if I were not to say that it is " ' our opinion that these sums are now fixed at an amount which cannot be " ' exceeded for at least a number of years. I think it desirable that this " ' should be perfectly understood, because one of our objects is the attainment " ' of as great an amount of financial certainty as is possible. We believe that, " ' in justice to other public claims which are certain hereafter to be made on " ' Imperial revenue, in view of increased charges for the payment of interest " ' and other objects, we cannot without recourse to large additional Imperial " ' taxation increase this sum, as now fixed, to any very considerable amount. " ' We know that, if it is necessary, the sums which have been hitherto " ' allotted for this purpose can be increased by local taxation in a manner " ' much less burdensome and much less offensive to the people than they " ' could be by Imperial taxation. If it is necessary or desirable to spend more " ' money, that money must come from some other source. It is possible that " ' the wants of the Local Governments may increase, and I daresay they will; " ' but if they do, we believe, after the most mature consideration, that these " ' wants can better be supplied within the limits of the provinces themselves, " ' than they can be by adding to the Imperial taxation and to the general " ' burdens of the people. But, in addition to the increased power of adminis- " ' tration which it is proposed to give to the Local Governments, an adminis- " ' trative change will take place which I think they will be able to exercise " ' with advantage. They will have a large sum to devote to local objects; the " ' power of allotment will be left absolutely to them, and they will be able to " ' vary their grants from roads, civil buildings, education, and other heads, " ' from year to year, as they may think most desirable. In some provinces it " ' may be desirable in one year to spend a larger sum on roads, in others it " ' may be desirable to fill up some shortcomings with regard to education or " ' other objects. The Local Governments will thus be able to exercise that " ' power of allotment with much greater satisfaction to themselves and to the " ' public than they did under the old system, when they were obliged to con- " ' sult the Supreme Government, not only as to the allotments that were made " ' in the beginning of the year, but also with regard to any appropriations " ' that were thought desirable within the year, provided that those appropria- " ' tions exceeded a certain amount. * * I have heard it stated that, by the " ' proposals which we make, there may arise a separation of interests between " ' the Supreme and Local Governments. I fail to perceive any strength " ' whatever in this assertion. I believe that, so far from there being a " ' separation of interests, the increased feeling of responsibility and the feeling " ' of

"'of confidence which is reposed in them will unite and bind together the "'Supreme and Local Governments to a greater extent than before. * * "'I believe that we shall see, in place of greater uncertainty, greater certainty; "'we shall see works and objects carried on with more vigour, enthusiasm, "'and with less hesitation, when these works and these objects are effected "'under the immediate responsibility of those who are most interested in them.'

"These were not the only results which Lord Mayo anticipated from the "adoption of this scheme. He believed that it would have a most important "effect in stimulating and developing local and municipal institutions. 'Local "'interest,' he wrote himself in the Resolution of the 14th December 1870, "'supervision, and care are necessary to success in the management of funds "'devoted to education, sanitation, medical charity, and local public works. "'The operation of this Resolution, in its full meaning and integrity, will "'afford opportunities for the development of self-government, for strengthening "'municipal institutions, and for the association of Natives and Europeans to "'a greater extent than heretofore in the administration of affairs. The "'Governor General in Council is aware of the difficulties attending the practical "'adoption of these principles; but they are not insurmountable. Disappoint-"'ments and partial failures may occur; but the object in view being the "'instruction of many people and races in a good system of administration, "'his Excellency in Council is fully convinced that the Local Government and "'all their subordinates will enlist the active assistance, or at all events the "'sympathy, of many classes which have hitherto taken little or no part in the "'work of social and material advancement.'

"The gross sum made over to the Provincial Governments for these services, "and some few others transferred since the scheme was first introduced, amounts, "including receipts given up, to about 5,600,000 *l.*, being nominally 331,000 *l.* "less than the grants that would have been assigned for these services upon "the old system. I say nominally, for it is believed that the sum of *331,000l.* "did not greatly, if at all, exceed the saving effected upon these grants in "ordinary years. The Local Governments generally accepted the arrange-"ments with alacrity, valuing the large increase of power accorded to them "more highly than the small sum curtailed from their grants, and experience, "while it has proved that they were right, has entirely confirmed the Govern-"ment of India in the belief that the measure was wholly beneficial. From "the day on which the Provincial Services scheme was introduced until the "present moment, scarcely a single expression of dissatisfaction affecting the "principle of the scheme has reached the Government of India, while most of "the Local Governments have warmly commended the working of the new "system. The relief to the Government of India from ever-recurring financial "demands, leading to embittering controversies, has been immense, and the "Local Governments have, almost without exception, carried on the services "of the first year of their financial emancipation to their entire satisfaction, "while they have saved large resources for future years. This really great "result has been attained without the least sacrifice of Imperial financial power "and control, which has, on the contrary, gained in efficiency and completeness. "I do not claim for Lord Mayo the merit of devising the scheme. In one "shape or another it had been presented to the Government of India, discussed, "and re-discussed, advocated, and rejected, for some years before Lord Mayo "assumed the Government. But in such matters the merit of accomplishing "the fact is greater than the merit of its invention. I do not hesitate to say "that, but for Lord Mayo's sagacity in discerning the absolute necessity of this "change in our financial system, but for his tact and decision in obviating "doubts and difficulties, and carrying the measure through, it would have been "to this hour unaccomplished. The system will, doubtless, be further im-"proved and developed, but the honour of practically inaugurating it belongs "to Lord Mayo, and it will remain one of the most important monuments of "his administration."

We have now had nearly three years' practical experience of the new system, and are in a position to judge what the actual results have been. It is idle to discuss the subject any longer on purely speculative grounds. The facts are easily available, and nearly all the highest authorities in India have given their opinions in regard to the results which have been obtained.

The

The first questions are, I think, these: What has been the effect of the new system on the relations between the Supreme and Local Governments? Have those relations been really more harmonious and satisfactory? How have the powers of control by the Supreme Government been affected? Has the change really led to economy, and to increased efficiency in the management of the branches of the public service transferred to the Local Governments?

The second, and still more important questions, are: What has been the effect of this change of system on the people of India? Has the result been, as some have asserted, a great increase to the burdens of the people, a sort of juggle, by which we have thrown upon the people, under the name of provincial or local taxation, fresh demands to meet charges which were formerly met out of the Imperial revenue?

The first class of questions, regarding the effect of the new system on the relations between the Imperial and Local Governments, and in regard to economy and efficiency in the administration, is, I think, easy to answer. I confidently assert that, in India at least, no difference of opinion remains on the subject. Objections have been made to certain details of the new arrangements, and imperfections have been pointed out. For my own part, I have no doubt that many of these objections are well founded, and that there are various changes and improvements which it will be essential, sooner or later, to make. But in regard to the general success of the new system, so far as it has gone, there neither has been, nor is, any difference of opinion. I will give a few quotations from the recorded opinions of high authorities to which I happen at the present time to have access.

Sir George Campbell, the Lieutenant Governor of Bengal, writes as follows:—

"It will be well," he says, "first, briefly to review the situation to which we "succeeded. While the Local Governments had very great powers in many "respects, and as regards some of the principal sources of income, especially "the land revenue, exercised practically almost complete discretion, the power "of the purse in respect of expenditure was completely centralised in the Govern- "ment of India, by whom grants to the various Local Governments were made "on detailed estimates of the needs of each department. It was impossible that "the central power could efficiently scrutinise these demands over so vast an "empire, and the result was sometimes that the Local Governments asked as "much as possible, and the Central Government gave as little as possible; and "so grants were adjusted by a series of compromises, under which, however, "the general result seems to have, to some extent, been that those who asked "most, and asked it most boldly and pertinaciously, got most. On this system "many of the civil departments were constantly progressing in their expenditure, "when the Government of the late Earl of Mayo determined to apply a remedy "which had been long talked of but never carried into practical effect, viz., "the assignment of certain funds and resources to the Local Governments for "certain purposes to be by them made the most of. The arrangement adopted "was as follows: No sources of revenue were made over other than the *per* "*contra* receipts of the executive departments transferred. But the previous "net assignments to certain departments, viz., police, jails, education, registra- "tion, medical, printing, and civil public works, were taken; a proportion "(about 7 per cent.) was deducted as a relief to the Imperial finances, and as "representing a share of the burden 'to be charged upon local resources;' the "remainder was made over as a fixed annual income. It was intended that any "deficiency thus caused, and any additional expenditure resulting from progress "and improvement, should be met either by economy or local taxation. It is "fair, however, to mention here, though the view was not taken in the original "resolution, that there had in fact usually been certain savings and unspent "balances in some departments at the end of the year, and that these might "fairly be set off against the deduction from the usual assignments. At the "same time it must, on the other hand, be remembered that the assignments "on which the fixed allowances were calculated were those which had been "made after the financial crisis of 1869, when all expenditure had been cut "down to the lowest point, and were very far short of those which had been "made before the financial crisis. In Bengal, for instance, there had been an "enormous reduction in the sums allowed for civil public works, and a very "large reduction in the assignments for the police."

After explaining his determination, notwithstanding the special difficulties in which he was placed, to propose no fresh taxation to meet provincial expenditure, but "to try the effect of constant economy and thrift, and see if he could "manage to pull through with the resources which we had," Sir George Campbell goes on to say that "this course, determined on with anxiety and hesi- "tation, has succeeded beyond the Lieutenant Governor's most sanguine hopes. "No extensive reductions of establishment have been made in any department, "for in the only department in which some branches have been reduced, addi- "tions have been made to other branches; really reasonable demands have "not, it is hoped, been rejected; real necessities have been provided for; but "a constant watchfulness has been maintained over little things; nothing has "been spent, so far as the Government could help, without necessity, merely "because it was the custom to spend it; excrescences have been retrenched "whenever they came to light. The previous scale of efficiency in regard to "public works has been maintained, but there has been no indulgence in the "æsthetics of brick and mortar except so far as the completion of the already "far advanced High Court rendered this necessary. The result has been that "in most of the civil departments there has been a considerable saving. * * "Before leaving this subject the Lieutenant Governor would ask to be allowed "to submit his humble testimony to the wisdom and the practical efficiency of "the system of provincial finance inaugurated by the Government of the late "Earl of Mayo. It seems to him that for a beginning it went far enough, and "not too far; that it has most successfully supplied a motive to economy and "method which has taken full effect; that it has immensely diminished the "friction between the Supreme and subordinate Governments to which the "finance of the civil departments gave rise; and that it has enabled the Local "Governments to mould and shape the departmental establishments and "expenses with a view to their efficiency and their adaptation to local require- "ments in a way which was impossible under the old system. The experiment "has been, the Lieutenant Governor ventures to say, a complete and unalloyed "success."

In another Despatch, addressed to the Government of India on the 14th December 1872, the Lieutenant Governor of Bengal wrote as follows:—

"The Lieutenant Governor considers it to have been extremely fortunate that "the Government of India, in December 1870, did not attempt to formulate "very closely the rules within which the Local Governments might administer "the provincial departments and the provincial assignment. It is partly owing "to this absence of narrow restrictions, and partly to the consideration shown "by the Supreme Government in all provincial finance matters, that the scheme "of December 1870 has, in Bengal at any rate, proved a very great success. "There has, of course, been much less friction in the administration of the "provincial Governments than before; the Local Government has had very "much less occasion to trouble the Supreme Government with long references "and reports, while the Supreme Government has been much less often put to "the pain of having to negative measures wise and desirable in themselves "merely on the ground of expense. The hands of the Local Government have "been much strengthened; it has been enabled to localise much more than "heretofore the administration of the spending Departments of Public Works "and Education. The Lieutenant Governor fully believes that this localisation "of responsibility and power has been, and will be, productive of much economy "and efficiency. He can say for his part that he now looks more narrowly into "the necessity and usefulness of any proposed measure or expenditure than "might have been the case otherwise. When he has sanctioned expenditure "he has been more particular than ever to see that no money was wasted, and "that not a rupee was spent that could be saved. One chief means of effecting "this last object has been by delegating more power and responsibility in these "matters to local officers and to local bodies. He feels satisfied that small "funds which have to be spent in driblets all over the country will be better "and more economically spent if the responsibility rests with trustworthy local "officers or local bodies. Almost every useful measure or reform must, at "some time or other, become a money question in some shape or form; and "when the Local Government has to obtain the sanction of the Supreme "Government

"Government to every increase or redistribution of charge, it is more or less "debarred from any measures which involve expenditure. It may perhaps be "as well to trace very briefly the way in which the decentralisation system has "affected the measures of the Local Government under each head of service.

"Taking the order in which the services appear, we find that under—

"*Jails.*—The Lieutenant Governor has been able to push forward new jail "buildings, to set in train a plan for completing jail accommodation to an extent "that was not possible in former years. In so doing he has only carried out "the policy which the Supreme Government long ago enjoyed, but which "financial exigencies had heretofore checked. He has also been able to forego "a certain amount of manufacturing profit, so as to ensure the really sharp, "though often unremunerative, punishment of short-termed prisoners. He "has incurred some outlay, and is about to incur much more, in separating "prisoners of different classes from each other. All these measures cost money, "and could hardly have been so rapidly sanctioned and carried out under the "former system. Yet, notwithstanding all these measures, the jail expenditure "is kept considerably below the Budget Estimate of the year 1870-71, or the "last year before the decentralization.

"The *Registration* Department received, under the orders of December 1870, "about 60,000 rupees below its receipts. But notwithstanding this, the Lieutenant "Governor has been able to extend the convenience of registration offices to "fresh tracts of country.

"Under the head of *Police* no considerable saving has been possible, because "it turns out that when, under the pressure of the Government of India, a large "reduction was shortly before effected, a good many items were left unprovided "for, to be met from 'general savings.' The chief police measures of the year "have been unconnected with questions of expenditure. The Lieutenant "Governor's concern for the provincial finances has, however, led him to abstain "from filling a certain number of police assistant superintendentships, the "abolition of which may perhaps be possible. In the higher departments of "general *Education* considerable savings have been effected, which will enable "the Lieutenant Governor to provide for the teaching of science and art, and "perhaps to save something for general education.

In the *Department of Public Works* economy has been practised so success- "fully as to lead to a large saving.

"It was perhaps feared at one time that Local Governments would exercise "their powers of raising and spending money too freely, and that the check "upon expenditure would be less strict than when every proposal involving "money was jealously watched by the Financial Department of the Govern- "ment of India. So far as Bengal is concerned, the experience of the last "18 months warrants the belief that the Local Government will check pro- "vincial expenditure and examine all applications for provincial funds quite as "closely as, and perhaps more successfully than, the Supreme Government "could do. In Bengal, at any rate, the power of raising further provincial "funds by fresh taxation has not been abused, and has not been at all exer- "cised. No proposal of the kind has even been brought forward."

Sir William Muir, Lieutenant Governor of the North Western Provinces, has given not less emphatic testimony to the success of the new system. "It has," he wrote in a Despatch dated the 11th May 1872, "on the whole fulfilled the "expectations which his Honor conceived, and with which he hailed the intro- "duction of the measure. It has strengthened the hands of this Government, "and enabled it to carry out many minor measures of departmental re- "form. It has given it a direct and vivid interest in the attempt to combine "economy with efficiency. The greater facility of moulding establishments and "other expenses to the varying circumstances of the day, by giving in one "direction and taking in another, has certainly tended to promote the power "of administration, and diminish the expense of working it. And it has in "some cases conduced to a saving by the power it conveyed to carry out reforms "at once, without the generally long protracted delays entailed by a reference "to the Supreme Government. During the year 1871-72, almost every one "of the transferred departments has been thoroughly and minutely overhauled

"and examined. The Jail Establishment, the Registration Department, and "some branches of the Educational Department, have been entirely revised "and reorganised upon a more effective and vigorous plan of action. In the "Vaccination, Dispensaries, and Printing Departments considerable reforms "have been carried out. Lastly, the Public Works Department has been "entirely recast, and a new system organised, which is in accordance with "the altered administrative arrangements of the day. There remains, indeed, "much still to be done, doubtful questions to be decided, and reforms to be "carried out, but his Honor cannot regard without real satisfaction the "measure of progress which has been made during the past year."

It would be easy to multiply these quotations to any extent that I desired, but it would really be waste of time to do so, and I could quote no judgments that would carry greater weight than those of Sir William Muir and Sir George Campbell. I repeat that in regard to the practical success of these measures in promoting economy and efficiency, there has been no difference of opinion in India. The Viceroy, the Members of the Government of India, the Governors and Lieutenant Governors, and Chief Commissioners, and, to the best of my belief, all other authorities, not only official but non-official, who have had opportunities of forming an opinion, have virtually been unanimous on the subject. The published proceedings of the Government of India show that Lord Northbrook has, in regard to this matter, adopted the policy of Lord Mayo, and has recognised its wisdom.

As I before observed, however, there are questions relating to the new financial system still more important than those of which I have just been speaking. How has it affected the people of India, and the burden of taxation imposed upon them? If the result has been, as some have asserted, to make a great addition, which might otherwise have been avoided, to those burdens under a new name, I say without hesitation that the result has been mischievous, for I entirely disbelieve that calling a tax provincial or local instead of Imperial makes it one atom less unpopular or less objectionable.

Although the main thing to be looked to is of course actual results, and not previous intention, it is not unimportant to observe that one of the objects with which this system of provincial assignments was originally proposed and adopted was to prevent the necessity of new taxation. I have a right to speak with some authority on the point, because I was a member of the Government when this policy was discussed and adopted, and I think that I may say without impropriety that I was as well acquainted as any man could be with the views of Lord Mayo upon the subject.

In the course of the discussion which led to the measures of 1870, I wrote as follows:—"The very important question remains of the extent to which "the power of imposing new local taxes will follow the transfer of financial "responsibility for local objects to the Local Governments. The proposals that "have now been made adopt the principle of transferring to those Governments an equivalent of revenue and charge together, with the express "object, among other things, of preventing any present necessity for new "local taxes. The last and most difficult step in financial administration is "the proper adjustment of new taxation. The first thing to accomplish is the "introduction of local economical management of existing local resources. "When this has been done, and a habit of financial administration has been "in some degree acquired, the time will come, and not till then, for considering what powers of taxation for local purposes may properly be given to the "Local Governments. It seems in no way necessary or advisable to complicate the present discussion with the consideration of how new local taxes "may safely be imposed, or how far the imposition of any such new taxes is "likely to be required. And this appears to Mr. Strachey to be one of the "most important advantages which the present proposals possess over all "former schemes for transferring to the Local Governments the responsibility "of meeting certain portions of the public charges. Hitherto it has always "been assumed that this responsibility was to be met by the imposition of new "local taxes. Mr. Strachey has always believed that such propositions are "unwise and dangerous. He is satisfied that there is no power which the "Government of India ought so jealously to watch, and so carefully to limit, "as the power of taxation. There is a very common but altogether vague "notion, that Local Governments have the means of discovering sources of

"local

"local taxation suitable to the circumstances of particular provinces, and that "the taxes thus levied for local purposes will be less distasteful to the people "than those taxes which are levied for Imperial purposes. Mr. Strachey is "satisfied that these notions have been derived from European and not from "Indian observation, and that they have little or no foundation in fact. * * "It is a complete delusion to suppose that local taxes, which really fall upon "those for whose advantage they are imposed, are, in this country, paid more "willingly than those taxes which are levied for Imperial purposes. The truth "rather is, that no taxes are, in India, so unwillingly paid as those which are "avowedly levied for the advantage of the taxpayers. People recognise, to a "certain extent, the obligation of contributing to meet Imperial necessities, "the reality of which is not denied, although their nature and extent may be "unknown. To be called upon to contribute for purposes of local improvement "in which, with rare exceptions, no one takes the smallest interest, is felt to "be a more serious hardship."

No man was more alive than Lord Mayo to the danger of imposing fresh taxation. He declared, in words which have been repeatedly quoted, that the increase of taxation which had been going on had caused "a feeling of dis-"content and dissatisfaction among every class," and that the "continuance of "that feeling is a political danger, the magnitude of which can hardly be over-"estimated." Holding these views, it is incredible that Lord Mayo should have adopted a policy which he believed would lead to an increase of taxation. The truth is, that he was satisfied that there could be no proper economy, no efficient check upon a constantly increasing expenditure, and therefore no check upon constant demands for fresh taxation, until the Local Governments, in whose hands the administration of nearly the whole of the practical business of the country rests, were made responsible for regulating their expenditure in accordance with their actual income; and until the Supreme Government was relieved from the moral obligation of providing the funds for almost every important work of improvement that was required. The justice of Lord Mayo's convictions on this subject has been, in my opinion, completely proved by the experience of the last three years. So far from it being true that the result of his measures was to increase the burden of taxation, it is certain that the first and immediate result was to reduce that burden, and that the same process of reduction has been going on since. The causes which have led some persons to a different opinion can I think easily be explained.

The inauguration of the new system happened at an unfortunate time. I have already noticed the main facts regarding the financial position of the Government, and have shown, not only that it was unsatisfactory, but that it threatened to become extremely dangerous. Matters had drifted into such a state that, after all practicable reductions of expenditure, it was only by means of an income tax, levied at an exceptionally high rate, that it seemed possible, under the existing system, to avoid another serious deficit. Lord Mayo hated the income tax; he believed it to be altogether unsuitable to India, and he had a strong desire to get rid of it. This desire, however, did not incline him to commit the folly of abolishing, or even of reducing, the income tax, when he believed that such a course would lead to serious financial difficulty.

The grants to the Local Governments throughout India had already been brought down to such a point that it was declared by almost all of them to be *hardly* possible to carry on the public service with proper efficiency. Towards the close of 1870, however, Lord Mayo was satisfied that, unless those grants were still further diminished, a course which appeared impracticable, his determination to reduce the rate of the income tax to one per cent. could not be carried out. He had to choose between two evils—between, on the one hand, the maintenance of taxation which he believed to be more objectionable than any other that could be named, and, on the other hand, the imposition of new taxation which would, to a certain extent, provide a substitute for income tax surrendered. Of those two evils the former appeared to be the greater, but I know how much Lord Mayo regretted that measures, which he believed to be necessary, could not be effected without the imposition of some fresh burdens to meet local charges in the place of the Imperial taxation which he was at the same time remitting.

The principle that fresh local requirements, such as district roads and bridges, and schools and hospitals, and other works of local utility, must be provided, if at all,

all, from local resources, and that it was altogether impossible to go on providing for such things out of the Imperial revenues, at the cost of the general taxpayer, was one that was obviously true, and one which hardly any reasonable person denied; but it was unfortunate that it became necessary to proclaim an act upon this principle to a greater extent than had been done before, at this particular time. The result undoubtedly, and not unnaturally, was to give apparent colour to the notion that the Government had really little desire to reduce taxation, and that the effect of its measures would rather be to impose, under another name, fresh burdens on the people.

It is easy to show what has been the amount of fresh taxation for provincial and local purposes imposed in consequence of the new system of provincial assignments. A great deal of the evidence given before the Committee on this subject has been altogether inaccurate and misleading, in consequence of its authors failing to distinguish between local taxation imposed in consequence of the new arrangements, and local taxation of an entirely independent sort imposed without any reference to those arrangements, and, for the most part, before they were even thought of. It might easily be supposed, from the manner in which such persons have spoken, that the greater part of the increase which of late years has taken place in local taxation in India, and to which I shall again refer, has been due to the so-called decentralization measures of 1870. To prove how unfounded such notions are, I shall take each province separately, and shall show for each what taxation has really been imposed.

In Bengal, in Madras, and in British Burmah, the new system did not lead to any fresh taxation of any kind. It is true that, in Bengal and in Madras, laws imposing cesses for certain local purposes have been passed by the local legislatures since 1870, but they had no connection with the financial changes of that year. The Bengal Road Cess, which, however, has even now hardly anywhere come into actual operation, was the result of a discussion extending over several years, in which the Governments of India and of Bengal and the Secretary of State took part. It was proposed by Lord Lawrence, who disapproved the system of provincial assignments, and with that system it had nothing whatever to do. There has been no other fresh taxation in Bengal, and the only result of the measures of 1870, so far as taxation was concerned, was that the province was relieved from the demand for income tax to the extent of 379,000 *l.*

In Madras, the case was somewhat similar. Bills for the imposition of rates for local purposes upon immoveable property were introduced by the Government of Madras into the local legislature without any reference to the new system, and before there was any idea that it would be carried out. Although it was not until 1871 that these Bills became law, the proceedings of the Government of India did not affect them, and, in regard to taxation in the Madras Presidency, the only result of those proceedings was the remission of 142,000 *l.* income tax. I do not, of course, mean to say that, in these or other cases, the reduction of Imperial taxation was caused entirely by the introduction of the system of provincial assignments. But, when it is asserted that the immediate result of the measures of 1870 was to increase the total burden of taxation, Imperial and local, it is necessary to compare the amount levied under both heads before and after those measures were adopted. It is also, of course, true that, although in cases in which fresh local taxation was imposed, the amount may have been less than the amount of Imperial taxation remitted, the interests burdened were different from those which were relieved. This last point leads to questions to which I shall refer further on.

In regard to the local rates imposed in the North-West Provinces, there has been much misapprehension. For many years past, the total amount of the cesses imposed upon the land, at the time of the revision of settlement, has been 10 per cent. on the land revenue. These cesses were originally imposed by executive order only. Doubts arose whether they rested on a sound basis of law, and whether the cesses could legally be collected in temporarily settled districts in which the term of the old settlement had expired. The Local Rates Bill, which became law as Act XVII. of 1871, was prepared under the orders of Sir William Muir, and was introduced and carried through the Legislative Council by Mr. Inglis. It removed the doubts to which I have referred, as it sanctioned the levy of cesses for certain purposes at the rate of 10 per cent. on the land revenue in the temporarily settled districts, which comprise nearly the whole of the

the North-Western Provinces, but it did not impose any new rates in those districts, nor did it increase their amount. In the permanently settled districts of the Benares Division, the case was different. Here it was thought right to impose new rates upon the land for local purposes, for reasons similar to those which led to the determination to impose them in Bengal. Although there cannot, in my opinion, be the least doubt that these rates would have been imposed under any circumstances, not only because such a course was obviously right, but because almost every reason which had been held to require their imposition in Bengal applied equally to the permanently settled portion of the North-Western Provinces, it is true that the so-called decentralization system was the immediate cause of these rates being levied, and I will assume, therefore, that they were due to it. The total annual amount which they yield is about 32,000 *l.* To this extent the taxation of the North-Western Provinces was increased, but there was simultaneously a reduction of 196,000 *l.* in the demand for income tax.

The facts regarding fresh taxation in the Central Provinces which have been laid before the Committee have been incomplete and misleading. The truth is that not only did the so-called decentralization measures lead to no fresh taxation in those provinces, but they were followed, independently of a reduction in the demand for income tax to the extent of 57,000 *l.*, by a positive reduction in the amount of local provincial taxation. The only possible exception that can be made to this statement is, that in 1871 a toll was established on certain roads, yielding an annual revenue of about 4,000 *l.* The account given to the Committee of the proceedings in regard to the Pándhree tax in the Central Provinces was so inaccurate that it is desirable to state what the facts really are. This was an old tax of the Native Government before our time, and until 1871 it was one of the sources of Imperial revenue. It falls only upon traders and artisans; incomes derived from agricultural and other sources are exempt. Under the Native Government every trader and artisan was liable to this tax, however poor he might be. An Act of the Legislature passed in 1867 provided that no person whose income was less than 75 rupees a year should be taxed; that the rate of assessment should in no case exceed 2 per cent.; that no person should be assessed at a sum exceeding 500 rupees; and that no person paying income tax should be assessed to Pándhree tax also. After the scheme of provincial assignments had been carried out, the Government of India abandoned the Pándhree tax althogether as a source of Imperial revenue, and made it over to the local administration, to be expended for the benefit of the province. Relief was at the same time given to the taxpayers. Incomes between 75 rupees and 100 rupees were exempted altogether; the total number of persons assessed was reduced by one half, and 22 per cent. of the revenue was given up. The tax now yields about 24,000 *l.* a year. Although it has the merit of being no novelty, and although less burdensome than it was, it is nevertheless a bad tax, and the Chief Commissioner was ordered last year by the Government of India to report whether some further modifications ought not to be made in it, with the object of extending still further the exemption of the lower classes of taxpayers. I have not heard the result of this reference, but this at least is certain, that not only was there no increase of taxation in the Central Provinces as a result of the measures of 1870, but a positive, and, considering the poverty of the country, a large decrease.

In the Punjab, on the other hand, the measures of 1870 undoubtedly led to the imposition of new rates upon the land. The "Punjab Local Rates Act" (No. XX. of 1871) authorises the levy of a rate upon land, not exceeding six pies in the rupee, or about three per cent. of the annual value. The money is to be expended on roads, education, hospitals, wells, and other useful local works, and the whole amount raised in any district must be expended in that district, under the supervision of the local Committee. The gross annual amount yielded by these rates is about 137,000 *l.* There were, however, in parts of the Punjab various local cesses of more or less old date, for the support of dispensaries, schools, roads, and other purposes. When the new rates were introduced, the whole of these cesses, amounting to about 23,000 *l.*, were abolished. The actual amount of additional local taxation imposed in 1871 in the Punjab was, therefore, 114,000 *l.* The amount of income tax remitted at the same time was 123,000 *l.* In this, as in the case of the other provinces, my object is merely to show the actual effect of the measures of December 1870 on the amount of taxation levied from the people of India. I should be going beyond my present purpose if I were to enter into

the reasons which led the Government of India to agree with the Local Government that some fresh local taxation was necessary. I may, however, observe that although I have stated that the imposition of these rates in the Punjab was the immediate result of the change of system adopted in 1870, the propriety of placing additional rates upon land to meet necessary local charges, had been discussed long before, and had been strongly advocated by Sir Donald M'Leod and other high authorities.

In Bombay, in consequence of the measures of December 1870, Act II. of 1871 was passed by the local legislature. It imposed a cess upon certain non-agricultural classes. In 1871-72 the amount collected was, I believe, about 54,000 *l.* The cess was levied for only one year, and was then given up, as it was the opinion of the local authorities that it had proved objectionable and oppressive, and that, on financial grounds, it was unnecessary. My knowledge of the facts connected with this cess is imperfect, but the impression on my mind is strong that its imposition was unwise, and its abandonment altogether right. The only other power given to the Local Government to increase local taxation was that given by the local legislature in Act I. of 1871. It was a peculiarity of the system of the Bombay Presidency that the charge for the police of the large towns fell almost entirely on the Imperial revenues. In other parts of India this charge was mainly borne by the inhabitants of the towns. The Act gave power to the Local Government to call upon municipalities to meet the charges for their local police, provided that the total demand did not exceed one-fifth of the municipal income. This might have had the effect of rendering increased local taxation necessary, but I believe that, in fact, there was no such fresh taxation, except, to a small extent, in Ahmedabad and a few other places. The Resolution of the Government of India, dated 21st March 1873, stated that it had been determined to hold in abeyance the powers given by Act I. of 1871. The general result of the new system in the Bombay Presidency was that new taxation, to the extent of about 56,000 *l.*, was imposed for one year, but that there has been no permanent increase. At the same time, the amount of income tax remitted in Bombay in 1871 was 269,000 *l.**

I have kept to the last the case of the local rates imposed in Oudh, because Sir Charles Wingfield has given to the Committee evidence regarding them, and he has expressed the opinion that, in increasing those rates, the Government has been guilty of something very like a breach of the settlement engagments entered into with the landholders. Coming from so high an authority, this opinion obviously deserves the most careful consideration.

I must in the first place observe that, although there are some special circumstances, to which I shall refer hereafter, affecting the propriety of levying these rates in Oudh, many of the questions noticed in Sir Charles Wingfield's evidence are quite as applicable to other provinces. For several years past they have been under almost constant consideration in India, and I may safely say that no great Indian question of modern times has been more completely and elaborately discussed than this of imposing rates upon land for local purposes. The principles involved possess the utmost importance, and it is, I think, impossible for any one to understand the subject as it affects Oudh, or any other province, unless he has made himself acquainted with the discussions which have taken place, and with the conclusions at which both the Government of India and the Secretary of State have arrived. Although I will endeavour to state some of the more important facts, as they present themselves to my mind, I should be going altogether beyond the purpose with which this paper is written, if I were now to enter fully into these subjects.

I think that much misapprehension of the facts of the case and much confusion of thought has arisen in consequence of two questions, one affecting the land revenue, the other a question of taxation, having been mixed up together. From time immemorial the State has possessed, both in theory and in practice, the greater part of the property in land in India, and has taken such portion of the rent as it has appeared possible or expedient to take. The land revenue of India is

* I should notice that, although Act I. of 1871 did not apply to the city of Bombay, a fresh charge was thrown upon the Bombay municipality in 1871 by the withdrawal, by order of the Local Government, of the contribution which had been made by the State towards the cost of the town police. The financial arrangements of three Presidency towns, Calcutta, Madras, and Bombay, are quite distinct from those of other municipalities, and their income and expenditure are not included in the Provincial and Local revenue accounts.

is simply this portion of the rent of the land. It has been the policy of the British Government, especially in the Bengal Presidency, to encourage the growth of private property in land, and even to create such property, when no private owners could be found; and it has been an essential part of that policy to limit, either for a term of years or in perpetuity, the share of the rent which the State is to receive. The remainder of the rent is private property. The right of the State to its share of the rent is, in its nature, identical with the right of the private proprietor, both being founded on long established co-existing customs. The object of our so-called settlements of the land revenue is to define the portions of the rent which the State and private proprietors are respectively entitled to receive, and to give security to the latter that improvements made by them on their estates shall not lead to an increased demand on the part of the Government. A settlement has nothing to do, except indirectly, with questions of taxation, using that word in the sense commonly given to it. The determination of the share of the rent which the private proprietor is to retain has, of course, the greatest possible effect in determining the value of his property, and affects immensely his capabilities of meeting taxation, but his liability to taxation is not affected at all. It is, however, very natural that the proprietors of land should see little or no difference between payments of rent and payments of taxes, when both are made to the same party, the Government, and this is especially true when, as in the case of these local rates, the tax is collected at the same time, and through the same machinery with the land revenue. It has been repeatedly found that when a tax is imposed upon the private proprietors of land, the Government is charged with a breach of the conditions under which the settlement of the land revenue was made. Thus, for example, when, in Mr. Wilson's time, the income tax was first imposed in Bengal, the zemindars loudly declared that a gross breach of faith was being committed; that the demand of the Government upon their estates had been fixed for ever, and that they were liable to no taxation of any profits which they derived from the land. While the income tax lasted, this outcry lasted too.

Exactly the same thing has been said, over and over again, of the local rates which have been imposed in various provinces. Nor is there any real difference between the case as it presents itself in the permanently and in the temporarily settled provinces. Whether the settlement was made for a term of years or for ever, it is in both cases equally true that it applied only to the limitation of the portion of the rent to be taken by the State as co-proprietor of the land, and had nothing to do with the right of the State to impose taxes either for Imperial or local purposes.

The plan was formerly adopted, not only in Oudh, but also in the North-Western Provinces, of consolidating at the time of the settlement the demand for land revenue and for local cesses, and taking a single engagement for the payment of both. Sir Charles Wingfield has stated to the Committee his opinion that this plan should have been maintained. It is not necessary that I should now enter at length into the subject. It is sufficient to say that, after a very long discussion, the Government of India and the Secretary of State concurred in the determination that the plan in question was objectionable, and that it ought to be abandoned for the future. I have myself no doubt that this conclusion was right. These local rates are taxes, and to take an engagement for the payment of taxes is, in my opinion, not only open to other obvious objections, but to this objection in particular, that it obscures the difference between land revenue and taxation, that it exposes Government to misapprehension, and makes possible charges of breach of faith such as those which have been brought forward.

Of these last charges I must say a few words. They have been urged, in the strongest terms in Bengal, in regard not only to local but to Imperial taxation on the land, and less strongly, but in a similar manner, in other provinces.

If a former Government had done anything so unwise, and so completely beyond its rightful powers, as to give a pledge that no taxation should in future be imposed upon certain classes of persons or property, for any purposes, whether the pledge was to remain in force for ever or for 30 years, I think that it would have been a serious question whether it ought not to have been deliberately set aside, as having been made altogether *ultra vires*. If, for example, the zemindars of Bengal had been able to make good their contention that, by the conditions of

the permanent settlement, they were exempted for ever from all taxation upon any of the profits derived by them from the land, I think that it can hardly be doubted that an alteration in the conditions of the settlement would have become inevitable. To say that because the Government nearly a hundred years ago made certain arrangements in Bengal, therefore the richest interest in the richest part of India is to be exempted for ever from taxation, both for Imperial and local purposes; that therefore the wealthiest people in India are not only to contribute nothing to the necessities of the State, but that their roads and bridges, their police, their hospitals, and their schools, are to be provided for them for ever at the cost of their poorer neighbours in other parts of India, would have been such a manifest absurdity and injustice that the conclusion could not possibly have been accepted. Fortunately, however, the decision come to by the Government of India, and come to with complete confidence that the decision is a right one, prevents any such question from arising either in regard to the permanently or temporarily settled provinces.

The general principles in accordance with which the power to impose local rates upon land is to be exercised by the Government have been explained with great force and clearness in the published Despatch of the Duke of Argyll to the Governor General in Council, dated the 12th May 1870. The following quotation will render it unnecessary for me to say more on this part of the subject:—

"12. It has been contended that the rates levied in other provinces of India "are essentially distinct in principle from the rates which it is proposed to levy "in Bengal. The argument appears to be, that in other provinces of India the "local rates are simply so much addition to the ordinary land revenue, an "addition which is there legitimate, because the Government had not in those "provinces debarred itself by positive engagements from increasing the land "assessment. This appears to be only another form of stating the argument "already dealt with, which is founded on the terms of the permanent settlement. "But the distinction thus drawn between the character of such rates when levied "in Bengal and the character of similar rates when levied elsewhere is a dis-"tinction which I concur with your Excellency in considering to be unsound. "Whatever character may be assigned to these rates as a matter of mere verbal "definition, they were unquestionably intended by the Government, in all the "provinces in which they have been raised, to be in addition to the land "revenue, and not a part of it. This separation was expressly defined and "marked in the proceedings of the Government of Bombay before any special "legislation had been passed upon the matter. In the resolution of that "Government, dated 9th March 1860, the superintendents of survey were directed, "'after fixing the assessment of a district,' to add the rate 'over and above the "'amount which on other considerations they may deem appropriate.' Although "incorporated with the land revenue in respect to the mode of levy, as being "the most convenient, it is again in the same sentence explained to be 'calcu-"'lated over and above the ordinary assessment;' and Sir Charles Wood, in his "Despatch of 25th May 1861, in which he dealt with the proposal, speaks of it as "a proposal 'for the imposition of a school rate and road cess in addition to the "'revised rates of land assessment which have been, and still are, in course of "'introduction.'

"13. Her Majesty's Government are, therefore, of opinion that it cannot be "said with justice that to impose rates in Bengal would be to impose a special "tax on that province which is not imposed on other parts of India.

"14. It is true that, in making some of the more recent land settlements in "various Provinces of India, the Government has given notice that in fixing the "assessment of land revenue for 20 or 30 years it retained the power of "imposing some additional rates for local expenditure. In the Bombay Act of "1865* a notice to this effect has been made permanent by law. But this notice, "so far from indicating that such rates are to be considered as part of the land "revenue, is, on the contrary, a distinct indication that they are to be considered "separate. The notice was issued because the Government was warned by the "misunderstanding which had arisen in Bengal, and because it knew that pre-"cisely the same misunderstanding might arise under any settlement, the "misunderstanding, namely, that during the term for which such settlement "might

* Act I. of 1865, Sect. XXIX., Clause 1.

"might be made the Government absolutely surrendered all power of additional "taxation upon the land. But although, under these circumstances, it was "expedient to prevent such misunderstanding in future by a warning explanation "to all with whom new settlements might be made, Her Majesty's Government "do not admit that, where no such notice has been given, no rates can be levied "in addition to the assessment. This, indeed, would involve a result in direct "antagonism with the principle laid down in this Despatch, and sanctioned in the "case of the Income Tax. That principle is, that any extra taxation or rating "levied from the agricultural classes over and above the land revenue, must be "imposed as equally as possible upon all holders of property accessible to the "impost. But if those holders of landed property are to be free from the tax "to whom notice was not given at the time of settlement, the rates cannot be "imposed equally, but, on the contrary, there must be an extensive system of "exemptions. And those exemptions must especially include the holders of "inams, of alienated villages and all permanent tenures either rent-free or at "small fixed quit-rents. The guarantee under which these persons hold their "lands, free from any increase of the land assessment, is a guarantee quite as "binding as the promise given to any holder in Bengal. But the practical "injustice of exempting inamdars, or the owners of alienated villages, is as "apparent as the departure it involves from the principle of making rates equal "and general in their incidence. It must always be remembered, in matters of "taxation, that when a given work is to be done, and a given amount of expen-"diture is required to do it, the exemption of any class is simply an aggravation "of the burden on all other classes who are not exempt. And in this case those "would be the exempted classes who have been otherwise most favoured by the "State, and those would be the classes bearing an aggravated burden who "already contribute most to the public expenditure. Moreover, the holders of "property thus exempted would derive equal, or indeed greater, benefit from the "rates than the holders of property, who alone would be called upon to pay "them. On these grounds Her Majesty's Government feel that, in rejecting any "claim to exemption from rates on the part of those who did not expect to pay "them at the time of the Land Settlements, or on the part of those who hold "under permanent tenures, whether of one kind or another, they are not adopting "any mere verbal plea in order to justify a foregone conclusion which otherwise "might be difficult of defence. They are satisfied, on the contrary, that they "are rejecting a claim founded solely on a mistaken interpretation of the mere "wording of a particular document, and which, if admitted, would lead to results "at once anomalous and unjust.

"15. It is the more important that a final decision on this matter should be "arrived at, because it must be admitted that the misunderstanding on which "such claims to exemption are founded is a misunderstanding which has been "long prevalent, and has imparted a character of doubt and hesitation to the "language and to the acts of the Government, both in India and at Home. "There has been, on the one hand, a feeling and a conviction of the essential "distinction between the ordinary Land Revenue and the rates which it was "desired to levy, whilst, on the other hand, there has been a difficulty in defining "that distinction, and a fear lest it should be found to be incapable of explana-"tion to the people. Hence there has been a variety of suggestions for evading "the difficulty, by raising the required amount of money through a House Tax, "or a License Tax, or some other tax which could not be confounded with the "Land Revenue, and respecting which, therefore, there could be no doubt of "the right of the Government to impose it. But all these suggestions have, for "various sufficient reasons, been rejected. The Despatch of Sir J. Lawrence, "of 22nd February 1867 (No. 9, Revenue Department), exhibits the embar-"rassment felt by the Government of India in this condition of affairs, and its "anxiety lest rates on landed property should appear to the people to be a breach "of faith. It is injurious alike to the Government and to the people that this "condition of things should continue. The Government has nothing to conceal, "and the people have nothing to fear or lose in the re-affirmation of the same "principle as regards rating, which has already been affirmed as regards the "Income Tax.

"16. An important step in the practical decision of this question has been "taken in the passing of the Bombay Act, No. III. of 1869. The special object "of that Act is to raise 'Funds for expenditure on objects of local public utility

" 'and improvement,' and for this purpose it imposes rates upon all holders of " land, without making any distinction between those who received and those " who did not receive a notice at the time of settlement. No exemption of any " class of landholder is admitted. On the contrary, the holders of rent-free, of " alienated villages and of other permanent tenures are expressly subjected to " the rates.

" In view, therefore, of these various facts and considerations, Her Majesty's " Government have now to intimate to your Excellency the conclusion to which " they have come, after a careful consideration of a controversy which has now " been going on for a long course of years. This conclusion is, that rating for " local expenditure is to be regarded, as it has hitherto been regarded in all the " provinces of the Empire, as taxation separate and distinct from the ordinary " Land Revenue; that the levying of such rates upon the holders of land, irre- " spective of the amount of their land assessment, involves no breach of faith on " the part of the Government, whether as regards holders of permanent or of " temporary tenures; and that, where such rates are levied at all, they ought, " as far as may be possible, to be levied equally, without distinction and without " exemption, upon all the holders of property accessible to the rate."

With regard to the new local rates which were imposed in Oudh, I maintain that there was even less need, if possible, for charging the Government with breach of the settlement engagements than there was in Bengal. It is quite true that the instructions issued Sir Charles Wingfield, as Chief Commissioner, before the regular settlement of the land revenue was commenced, contemplated the abolition of all local rates separated from the land revenue. Sir Charles Wingfield, as he has already informed the Committee, was of opinion that " the " levy of any cesses in addition to the Government demand proper is viewed with " great suspicion by the people, who regard them as exactions to which no limit " can be assigned, and by far the preferable course, in the Chief Commissioner's " opinion, is to include all cesses in the Government demand, and to set aside, " from the general revenues thus raised, a fixed proportion for specific objects. " The people greatly prefer this course, as they then consider that the State, by " devoting a portion of its revenue to the maintenance of institutions calculated " to confer great public benefits, is performing its proper functions, towards " which they should be called on to contribute. The Chief Commissioner has, " therefore, with the consent of the Government of India, determined to fix the " Government demand at $51\frac{1}{4}$ per cent. of the average gross rental, and of " this sum 50 per cent. will be credited to the Imperial Government, and " $1\frac{1}{4}$ per cent. will remain at the disposal of the local government, to be " devoted to the purposes marginally noted."

I am altogether unable to admit that, by accepting these proposals of the Chief Commissioner, the Government entered into an engagement that no taxation should be imposed upon the land for 30 years. There is, I think, as much room for saying that the imposition of the income tax upon the landholders of Oudh was a breach of the conditions of the settlement, as there is for saying that this was a consequence of the imposition of the new rates. In both cases equally, fresh taxation was levied.

Whatever may have been Sir Charles Wingfield's views at the commencement of the settlement operations in Oudh, the old local rates were in practice kept quite as distinct from the land revenue as was the case in other provinces. The remarks of the Secretary of State, which I have already quoted, are completely applicable to Oudh, that " whatever character may be assigned to these " rates as a matter of mere verbal definition, they were unquestionably intended " by the Government, in all the provinces in which they have been raised, " to be in addition to the land revenue, and not any part of it." The system under which the local cesses were levied in Oudh was well known to the Government. When the Bill imposing the new rates was passed, the Chief Commissioner was General Barrow, who, with the single exception of Sir Charles Wingfield, had more to do with the settlement of the land revenue, and indeed with every great question affecting the province which has arisen since 1858, than any man living. I am sure that Sir Charles Wingfield will agree with me when I say that the Government could have had no higher authority as its adviser than General Barrow. The Bill imposing these rates was almost entirely prepared by him, and by his predecessor, Mr. Davies, the present Lieutenant Governor of the Punjab.

On

On the subject of these local cesses, General Barrow wrote officially to the Government of India, as follows :—

"The Chief Commissioner cordially and unreservedly concurs in the inexpe-
"diency of making cesses and local rates an integral portion of the land revenue,
"and as to the importance of removing misapprehensions as to the real nature of
"such taxes." He went on to say: "As a fact, the cesses have in Oudh been kept
"far more distinct from the revenue than the theory, and even the orders as to
"their amalgamation, would seem to imply; and it may be doubted whether
"the immemorial distinction between *mál* and *sewái* has, to any appreciable
"extent, lost its hold upon the Native mind." In illustration of this, the Chief Commissioner sent up, with his official letter, specimens of the ordinary receipts given at the Government treasury for payments of land revenue and cesses. These showed that when a landholder paid his money, he did not get a simple receipt for the consolidated demand on account of land revenue and cesses, which he would have done if Sir Charles Wingfield's views had been fully acted upon, but that he obtained in fact a memorandum showing separately in detail how much was paid on account of land revenue, and how much on account of local cesses. The cesses are separately enumerated; road, school, margin, and dák; just as they used to be in the other provinces; and there is a column to show what sums are to be credited to the Government as land revenue, and what sums to the local funds. Thus, every landholder, whenever he paid his land revenue, was distinctly reminded of the fact that he had to pay the local rates in addition.

This, however, was not all. The chief commissioner sent to the Government of India, at the same time, papers which showed that a year before the proposal to increase the local rates had been made, or had even been thought of, this very question of the power of the Government to alter their amount from time to time had been raised in the court of the financial commissioner, the highest judicial authority in cases relating to land, in the province. One of the principal talookdars of Oudh had received from the Government a large estate as a reward for loyal services rendered during the mutinies, and to make the gift more valuable the demand for land revenue was fixed permanently at a moderate rate. At the revision of settlement, there was of course no increased demand for land revenue, and the talookdar claimed that the amount levied on his estate in local cesses should also remain unchanged for ever. He stated that, under the system in force in Oudh, the cesses and the land revenue were included together in one demand. "Any increase of the cesses," his counsel said, "would be as much a
"breach of contract as an increase of the jumma (or land revenue), because
"there is nothing whatever to show that the cesses were ever intended to be
"raised any more than the jumma; and had such been the intention of the
"Government, nothing would have been easier than to have inserted a clause to
"this effect, whereas this had not been done." In passing judgment on this claim, the financial commissioner said :—

"Cesses differ entirely in their character from land revenue; the latter is an
"Imperial tax, which goes into the Imperial exchequer, and must always be
"treated as an Imperial matter; the former is a local tax which is applied to
"distinctly local purposes, and which must necessarily vary with local require-
"ments. To fix these local taxes permanently would be simply absurd; at one
"time, and in one part of the country, the rate so permanently fixed might fall
"far short of existing exigencies, and materially retard the progress of that
"portion of the Empire. At another time and in another place the perma-
"nently assessed tax might be in excess of local requirements, and would yet
"have to be collected, although collected only to lie idle and unproductive in
"the treasury." "The full cesses," the financial commissioner says, in another place, referring to the same question, "are now assumed to be $1\frac{1}{4}$ of the gross
"assets, and no other rate, nor any other method of calculation, will for the
"present be allowed, but it should be borne in mind that this rate of $1\frac{1}{4}$ per
"cent. may be hereafter increased, should the exigencies of local taxation re-
"quire it."

Enough has, I think, been said to show that the views which Sir Charles Wingfield advocated were not practically maintained, and that when the question of imposing additional local rates in Oudh was before the Government, the highest executive and judicial authorities of the province held that there was nothing exceptional in the case, and that the distinction between land revenue

and local cesses had always been preserved, and was well understood by the people.

Another argument has been brought forward in support of the imposition of those rates, which I mention, because some high authorities have attached importance to it, and not because I myself agree with it. When the Act imposing the rates was passed, the settlement had not, with the exception of a single district, been confirmed by the Government in any part of Oudh. Technically speaking, it was therefore in the power of Government to re-open not only the question of the cesses, but any other questions connected with the settlement arrangements. On these grounds Mr. Inglis, who was then a Member of the Legislative Council, although he objected to altering the amount of local rates during the currency of a settlement, and after a settlement had been finally accepted by the Government, supported the Bill for imposing new local rates in Oudh.

Sir Charles Wingfield has referred to the fact that these rates were imposed, after consultation by the chief commissioner with the talookdars, but he has doubted the value and the sincerity of their approval. He has also observed that, even assuming that the consent of the talookdars was voluntarily given, about one-third of the land of the province is held by small proprietors, whose opinion was vever asked:

I do not wish to attach to the consent of the talookdars more weight than it deserves, although the fact that General Barrow was chief commissioner renders it certain that no improper administrative pressure was brought to bear. I know that it is very difficult in India, in regard to such matters, to say how far the opinion expressed by any section of Native society is really a free and honest opinion, or how far it is given with the notion that it will win favour from the Government authorities. But I know no part of India in which, during the last 10 years, the Native gentlemen of a province have taken so active a part in public affairs, or have shown themselves so well able to take care of their own interests, as they have done in Oudh. In this case of the imposition of local cesses in Oudh, I think that it may at any rate be said, that when taxation had to be imposed, a nearer approach than had been made in any other province of India, was made towards consulting the persons chiefly concerned in regard to the form which that taxation should take. I, of course, do not suppose that this or any other taxation was liked, but assuming that more money had to be raised, I believe that this was really the least unpopular kind of taxation that could have been adopted.

The local rates imposed in Oudh in 1871 yielded 35,000 *l.* a year. The amount of income tax which was at the same time remitted was 37,000 *l.*

The local rates in Oudh, which were formerly 1¼ per cent., are now 2½ per cent. on the annual value of the land, or 5 per cent. on the land revenue. They are exactly one-half of the amount which has for a long time past been levied in the neighbouring North-Western Provinces. It is true that these per-centages are not fairly comparable, because the services for which the charges are made are not identical. Making, however, allowance for this, there can be no question that the total amount raised in Oudh from the land after the new rates had been imposed, was and still is less than the amount raised in the North-Western Provinces.

Before I leave the question of local rates upon land, there is one other point which I wish to notice. The Secretary of State, in his published Despatch to the Government of India, dated the 12th May 1870, laid stress on the necessity of making it clear when rates were imposed upon the owners of land, that they were taxed in company with other classes, and that the land was not treated differently from other property. After pointing out the essential distinction between the assessment of land revenue and "every kind of tax or cess which is levied irre-"spective of the increased value or produce of land, and with no view to a "re-adjustment of the proportions in which the produce of the soil is divided "between the State and the owners of land holding under it," the Duke of Argyll observes, that "the best method of marking this distinction, and of making "it clear, is to provide that such cesses should be laid upon the owners of land "only in common with other owners of property which is of a kind to be assess-"able to the rate." The fact that this condition was obviously fulfilled in the case of the income tax, while in the case of these local rates the burden appeared to fall solely on the land, has undoubtedly given colour to the feeling that, although

the

the charge of disregarding the settlement engagements could not be sustained in the former case, it was clearly groundless in the latter. This point was specially considered when the Bill for imposing local rates in the North-Western Provinces was before the Legislative Council. Sir William Muir then showed, and I think very completely, that the condition that all property should be taxed alike was virtually fulfilled. He showed that every considerable town possessed a municipality, which levied rates for police, roads, sanitary improvements, and, in fact, for all the objects for which local rates upon land are levied. In the North-Western Provinces a sum of 170,000 *l.* a year is thus paid by the non-agricultural classes, and the same is more or less true in all the other provinces. Even however, if it be admitted that the taxation is not altogether equal, and that it falls more heavily upon the land than upon other property, the fault can hardly be said to be one of much practical importance. If the rates on the land gave all the money that was required, with a minimum of unpopularity and of trouble, it would have been very unwise, on theoretical grounds, to insist upon imposing fresh and unpopular taxation on other kinds of property, so that the pressure on all classes might be more equal. It ought also to be remembered that, great as the benefit has been which other classes have derived from the vast expenditure of late years upon canals, and roads, and railways, and other public works, there is no class which has benefited so much as that of the proprietors and occupiers of land. New and profitable markets have been opened to us, and an immense increase has taken place in the value of agricultural produce, and in the value of land, and this has been done at the expense of the State, and without the expenditure of any capital or labour on the part of the landholders. It is only fair that the land should bear a large portion of the local charges necessary for the maintenance and extension of the works on which it depends so greatly for its prosperity.

The taxes for local purposes which I have now mentioned were the only taxes imposed in British India in consequence of the measures of 1871. In 1872-73, after they had come into full operation, the total amount which they were expected to yield was 210,000 *l.* In the year immediately following the introduction of the new system of provincial assignments, they yielded 144,000 *l.* The amount of Imperial taxation simultaneously remitted was more than 1,500,000 *l.*

The income tax has now ceased altogether. While I admit that, under existing circumstances, its retention was hardly possible, I personally regret its disappearance, for I always maintained the expediency of making an income tax, at a very low rate, a permanent part of our financial system. In this respect, while I strongly objected to a heavy income tax, I did not share the opinions of Lord Mayo, who desired to see the tax abolished altogether. But this is, I am satisfied, certain, that the opponents of the income tax in any shape have to thank for their success the measures taken by Lord Mayo in 1870-71. But for those measures, and the consequent stop that was put on the constant demand for increased expenditure, the abandonment of the income tax would have been impossible. Whether, however, I am right or wrong in this assumption, the facts remain, not only that there is no truth in the assertion that the introduction of the new system of provincial assignments led to a great increase of taxation, but, on the other hand, that the immediate result was a reduction in the total burdens of the country. As to the statements to the effect that the new scheme led also to a large addition to municipal taxation, it is sufficient to say that they have no foundation. With certain slight exceptions in Bombay, to which I have already referred, municipal taxation was nowhere increased by a single shilling in consequence of the new system. I may add that all the assertions which have been made regarding the power that has been given to the Local Governments of spending as much money as they please, and of raising, by fresh local taxation, the means of meeting their increased expenditure, are based upon a complete misapprehension of the facts. The truth is that the checks upon provincial and local expenditure are far stronger than they were, and that no Local Government possesses, under the present system, any powers of fresh taxation, of any kind whatever, different from those which it possessed before.

There is another serious mistake, which the evidence taken by the Committee has not only failed to correct, but has strengthened. It has been said that the so-called decentralization scheme, while it increased the powers of the

local authorities, contained no reference to the incurring of debt, and that there is no security that, side by side with the local expenditure, there is not growing up a great number of local debts. It is unfortunate that there was no one who was able to tell the Committee that, so far from this being true, Lord Mayo gave special and personal attention to this question. He insisted strongly on the necessity of strictly regulating by law the powers of municipalities and of other local bodies in regard to incurring debt. A minute inquiry was instituted, and although it was ascertained that, excepting in the three Presidency towns, where loans had been authorised by special laws for certain purposes, very little debt has been actually incurred, Lord Mayo thought it essential to place this matter on a satisfactory footing for the future. He was far from desiring that local bodies should be altogether debarred from the means of obtaining loans for public works of real and permanent improvement, such as the supply of water, drainage, and so forth when it was proved to the satisfaction of the Government that borrowing was proper and necessary. On the contrary, he believed that it would often be the duty of the Government to help in this manner the construction of works of urgent importance, which must otherwise remain unexecuted. An Act of the Legislature was accordingly passed in 1871 (Act XXIV. of 1871), rendering it illegal for any municipality or other public body to borrow money, except, under certain circumstances, from the Government, and authorising the Government to prescribe the rules under which applications to it for loans for certain specified purposes could be made. In accordance with this Act, rules have been laid down, the effect of which has been to make it too difficult, rather than too easy, for municipalities to borrow money.

While I assert that the system of provincial assignments led to no serious increase of local taxation in India, and while I confidently declare that all statements to the contrary are unfounded and incapable of proof, nothing is further from my intention than to say that there has not been of late years a considerable increase in the amount of such taxation. This increase has been going on steadily for the last 10 or 15 years, but the process was hardly affected by the measures of 1870-71. Although the growth of local taxation has been the subject of extreme exaggeration and misrepresentation, there can be no doubt that it demands serious notice.

The following figures show the sums yielded by every kind of local taxation in the Bengal Presidency during the eight years ending with 1871-72. They are taken from official returns furnished to me by the Financial Department of the Government of India, and I believe them to be more accurate than any of the figures which have hitherto been published:—

	£.
1864–65	1,181,514
1865–66	1,547,843
1866–67	1,693,258
1867–68	1,676,594
1868–69	1,871,775
1869–70	1,845,252
1870–71	1,940,500
1871–72	1,796,789

The above sums include Bengal, the North-Western Provinces, Oudh, the Central Provinces, and the Punjab. I am unable to give similar figures for Madras and Bombay. The increase in Madras has, I believe, speaking comparatively, been larger than in any other province.

Including Madras and Bombay, the receipts arising from every kind of local taxation in British India were a little over 2,000,000 *l.* in 1865-66, and they had risen to nearly 3,000,000 *l.* in 1870–71, so that in round numbers we may consider that since the former period the total amount has increased by a million. These figures include everything which can by any possibility be called taxation, and they give really a somewhat exaggerated idea of the actual burdens. They include not only all local rates and cesses, all municipal taxation, and tolls on roads and ferries, but receipts which are really not taxation at all, such as fees for serving judicial processes, and fines levied at cattle pounds.

I may also observe that the published statements showing the receipts of local and municipal funds invariably include large sums which are in no way raised by

by taxation. Forgetfulness of this fact has often led to a great misapprehension. There are many other sources of local income besides taxation, and many other receipts which are credited to local funds. Thus, while the amount raised by local taxation in India is not more than 3,000,000 *l.*, the total receipts of the local funds exceed 4,000,000 *l.* a year.

In the earlier part of this paper, I pointed out the main causes, which, as I believe, have led to the great increase of Imperial expenditure in India in late years. Similar causes have rendered inevitable and right the increase of local expenditure also, and indeed they have been still more powerful in the latter case than in the former. All the requirements of civilised life have had to be provided in our long neglected towns and districts. I have already given an illustration of this in noticing the former condition of Calcutta.

The question is often asked, whether the improvements that we have been making are really appreciated by the people. Can it be said that they are paid for willingly, or have they been forced on the people against their own wishes by the Government and its officers? I answer that they are certainly not appreciated, nor do I believe that they would have been popular, even if they had involved no fresh taxation at all. The people of India are not only intensely conservative, but they absolutely hate all change, and are generally quite unable to understand the advantage which they will obtain from (as we think) the most obviously desirable improvements. I will take Calcutta again as an illustration, the wealthiest and perhaps the largest city in Asia, and the city in which European knowledge and habits have made the greatest progress. A few years ago there was hardly a drop of wholesome water to be got. When it was proposed to bring in a new supply, the Hindoo community generally objected, and not only the ignorant part of the community, and the orthodox Hindoos of the old school, but also the native gentlemen who had received an English education, and who professed to be the leaders of their countrymen in progress of every kind. They declared that it was folly to bring into Calcutta, at a great expense, a supply of water which the religious feelings of the Hindoo population would not allow them to use, and they opposed the scheme, not only because it was expensive, but because they were perfectly satisfied with things as they were. The waterworks were nevertheless constructed. They have, I believe, cost already more than half a million, but Calcutta now possesses a supply of water far better than that of London, and indeed, according to high authorities, as good as that of Glasgow. Not only does everybody drink the water, but the orthodox Hindoos have discovered texts in the Shastras which prove that it is right to do so. The same sort of story might be told of the drainage works, and of the other great sanitary improvements that have been made in Calcutta.

What have been the results? The annual death-rate is greatly reduced below what it was a few years ago before these improvements were made. Formerly there was hardly a year in which there were not five or six thousand deaths from cholera alone. In 1871 the number of deaths from cholera fell to 800; and although in 1872, a year in which the disease was epidemically prevalent, the number rose to 1,563; this is not more than one-half of the number in the most healthy of the 25 years before these sanitary improvements were carried out. According to the Report of the Royal Commission, the death-rate of the European troops in Fort William, Calcutta, for the 10 years preceding 1856, was more than 102 per 1,000. I have no other authorities at hand, and possibly these figures may require correction, but it is certain that Calcutta was one of the most unhealthy stations for troops, not only in India, but in the British Empire. It has now become one of the healthiest. In 1870 the death-rate was 12·5 per 1,000; in 1871 it was 10.

Improvements such as those which have been made in Calcutta involve a great expenditure of money, and opinions will differ as to how far it is right to force them on people who would prefer going on without them, even although the result may be to diminish the rate of mortality by one half. I shall not argue the question. Although I do not deny that we may sometimes have been inclined to carry out our reforms too rapidly, and with too little regard to the prejudices of the people, it is better to have done too much than too little. In spite of all mistakes, the money we raised by local and municipal taxation has, on the whole, been thoroughly well spent.

The assertions that are sometimes made, to the effect that the chief expendi-

ture of the funds raised by local taxation has been on objects which benefit the European community, are, when they are not the results of ignorance, malicious perversions of the truth. Any one who takes the trouble to look at the returns of receipts and expenditure of the local funds will be satisfied that the money is, with the rarest exceptions, spent, not on luxuries, or fine streets and magnificent buildings, but on things necessary for the health and daily convenience of the people. It is obvious that the Imperial resources cannot supply the funds for meeting purely local requirements. What, then, is to be done? Are our districts to be left without roads and bridges, and are our cities to be left in a condition of abominable and poisonous filth, or are we to raise from local sources the funds necessary to provide what we consider the essential requirements of tolerably decent and wholesome life? For my part, I should be sorry to believe that in choosing the latter alternative we had gone beyond our obvious duty to the people of India.

This brings us to another very important question. Whether, in consequence of the increase of taxation, or of other causes, is it true that the feelings of the people at large towards the British Government are less loyal and less satisfactory than they were in former times? I think that this question must be answered in the affirmative. It cannot be denied that there has been for a good many years past a prevalent feeling, which, although it cannot be called a feeling of actual discontent, is still a feeling of uneasiness and dissatisfaction.

While I do not doubt that the increase of taxation has had something to do with bringing this about, I am sure that it has not been the most serious cause. With the exception of the income tax, the unpopularity of which has been, in my opinion, greatly exaggerated, there has really been no increase of Imperial taxation which has affected the people at large. The taxes which have been increased are either indirect taxes which the people do not think about, or taxes falling upon special classes, and not affecting the population generally. The salt duties, for example, are higher now than they were 10 or 12 years ago, but the people are not conscious of the fact, because the price of salt is no higher; on the contrary, it is lower, because the improved means of communication have had a greater effect in cheapening salt than the additional duties have had in raising its price. So, again, the stamp duties have been increased, but they affect only a small section of the population, and cannot be felt as a common cause of dissatisfaction.

In many parts of India there has been an increase of the land revenue, following an increased area of cultivation, or increased rentals, and no doubt people dislike paying more money, even if the demand be admitted to be reasonable. In the greater part of Northern India the old settlements have expired, and the demand under the new settlements will generally be heavier than before. The proportion of the rental which the State now receives is, however, much smaller than that which it used to demand. Instead of taking two-thirds of the net profits of the land which was done under the old settlements, we now only take one-half, and including the local rates, the total demand is much lighter than it used to be. Although in particular cases the assessments may have been too high, I do not think that any one has asserted that the Government demand under the new settlements is generally excessive, or that it has been the cause of popular discontent.

Similar remarks apply to a great extent, to local taxation. The greater part of this has fallen on the land, and although I do not doubt that the rates have been disliked by those who have had to pay them, the feeling against them has never, so far as I can judge, been strong. It must be remembered that there has been a large and general increase in the value of every kind of agricultural produce; and there can be no doubt that the total demand on the land, Imperial and local together, is now a much lighter burden, when viewed in relation to the increased value of the produce than it was 10 or 20 years ago.

The greater portion of the increase in municipal taxation in the towns, especially in Northern India, has been in indirect taxation, which, however open to objection it may be on economical grounds, cannot often be called unpopular, because the people are usually hardly aware of its existence. This absence of unpopularity is sometimes rather a misfortune, for there is little inclination to abolish a tax, however bad it may be, when nobody objects to it. For instance, it is literally true that the more objectionable the form in which octroi duties are levied in India, the more popular they are. What a town really likes is,

under

under the name of octroi, that is a duty on local consumption, to levy transit duties on the general trade of the country which passes through the town, and thus to make others pay for local wants.

But admitting that the demand for money, under one name or another, Imperial, or local, or municipal, has led directly to a good deal of positive dissatisfaction, my belief is, that the indirect and secondary effects of increased taxation have been still more important in bringing about the feelings to which I have alluded. The new burdens have not really been heavy, but the imposition of fresh taxes in a country like India produces effects far beyond the persons who are actually called upon to pay. Independently of the fact that every new tax is to some extent made an opportunity of extortion against many who ought not to be affected at all, the whole people hate everything new, they are ignorant, and suspicious, and timid, and the knowledge, or the mere rumour, that fresh taxation is being imposed may strongly affect great numbers who can never in reality be called on to pay a farthing. In this way I have little doubt that the dissatisfaction caused by increased taxation has been out of all apparent proportion to the actual burden imposed. I believe, also, that the endless talk and discussion about taxation which has been going on for years past in India has produced a greater and more mischievous effect than anything that has been really done. There is hardly a conceivable tax, however silly, that has not been proposed by somebody or other, and discussed over and over again, from one end of the country to the other, during the last 10 years. Now it is income tax, then tobacco tax, then succession tax, then something else. Although the numbers of people who actually take part in these discussions is small, the effect filters downwards, and the result is a general uneasy feeling that all sorts of new schemes are contemplated for raising more money.

My own belief is, however, that these feelings of suspicion and dissatisfaction have arisen less from causes connected with taxation than with other causes. In the first place, it is a delusion to suppose that a Government of foreigners can ever be popular. Even in old times, when our Government was liked much better than it is now, I entirely disbelieve that it deserved to be called popular. Now, I am afraid it is unhappily true that the feelings caused by the events of 1857-58 have not been got over either by Englishmen or by Natives, and I fear that, until the present generation has passed away, we can hardly hope for much improvement in this respect. It is not strange that men whose wives and children, and brothers and friends, were treacherously and barbarously murdered, should look upon the Natives of India with very different feelings to those which they formerly held. On the other hand, the mutinies and revolts of 1857 were put down with tremendous energy. We may think that we were merciful, or at least that we were not, in spite of some errors, more severe in measures of repression and punishment than, under the circumstances, was inevitable and right. I think that myself; but this is certainly not the opinion of the people of India. On both sides there is an unhappy feeling that things have changed. Englishmen and Natives are not towards each what they were before 1857. The old friendly feelings of mutual liking and confidence have been most seriously weakened.

Again, and this I believe to be the most important of all the causes of the uneasy condition of the public mind in India, almost every improvement that is made in our administration is looked upon with dislike or suspicion. The people, as I have said before, are quite unable to appreciate the real advantages which are given to them. Every change, whether for the removal of an abuse or not, is unpopular for a time, simply because it is a change. Even obvious improvements in the administration of justice cannot be said to be popular. Mr. Stephen, in his Minute on the Administration of Justice in India, tells a story which, whether it be true or not, gives a curious illustration of this. People were talking about a notoriously corrupt Native judge, and a Native gentleman was heard to remark, "Blessed be God, he was an excellent judge. He received gifts with his own blessed hands, and gave judgment accordingly, but with the sahibs as judges the judgment that will be given is known beforehand to God only." We may sometimes have gone too fast with our reforms, but, after all, our sole *raison d'être* in India is to govern the country and to improve the condition of the people as well as we can. When we see grave abuses in the administration, when we know that the people are oppressed by a corrupt police, that they cannot get justice because the judges and the

officers of the courts are paid almost like common labourers, when we see the inhabitants of the towns and our soldiers dying in multitudes through preventible causes, in consequence of the neglect of simple sanitary precautions; when we see the people in a condition of the grossest ignorance, not only lamentable for their own sakes, but the root of the greatest political danger which we run in India, when we find the whole country to be liable to constantly recurring famines, the desolating effects of which are beyond description, and the mitigation of which can only be effected by the construction of costly works of irrigation or communication, when the Government sees all this, and a great deal more that I need not attempt to mention, it is hard to blame it for trying to apply a remedy, although increased taxation and increased discontent may be the first results. That the difficulties in the way of the good government of India by Great Britain are great, is unfortunately too true, but until we renounce the duty which we have been bold enough to assume, the obligations on us to accept all the responsibilities of the situation, tremendous though they be, are in the last degree imperative.

In regard to the future prospects of Indian finances, although we are at the present moment, in consequence of apprehended famine, passing through a period of anxiety, there is, in my opinion, no reason to take any but hopeful views. Notwithstanding the abandonment of the income tax, I believe that we may expect to see not only an equilibrium between income and expenditure, but a gradually increasing balance on the right side, and this without the imposition of any new taxes. I speak of course on the assumption that we shall have no serious wars, and that the finances will be managed with ordinary prudence.

Judging from the experience of the last few years, I think that we may reasonably anticipate a gradual, although not very rapid, increase of revenue, and that there will be a less rapid increase in the total amount of the expenditure.

In the last three years, ending with 1872-73, the accumulated surplus of income over expenditure has been nearly 6,000,000 *l.** If there had been no income tax, which in the three years yielded about 3,500,000 *l.*, we should still have had a surplus of 2,500,000 *l.* on the ordinary account. Even if the whole of the Extraordinary Public Works Charges, amounting to nearly five and a-half millions,† had been charged against the ordinary revenue of the three years, there would still have been a small surplus.

	Surplus.
	£.
* 1870-71 - - -	1,480,000
1871-72 - - -	3,120,000
1872-73 Regular Estimate - - -	1,350,000
† 1870-71 - - -	1,170,000
1871-72 - - -	1,628,000
1872-73 Regular Estimate - -	2,600,000

There seems no reason for thinking that during the last three years there has been any great increase of income from exceptional causes, on the continuance of which we cannot reckon. The expansion of the chief sources of revenue of late years has not been very rapid, but it has been going on gradually and steadily.

The most important of all these sources is the land revenue. Although the tendency for a good many years past has been to make the conditions of the settlements of land revenue less immediately favourable to the State, and certainly has not been in the direction of taking too much, there has been a gradual increase. This is shown by the following figures :—

	Land Revenue.
	£.
1862-63 - - - - - -	19,600,000
1863-64 - - - - - -	20,300,000
1864-65 - - - - - -	20,000,000
1865-66 - - - - - -	20,500,000
1866-67 (eleven months).	—
1867-68 - - - - - -	20,000,000
1868-69 - - - - - -	20,250,000
1869-70 - - - - - -	21,000,000
1870-71 - - - - - -	20,600,000
1871-72 - - - - - -	20,500,000
1872-73 - - - - - -	21,200,000

Considering that the old settlements have expired in many parts of Northern India,

India, and that new settlements are being made, there can be little doubt that the land revenue will go on increasing, and, to take a most moderate estimate, that it will be at least three quarters of a million higher five years hence than it is now.

The next great head of revenue is Excise. In this there has been very little change for a good many years. Since 1865-66 the Excise revenue has never fallen below 2,200,000 *l.*, and has never exceeded 2,400,000 *l.* Considering that the constant tendency has been to increase the stringency of the Excise regulations, with the object of giving no encouragement to the spread of drinking, this is not unsatisfactory, and there is, at any rate, no apparent room for supposing that the revenue will diminish.

In regard to Customs, it is difficult, in consequence of changes in the amount of duty, to compare one period with another. For some years past the receipts have been about 2,600,000 *l.* a year, and they have not greatly varied. I should be sorry to anticipate any important increase under this head. I believe that our Customs tariff is in a very unsatisfactory state. I look forward with hope to seeing a more enlightened policy than that which has hitherto been followed, and trust that, when it can be afforded, we may obtain not only the abolition of all export duties, but a reduction of duty on all the great staples of the import trade. I cannot now go further into this subject, but I believe it to be one of great importance, and I annex to this paper the report of a speech made in the Legislative Council of the Governor General, by Major General R. Strachey, because I entirely agree with the views which it states, and think that the questions to which it refers have never received proper attention. They have a close connexion with the serious questions to which attention has been forcibly called by Mr. Fawcett, in commenting on the unfortunate results which India has to suffer in consequence of the great difference in the annual value of her exports and imports of useful commodities.

Regarding the salt revenue it is difficult to speak, because things are evidently in a transition state which cannot long continue. But there is no reason for supposing that the revenue will decrease. I believe myself that, with reduced duties in the greater part of India, we shall obtain hereafter from salt more revenue than we obtain now, and that at the same time the people will get a larger supply of salt at a cheaper rate.

The next great branch of revenue is that which has been the subject of more discussion than any other—opium. I shall not add another long disquisition to the volumes which have been written about it. I have given much attention to this subject for years past, and the more I learn, the more strong does my conviction become that there is no source of the Indian revenue regarding which there need be less anxiety, if only we treat it in a reasonable way. In spite, as I think, of frequent mistakes in the administration of the opium department, and frequent mischievous vacillations of policy, the opium revenue has gone on constantly and steadily increasing. The following figures show the gross revenue since 1859, and they speak for themselves :—

	£	Average of 3 years. £
1859--60	6,066,000	
1860--61	6,677,000	6,367,000
1861--62	6,359,000	
1862--63	8,055,000	
1863--64	6,832,000	7,416,000
1864--65	7,361,000	
1865--66	8,518,000	
1866--67 (11 months)	—	8,631,000
1867--68	8,924,000	
1868--69	8,453,000	
1869--70	7,952,000	
1871--72	8,054,000	8,420,000
1872--73	9,254,000	

Lord Mayo was, in my opinion, the first Governor General who laid down a thoroughly sound and safe policy for the management of the opium revenue. Its complete success has been delayed and interfered with by a most unfortunate and unprecedented recurrence of bad crops of the poppy, but this is only a temporary misfortune. I believe that our opium revenue runs one serious risk,

and one only. Many people have a strong feeling that the present system under which the Government manufactures and sells opium is morally wrong, and that it is a smaller crime to raise a revenue from opium by levying an Excise or Customs duty. I can understand the opinion, although I believe it to be entirely mistaken, that the British Government ought to prohibit and discourage, to the utmost of its power, the cultivation and exportation of a poisonous drug which is ruining millions of people in China. But to say that this despotic Government commits a more venial offence or no offence at all, if it takes from private parties a portion only of the profits derived from the growth and sale of opium, instead of taking the whole of the profits by establishing a monopoly, is to me unintelligible. If there be any moral difference at all, it is rather in favour of the monopoly, which probably leads to a smaller production of opium than would result from a freer system of trade. But, as I disbelieve that there is anything immoral in manufacturing and selling opium to the Chinese, either under one system or the other, I think that plan the best which yields the largest revenue. That this condition is fulfilled by the existing system in Bengal, and that we obtain by its means a far larger revenue than we could get in any other way, seems to me to be certain. Even if it were less certain it would, I think, be the height of folly to try new experiments, when we consider the magnitude of the interest at stake, and the ruinous results which might follow from a mistake. Our opium revenue now goes on steadily increasing at an average rate of almost half a million a year, and if we are wise we shall be satisfied. We have now in actual operation the two different systems on two sides of India; in Bengal, a Government monopoly; in Bombay an export duty of 600 rupees per chest. We know exactly the cost of producing opium in Bengal. The cost, including everything until the opium is brought to sale in Calcutta, has never reached 400 rupees per chest. For a good many years past, opium has seldom brought less than 1,200 rupees a chest. When it sells at this rate the Government makes a clear profit of at least 800 rupees a chest. The actual profit has generally been much higher, for I have over-estimated the cost of production and have under-stated the ordinary selling price. Taking into consideration the fact that the consistency of the Bombay opium is different from that of Bengal, we should get, under the Bombay system, 483 rupees profit per chest, instead of the actual profit of 800 rupees. It may be said that the duty of 600 rupees in Bombay might be raised to an amount which would give a profit as great as that which we get in Bengal. This can be maintained by no one conversant with the facts. There can be no doubt that if we were to raise the duty to 900 rupees a chest, we should destroy the trade altogether. If we tamper with our opium revenue, it is impossible to say what financial disasters may not fall upon us; if we leave well alone, I believe that there will be no real cause for anxiety for at least many years to come.

The other branches of the revenue are individually less important, but, judging from past experience, there seems no reason whatever to apprehend any falling off.

It is difficult to compare accurately and usefully the income of the Government in two different periods, because, not only have there been changes in the amount of taxation, and in the system of administration, but also in the way of making up the accounts. But, whatever allowance be made for such causes as these, it is impossible to doubt that there has been, during the last ten or twelve years, a large and substantial growth of the public income, quite independently of new taxation. It would have been strange had it been otherwise, considering the great increase which, during this period, has undoubtedly taken place in the wealth of the country, and of which we find ample evidence in the immense growth of trade, and the increase not only in the values but in the quantities of exports of the great staples of Indian production.

Looking to the other side of the account, there has been, as I have already noticed, a large reduction in the annual total expenditure. We now spend, apart from extraordinary charges, between three and four millions a year less than we spent five or six years ago. The public charges, which have been reduced by 2½ millions, can always be kept under control if the Government is determined that this shall be done. The military charges, which have already been reduced by three quarters of a million, will, I have no doubt, be reduced still further, and, now that attention has been seriously devoted to the subject, we may reasonably hope that the grave questions affecting the Staff Corps, which are now pending,

will

will receive a satisfactory solution. The growth, to any great extent, of charges for the principal branches of the ordinary civil administration, has been guarded against, for some time to come at least, by the system of provincial assignments. I have, however, not the slightest doubt that this system must be still further and largely extended, if we desire to make our civil administration more economical and efficient, and that it is essential to assign to the local governments not only a greater responsibility for controlling expenditure, but to assign to them also a share of certain branches of revenue. At the present time the local governments and their officers have, so to speak, no personal interest in the development of the revenues. It is necessary to give them this interest, and to give them at the same time an income which shall have a tendency to increase. They will then be relieved from the temptation to propose new schemes of local taxation to meet new charges. I shall not now go further into this question, but I am satisfied that it is of the very first importance. All the reasons which led to the adoption of the new system which has proved so beneficial apply with equal force to its further extension.

The most dangerous and doubtful part of our financial system remains to be noticed. I refer to the questions connected with the public debt, railways, and works of irrigation. On the treatment of these questions the future condition of the finances of India will in a great measure depend.

I believe it to be certain that, if we fail to exercise extreme caution in regard to borrowing money for works of public improvement, we shall run into serious difficulties, for I am convinced that the imposition of any large amount of fresh taxation in India is impossible without serious practical risk. That our canals and our State railways will ultimately pay, I do not doubt, but it must, as a general rule, be assumed that for a long time after construction the returns will not cover the charges incurred. The system of running into debt for these great works has been one of the greatest dangers of our Empire in India, and the danger is not only financial, but political. I hope that it has now past, but the utmost care is needed.

The only works for which we now borrow are railways and works of irrigation, but the borrowing for these two classes of works is justified on different grounds. There has been a good deal of misapprehension on this subject, and I wish therefore to refer to it.

It is often assumed that, in borrowing money for our State railways in India, we believe that they will be reproductive works, in the sense that they will directly pay the interest of the money expended on them. Although it may be hoped that this will ultimately turn out true, this is not at all the assumption on which the State railways are being constructed. Some of the lines, and notably those from Lahore to Peshawur, and down the Indus Valley, are being made for political reasons only, and it is hardly probable that, within any time to which we can now look forward, they will repay anything like the interest on the capital expended on them.

For a good many years past the net annual charge falling on the revenues of the State on account of railways has been not far short of 2,000,000 *l.* This includes all charges for purchase of land, Government supervision, and guaranteed interest, less the net traffic receipts. If no fresh lines had been undertaken in addition to those made or in progress under the old guaranteed companies, and if no addition had been made to the capital under those guarantees, this charge would have gone on diminishing as the traffic on the old lines increased, and the new lines were opened and began to give some return.

Early in 1869 the conclusion was arrived at by Lord Lawrence, and was afterwards adopted by Lord Mayo and by the Secretary of State, that the revenues might continue to contribute about 2,000,000 *l.* a year in the future, as they had done in the past, for the development of railway construction, and that the importance of this object was on all grounds so great that this charge would be fully justified. It was never professed that all the lines that were projected would certainly prove ultimately profitable; but it was considered that the Government might go on from time to time borrowing money for railway construction, provided that the condition were always fulfilled that the total annual charge on the revenue on account of railways, both those belonging to guaranteed companies and to the State, should never exceed 2,000,000 *l.*

But it is impossible to avoid the conclusion that increased caution is already called for in dealing with this class of outlay. The anticipated growth of income

of the old lines has not been realised; and additions to the capital under guarantee have gone on to such an extent that a strict adherence to the proposed policy may be rendered difficult, or be found incompatible with further railway extension. Recent events have demonstrated more clearly than ever that some of the greatest of the difficulties created by a drought are dependent on the want of improved communications, and it appears almost certain that, among the measures that will be looked upon as necessary for the protection of some parts of India, the construction of additional railways will form essential items, notwithstanding the financial difficulties which may arise in consequence.

It would, however, be beyond the scope of this paper to enter further on so large a question as is thus touched upon. I shall only add, that I feel assured that it is necessary to exercise the greatest watchfulness over this branch of our finances, not only in respect to the direct expenditure on new lines, but equally in relation to the economical working of both the old and new. Even of greater importance, perhaps, is attention to the conditions under which the State may exercise its powers, under the contracts with the companies, of purchasing the guaranteed railways, and may thus obtain the means of virtually extinguishing an amount of public debt not greatly differing from the whole amount of guaranteed capital, that is, about one hundred millions sterling. The bearing of these matters on the future condition of Indian finance has, I think, been too little considered.

The borrowing for works of irrigation is justified on different grounds from those that have been accepted in dealing with railways. In this case the assumption is that the returns from the works will not only cover the interest on the capital expended, but will ultimately repay the whole of the capital itself. Unless these conditions be fulfilled, it is held that the work ought not to be executed from the loan funds. Although I have no doubt that the assumptions thus made, as to the character of the bulk of the works thus put in hand, are correct, they are only correct with this serious proviso, that a long time will commonly elapse before the anticipated results are obtained. It has been proved by experience that under ordinary circumstances, and under the existing system, it takes many years before the direct money receipts from our great canals are sufficient to give a really remunerative return on the capital expended. For this reason, and because no such limit has been assigned to the maximum charge which is ever to be allowed to fall on the annual revenues on account of irrigation works, similar to the limit imposed in regard to the railways, the financial risk caused by the former class of works is, so far as the immediate, although not the more distant, future is concerned, greater than that caused by the latter. The risk is increased by the fact that, since works of irrigation afford in the majority of cases the only real security against scarcity and famine, not only is a strong pressure brought by public opinion for their extension, but the Government is compelled to undertake these works by the conviction that this is an absolute duty to the people, which must be performed whether the financial risk be great or not. The cost of the works which are now in progress, or the construction of which has been sanctioned, can hardly involve us in serious difficulties, but the necessity for protecting the country against famine is so great that it is impossible to say that we ought to be satisfied with the moderate rate of progress which is being made, or that our financial prospects need cause no anxiety. We are at this moment receiving, in the threatened famine in northern Bengal, a lamentable lesson as to the insufficient development of our protective irrigation works.

For my own part, I have no doubt that the proper principles on which we ought to deal with these questions are those upon which Lord Mayo always insisted. "We must establish," he said, in a speech in the Legislative Council, on the 31st March 1871, "a system of irrigation finance that will throw the "main burden for the repayment of the capital and interest expended on these "works upon the land which benefits by them. We must follow the same prin-"ciples which have been adopted by every country in the world in which similar "undertakings have been constructed. We must take such measures as will "oblige the people who are enriched, whose lives are preserved, and whose wealth "is augmented by these works, to contribute in a fair proportion to the cost of "their construction. We desire to individualise as much as possible each work, "in order that the public may be made fully aware of the terms under which it

is

" is constructed, its cost, and its returns. We desire to separate as much as " possible the finance of our reproductive operations from the ordinary finance of " the Empire. We have endeavoured to give effect to some of those principles in " the Canal Bill which is now before the Legislative Council, but which, I regret " to say, we have not altogether succeeded in making acceptable to the public. " I am surprised at the resistance with which our intentions in this respect have " been met. Everybody seems to desire irrigation, but many seem to desire that " somebody else should pay for it. But, as a matter of principle, the people of " Madras should not pay for the enrichment of the Punjab, nor the people of " Bengal for the irrigation of Sindh. Unless the Government is supported in " organising a system by which these works can be constructed without placing " further serious charges upon Imperial revenue, I greatly fear many of these " important operations may not be undertaken at all, or if they are undertaken, " they may run the risk of being stopped before they are finished. We wish to " make these works as self-supporting and as independent as possible; in fact, " to put them in such a position that, if war, famine, financial difficulty, or other " misfortune occurs, they will continue to progress, and go on to completion. " But if we continue, or rather attempt (for these works are only in their infancy) " to construct them on the system of mixing up their accounts with the ordinary " accounts of the Empire; if we think we can pay the interest of the capital " expended on them out of the revenues of the year, if we do not extend to their " finance generally the severest and most business-like principles, we shall pos- " sibly have in a few years to witness either financial difficulty or the stoppage " of some of these great and beneficial works."

Lord Mayo's views on this subject, and especially the proposals to levy, under certain circumstances, compulsory water rates on the land benefited by the construction of canals, have been often misunderstood and misrepresented. I am satisfied, for my part, that although they have not yet been carried into effect, they were thoroughly just and wise, and I believe that the time will come when the policy for which Lord Mayo so constantly contended will be generally accepted and adopted. The state of the case seems to me to be as follows:

Irrigation works are necessary in many parts of India, to save the people from destruction and ruin by famine. Security can be given in no other way. When canals are first made in a country where canal irrigation has not been commonly practised it takes a long time for the people to find out the advantages which they have gained. Their extreme ignorance is the main cause of this, as of every other failure to appreciate the value of improvement offered to them. From time immemorial they have used nothing but the water from heaven or from wells, and they are no more inclined to adopt a new system of irrigating their fields than they are inclined to send their children to school or to improve the sanitary condition of their villages and towns. In four out of five years the periodical rains are copious enough to give the people, if not all the crops that they desire, at any rate, sufficient food and the means of supporting themselves with some sort of comfort. During these four favourable years, when a canal has been newly opened, the people think very little about the canal water. Some of the more enterprising take it, and get rich upon it, but they are exceptions. In the fifth year there comes perhaps a failure of the rains, and the people suddenly find themselves on the brink of ruin and starvation. Then there is a rush for the water, and they find out its advantages. Some of them learn the lesson rightly, and take the water regularly in future. Others, when the pressure is over for the time, go back to their old habits until another failure of the rains occurs. Under our existing system, which leaves the cultivators absolutely free to take water or not as they please, this is the sort of process by which canal irrigation gradually progresses. Take, for example, the returns of the Ganges Canal for the last 20 years. In years of scarcity the irrigated area always takes a great stride forwards. In the following year it goes back again, but not to the old level. Half a dozen years of scarcity, distributed over a period of 30 or 40 years, give the necessary experience to everybody; every drop of water is at last utilised; the country is completely protected against famine, and the canal gives a good return on the money expended. After being for some 20 or 30 years a constant burden on the revenues of the Empire, this is what has at last come to pass with the Ganges Canal.

The same process is (as is acknowledged by the Governments of India and

Bengal, in a recent correspondence on the subject) now going on in Orissa, which, as we all know, suffered a few years ago from one of the most terrible famines of modern times. More than 1,000,000 *l.* has been spent on irrigation works, but, in spite of the frightful lesson that they have received, and although the price of the water has been fixed at an extremely low rate, the people will not take the water. "At present," Sir George Campbell writes, "the people "look on a water rate merely as a sort of insurance against a possible failure "of the rains, especially a failure at the end of the season; and they are "very unwilling to agree to pay heavy rates till at least the failure is actually on "them. If the year is a good or ordinary one, and there is no special failure "of the rains, they think they can do very well without irrigation."

Thus, while the people are slowly learning to appreciate the advantages of irrigation, the country remains imperfectly protected against famine, and, as the canals do not pay, the loss caused by the failure of the people to take the water must be borne by the taxpayers at large. It was this system which Lord Mayo declared to be altogether wrong.

It is obvious that, in a country exposed to the certainty of periodical drought, the construction of works of irrigation is an enormous benefit, whether the water is voluntarily taken or not. The water is provided, and is available in case of necessity. A perfect insurance against failure of the rains has been obtained. It is surely fairer that the people upon whom this benefit has been conferred should pay something for it, rather than that the obligation should be thrown on distant provinces which derive no benefit at all. I cannot conceive why works of irrigation, incomparably the most beneficial works which can be constructed, should be singled out as the sole works of local value for which the people immediately interested ought not to pay. Nobody thinks it a hardship that people should be made to pay something for their own schools and hospitals, for cleaning their own streets and drains, for the protection of their own property or persons from acts of violence or other injury, and for their own supply of drinking water. Why is it a hardship that a community should pay something for the water on which its very existence depends?

When a canal has been made, when we are in a position to say positively that we can give to a man water which, if he uses it, will increase every year the quantity and the value of the produce of his fields, and that we have provided him with a perfect insurance against the failure of the rains, and against ruin from that cause, it is entirely just to make that man contribute towards meeting the expenses of the work constructed for his benefit, whether he chooses to take the water or not. This was maintained by Lord Mayo, when it was proposed, in the Punjab Canal Bill, to authorise, under certain circumstances, the imposition of compulsory water rates. I can understand, although I may not accept, the argument that such rates are unnecessary, and that we shall do better without them; but the assertion that has been frequently made that they are essentially unjust, is to me quite unintelligible. I do not wish to discuss at length the details of the measures which were proposed. It is sufficient to say that Lord Mayo was convinced that it could never be necessary to impose more than a very light rate, so light, indeed, that it could hardly be felt, and that it would be easy for the Legislature to prescribe beforehand precautions which would render any excessive demands impossible. All that he wished was to obtain security that, after a canal was finished and in complete working order, a sum should be forthcoming sufficient to cover the difference between the income yielded by the canal and the amount required to pay the interest on the money borrowed for the works, and to provide for the gradual repayment of the capital. To fulfil these conditions, Lord Mayo considered that if the annual receipts, after the works had been finished for a reasonable time, were less than seven per cent., they should be made up to that amount by the imposition of a rate upon the land benefited.

Rates of this kind would not only render the financial position of our great irrigation works perfectly secure, but they might confidently be expected to produce another result still more valuable. Instead of the pressure to take water which is now brought to bear upon the cultivators by natural calamities, sometimes of a frightful character, a pressure would be exercised of a different kind. If the fact that water was available to irrigate his fields were brought home to a man by the demand for payment for the water, he would be far more

likely

likely to use it. If his neglect to use it damaged no one but himself, we might leave him alone. Unhappily, it damages the whole community, for it tends to defeat the primary object with which the canals are made, the protection of the country against famine.

It also deserves notice, that the power which Lord Mayo proposed to take of imposing water rates, under certain conditions, not only upon irrigated but on irrigable land, is virtually almost the same as that which is already possessed by every private landholder in Bengal, and in the greater part of Northern India in dealing with his own tenants. It has been ruled by the High Courts, both of Calcutta and of the North Western Provinces, that under the existing law tenants with rights of occupancy are liable to enhancement of their rent when the productive powers of their land have been increased by improvements made at the expense either of the landlord or of the Government. I quote the following remarks on this subject from a speech of my own. "The Government, the "chief landlord of the country, asks only for a power which private landlords "possess already. If the Government make a canal, and water becomes avail-"able for the irrigation of an estate, the private landlord may say to his tenant, "'Why, on account of your neglect, and of your bad husbandry, am I to suffer, "'and get from you only the rent of unirrigated land? Take the water, and "'increase the value of your holding, and pay to me in future a rent propor-"'tionate to the real value which the land now possesses, and equal to that "'which good tenants, your neighbours, who have availed themselves of the "'advantages offered to them to pay for similar land close by.' The Courts "would support the landlord in his perfectly reasonable demand. We now ask "the Legislature to acknowledge that the State possesses similar rights, and "that it may equitably demand to receive from those who are virtually its "tenants a similar return for the improvements by which it has permanently "increased the value of the land."

I shall only add, that while this question is an important one everywhere, it possesses a special importance in those parts of India where a permanent settlement of the land revenue has been made. In other Provinces we get sooner or later from our canals, not only a direct return in the shape of water rates, but when a new settlement is made, increased land revenue also. In the permanently settled provinces the latter resource is shut off.

At the present time we are constructing a great work, under conditions of this sort, in the northern districts of Bengal, some of which are now threatened with famine. The Soane Canal will cost 4,000,000 *l.*; and although the benefit conferred by it upon the country will be inestimable, I fear that, under the existing system, we shall see for many years to come the ignorance of the people frustrating the intentions with which it was undertaken, rendering incomplete the protection against famine, and throwing, at the same time, a heavy burden on the general taxpayers of India.

I have written on this subject more than I had proposed, but it possesses a special interest at the present moment, when a large tract of country is threatened with famine. The serious nature of the responsibility which rests upon the Government of India has perhaps never been placed in so strong and clear a light as it has been placed by the calamity which we fear may be now impending. Our duty to the people of India cannot properly be discharged unless we resolve to spare no efforts in giving to them, by the construction of works of irrigation, complete protection against the terrible dangers to which they are now too often exposed. I fear that, if we make no change in our system, we may find hereafter that the performance of this duty has brought us to a position of extreme financial difficulty. I cannot do better than close these remarks from the following quotation from one of Lord Mayo's speeches on the subject. "I have only," he said, "to repeat my belief, that if a strict, sound, "and straightforward system is pursued with regard to these works, they will "go on, be self-supporting, and will create no future difficulty for the Govern-"ment; but I believe at the same time, that if you endeavour to adopt the hap-"hazard principle by which there is to be any uncertainty as to your security "for these vast loans, and as to how and when, and by whom, such works are "to be paid for—if a system of scrambling finance is to be adopted with regard "to them—they will become a source of serious difficulty and much damage, "and that those who resist such wise and necessary precautions, and oppose "measures similar to this, though they may have the best intentions, are really

obstructing, hindering, and, possibly, endangering the future success of the most beneficent undertakings that any Government has ever promoted for the welfare of its people."

(signed) *John Strachey.*

Ravensdale,
6 February 1874.

ANNEXURE TO PAPER BY SIR JOHN STRACHEY ON INDIAN FINANCE.

SPEECH made in the Legislative Council of the Governor General of India, 31st March 1871, on the Tariff Bill, by Colonel *Richard Strachey*.

Colonel Strachey said—

MY Lord, I am unwilling to allow this Bill to pass without saying a few words regarding it. If I did not know that it was impossible for the Government to give up the revenue which it is proposed to raise under the Bill, I should have opposed it, at all events in part, for the same general reasons that have led me to vote for the measure just passed, namely, that I think there are certain descriptions of taxation which are essentially bad, as I think there are others that are equally good. Among taxes that I regard as essentially bad are export duties, and such duties we are asked to assent to by the present Bill.

And I have a special reason for desiring to draw the attention of the Council to this subject in a pointed manner. It is a misfortune which the form of the Government of this country almost necessarily imposes on us, that our administration is altogether conducted by a separate official class, without that most useful co-operation of the non-official classes, which is possible under other systems of Government. I do not, of course, undervalue the aid which is given to the Government by my honourable friend on my right, and other commercial gentlemen, who, from time to time, have sat in this Council; but, as we were reminded in very plain language a few days ago, this is not a House of Commons, and the Government is not carried on by this Council, but by the Executive Government; and my honourable friend, Mr. Bullen Smith, will, I am sure, agree with me in recognising the fact that a seat in this Council gives very little power of controlling the practical administration of the country, or of directing its policy.

I do not intend to give the Council a lecture on the art of government, and I do not propose to suggest any remedy for the difficulty I have stated. What I wish to do is, to draw attention to the fact that there is very much left to be done in the way of reforming the commercial taxation of India, and that it is a serious error, to which a Government constituted such as ours is will necessarily be prone, to exaggerate the relative importance of administrative reform, and to neglect what is really due to economical reform. I have no hesitation in declaring my own belief that in the last eight or ten years this has actually happened, and that the whole of the available resources of the State have been applied too exclusively to administrative improvements, in themselves no doubt valuable, but not more valuable, to say the least of it, than the other class of improvements to which I have referred. If, as I hope, the Government of India has, after recent events, resolved to do its utmost to check that incessant expansion of the civil administrative charges which I have lately discussed at some length, it will assuredly be its duty to regard the demand of an enlightened customs policy as amongst the very first objects to claim attention, when the natural further growth of the revenues permits it. If, then, I may venture to offer advice on such a subject, it would be that the first measure which the Government of India should seriously take up after a permanently healthy condition of the finances has been established, is the complete reform of the tariff, and the removal from it of the blots which so greatly disfigure it.

The worst of these blots no doubt are to be found in the export tariff. And I should perhaps explain to the Council why I have said that export duties are essentially bad, for no doubt those who first imposed them, and now retain them, thought and think better of them than I do. I regard it as an axiom in taxation that it shall, as far as possible, fall on the fund destined to supply consumption, and not on that which supplies production. An export duty necessarily

necessarily falls on the producers. To tax the export of rice is to do what is virtually equivalent to rendering the soil on which that rice was grown less productive. To tax the export of cotton goods manufactured in India is to do what in its result in no way differs from any material obstruction thrown in the way of such a manufacture. By the imposition of such taxes, the inducement to the production of the things taxed is reduced in India, and an additional stimulus is given to competition in other countries. It is of course true, that among export duties that is least noxious which is imposed on any article having a virtual monopoly in its markets. But, as a fact, all experience proves that nothing has such a monopoly. India can tell the tale of its saltpetre trade destroyed by export duties. Is India also to destroy its export rice trade? Will it stimulate to the utmost the production of other dyes to compete with its indigo? Will it drive its own sugar out of its own markets for the benefit of the Mauritius? Even in that commodity of which India apparently has the most important monopoly, opium, the competition of the local Chinese market is already beginning to be felt, and there are those who foretell the ultimate destruction of our export of this drug. Only to-day I have read of a commencement of opium production in the United States of America. But whatever is the immediate consequence of export duties in special cases, it is quite certain that the necessary tendency of the growth of knowledge, the spread of commerce, and the increase of competition, is to bring all producers more and more nearly to a level, and to reduce more and more the special advantages of any of them. Under such a competition, the law which has for other purposes been called a law of natural selection, will eventually destroy the industry which is weighted the heaviest, and export duties will thus constantly be tending to destroy the commerce of the country that imposes them.

The gross receipts from the export duties for the year 1870-71, reckoned from the actual accounts of the first eight months by adding one half, would be 528,000*l.* Of this, two articles, grain and seeds, paid 465,000*l.*, and all others 62,500*l.* Among these last have a place, by a refinement of barbarity, two of the very few manufactures of which India can boast. Cotton goods and leather pay 21,000*l.* together. Indigo, oils, lac, and spices, articles requiring either to be manufactured or specially dealt with, to fit them for the market, figure for 28,500*l.* I confess that I am at a loss to supply the arguments by which the retention of such duties can be justified in preference to refusing an infinite variety of petty administrative demands, among which I am quite content to class requirements for public buildings and such matters, which have been allowed to swallow up the money that, to my mind, would so vastly better have been applied to getting rid of these senseless and positively mischievous hinderances to the growth of the wealth of the country. The refusal to supply funds for the Godavery works and the Kurrachee Harbour, for instance, would have permitted of the abolition of all export duties except those on grain and seeds, and, if the choice had been left to me in such a matter, I should have had no sort of hesitation in taking off the duties. Of course I do not say that of all expenditure that might be stopped that which I have mentioned would be the best to select, but I accept the test of a practical application of my principles, and I have said where I could find a reduction which would suffice in the absence of any better.

I do not know that I should be disposed to agree with my honourable friends who have spoken of the grain duties as being those which most demand attention, though I fully assent to their condemnation of them absolutely. I regard that duty as the worst which is most in the nature of a class duty, and which at the same time is least productive. Now all these little productive export duties are essentially class duties and inflict special injury on a small body of persons employed in particular trades. Inasmuch as the rice duty falls on a large area it is less obnoxious and not more, and it partakes more of the character of a general tax on agriculture. I fear that the true reason we hear more of it than of other worse duties, is that it affects a greater number of influential persons who can complain, and not that it is really more obnoxious to censure.

And here I would say a word as to how bad a test of the character of a tax is mere absence of complaint. The sugar production of the North-West Provinces, to take an instance that has been lately referred to in this room, may be utterly strangled by export duties levied hundreds of miles away in the

Punjab, Central Provinces, and Rajpootana, of which the grower of the cane probably never even heard. And so it may readily be with all industry. The poison is absorbed into the system imperceptibly, and the victim dies without a struggle it is true, but not the less surely.

The sugar duties of which I have just spoken are without doubt the most discreditable relic of the dark ages of taxation that yet subsists in India. A 10 per cent. *ad valorem* duty is deliberately retained on the export of British sugar into Rajpootana, and into our own territories on the wrong side of the Customs line drawn across Northern India, by a Government which has for years past preached to the very States on whose borders this tax is levied the impropriety of doing this very thing which is justified in our own case, because it yields 120,000*l.* or 130,000*l.*, which it would be inconvenient to give up. I have rejoiced to hear the head of the Government say that he thinks this is among the matters first to be put to rights in any future revision of the public burdens, and I cannot see how there can be a difference of opinion on the subject. These sugar duties have been defended, by persons who should have known better, on the ground that no one complained of them. It shows a truly melancholy want of insight into or consideration of the action of such imposts on the part of those who supervise this part of the administration to find these duties in existence at the present day; and I trust that another year may not elapse before some step at least is taken towards extinguishing them.

And before I leave these export duties, let me ask why is it that the cotton goods manufactured on one side of the Hooghly are taxed, while the jute on the other goes free? Why does the cotton grown side by side with the indigo escape the duty which the other staple pays? The reply is obvious. The customers of the jute mills and the purchasers of the cotton live in England, and can make themselves heard, and have made themselves heard and feared. Here, for such reasons as I have mentioned, and in the absence of the natural defenders of the suffering interests from the Councils of the Government, the true principles of taxation have too long been neglected, for the sake of obtaining a revenue really insignificant in amount, and the necessity for which might quite easily have been avoided by proper firmness in refusing the expansion of expenditure.

But I fear that my Bill of indictment against the Customs duties does not end with the export tariff. As I before said, the true test of character of a Customs duty is, that it shall fall on consumers. Now, there are several items of the import tariff, and one an important one, that does not comply with this condition. The first on the list is metals. It is true that iron is taxed lightly at one per cent., but all other metals are taxed at 7½ per cent., and almost in all cases such metals are in truth used in manufactures, and are not in any true sense articles of consumption. Naval stores come under the same description, also hides, and paints and colours, and there may be others, which for the most part stand at 7½ per cent.

Railway materials, I need not say, come under the same condemnation, but this duty is yet more objectionable, for it is either paid by the Government in the form of guaranteed interest in case of materials used on an open line, or, if for a new line, it is charged to the capital account of the railway, and is converted into debt bearing interest at five per cent. for ever. Now that the Government is about to commence railway construction, the absurdity of this duty will perhaps become more obvious, and I hope that it will not make its appearance in another tariff. The aggregate of the five items which I have named is 225,000*l.*

Excluding these items, I find that the 10 largest amounts, of which the lowest is 15,000*l.*, yield together 1,444,000*l.*, and that all the rest, 39 in number, together give only 134,000*l.* The whole list comprises 54 items. I cannot consider that it is desirable to maintain such a tariff as this, several of the items of which do not produce 1,000*l.* Among the most miserable of the list are the two last additions to it, the mere mention of which will, I think, sufficiently indicate the spirit which has governed the commercial policy of the Government in late years, corals and lucifer matches.

Many of the items in the import tariff are, moreover, open to objection as being class taxes. Such are the duties which exclusively, or nearly exclusively, fall on the Europeans resident in India, and of these a long list might be enumerated. Although it would, no doubt, be indefensible to place Europeans

in

in a better position than the natives of the country in these matters, yet to do the converse is still more indefensible: and I consider that many of these duties press most unjustly on the class to which I belong, and I think that I should be neglecting my duty in this Council, and to that class, if I did not say it in perfectly plain terms. The European has at least as much claim to my sympathy in matters of taxation, as the sugar grower of Northern India, or the indigo grower of Bengal, or the cotton spinner of Bombay. In all these cases, I affirm, are grievances in the matter of taxation far more onerous than those of which we have, within the last few weeks, heard so much, and having this distinctive character that they are as real as the others were imaginary. And I may add that, for my own part, I should be glad to hear the voice of the House of Commons require the Government of India, if it were necessary, which I hope and believe indeed it will not be, to do what is necessary for the removal of evils such as I have mentioned in the interest of Great Britain, for she has a great interest in them, and may justly defend it, as well as in the interest of India itself.

I am, of course, quite aware that it is not possible in a summary way to take off these duties, and I am anxious not to be supposed to suggest such a course. But what I say is, that the first occasion should be taken to reduce the list, and to carry out the other reforms of which I have spoken; and that such an occasion can only be found by a resolute determination on the part of the financial administration that there shall be no addition to the expenditure which shall prevent these necessary fiscal reforms. A distinct and positive policy must be adopted and acted up to, or nothing in this direction will be possible. I am too well aware of the incessant and insiduous demands for money for mere administrative purposes, and I know the difficulty of resisting these demands, and I repeat, therefore, with special emphasis, what I believe to be the only rule of action that can lead to success.

Neither am I satisfied that even this amount of reform is all that we can fairly hope to see carried out. I go further still.

And in the first place; I reject entirely the doctrine that we do well to maintain a high rate of duty on the piece goods imports. Whether Manchester be selfish or not, and no doubt it has been loudly asserted, it is not for me to say; but this I know, that the men of Manchester gave England free trade, and understand the real requirements of commerce and progress vastly better than those statesmen who put export duties on such products as tea and coffee, and grain, as well as on the few manufactures India ever had, and who maintain transit duties in the heart of our own provinces to this very day. I say, then, that those who ask for a reduction of the duty on piece goods may at all events possibly, and to my mind actually, have a very substantial ground on which to base their argument, quite apart from mere personal interest, though no doubt this is one of the motives of those who object to high duties, and a motive which is a perfectly proper one.

The truth is, and it lies on the surface, that exports are best paid for by imports, and that if a fair return in the shape of imports is not taken, the export trade is carried on at a disadvantage. Everything which enlarges the consumption of imports, opens the way for a further production of exports. Now, obviously the best way of enlarging consumption is to reduce price, and even a very small fall of price may in a very important degree influence the total amount of trade. In the particular case of piece goods, moreover, every increase of consumption tends to add to the demand for the raw material, and thus in another way to stimulate Indian production.

And let me here further remark that it by no means follows that a duty is not mischievous because it only adds one, two, or three per cent, to the cost of goods. It is precisely these small amounts which in the end determine whether trade is possible or not; and in the present condition of commerce, with its vast extent and close competition, it is altogether erroneous to say that a duty is not important because the rate is low.

Nor does this finish my demands in behalf of the commerce of India. I do not affirm that it can at present be said to be within the limits of the practicable to make all the ports of India entirely free; but this is certain, that there is hardly any sacrifice of present administrative progress that I can conceive of that would not be a reasonable price to pay for the vast benefit of complete freedom of the export and import trade of India. The customs duties at the

present time are not of a magnitude to render this idea in any way chimerical. The whole amount at stake is about 2½ millions Of this there is some portion that it might reasonably be thought right to retain; and though I have no specific plan to propose, I should conceive that some system might be adopted by which a certain revenue could be obtained by stamps on the documents relating to the import and export of goods. So far as this were possible, it would reduce the sacrifice to be made. Now, if this amounted to two millions sterling, I can at once indicate a possible source for meeting it. When I placed before the Council a statement of the recent growth of the public expenditure, I also noticed that there had been a growth of the revenues in the last ten years of something like 3,900,000 *l.* after allowing for increase of charges of collection, but that of this amount 2,700,000 *l.* had been eaten up by growth of civil charge. Let the revenues then continue to increase as in the past, let reasonable attention be given to the due assessment of the land revenue, and the proper protection of the rights of the State to share in the profits derived from land in conformity with ancient usage and theoretical justice, and let the growth of civil charges be stopped for ten years, and the difficulty is removed. And without taking any extreme view, it seems to me quite reasonable to look forward to such a growth of the revenues as shall render possible, if not such a complete adoption of free trade as I myself would advocate, at all events a fair approach to it.

I need not speculate on the probable results of such a policy, if carried out; but I may point to the wonderful effects of the adoption of a modified form of free trade by England, and say that it seems to me certain that the greatest benefit would be obtained by following a like course in India.

I should perhaps mention that the suggestion that I have put forward of a possible complete or almost complete abolition of customs duties in India is not due to me. It originated, so far as I am concerned, with Mr. Robert Knight, a gentleman to whom the best interests of Indian finance and commerce are much indebted. If in some particulars I do not adopt his views, yet it is a simple act of justice to bear testimony to the value of one of the few real critics to whom the Indian administration can look for assistance in the onerous task that rests upon it.

In conclusion, I will only further observe that I look forward to the action of the newly constituted Department of Agriculture and Commerce as likely to be of the greatest service in giving effect to such modifications in our commercial taxation as the further consideration of this important matter may show to be desirable. In support of this expectation, I will read a portion of the Despatch of the Government of India to the Secretary of State, proposing the constitution of the Department of Agriculture and Commerce:—

"We are convinced that if there had been a department, the special business "of which was to make itself thoroughly acquainted with all facts of importance "regarding the commercial transactions of India, to observe intelligently the "operations of external and internal trade, and to watch the effect produced "upon the commerce of the country by our fiscal system, our legislation would "have been very different from what it has actually been. If such a depart- "ment had existed, we doubt whether the export duties which we now levy on "some of the main staples of agricultural produce, and even on articles of "Indian manufacture, could have been imposed or maintained. If such a de- "partment had existed, it could never have tolerated the continuance of duties "such as those which are still levied on sugar exported from the North-West "Provinces across the Inland Customs line. Those duties are transit duties of "the worst description, levied on one of the most important articles of agricul- "tural produce in Northern India."

After such an expression of opinion on the part of the Government of India, I confidently hope that the very important questions to which I have called the attention of the Council will receive the attention they deserve, and in a spirit conformable to the suggestions I have ventured to make.

EAST INDIA (FINANCE).

COPY of a PAPER entitled "OBSERVATIONS on some Questions of INDIAN FINANCE, by Sir *John Strachey*, K.C.S.I."

(*Mr. Grant Duff.*)

Ordered, by The House of Commons, *to be Printed*, 24 *July* 1874.

REPORT

FROM THE

SELECT COMMITTEE

ON

EAST INDIA FINANCE;

WITH THE

PROCEEDINGS OF THE COMMITTEE.

Ordered, by The House of Commons, *to be Printed*,
28 *July* 1874.

Monday, 20*th April* 1874.

Ordered, THAT a Select Committee be appointed to inquire into Charges payable in this Country for which the Revenues of India are liable.

Ordered, THAT the Committee do consist of Seventeen Members, viz:—

Mr. Stephen Cave.
Mr. Grant Duff.
Mr. Beckett Denison.
Mr. Stanley.
Mr. Massey.
Sir Thomas Bazley.
Mr. Birley.
Sir George Balfour.
Sir Seymour Fitzgerald.
Sir Henry Havelock.
Mr. Onslow.
Lord Edmond Fitzmaurice.
Mr. Eustace Smith.
Lord George Hamilton.
Mr. Sampson Lloyd.
*Mr. Dickinson.
Sir James Elphinstone.

* Void Election, 8 May 1874.

Ordered, THAT the Committee have power to send for Persons, Papers, and Records.

Ordered, THAT Five be the Quorum of the Committee.

Thursday, 30*th April* 1874.

Ordered, THAT the Select Committee on East India Finance do consist of Twenty-one Members.

Ordered, THAT Mr. Fawcett, Mr. Campbell-Bannerman, Mr. Dalrymple, Mr. Balfour, and Mr. Dunbar be added to the Committee.

Tuesday, 28*th July* 1874.

Ordered, THAT the Committee have power to report their Observations, together with the Minutes of Evidence taken before them, to The House.

PROCEEDINGS OF THE COMMITTEE - - - - - - p. vi

REPORT.

THE SELECT COMMITTEE appointed to inquire into CHARGES payable in this Country for which the REVENUES of INDIA are liable;——HAVE considered the matters to them referred, and have agreed to the following REPORT:—

THE inquiry into the charges payable in this country for which the revenues of India are liable may be divided into two distinct heads:

First, assuming that no expenditure of the Indian revenue is to take place except for the purposes of India, whether India should contribute to establishments such as Zanzibar, to political agencies in China and Persia, to wars such as the Chinese, Persian, and Abyssinian, to hospitals and asylums in England, to telegraph and postal services, and whether she should pay the whole expense of the India Office, and contribute to the expense of other departments of State in this country.

Secondly, granting that India ought to pay for that portion of the British army which is stationed in India, together with the necessary stores and transport, the expense of recruiting and depôts in this country; and to contribute to that portion of Her Majesty's navy which is employed in the Indian Seas, to guaranteed railways and other public works which have been either purchased or assisted by the Secretary of State in Council, and the interest of which is payable in this country, whether she is called upon to pay more than her due share of such charges; and whether the charges themselves are fixed with a due regard to economy. The first is clearly a wide and somewhat speculative question of policy; the second a matter of detail and of account.

The late period at which your Committee were appointed has rendered it necessary that in order to report during the present Session, they should restrict their inquiry within the limits of a part only, though the most important part, of the second of these two heads, that, namely, which relates to military expenditure. This will also be found to divide itself into two questions. First, whether the India Office is able to obtain from the other departments of the State due consideration for Indian interests. Secondly, whether the views of the Government of India in India is sufficiently consulted by the India Office itself.

Your Committee have made a careful inquiry into these points. They have had the benefit of the evidence taken before the Committee on Indian Finance which sat during the last three Sessions of the late Parliament. They have also had before them, among other documents to be found in the Appendix to their Report, the proceedings of a Committee appointed by the Secretaries of State for War and for India, "to make arrangements for adjusting from the 1st April 1869 the charges for effective services of Her Majesty's regiments on the East India Establishment, on the principle of actual charges," together with an unfinished correspondence between the two departments in which the several matters in dispute between them are clearly and strongly set forth.

They have moreover had the advantage of examining, in addition to some of the principal permanent officials of both departments, His Royal Highness the Field Marshal Commanding in Chief; the late Secretary of State for War,

Viscount Cardwell; the present Secretary of State for India, the Marquis of Salisbury, and other high authorities.

From these witnesses very valuable evidence has been received in reference to the general principles on which these charges are and ought to be made, as well as upon the various items of which the sums total are made up.

Your Committee have received an impression from these sources that charges have in some instances been imposed upon India which ought to have been borne by England. Your Committee have, however, been assured by various witnesses that a very general desire prevails among the different English departments not to throw any charge upon India improperly. Your Committee cannot too strongly insist on the importance of securing for India strict impartiality in all her financial arrangements with this country, and they agree in the opinion which was very emphatically expressed by the Marquis of Salisbury, that the most effectual way of securing financial justice for India is for the House of Commons to be constantly watchful on her behalf.

Your Committee cannot lay down too strongly the position, that the English estimates ought not to be relieved at the expense of the Indian revenues, but that the Secretary of State for India in Council has the constitutional right of refusing to pay for objects in which he considers that India has no interest. At the same time India, as a component part of the Empire, must be prepared to share in the cost of a system the expense of which may be enhanced for Imperial purposes.

Your Committee have found that there has been and is considerable difference of opinion between the two great departments which conduct the military and Indian affairs of the Empire, both generally as to the proportion of the charges which ought to be borne by India, and in particular with respect to the items which should be taken into account.

It has been attempted to settle these differences by means of a Committee composed of permanent officers of these two departments; but although the labours of this Committee have resulted in presenting the points of difference in a clear light, yet no agreement has been finally arrived at. Your Committee have been informed that, with a view to settle these differences, an independent authority is to be added to the Departmental Committee, for the purpose of bringing the questions thus stated to some satisfactory solution. Your Committee have been informed, in the course of their inquiry, that steps have been taken to supply this obvious want, and that the Government have secured the co-operation of Mr. Bouverie, a former Member of your House, as President of this Committee. Your Committee hope that the deliberations of this Committee will assist the heads of the English departments and the Secretary of State for India to come to conclusions upon the charges in dispute, satisfactory both to England and to India.

Your Committee suggest, that in the interval before next Session the Departmental Committee should, under the supervision of the President, continue the inquiries into all the details of charges which are now incurred by the War Office on behalf of Indian interests, and for which charges Indian interests are considered liable. Your Committee would indicate some of the heads which appear to need special investigation, such as the strength of depôts, and the ranks composing these depôts, and whether recruits are sent to India with much less training than the agreed on period. Your Committee would also urge a further investigation into all the items of charge making up the total cost of recruits, especially with regard to the large addition of one-third to the cost for deaths, desertions, &c. Your Committee would also advise an inquiry into the mode of adjusting claims of the War Office against Indian revenues arising subsequently to the 31st of March 1872, there being no arrangement as yet fixed on as to the final adjustment of charges for effective services. Your Committee would also advise an inquiry into the arrangements for adjusting the non-effective charges, and whether the retiring pay, pensions, and other charges of this nature should be adjusted by the contribution of a lump sum, or whether the actual charges for pensions based on the actual service rendered to the Imperial and Indian Governments should be followed for settling these claims.

It would be impossible for your Committee to pronounce an opinion of any value upon these details, especially at a time when so much of our military policy is new and scarcely tried, and must for some years to come be more or less tentative. They would, however, suggest that the payments from India should be as much as possible in the form of fixed rates for particular charges, for the obvious purpose of avoiding frequent re-opening of accounts, the delays in settling claims which have led to the serious evil of the accounts having been presented to Parliament without certificate from the Auditor that the payments have been allowed, as well as the inconvenience which might arise from any sudden change of policy in either Administration. They think that such sums should be, in the first instance, arrived at by careful computation; but that when once fixed they should continue without alteration for as many years as may be deemed advisable. This same method of adjustment would obviously apply to similar differences between the India Office and other Departments, such as the Admiralty, with whom a question was for some time pending in reference to transports. As, however, your Committee have been informed that this question has been satisfactorily settled, and as copious evidence was taken on the subject by the India Finance Committee of former Sessions, your Committee have not thought it necessary to go more fully into this matter.

Your Committee would remark that, while there appears to be every disposition among the heads of other Departments to consult the India Office upon proposed changes which may affect India, yet this has sometimes been omitted, in consequence of the fact that India may be affected by such changes having been overlooked; and the India Office, as the controlling authority, has occasionally acted independently of, or not in accord with, the opinions of the Government of India in India. In reference to these points, your Committee suggest that although the interests of India must be subordinate, like those of any other portion of the Empire, to the common interests of the Empire as a whole, and that although the best information upon almost every subject connected with India may be generally obtained in this country, yet that even the appearance of neglect may be misunderstood and magnified by the natives of India, some of whom take the most intense interest in the minutest details of the policy adopted by this country towards its Indian possessions, and attach perhaps exaggerated importance to points which may pass unobserved by those who have to perform the arduous task of governing a vast and varied Empire.

In conclusion, your Committee would suggest that, as they have not had time to investigate the various Home charges which are not connected with military expenditure, they should be re-appointed next Session. As much evidence was taken in reference to these charges by the India Finance Committee, which sat during the three previous Sessions, it is probable that the inquiry might be completed within a reasonable period.

28 *July* 1874.

PROCEEDINGS OF THE COMMITTEE.

Friday, 28th April 1874.

MEMBERS PRESENT:

Sir James Elphinstone.
Lord George Hamilton.
Sir George Balfour.
Mr. Massey.
Mr. Stanley.
Lord Edmond Fitzmaurice.
Mr. Stephen Cave.
Mr. Sampson Lloyd.
Mr. Onslow.
Mr. Birley.
Sir Seymour Fitzgerald
Sir Henry Havelock.
Mr. Eustace Smith.

Mr. CAVE was called to the Chair.

The Committee deliberated.

[Adjourned till Tuesday, 12th May, at Half-past Twelve o'clock.

Tuesday, 12th May 1874.

MEMBERS PRESENT:

The Right Hon. STEPHEN CAVE in the Chair.

Mr. Sampson Lloyd.
Mr. Dunbar.
Mr. Birley.
Mr. Stanley.
Lord George Hamilton.
Sir Thomas Bazley.
Mr. Campbell-Bannerman.
Mr. Dalrymple.
Lord Edmond Fitzmaurice.
Sir George Balfour.
Mr. Eustace Smith.
Sir Henry Havelock.
Mr. Onslow.
Mr. Fawcett.
Mr. James Elphinstone.
Mr. Balfour.
Mr. Beckett Denison.

Messrs. *Milton, Day,* and *Knox,* were severally examined.

[Adjourned till Friday next, at Half-past Twelve o'clock.

Friday, 15th May 1874.

MEMBERS PRESENT:

The Right Hon. STEPHEN CAVE in the Chair.

Sir Seymour Fitzgerald.
Sir George Balfour.
Sir Henry Havelock.
Lord George Hamilton.
Mr. Sampson Lloyd.
Mr. Onslow.
Mr. Dalrymple.
Mr. Balfour.
Mr. Dunbar.
Mr. Campbell-Bannerman.
Mr. Fawcett.
Mr. Eustace Smith.
Lord Edmond Fitzmaurice.
Mr. Stanley.
Mr. Beckett Denison.
Mr. Birley.
Mr. Massey.

Messrs. *Milton, Day,* and *Knox,* were severally examined.

[Adjourned till Tuesday, 2nd June, at Half-past Twelve o'clock.

Friday, 5th June 1874.

MEMBERS PRESENT:

The Right Hon. STEPHEN CAVE in the Chair.

Mr. Sampson Lloyd.
Mr. Campbell-Bannerman.
Mr. Onslow.
Mr. Fawcett.
Sir George Balfour.
Mr. Stanley.
Sir Henry Havelock.
Lord George Hamilton.
Mr. Eustace Smith.
Sir Thomas Bazley.
Lord Edmond Fitzmaurice.
Mr. Dunbar.
Mr. Balfour.
Mr. Dalrymple.

Sir *T. Pears* was examined.

[Adjourned till Tuesday next, at Half-past Twelve o'clock.

Tuesday, 9th June 1874.

MEMBERS PRESENT:

The Right Hon. STEPHEN CAVE in the Chair.

Lord George Hamilton.
Sir Thomas Bazley.
Mr. Dunbar.
Sir Henry Havelock.
Mr. Stanley.
Mr. Birley.
Mr. Campbell-Bannerman.
Mr. Onslow.
Lord Edmond Fitzmaurice.
Sir George Balfour.
Mr. Sampson Lloyd.
Mr. Balfour.
Mr. Fawcett.
Mr. Dalrymple.
Mr. Eustace Smith.

The Lord *Sandhurst*, attending by permission of the House of Lords, was examined.

[Adjourned till Friday next, at Half-past Twelve o'clock.

Friday, 12th June 1874.

MEMBERS PRESENT:

The Right Hon. STEPHEN CAVE in the Chair.

Sir Thomas Bazley.
Lord Edmond Fitzmaurice.
Mr. Dalrymple.

Mr. Campbell-Bannerman.
Mr. Stanley.
Lord George Hamilton.
Sir George Balfour.
Mr. Fawcett.
Sir Henry Havelock.
Mr. Onslow.
Mr. Balfour.
Mr. Birley.
Mr. Massey.
Mr. Beckett Denison.

Sir *Thomas Pears* and The Viscount *Cardwell*, attending by permission of the House of Lords, were examined.

[Adjourned till Tuesday next, at Half-past Twelve o'clock.

Tuesday, 16*th June* 1874.

MEMBERS PRESENT:

The Right Hon. STEPHEN CAVE in the Chair.

Sir Thomas Bazley.	Mr. Fawcett.
Lord Edmond Fitzmaurice.	Mr. Grant Duff.
Mr. Sampson Lloyd.	Mr. Dunbar.
Mr. Eustace Smith.	Mr. Campbell-Bannerman.
Sir Henry Havelock.	Mr. Dalrymple.
Mr. Stanley.	Lord George Hamilton.
Sir George Balfour.	Mr. Balfour.

Sir *W. Muir* was examined.

[Adjourned till Friday next, at Half-past Twelve o'clock.

Friday, 19*th June* 1874.

MEMBERS PRESENT:

The Right Hon. STEPHEN CAVE in the Chair.

Mr. Dunbar.	Mr. Sampson Lloyd.
Lord George Hamilton.	Mr. Onslow.
Mr. Eustace Smith.	Mr. Birley.
Mr. Fawcett.	Sir Henry Havelock.
Sir George Balfour.	Mr. Dalrymple.
Mr. Campbell-Bannerman.	

The Lord *Cardwell* was further examined.

[Adjourned till Tuesday next, at Half-past Twelve o'clock.

Tuesday, 23*rd June* 1874.

MEMBERS PRESENT:

The Right Hon. STEPHEN CAVE in the Chair.

Mr. Dalrymple.	Sir Seymour Fitzgerald.
Lord Edmond Fitzmaurice.	Lord George Hamilton.
Mr. Dunbar.	Mr. Stanley.
Mr. Sampson Lloyd.	Sir George Balfour.
Mr. Eustace Smith.	Mr. Fawcett.
Sir Henry Havelock.	Mr. Onslow.
Mr. Campbell-Bannerman.	Mr. Balfour.

H. R. H. the Duke of *Cambridge*, attending by permission of the House of Lords, was examined.

Friday, 26th June 1874.

MEMBERS PRESENT:

The Right Hon. STEPHEN CAVE in the Chair.

Lord George Hamilton.	Mr. Onslow.
Sir George Balfour.	Mr. Beckett Denison.
Mr. Fawcett.	Mr. Stanley.
Sir Thomas Bazley.	Mr. Sampson Lloyd.
Sir Henry Havelock.	Mr. Birley.
Mr. Eustace Smith.	Mr. Campbell-Bannerman.
Mr. Dunbar.	Mr. Dalrymple.

The Marquis of *Salisbury*, attending by permission of the House of Lords, and Sir *George Balfour* (a Member of the Committee), were severally examined.

[Adjourned till Tuesday next, at Half-past Twelve o'clock.

Tuesday, 30th June 1874.

MEMBERS PRESENT:

The Right Hon. STEPHEN CAVE in the Chair.

Mr. Sampson Lloyd.	Sir George Balfour.
Mr. Campbell-Bannerman.	Mr. Birley.

Mr. Sampson Lloyd.	Mr. Onslow.
Lord Edmond Fitzmaurice.	Sir Seymour Fitzgerald.
Sir George Balfour.	Mr. Balfour.
Mr. Fawcett.	Mr. Beckett Denison.
Sir James Elphinstone.	Mr. Birley.

DRAFT REPORT, proposed by the *Chairman*, read the first time, as follows:—

"1. THE inquiry into the charges payable in this country for which the revenues of India are liable, seems to be divided into two distinct branches. First, namely, whether, on the assumption that no expenditure of the Indian revenue is to take place, except for the purposes of India, India should pay for Imperial establishments, such as political agencies in China and Persia, at Aden and Zanzibar; for wars, such as the Abyssinian, for departments of State, for hospitals and asylums in England, for pensions and furloughs. Secondly, granting that India ought to pay for that portion of the British army which is stationed in India, together with the necessary stores and transport, the expense of recruiting and depôts in this country; and again, for that part of Her Majesty's navy which is employed in the Indian seas, for telegraph and postal services, and for railways and other public works, the guaranteed interest of which is paid in this country; whether she is compelled to pay more than her due share of such charges; and whether the charges themselves are fixed with due regard to economy. The first is clearly a wide and somewhat speculative question of policy, the second a matter of detail and of account.

"2. The late period at which your Committee was appointed has rendered it necessary that in order to report during the present Session they should restrict their inquiry within the limits of a part only, though the most important part of the second of these two propositions, that, namely, which relates to military expenditure. This will also be found to divide itself into two parts; first, whether the India Office has the power of obtaining justice for India from the other departments of the State; secondly, whether India is sufficiently considered by the India Office itself.

"3. Your Committee have met, and have made a careful inquiry into these points. They have had the benefit of the evidence taken before the Committee on Indian Finance which sat during the last three Sessions of the late Parliament. They have also had before them, among other documents to be found in the Appendix to their Report, the proceedings of a Committee appointed by the Secretaries of State for War and for India, to make arrangements for adjusting the charges for the effective services of Her Majesty's troops on the East India Establishment, together with an unfinished correspondence between the two departments in which the several matters in dispute between them are clearly and strongly set forth.

"4. They have also had the advantage of examining, in addition to some of the principal permanent officials of both departments, His Royal Highness the Field Marshal Commanding in Chief; the late Secretary of State for War, Viscount Cardwell; the present Secretary of State for India, the Marquis of Salisbury, and other high authorities.

"5. From these witnesses very valuable evidence has been received in reference to the general principles on which these charges are and ought to be made, as well as upon the various items of which the sums total are made up.

"6. Your Committee have received a general impression from these various sources that, although India has occasionally been hardly dealt with, and that both the India Office has found it difficult to defend itself against the encroachments of other departments, and that India has not always been sufficiently considered by the India Office itself, this is true only in reference to past years, and that there is now no desire, in the language of one of the witnesses before the former Committee, to sacrifice India to the exigencies of English Estimates, or to the wishes of the Horse Guards; but, on the other hand, a ready concurrence on all sides that India ought not to pay beyond her due proportion. They have, however, found a considerable difference of opinion both generally as to what that due proportion is, as well as in particular with respect to the items which should be taken into account.

"7. Your Committee has considered it unnecessary to revert to what is now mere matter of history, and they would, therefore, confine themselves to a suggestion of the principles on which these charges should be made, and to a recommendation of means by which disputed items between the different departments of State may be in future adjusted.

"8. Your Committee cannot lay down too strongly the position, that India should never be sacrificed to the desire for economical budgets in England, but that the Secretary of State for India in Council has the constitutional right of refusing to pay for objects in which he considers that India has no interest. At the same time, India as a component part of the Empire, must be prepared to share in the cost of a system, the expense of which may be enhanced for Imperial purposes.

"9. Your Committee cannot admit a parallel drawn between India and the self-governing Colonies of the Anglo-Saxon race. It is obvious that such Colonies are in a totally different position in every way; and that they would in case of war within their own territory have to make far greater sacrifices than India has, under similar circumstances, been called upon to do.

"10. It

"10. It is well known that Canada, even in time of peace, has raised, entirely from her own resources, a militia of 40,000 men, and a reserve of 300,000. It should also be remembered that these Colonies maintain for themselves that inestimable benefit of order and security which India owes entirely to England, and which she would almost certainly lose if English supremacy were overthrown, and that in those colonies which, like Ceylon, repay the British Exchequer for troops, the payment is fully as great as that exacted from India: while, therefore, India must be content to bear her share of Imperial expenditure, it is important that she should feel that her proportion is fixed with due regard to justice, and even, considering the circumstances of the two countries, with liberality.

"11. It is natural that there should be frequent differences of opinion as to matters of detail and of account between the two great departments which conduct the military and Indian affairs of the Empire.

"12. It has been attempted to settle these differences by means of a committee composed of the permanent officers of these two departments; but although the labours of this Committee have resulted in presenting the points of difference in a clear light, yet, as might have been expected from the nature of things, no agreement has been arrived at. It is necessary, therefore, that there should be an independent arbitrator who can bring the questions thus stated to some satisfactory conclusion. Your Committee have been informed, in the course of their inquiry, that steps have been taken to supply this obvious want, and that the Government have been fortunate enough to secure the co-operation of a former Member of your House, who cannot fail to command the confidence of the departments and the country.

"13. Your Committee cannot recommend any better plan; it would be impossible for them to pronounce an opinion of any value upon these details, especially at a time when so much of our military policy is new and scarcely tried, and must for some years to come be more or less tentative. They would, however, suggest that the payments from India should be as much as possible in the form of lump sums, for the obvious purpose of avoiding frequent reopening of and haggling over accounts, as well as the inconvenience which might arise from any sudden change of policy in either Administration. They think that such sums should be, in the first instance, arrived at by careful computation; but that when once fixed, they should continue without alteration for as many years as may be deemed advisable. This same method of adjustment would obviously apply to similar differences between the India Office and other departments, such as the Admiralty, with whom a question was for some time pending in reference to transports. As, however, your Committee have been informed that this question has been satisfactorily settled, and as copious evidence was taken on the subject by the India Finance Committee of former Sessions, your Committee has not thought it necessary to go more fully into this matter.

"14. In conclusion, your Committee would venture to remark that, while there appears to be no indisposition among the heads of other departments to consult the India Office upon proposed changes which may affect India, yet that sometimes this has been omitted, in consequence of the fact that India may be affected by such changes having been overlooked. Again, that while there can be no pretence for saying that the interests of India have been neglected at the India Office, there seems sometimes a disposition to act without notice to, or consultation with, the authorities in India itself. In reference to these points, your Committee venture to suggest, with great deference, that although, as they have already said, the interests of India must be subordinate to those of the Empire, and that although the best information upon almost every subject connected wth India may be generally obtained in this country, yet that this seeming neglect is apt to be misunderstood by the natives of India, who are rapidly advancing in education and intelligence, and who take the most intense interest in the minutest details of the policy adopted by this country towards its Indian possessions, and attach perhaps exaggerated importance to points which may pass unobserved by those who have to perform the arduous task of governing a vast and varied Empire."

MOTION made, and Question, That this Report be now read a second time, and considered, paragraph by paragraph,—put, and *agreed to.*

Paragraph 1, amended, and *agreed to.*

Paragraph 2.—Amendment proposed to leave out from the word "The" to the end of the paragraph, in order to add the words "Committee have had the benefit of the evidence taken before the Committee on Indian Finance, which sat during the last three Sessions of the late Parliament. Owing to the majority of the points to which the attention of your Committee has been directed, having been already examined by that Committee, they have confined the evidence taken in the present year to the question of the Home military expenditure, as between the War Office and the India Office in England —

(Lord *Edmond Fitzmaurice*),—instead thereof,—Question, That the words "late period" stand part of the paragraph.—The Committee divided:

Ayes, 11.	Noes, 4.
Mr. Dalrymple.	Mr. Balfour.
Mr. Dunbar.	Lord Edmond Fitzmaurice.
Mr. Sampson Lloyd.	Mr. Eustace Smith.
Sir Henry Havelock.	Mr. Fawcett.
Mr. Campbell-Bannerman.	
Mr. Grant Duff.	
Lord George Hamilton.	
Mr. Stanley.	
Mr. Birley.	
Mr. Beckett Denison.	
Sir Seymour Fitzgerald.	

Other amendments made.

Paragraph, as amended, *agreed to.*

[Adjourned till Wednesday next, at Half-past One o'clock.

Wednesday, 22nd July 1874.

MEMBERS PRESENT:

The Right Hon. STEPHEN CAVE in the Chair.

Sir Seymour Fitzgerald.	Mr. Beckett Denison.
Mr. Stanley.	Mr. Onslow.
Lord George Hamilton.	Mr. Sampson Lloyd.
Mr. Campbell-Bannerman.	Sir James Elphinstone.
Mr. Grant Duff.	Mr. Fawcett.
Sir George Balfour.	Sir Henry Havelock.
Mr. Birley.	Mr. Eustace Smith.
Lord Edmond Fitzmaurice.	Mr. Balfour.

Paragraphs 3—5, *agreed to.*

Paragraph 6.—Amendment proposed to leave out from the words "Your Committee," to the end of the paragraph, in order to add the words, "have come to the conclusion that charges have often been unjustly thrown on India which ought to have been borne by England, and that, in the language of one of the official witnesses examined, Indian finance has been frequently sacrificed to the wishes of the Horse Guards and to the exigencies of English Estimates. Your Committee, have, however, been assured by various witnesses that a very general desire now prevails among the various English departments not in the future improperly to throw any charge upon India. Your Committee cannot too strongly insist on the importance of securing for India strict justice in all her financial arrangements with this country, and agree in the opinion which was very emphatically expressed by the Marquis of Salisbury, that the most effectual way of securing justice for India is for the House of Commons to be constantly watchful on her behalf, and for the English people so generally to recognise the duty they owe to India, that a Government would know that inattention to the affairs of India would be commented upon in Parliament, and an attempt to treat her with injustice would meet with disapproval"—(Mr. *Fawcett*),—instead thereof.—Question put, That the words "have received," stand part of the paragraph.—The Committee divided:

Ayes, 10.	Noes, 6.
Mr. Beckett Denison.	Sir George Balfour.
Mr. Balfour.	Lord Edmond Fitzmaurice.
Sir Henry Havelock.	Mr. Birley.
Sir James Elphinstone.	Mr. Eustace Smith.
Mr. Sampson Lloyd.	Mr. Fawcett.
Sir Seymour Fitzgerald.	Mr. Onslow.
Mr. Campbell-Bannerman.	
Mr. Grant Duff.	
Lord George Hamilton.	
Mr. Stanley.	

Another

Another Amendment proposed, to leave out from the words "sources that," in line 2, to the end of the paragraph, in order to add the words "charges have in some instances been thrown on India which ought to have been borne by England. Your Committee have, however, been assured by various witnesses that a very general desire prevails among the various English departments not to throw any charge upon India improperly. Your Committee cannot too strongly insist on the importance of securing for India strict impartiality in all the financial arrangements with this country, and agree in the opinion which was very emphatically expressed by the Marquis of Salisbury, that the most effectual way of securing financial justice for India, is for the House of Commons to be constantly watchful on her behalf"—(Lord *Edmond Fitzmaurice*),—instead thereof.—Question put, That the words proposed to be left out stand part of the paragraph.—The Committee divided:

Ayes, 4.	Noes, 11.
Sir James Elphinstone.	Mr. Onslow.
Mr. Campbell-Bannerman.	Mr. Beckett Denison.
Mr. Grant Duff.	Mr. Balfour.
Mr. Stanley.	Sir Henry Havelock.
	Sir Seymour Fitzgerald.
	Lord George Hamilton.
	Sir George Balfour.
	Mr. Fawcett.
	Lord Edmond Fitzmaurice.
	Mr. Birley.
	Mr. Eustace Smith.

Question put, That the proposed words be there added.—The Committee divided:

Ayes, 10.	Noes, 6.
Mr. Onslow.	Sir Henry Havelock.
Mr. Beckett Denison.	Sir James Elphinstone.
Mr. Balfour.	Sir Seymour Fitzgerald.
Lord George Hamilton.	Mr. Campbell-Bannerman.
Mr. Stanley.	Mr. Grant Duff.
Sir George Balfour.	Mr. Sampson Lloyd.
Mr. Fawcett.	
Lord Edmond Fitzmaurice.	
Mr. Birley.	
Mr. Eustace Smith.	

Question, That the paragraph, as amended, stand part of the proposed Report.—The Committee divided:

Ayes, 10.	Noes, 6.
Mr. Onslow.	Sir Henry Havelock.
Mr. Beckett Denison.	Sir James Elphinstone.
Mr. Balfour.	Sir Seymour Fitzgerald.
Lord George Hamilton.	Mr. Campbell-Bannerman.
Mr. Stanley.	Mr. Grant Duff.
Sir George Balfour.	Mr. Sampson Lloyd.
Mr. Fawcett.	
Lord Edmond Fitzmaurice.	
Mr. Birley.	
Mr. Eustace Smith.	

Paragraph 7, *disagreed to.*

Paragraph 8.—Amendment proposed to leave out from the word "that" in line 1, to the word "England," in line 2 (inclusive), in order to insert the words "the English Estimates ought not to be relieved at the expense of the Indian Revenues"—(Lord *George Hamilton*),—instead thereof.—Question, That the words proposed to be left out stand part of the paragraph,—put, and *negatived.*

Question, That the proposed words be inserted instead thereof.—Whereupon Amendment proposed to the proposed Amendment, to add after the word "Revenues," the words, "just as no charge should be thrown on the taxpayers of England in order to meet the financial

exigencies in India"—(Mr. *Campbell-Bannerman*).—Question put, That those words be added to the proposed Amendment.—The Committee divided:

Ayes, 5.	Noes, 9.
Mr. Balfour.	Mr. Onslow.
Mr. Sampson Lloyd.	Mr. Beckett Denison.
Mr. Campbell-Bannerman.	Sir Seymour Fitzgerald.
Mr. Stanley.	Lord George Hamilton.
Sir Henry Havelock.	Sir George Balfour.
	Mr. Fawcett.
	Lord Edmond Fitzmaurice.
	Mr. Birley.
	Mr. Eustace Smith.

Question, That the words "the English Estimates ought not to be relieved at the expense of the Indian Revenues," be inserted in the paragraph,—put, and *agreed to.*

Another Amendment proposed, in line 3, to leave out the word "constitutional"—(Mr. *Beckett Denison*).—Question put, That the word "constitutional" stand part of the paragraph.—The Committee divided:

Ayes, 11.	Noes, 3.
Mr. Onslow.	Mr. Beckett Denison.
Mr. Balfour.	Mr. Seymour Fitzgerald.
Sir Henry Havelock.	Mr. Campbell-Bannerman.
Mr. Sampson Lloyd.	
Lord George Hamilton.	
Mr. Stanley.	
Sir George Balfour.	
Mr. Fawcett.	
Lord Edmond Fitzmaurice.	
Mr. Birley.	
Mr. Eustace Smith.	

Another Amendment proposed, after the word "right," to insert the words "and the duty"—(Mr. *Beckett Denison*).—Question put, That those words be there inserted.—The Committee divided:

Ayes, 6.	Noes, 7.
Mr. Onslow.	Mr. Balfour.
Mr. Beckett Denison.	Sir Henry Havelock.
Sir George Balfour.	Sir Seymour Fitzgerald.
Mr. Birley.	Mr. Campbell-Bannerman.
Mr. Fawcett.	Lord George Hamilton.
Mr. Eustace Smith.	Mr. Stanley.
	Lord Edmond Fitzmaurice.

Another Amendment proposed, in line 4, to leave out from the word "interest" to the end of the paragraph—(Mr. *Fawcett*).—Question put, That the words proposed to be left out stand part of the paragraph.—The Committee divided:

Ayes, 9.	Noes, 4.
Mr. Beckett Denison.	Mr. Onslow.
Mr. Balfour.	Sir George Balfour.
Sir Henry Havelock.	Mr. Fawcett.
Sir Seymour Fitzgerald.	Mr. Eustace Smith.
Mr. Campbell-Bannerman.	
Lord George Hamilton.	
Mr. Stanley.	
Lord Edmond Fitzmaurice.	
Mr. Birley.	

Other Amendments made.—Paragraph, as amended, *agreed to.*

[Adjourned till Friday next, at Eleven o'clock.

Friday, 24th July 1874.

MEMBERS PRESENT:

The Right Hon. STEPHEN CAVE in the Chair.

Mr. Stanley.	Lord George Hamilton.
Sir George Balfour.	Mr. Dunbar.
Lord Edmond Fitzmaurice.	Sir Henry Havelock.
Mr. Birley.	Mr. Balfour.
Mr. Fawcett.	Mr. Beckett Denison.
Mr. Campbell-Bannerman.	Mr. Grant Duff.
Mr. Eustace Smith.	Sir James Elphinstone.
Mr. Onslow.	

Amendment proposed, after paragraph 8, to insert the following new paragraph:—"Your Committee believe that the military expenditure of India has considerably varied for some years past, consequent on changes being carried out in the military system entirely unconnected with India, and would, therefore, propose that the fullest opportunity should in future be given to the India Office to make inquiry, when changes are deemed advisable, into the new organisation and system of the Imperial army, even when these may appear to be for Imperial interests, and not solely for the interests of India, so as to ascertain how far the financial and military arrangements of India are then or afterwards likely to be affected by the contemplated changes. Your Committee, in support of this view, may refer to some of the many alterations in the home military system that have taken place since the Sovereign resumed the direct rule over India, whereby the interests of India have suffered financially. The numerical strength of regiments of cavalry and infantry, the proportions of ranks, and the numbers of troops and companies composing the regiments, have been several times changed within this period; whilst the numbers of cadres, in proportion to the number of privates, have necessarily varied in India with these changes, with great increase of cost. The formation of brigades of artillery, and their location abroad, with their large complement of colonels and field officers, all receiving high pay in India; the varying numbers and strengths of batteries in India, and the promotion of first captains of artillery and engineers, in order to meet the wants of the home service, with the large Indian pay, have borne heavily on the finances of India. The addition made to the pay of the soldiers in 1866 and 1867, as also the permission to soldiers of seven years' service to extend their service, and anticipate the bounty due at the end of 10 years, and the more recent addition to the pay of the soldiers, have all been made for Imperial considerations, but have necessarily increased the Indian expenditure. The strength and number of depôts kept up in England to train recruits for the regiments in India, the numbers of recruits and other soldiers consequently kept in these depôts, as also the large proportion of higher ranks, and the great extension of the periods of training recruits, have added to the charges on Indian revenues. The several alterations that have taken place in the periods of soldiers' enlistment have necessarily shortened their periods of actual service in India, and have increased the payments of bounties, as well as the expenses connected with the transport of men to and from India. The short period of unexpired service of soldiers sent to India, under the shorter term of enlistment, and the reliefs of regiments with soldiers of short Indian service, have likewise affected the numbers embarking and disembarking. Your Committee would point out that, up to 1870, the effective strength constantly fell much below the established strength. The maintenance of the effective strength of all arms up to the full established strength agreed on to be the garrison of India, must necessarily be not only of financial, but of great political, importance; as also, that the means for keeping up that strengh, by supplies of men from home, should be at all times readily available. Further, whatever may be the total fixed strength of that force, it is advisable that the organisation and formation should, as far as Imperial considerations may permit, be the best suited to India for efficiency, as well as economy. Your Committee may, therefore, suggest, that not only should contemplated changes in the Imperial army be fully and freely communicated to the India Office, but that before being finally resolved on, a calculation be made as to the financial bearing of the proposed changes on the Indian revenues; and your Committee has every confidence that the interests of India would be protected by this combined military and financial examination as to the effect of the proposed changes.

Your Committee may add, that it would be advisable to enter on a similar inquiry in regard to the existing army organisation in India, in order to ascertain how far it is adapted to ensure efficiency and economy"—(Sir *George Balfour*).

Question, That this paragraph be inserted in the proposed Report,—put, and *negatived.*

Paragraphs 9—10, *disagreed to.*

Paragraph 11, amended, and *agreed to.*

Amendment proposed, after paragraph 11, to insert the following new paragraph:—"The differences of opinion regarding the home military expenditure that have arisen between the War Office and the India Office are consequent on the many duties in great detail devolving on the War Department connected with the European army in India, and the uncertain character of the many claims which necessarily spring out of these duties. The entire European force required for the garrison of India being now furnished from the regiments and batteries of the Imperial army, and the duty and responsibility of maintaining that force complete and efficient having devolved on the Secretary of State for War, the heavy expenditure at home for the service of the European troops in India has necessarily been incurred in the first instance by the War Department. These money claims necessarily spring out of the duties involved in raising and training recruits in England for dispatch to India, preparing home regiments and batteries for the periodical reliefs of corps for service in India, receiving invalided, time-expired, and discharged soldiers from India, and detaining them in hospital, and in depôts at home until disposed of. There are other very varied and numerous liabilities connected with the large European army in India, entailing, amongst other outlays, the payment of officers temporarily at home, belonging to the Imperial forces on duty in India; and as these duties have been carried on through the machinery of the War Office, and the expenditure on account has been directly incurred by that department, the War Office has the additional duty of subsequently claiming repayment from the India Office. All these money claims against Indian revenues have, since the 1st April 1870, entailed on the War Office extensive separate accounting, with the necessity of providing all the numerous vouchers for supporting every one of the many small items of charge inserted in the accounts. Further, all the accounts and detailed vouchers have to be examined, audited, admitted, or objected to by the auditor of all charges made at home against Indian revenues. This officer being directly responsible to Parliament for the anthenticity, in the fullest sense, of all payments made in England and entered in the Parliamentary accounts, is thereby under the necessity of seeing not only that all claims are sufficiently supported by proper vouchers, but that they are made under a fully recognised authority from the Secretary of State for India in Council, who alone can grant permission for the admission, in the first instance, of these charges, with the final liability of being objected to by the auditor as not justly chargeable against India. This minute accounting and detailed audit of all War Office claims against India, may naturally be expected to cause delay in settlement; and your Committee regrets to find that the outlays made for India, from 1st April 1870, a period of four years, have not yet been finally agreed to, though advances of money appear to have been made from the Indian Treasury to meet in part the expenditure by the War Office. Your Committee have also to express their further regret, that these delays in settling the claims have led to the serious evil of accounts of Indian revenues, &c., having been presented to Parliament without the important certificate from the Imperial Auditor, that the payments entered therein have been duly examined, audited, and allowed by him. Your Committee attach the greatest importance to the certificate of the Imperial auditor being affixed to the accounts of the India revenues, in proof of all charges against India being duly allowed; and as the examination of some claims may sometimes entail delays in effecting the final audit, within the year, of every charge against India, thereby preventing the auditor giving the required certificate, your Committee would suggest that in such case a supplementary account be laid before Parliament, wherein all the previously unsettled claims of the former years, whenever fully agreed to and finally allowed by the auditor, should be shown. But pending the complete settlement, the entries in the annual ordinary accounts should be so made as clearly to show to Parliament that the items are charges under suspense; and we further advise that this course be followed, as far as possible, with respect to all unsettled arrears of prior years. Your Committee would, however, fail in their duty in omitting to point out, that there is another and very conclusive cause for the delays that have taken place in adjusting these claims; and that is an alteration, since April 1870, in the mode of making up the claims, which involves the preparation of numerous detailed accounts of 'actual charges,' instead of payment by lump sums, as below explained. "Under the Act of 4 Geo. 4, c. 71, it was enacted that all money claims against India from the Imperial departments at home, for the effective services of the army in India, should be charged in accounts against India in the form of 'actual charges,' and be settled regularly every year. At the same time it was agreed, that as it was advisable to meet the liberality of India in the compromise then effected, India should contribute a lump sum of 60,000 *l.* per annum, paid in quarterly to the Imperial Exchequer, in clearance, as the Act states, of all claims then existing, or which may hereafter arise in connection with the retiring pay, pensions, and other outlays of this nature, on account of the European troops of the Imperial army detached from home for services in India. This annual settlement of accounts appears to have been regularly effected up to 1857,

1857, with one exception, owing to the claim made by India against the Imperial Exchequer for refunding, in accordance with promises stated to have been made, the ordinary pay and allowances of the troops detached from India for operations against China, for what is known as the first China War; and as this claim was finally refused by the Imperial Treasury after lengthened negotiations, delay in settling accounts was caused thereby. But, after 1857, on the Mutiny breaking out in India, there were extensive additions made to the European troops of the Imperial army for service in India, and with the existence of many novel charges against India, arising out of these additional demands for troops and stores, the settlement of accounts of home claims appears to have fallen into arrear between 1857 and 1860. Even the actual compilation of the accounts of claims appears to have entailed on the Imperial departments great labour and difficulty, quite apart from the difficulties in proving the claims and in obtaining payment. The very extensive augmentation, consequent on the Mutiny, of the Imperial force in India, in contrast with the smaller force maintained in India, when the Act 4 Geo. 4, c. 71, was passed, led to a claim being preferred, in 1858, by the War Office to the Treasury, for an inquiry into the sufficiency of the lump sum above referred to for the retiring pay and pensions. And subsequently, in 1860, the Treasury moved the War Office and India Office to inquire into the accounts with the Government of India, and into the long period they are necessarily, under existing arrangements, kept open, in order, as the Treasury and War Office then stated, 'that measures may be adopted for reducing the payments to be made by the East India Government in respect of these accounts to an average rate proportioned to the number of British troops serving from time to time in the territory, and that when once the scale is fixed the contributions should be paid by monthly instalments, including in the arrangements the contribution in aid of the non-effective payments.' The inquiries instituted to carry out this view in favour of lump sums were carried on by two separate committees, consisting of officers from the War and India Offices, and the Treasury (both under the presidency of Major General Sir Alexander Tulloch), and resulted in a provisional arrangement being submitted by the Committee on 31st January 1861, and provisionally accepted by the Treasury, War, and India Offices, that settlement of claims against India should be effected from 1st April 1861, by the Indian revenues contributing at the annual rate of 10,000*l.* per 1,000 men of all arms effective in India, based on the numbers borne on the 12 months' muster rolls; and that this rate of payment should cover all charges incurred at home by the War Office, for the effective services in England on account of the troops in India. Also, in lieu of the former lump sum for covering the retiring pay and pensions of the troops in India, an annual rate of 3,500*l.* per 1,000 effectives in India should be contributed out of Indian revenues. The Committee over which Sir Alexander Tulloch presided, proposed to continue their inquiries in view to defining more accurately the permanent rates to be paid by India for the several arms of soldiers; but this inquiry was never entered upon. The provisional arrangement, though only accepted for one year, was extended year by year, and continued in force from 1st April 1861 to 31st March 1870, a period of nine years, being then discontinued by the War Office, apparently owing to the assumed insufficiency of the rates to cover all the charge for which these lump sums were allowed. But as the accounts before your Committee do not supply details to prove this loss, your Committee advise a more complete investigation into the case. In 1869 a new Committee, known as Mr. Seccombe's Committee, was assembled, consisting of officers of the India and War Offices, to make arrangements for adjusting, from the 1st April 1869, the charges for effective services of Her Majesty's regiments on the East India establishment, on the principal of actual charges. That Committee, after careful consideration, came to the conclusion that it was advisable, in order to settle the claims between the War Office and the India Office, to revert to the system of 'actual charges' which was in force from 1824 up to 1861, in lieu of the lump payments adopted in the latter year. The Committee accorded their opinion that from the 1st April 1870, the claims of the Imperial Government should be adjusted by repayment of the actual charges on the general principles which governed the settlement of the accounts for recruiting depôts and other home services, from the year 1824 to the date of the introduction of a capitation rate. That Committee has submitted four Reports, but all mainly relating to only one of the many items of charge against India, that is, the cost of recruits raised and trained by the War Office. The members of the Committee, though all agreeing to certain rates of charge to be provisionally paid by India for the expenses of supplying recruits of different arms, and having advised the settlement of all such claims at these rates for two years, from 1st April 1870 to 31st March 1872, differed as to the data on which the military establishments of depôts should be maintained. The Committee was unanimous as to the costly nature of these depôts, but the officers of the India Office specifically objected to the large establishments of officers and non-commissioned officers belonging to the depôts, and contrasted the then far heavier cost of supplying recruits for service in India with the low average cost under the Warley depôt system of the East India Government, and recorded minutes of dissent on this point, which still remains undecided"—(Sir *George Balfour*).

Question, That this paragraph be inserted in the proposed Report,—put, and *negatived.*

Paragraph 12.—Amendment proposed to leave out from the words "*It* has been," in line 1, to the words "arrived at," in line 5 (inclusive), in order to insert the words, "desired to settle the payments to be made by the India Office to the War Office by means

of a committee composed of permanent officers of the two departments. But although comparatively little difference has been found to exist between the members of the two departments on matters of detail and of account, yet great difference prevails between the departments and between their respective officers, as to the principles on which those details and those accounts ought to be adjusted"—(Mr. *Campbell-Bannerman*),—instead thereof.—Question, That the words proposed to be left out stand part of the paragraph.—The Committee divided:

Ayes, 11.	Noes, 2.
Mr. Balfour.	Mr. Onslow.
Sir Henry Havelock.	Mr. Campbell-Bannerman.
Mr. Dunbar.	
Mr. Eustace Smith.	
Sir James Elphinstone.	
Lord George Hamilton.	
Mr. Stanley.	
Sir George Balfour.	
Mr. Fawcett.	
Lord Edmond Fitzmaurice.	
Mr. Birley.	

Another Amendment proposed to leave out from the words, "Your Committee have been informed," to the end of the paragraph—(Mr. *Beckett Denison*).—Question put, That the words proposed to be left out stand part of the paragraph.—The Committee divided:

Ayes, 11.	Noes, 3.
Mr. Balfour.	Mr. Beckett Denison.
Sir Henry Havelock.	Mr. Onslow.
Mr. Dunbar.	Mr. Campbell-Bannerman.
Mr. Eustace Smith.	
Sir James Elphinstone.	
Lord George Hamilton.	
Mr. Stanley.	
Sir George Balfour.	
Mr. Fawcett.	
Lord Edmond Fitzmaurice.	
Mr. Birley.	

Another Amendment proposed at the end of the paragraph, to add the words, "It appears indeed that so large a question of public policy is not usually submitted by the Executive Government or by Parliament to the discretion of any individual, however eminent; nor, indeed, would it seem to be fair to any individual to cast such a burden upon him. The decision, it must be observed, is not intended merely to govern the expenditure of any particular year, but to settle the principle on which in future years the relative expenditure of India and of the United Kingdom is to be apportioned. The Committee, however, understand that the departmental committee, with its new president, will merely inquire into the facts and details of the question, and that its settlement will rest with the responsible heads of the departments"—(Mr. *Campbell-Bannerman*).—Question put, That those words be there added.—The Committee divided:

Ayes, 5.	Noes, 10.
Sir Henry Havelock.	Mr. Beckett Denison.
Mr. Dunbar.	Mr. Balfour.
Mr. Eustace Smith.	Mr. Onslow.
Mr. Campbell-Bannerman.	Sir James Elphinstone.
Mr. Fawcett.	Mr. Grant Duff.
	Lord George Hamilton.
	Mr. Stanley.
	Sir George Balfour.
	Lord Edmond Fitzmaurice.
	Mr. Birley.

Question put, That the paragraph, as amended, stand part of the proposed Report.—The Committee divided:

Ayes, 13.	Noes, 2.
Mr. Beckett Denison.	Mr. Onslow.
Mr. Balfour.	Sir Henry Havelock.
Mr. Dunbar.	
Mr. Eustace Smith.	
Sir James Elphinstone.	
Mr. Campbell-Bannerman.	
Mr. Grant Duff.	
Lord George Hamilton.	
Mr. Stanley.	
Sir George Balfour.	
Mr. Fawcett.	
Lord Edmond Fitzmaurice.	
Mr. Birley.	

Amendment

Amendment proposed, after paragraph 12, to insert the following new paragraph:—"Your Committee suggests that in the interval between the adjournment of the House and its re-assembling next Session, the permanent officers of the Departmental Committee, consisting of officers from the War and Indian Offices, should, under the supervision of the arbitrator, continue the inquiries into all the details of charges which are now incurred by the War Office on behalf of Indian interests, and for which charges Indian revenues are considered liable. Your Committee would indicate some of the heads which appear to need special investigation, such as the strength of depôts and the ranks composing these depôts, and whether, as pointed out in the dissents of the officers representing the India Office, these regimental depôts are or are not in excess of the requirements for training men, both in respect to numbers in the different ranks and in the number of depôts. Also whether, as suggested in the 12th paragraph of the letter from the Under Secretary of State for India, dated 8th September 1871, to the War Office, the depôt arrangements for training recruits for India could not be simplified by being kept to the minimum establishment requisite for the provision of recruits. This view is also indicated in the 4th paragraph of the letter from the Government of India, dated 15th May 1873, to the Secretary of State, in which it is recommended that the depôt be kept on a reduced scale, and more resembling that of the present depôt of the Guards. Your Committee would also point out for investigation the periods fixed for actually training the recruits for the several arms, and whether these periods are proper; and next, whether from the evidence given before your Committee, and as stated in the letter, dated 14th April 1874, from the India Office to the War Office, the recruits are sent to India with much less training than the agreed on period. Your Committee would also urge a further investigation into all the many items of charge making up the total cost of recruits, especially the large addition of one-third of the cost for deaths, desertions, &c., referred to in the report of the Departmental Committee, dated 28th February 1870; also, in the other items of charge alluded to in the letter from the Government of India of May 1873, and generally into all the heads of outlay detailed in the Appendix to the Report of the Departmental Committee, dated 24th November 1869. Your Committee would also advise an inquiry into the mode of adjusting claims of the War Office against Indian revenues arising subsequently to the 31st March 1872, there being, as stated in the letter dated 14th April 1874, from the India Office to the War Office, no arrangement as yet fixed on as to the final adjustment of charges for effective services. Your Committee would also advise an inquiry into the arrangements for adjusting the non-effective charges which your Committee have been unable to commence on, and whether the retiring pay, pensions, and other charges of this nature should be adjusted by the contribution of a lump sum, as under the Act 4 Geo. 4, c. 71, which continued to be paid up to 31st March 1861, or by an average rate of 3,500*l.* per annum, based on the average number of effectives in India, as agreed on under the recommendation, dated 31st January 1861, of the Committee over which Sir A. Tulloch presided, and which sum continued to be paid till 31st March 1870. Or, whether the actual charges for pensions, based on the actual service rendered to the Imperial and Indian Governments shall be followed for settling these claims. This detailed inquiry would lead to the collection of information which would at least aid in bringing to a settlement most, if not all, claims between the two departments; and if a complete settlement should not thereby be effected, the information then obtained would facilitate the labours of this Committee if re-appointed next Session"—(Sir *George Balfour*).

Question proposed, That this paragraph be inserted in the proposed Report.—Amendments made in the paragraph.—Question put, That this paragraph, as amended, be inserted in the proposed Report.—The Committee divided:

Ayes, 12.	Noes, 2.
Mr. Beckett Denison.	Mr. Onslow.
Mr. Balfour.	Mr. Campbell-Bannerman.
Sir Henry Havelock.	
Mr. Dunbar.	
Mr. Eustace Smith.	
Mr. Grant Duff.

Mr. Sampson Lloyd.	
Mr. Campbell-Bannerman.	
Lord George Hamilton.	
Mr. Stanley.	
Mr. Birley.	

Another Amendment proposed, in line 7, to leave out the words "in reference"—(Mr. *Eustace Smith*).—Question put, That the words proposed to be left out stand part of the paragraph.—The Committee divided:

Ayes, 9.	Noes, 5.
Mr. Onslow.	Mr. Eustace Smith.
Sir Henry Havelock.	Mr. Dunbar.
Mr. Balfour.	Sir George Balfour.
Sir James Elphinstone.	Mr. Fawcett.
Mr. Sampson Lloyd.	Lord Edmond Fitzmaurice.
Mr. Campbell-Bannerman.	
Lord George Hamilton.	
Mr. Stanley.	
Mr. Birley.	

Another Amendment proposed, in line 9, to leave out the word "subordinate," and to insert, "in harmony with"—(Sir *George Balfour*),—instead thereof.—Question put, That the word "subordinate" stand part of the paragraph.—The Committee divided:

Ayes, 8.	Noes, 6.
Mr. Balfour.	Mr. Onslow.
Sir James Elphinstone.	Sir Henry Havelock.
Mr. Sampson Lloyd.	Mr. Dunbar.
Mr. Campbell-Bannerman.	Mr. Eustace Smith.
Lord George Hamilton.	Sir George Balfour.
Mr. Stanley.	Mr. Fawcett.
Lord Edmond Fitzmaurice.	
Mr. Birley.	

Another

Another Amendment proposed, in line 12, after the word "misunderstood," to insert the words "and magnified"—(The *Chairman*).—Question put, That those words be there inserted.—The Committee divided:

Ayes, 8.	Noes, 6.
Mr. Balfour.	Mr. Onslow.
Sir Henry Havelock.	Mr. Eustace Smith.
Sir James Elphinstone.	Mr. Dunbar.
Mr. Sampson Lloyd.	Sir George Balfour.
Mr. Campbell-Bannerman.	Mr. Fawcett.
Lord George Hamilton.	Lord Edmond Fitzmaurice.
Mr. Stanley.	
Mr. Birley.	

Paragraph, as amended, *agreed to.*

Amendment proposed, after the last paragraph, to add the following new paragraph: "In conclusion, your Committee would suggest that, as they have not had time to investigate the various home charges which are not connected with military expenditure, they should be re-appointed next Session. As much evidence was taken in reference to these charges by the India Finance Committee, which sat during the three previous Sessions, it is probable that the inquiry might be completed within a reasonable period"—(Mr. *Fawcett*).

Question, That this paragraph be inserted in the proposed Report,—put, and *agreed to.*

Question, That this Report, as amended, be the Report of the Committee to The House,—put, and *agreed to.*

Ordered, To Report, together with the Minutes of Evidence, and an Appendix.

REPORT.

THE SELECT COMMITTEE appointed to inquire into CHARGES payable in this Country for which the REVENUES of INDIA are liable;——HAVE considered the matters to them referred, and have agreed to the following REPORT:—

THE inquiry into the charges payable in this country for which the revenues of India are liable may be divided into two distinct heads:

First, assuming that no expenditure of the Indian revenue is to take place except for the purposes of India, whether India should contribute to establishments such as Zanzibar, to political agencies in China and Persia, to wars such as the Chinese, Persian, and Abyssinian, to hospitals and asylums in England, to telegraph and postal services, and whether she should pay the whole expense of the India Office, and contribute to the expense of other departments of State in this country.

Secondly, granting that India ought to pay for that portion of the British army which is stationed in India, together with the necessary stores and transport, the expense of recruiting and depôts in this country; and to contribute to that portion of Her Majesty's navy which is employed in the Indian Seas, to guaranteed railways and other public works which have been either purchased or assisted by the Secretary of State in Council, and the interest of which is payable in this country, whether she is called upon to pay more than her due share of such charges; and whether the charges themselves are fixed with a due regard to economy.

The first is clearly a wide and somewhat speculative question of policy; the second a matter of detail and of account.

The late period at which your Committee were appointed has rendered it necessary that in order to report during the present Session, they should restrict their inquiry within the limits of a part only, though the most important part, of the second of these two heads, that, namely, which relates to military expenditure. This will also be found to divide itself into two questions. First, whether the India Office is able to obtain from the other departments of the State due consideration for Indian interests. Secondly, whether the views of the Government of India in India is sufficiently consulted by the India Office itself.

Your Committee have made a careful inquiry into these points. They have had the benefit of the evidence taken before the Committee on Indian Finance which sat during the last three Sessions of the late Parliament. They have also had before them, among other documents to be found in the Appendix to their Report, the proceedings of a Committee appointed by the Secretaries of State for War and for India, "to make arrangements for adjusting from the 1st April 1869 the charges for effective services of Her Majesty's regiments on the East India Establishment, on the principle of actual charges," together with an unfinished correspondence between the two departments in which the several matters in dispute between them are clearly and strongly set forth.

They have moreover had the advantage of examining, in addition to some of the principal permanent officials of both departments, His Royal Highness the Field Marshal Commanding in Chief; the late Secretary of State for War,

Viscount Cardwell; the present Secretary of State for India, the Marquis of Salisbury, and other high authorities.

From these witnesses very valuable evidence has been received in reference to the general principles on which these charges are and ought to be made, as well as upon the various items of which the sums total are made up.

Your Committee have received an impression from these sources that charges have in some instances been imposed upon India which ought to have been borne by England. Your Committee have, however, been assured by various witnesses that a very general desire prevails among the different English departments not to throw any charge upon India improperly. Your Committee cannot too strongly insist on the importance of securing for India strict impartiality in all her financial arrangements with this country, and they agree in the opinion which was very emphatically expressed by the Marquis of Salisbury, that the most effectual way of securing financial justice for India is for the House of Commons to be constantly watchful on her behalf.

Your Committee cannot lay down too strongly the position, that the English estimates ought not to be relieved at the expense of the Indian revenues, but that the Secretary of State for India in Council has the constitutional right of refusing to pay for objects in which he considers that India has no interest. At the same time India, as a component part of the Empire, must be prepared to share in the cost of a system the expense of which may be enhanced for Imperial purposes.

Your Committee have found that there has been and is considerable difference of opinion between the two great departments which conduct the military and Indian affairs of the Empire, both generally as to the proportion of the charges which ought to be borne by India, and in particular with respect to the items which should be taken into account.

It has been attempted to settle these differences by means of a Committee composed of permanent officers of these two departments; but although the labours of this Committee have resulted in presenting the points of difference in a clear light, yet no agreement has been finally arrived at. Your Committee have been informed that, with a view to settle these differences, an independent authority is to be added to the Departmental Committee, for the purpose of bringing the questions thus stated to some satisfactory solution. Your Committee have been informed, in the course of their inquiry, that steps have been taken to supply this obvious want, and that the Government have secured the co-operation of Mr. Bouverie, a former Member of your House, as President of this Committee. Your Committee hope that the deliberations of this Committee will assist the heads of the English departments and the Secretary of State for India to come to conclusions upon the charges in dispute, satisfactory both to England and to India.

Your Committee suggest, that in the interval before next Session the Departmental Committee should, under the supervision of the President, continue the inquiries into all the details of charges which are now incurred by the War Office on behalf of Indian interests, and for which charges Indian interests are considered liable. Your Committee would indicate some of the heads which appear to need special investigation, such as the strength of depôts, and the ranks composing these depôts, and whether recruits are sent to India with much less training than the agreed on period. Your Committee would also urge a further investigation into all the items of charge making up the total cost of recruits, especially with regard to the large addition of one-third to the cost for deaths, desertions, &c. Your Committee would also advise an inquiry into the mode of adjusting claims of the War Office against Indian revenues arising subsequently to the 31st of March 1872, there being no arrangement as yet fixed on as to the final adjustment of charges for effective services. Your Committee would also advise an inquiry into the arrangements for adjusting the non-effective charges, and whether the retiring pay, pensions, and other charges of this nature should be adjusted by the contribution of a lump sum, or whether the actual charges for pensions based on the actual service rendered to the Imperial and Indian Governments should be followed for settling these claims.

It would be impossible for your Committee to pronounce an opinion of any value upon these details, especially at a time when so much of our military policy is new and scarcely tried, and must for some years to come be more or less tentative. They would, however, suggest that the payments from India should be as much as possible in the form of fixed rates for particular charges, for the obvious purpose of avoiding frequent re-opening of accounts, the delays in settling claims which have led to the serious evil of the accounts having been presented to Parliament without certificate from the Auditor that the payments have been allowed, as well as the inconvenience which might arise from any sudden change of policy in either Administration. They think that such sums should be, in the first instance, arrived at by careful computation; but that when once fixed they should continue without alteration for as many years as may be deemed advisable. This same method of adjustment would obviously apply to similar differences between the India Office and other Departments, such as the Admiralty, with whom a question was for some time pending in reference to transports. As, however, your Committee have been informed that this question has been satisfactorily settled, and as copious evidence was taken on the subject by the India Finance Committee of former Sessions, your Committee have not thought it necessary to go more fully into this matter.

Your Committee would remark that, while there appears to be every disposition among the heads of other Departments to consult the India Office upon proposed changes which may affect India, yet this has sometimes been omitted, in consequence of the fact that India may be affected by such changes having been overlooked; and the India Office, as the controlling authority, has occasionally acted independently of, or not in accord with, the opinions of the Government of India in India. In reference to these points, your Committee suggest that although the interests of India must be subordinate, like those of any other portion of the Empire, to the common interests of the Empire as a whole, and that although the best information upon almost every subject connected with India may be generally obtained in this country, yet that even the appearance of neglect may be misunderstood and magnified by the natives of India, some of whom take the most intense interest in the minutest details of the policy adopted by this country towards its Indian possessions, and attach perhaps exaggerated importance to points which may pass unobserved by those who have to perform the arduous task of governing a vast and varied Empire.

In conclusion, your Committee would suggest that, as they have not had time to investigate the various Home charges which are not connected with military expenditure, they should be re-appointed next Session. As much evidence was taken in reference to these charges by the India Finance Committee, which sat during the three previous Sessions, it is probable that the inquiry might be completed within a reasonable period.

28 *July* 1874.

PROCEEDINGS OF THE COMMITTEE.

Friday, 28*th April* 1874.

MEMBERS PRESENT:

Sir James Elphinstone.
Lord George Hamilton.
Sir George Balfour.
Mr. Massey.
Mr. Stanley.
Lord Edmond Fitzmaurice.
Mr. Stephen Cave.
Mr. Sampson Lloyd.
Mr. Onslow.
Mr. Birley.
Sir Seymour Fitzgerald.
Sir Henry Havelock.
Mr. Eustace Smith.

Mr. CAVE was called to the Chair.

The Committee deliberated.

[Adjourned till Tuesday, 12th May, at Half-past Twelve o'clock.

Tuesday, 12*th May* 1874.

MEMBERS PRESENT:

The Right Hon. STEPHEN CAVE in the Chair.

Mr. Sampson Lloyd.
Mr. Dunbar.
Mr. Birley.
Mr. Stanley.
Lord George Hamilton.
Sir Thomas Bazley.
Mr. Campbell-Bannerman.
Mr. Dalrymple.
Lord Edmond Fitzmaurice.
Sir George Balfour.
Mr. Eustace Smith.
Sir Henry Havelock.
Mr. Onslow.
Mr. Fawcett.
Mr. James Elphinstone.
Mr. Balfour.
Mr. Beckett Denison.

Messrs. *Milton*, *Daye*, and *Knox*, were severally examined.

[Adjourned till Friday next, at Half-past Twelve o'clock.

Friday, 15*th May* 1874.

MEMBERS PRESENT:

The Right Hon. STEPHEN CAVE in the Chair.

Sir Seymour Fitzgerald.
Sir George Balfour.
Sir Henry Havelock.
Lord George Hamilton.
Mr. Sampson Lloyd.
Mr. Onslow.
Mr. Dalrymple.
Mr. Balfour.
Mr. Dunbar.
Mr. Campbell-Bannerman.
Mr. Fawcett.
Mr. Eustace Smith.
Lord Edmond Fitzmaurice.
Mr. Stanley.
Mr. Beckett Denison.
Mr. Birley.
Mr. Massey.

Messrs. *Milton*, *Daye*, and *Knox*, were severallyexamined.

[Adjourned till Tuesday, 2nd June, at Half-past Twelve o'clock.

Friday, 5th June 1874.

MEMBERS PRESENT:

The Right Hon. STEPHEN CAVE in the Chair.

Mr. Sampson Lloyd.
Mr. Campbell-Bannerman.
Mr. Onslow.
Mr. Fawcett.
Sir George Balfour.
Mr. Stanley.
Sir Henry Havelock.
Lord George Hamilton.
Mr. Eustace Smith.
Sir Thomas Bazley.
Lord Edmond Fitzmaurice.
Mr. Dunbar.
Mr. Balfour.
Mr. Dalrymple.

Sir *T. Pears* was examined.

[Adjourned till Tuesday next, at Half-past Twelve o'clock.

Tuesday, 9th June 1874.

MEMBERS PRESENT:

The Right Hon. STEPHEN CAVE in the Chair.

Lord George Hamilton.
Sir Thomas Bazley.
Mr. Dunbar.
Sir Henry Havelock.
Mr. Stanley.
Mr. Birley.
Mr. Campbell-Bannerman.
Mr. Onslow.
Lord Edmond Fitzmaurice.
Sir George Balfour.
Mr. Sampson Lloyd.
Mr. Balfour.
Mr. Fawcett.
Mr. Dalrymple.
Mr. Eustace Smith.

The Lord *Sandhurst*, attending by permission of the House of Lords, was examined.

[Adjourned till Friday next, at Half-past Twelve o'clock.

Friday, 12th June 1874.

MEMBERS PRESENT:

The Right Hon. STEPHEN CAVE in the Chair.

Sir Thomas Bazley.
Lord Edmond Fitzmaurice.
Mr. Dalrymple.
Mr. Dunbar.
Mr. Sampson Lloyd.
Mr. Eustace Smith.
Mr. Campbell-Bannerman.
Mr. Stanley.
Lord George Hamilton.
Sir George Balfour.
Mr. Fawcett.
Sir Henry Havelock.
Mr. Onslow.
Mr. Balfour.
Mr. Birley.
Mr. Massey.
Mr. Beckett Denison.

Sir *Thomas Pears* and The Viscount *Cardwell*, attending by permission of the House of Lords, were examined.

[Adjourned till Tuesday next, at Half-past Twelve o'clock.

Tuesday, 16*th June* 1874.

MEMBERS PRESENT:

The Right Hon. STEPHEN CAVE in the Chair.

Sir Thomas Bazley.	Mr. Fawcett.
Lord Edmond Fitzmaurice.	Mr. Grant Duff.
Mr. Sampson Lloyd.	Mr. Dunbar.
Mr. Eustace Smith.	Mr. Campbell-Bannerman.
Sir Henry Havelock.	Mr. Dalrymple.
Mr. Stanley.	Lord George Hamilton.
Sir George Balfour.	Mr. Balfour.

Sir *W. Muir* was examined.

[Adjourned till Friday next, at Half-past Twelve o'clock.

Friday, 19*th June* 1874.

MEMBERS PRESENT:

The Right Hon. STEPHEN CAVE in the Chair.

Mr. Dunbar.	Mr. Sampson Lloyd.
Lord George Hamilton.	Mr. Onslow.
Mr. Eustace Smith.	Mr. Birley.
Mr. Fawcett.	Sir Henry Havelock.
Sir George Balfour.	Mr. Dalrymple.
Mr. Campbell-Bannerman.	

The Lord *Cardwell* was further examined.

[Adjourned till Tuesday next, at Half-past Twelve o'clock.

Tuesday, 23*rd June* 1874.

MEMBERS PRESENT:

The Right Hon. STEPHEN CAVE in the Chair.

Mr. Dalrymple.	Sir Seymour Fitzgerald.
Lord Edmond Fitzmaurice.	Lord George Hamilton.
Mr. Dunbar.	Mr. Stanley.
Mr. Sampson Lloyd.	Sir George Balfour.
Mr. Eustace Smith.	Mr. Fawcett.
Sir Henry Havelock.	Mr. Onslow.
Mr. Campbell-Bannerman.	Mr. Balfour.

H. R. H. the Duke of *Cambridge*, attending by permission of the House of Lords, was examined.

Friday, 26th June 1874.

MEMBERS PRESENT:

The Right Hon. STEPHEN CAVE in the Chair.

Lord George Hamilton.	Mr. Onslow.
Sir George Balfour.	Mr. Beckett Denison.
Mr. Fawcett.	Mr. Stanley.
Sir Thomas Bazley.	Mr. Sampson Lloyd.
Sir Henry Havelock.	Mr. Birley.
Mr. Eustace Smith.	Mr. Campbell-Bannerman.
Mr. Dunbar.	Mr. Dalrymple.

The Marquis of *Salisbury*, attending by permission of the House of Lords, and Sir *George Balfour* (a Member of the Committee), were severally examined.

[Adjourned till Tuesday next, at Half-past Twelve o'clock.

Tuesday, 30th June 1874.

MEMBERS PRESENT:

The Right Hon. STEPHEN CAVE in the Chair.

Mr. Sampson Lloyd.	Sir George Balfour.

Sir George Balfour.	Mr. Balfour.
Mr. Fawcett.	Mr. Beckett Denison.
Sir James Elphinstone.	Mr. Birley.

DRAFT REPORT, proposed by the *Chairman*, read the first time, as follows:—

"1. THE inquiry into the charges payable in this country for which the revenues of India are liable, seems to be divided into two distinct branches. First, namely, whether, on the assumption that no expenditure of the Indian revenue is to take place, except for the purposes of India, India should pay for Imperial establishments, such as political agencies in China and Persia, at Aden and Zanzibar; for wars, such as the Abyssinian, for departments of State, for hospitals and asylums in England, for pensions and furloughs. Secondly, granting that India ought to pay for that portion of the British army which is stationed in India, together with the necessary stores and transport, the expense of recruiting and depôts in this country; and again, for that part of Her Majesty's navy which is employed in the Indian seas, for telegraph and postal services, and for railways and other public works, the guaranteed interest of which is paid in this country; whether she is compelled to pay more than her due share of such charges; and whether the charges themselves are fixed with due regard to economy. The first is clearly a wide and somewhat speculative question of policy, the second a matter of detail and of account.

"2. The late period at which your Committee was appointed has rendered it necessary that in order to report during the present Session they should restrict their inquiry within the limits of a part only, though the most important part of the second of these two propositions, that, namely, which relates to military expenditure. This will also be found to divide itself into two parts; first, whether the India Office has the power of obtaining justice for India from the other departments of the State; secondly, whether India is sufficiently considered by the India Office itself.

"3. Your Committee have met, and have made a careful inquiry into these points. They have had the benefit of the evidence taken before the Committee on Indian Finance which sat during the last three Sessions of the late Parliament. They have also had before them, among other documents to be found in the Appendix to their Report, the proceedings of a Committee appointed by the Secretaries of State for War and for India, to make arrangements for adjusting the charges for the effective services of Her Majesty's troops on the East India Establishment, together with an unfinished correspondence between the two departments in which the several matters in dispute between them are clearly and strongly set forth.

"4. They have also had the advantage of examining, in addition to some of the principal permanent officials of both departments, His Royal Highness the Field Marshal Commanding in Chief; the late Secretary of State for War, Viscount Cardwell; the present Secretary of State for India, the Marquis of Salisbury, and other high authorities.

"5. From these witnesses very valuable evidence has been received in reference to the general principles on which these charges are and ought to be made, as well as upon the various items of which the sums total are made up.

"6. Your Committee have received a general impression from these various sources that, although India has occasionally been hardly dealt with, and that both the India Office has found it difficult to defend itself against the encroachments of other departments, and that India has not always been sufficiently considered by the India Office itself, this is true only in reference to past years, and that there is now no desire, in the language of one of the witnesses before the former Committee, to sacrifice India to the exigencies of English Estimates, or to the wishes of the Horse Guards; but, on the other hand, a ready concurrence on all sides that India ought not to pay beyond her due proportion. They have, however, found a considerable difference of opinion both generally as to what that due proportion is, as well as in particular with respect to the items which should be taken into account.

"7. Your Committee has considered it unnecessary to revert to what is now mere matter of history, and they would, therefore, confine themselves to a suggestion of the principles on which these charges should be made, and to a recommendation of means by which disputed items between the different departments of State may be in future adjusted.

"8. Your Committee cannot lay down too strongly the position, that India should never be sacrificed to the desire for economical budgets in England, but that the Secretary of State for India in Council has the constitutional right of refusing to pay for objects in which he considers that India has no interest. At the same time, India as a component part of the Empire, must be prepared to share in the cost of a system, the expense of which may be enhanced for Imperial purposes.

"9. Your Committee cannot admit a parallel drawn between India and the self-governing Colonies of the Anglo-Saxon race. It is obvious that such Colonies are in a totally different position in every way; and that they would in case of war within their own territory have to make far greater sacrifices than India has, under similar circumstances, been called upon to do.

"10. It

"10. It is well known that Canada, even in time of peace, has raised, entirely from her own resources, a militia of 40,000 men, and a reserve of 300,000. It should also be remembered that these Colonies maintain for themselves that inestimable benefit of order and security which India owes entirely to England, and which she would almost certainly lose if English supremacy were overthrown, and that in those colonies which, like Ceylon, repay the British Exchequer for troops, the payment is fully as great as that exacted from India: while, therefore, India must be content to bear her share of Imperial expenditure, it is important that she should feel that her proportion is fixed with due regard to justice, and even, considering the circumstances of the two countries, with liberality.

"11. It is natural that there should be frequent differences of opinion as to matters of detail and of account between the two great departments which conduct the military and Indian affairs of the Empire.

"12. It has been attempted to settle these differences by means of a committee composed of the permanent officers of these two departments; but although the labours of this Committee have resulted in presenting the points of difference in a clear light, yet, as might have been expected from the nature of things, no agreement has been arrived at. It is necessary, therefore, that there should be an independent arbitrator who can bring the questions thus stated to some satisfactory conclusion. Your Committee have been informed, in the course of their inquiry, that steps have been taken to supply this obvious want, and that the Government have been fortunate enough to secure the co-operation of a former Member of your House, who cannot fail to command the confidence of the departments and the country.

"13. Your Committee cannot recommend any better plan; it would be impossible for them to pronounce an opinion of any value upon these details, especially at a time when so much of our military policy is new and scarcely tried, and must for some years to come be more or less tentative. They would, however, suggest that the payments from India should be as much as possible in the form of lump sums, for the obvious purpose of avoiding frequent reopening of and haggling over accounts, as well as the inconvenience which might arise from any sudden change of policy in either Administration. They think that such sums should be, in the first instance, arrived at by careful computation; but that when once fixed, they should continue without alteration for as many years as may be deemed advisable. This same method of adjustment would obviously apply to similar differences between the India Office and other departments, such as the Admiralty, with whom a question was for some time pending in reference to transports. As, however, your Committee have been informed that this question has been satisfactorily settled, and as copious evidence was taken on the subject by the India Finance Committee of former Sessions, your Committee has not thought it necessary to go more fully into this matter.

"14. In conclusion, your Committee would venture to remark that, while there appears to be no indisposition among the heads of other departments to consult the India Office upon proposed changes which may affect India, yet that sometimes this has been omitted, in consequence of the fact that India may be affected by such changes having been overlooked. Again, that while there can be no pretence for saying that the interests of India have been neglected at the India Office, there seems sometimes a disposition to act without notice to, or consultation with, the authorities in India itself. In reference to these points, your Committee venture to suggest, with great deference, that although, as they have already said, the interests of India must be subordinate to those of the Empire, and that although the best information upon almost every subject connected wth India may be generally obtained in this country, yet that this seeming neglect is apt to be misunderstood by the natives of India, who are rapidly advancing in education and intelligence, and who take the most intense interest in the minutest details of the policy adopted by this country towards its Indian possessions, and attach perhaps exaggerated importance to points which may pass unobserved by those who have to perform the arduous task of governing a vast and varied Empire."

MOTION made, and Question, That this Report be now read a second time, and considered, paragraph by paragraph,—put, and *agreed to.*

Paragraph 1, amended, and *agreed to.*

Paragraph 2.—Amendment proposed to leave out from the word "The" to the end of the paragraph, in order to add the words "Committee have had the benefit of the evidence taken before the Committee on Indian Finance, which sat during the last three Sessions of the late Parliament. Owing to the majority of the points to which the attention of your Committee has been directed, having been already examined by that Committee, they have confined the evidence taken in the present year to the question of the Home military expenditure, as between the War Office and the India Office in England —

(Lord *Edmond Fitzmaurice*),—instead thereof,—Question, That the words "late period" stand part of the paragraph.—The Committee divided:

Ayes, 11.	Noes, 4.
Mr. Dalrymple.	Sir George Balfour.

Mr. Fawcett.	
Lord Edmond Fitzmaurice.	
Mr. Birley.	
Mr. Eustace Smith.	

Paragraph 7, *disagreed to.*

Paragraph 8.—Amendment proposed to leave out from the word "that" in line 1, to the word "England," in line 2 (inclusive), in order to insert the words "the English Estimates ought not to be relieved at the expense of the Indian Revenues"—(Lord *George Hamilton*), —instead thereof.—Question, That the words proposed to be left out stand part of the paragraph,—put, and *negatived.*

Question, That the proposed words be inserted instead thereof.—Whereupon Amendment proposed to the proposed Amendment, to add after the word "Revenues," the words, "just as no charge should be thrown on the taxpayers of England in order to meet the financial

exigencies in India"—(Mr. *Campbell-Bannerman*).—Question put, That those words be added to the proposed Amendment.—The Committee divided:

Ayes, 5.	Noes, 9.
Mr. Balfour.	Mr. Onslow.
Mr. Sampson Lloyd.	Mr. Beckett Denison.
Mr. Campbell-Bannerman.	Sir Seymour Fitzgerald.
Mr. Stanley.	Lord George Hamilton.
Sir Henry Havelock.	Sir George Balfour.
	Mr. Fawcett.
	Lord Edmond Fitzmaurice.
	Mr. Birley.
	Mr. Eustace Smith.

Question, That the words "the English Estimates ought not to be relieved at the expense of the Indian Revenues," be inserted in the paragraph,—put, and *agreed to.*

Another Amendment proposed, in line 3, to leave out the word "constitutional"—(Mr. *Beckett Denison*).—Question put, That the word "constitutional" stand part of the paragraph.—The Committee divided:

Ayes, 11.	Noes, 3.
Mr. Onslow.	Mr. Beckett Denison.
Mr. Balfour.	Mr. Seymour Fitzgerald.
Sir Henry Havelock.	Mr. Campbell-Bannerman.
Mr. Sampson Lloyd.	
Lord George Hamilton.	
Mr. Stanley.	
Sir George Balfour.	
Mr. Fawcett.	
Lord Edmond Fitzmaurice.	
Mr. Birley.	
Mr. Eustace Smith.	

Another Amendment proposed, after the word "right," to insert the words "and the duty"—(Mr. *Beckett Denison*).—Question put, That those words be there inserted.—The Committee divided:

Ayes, 6.	Noes, 7.
Mr. Onslow.	Mr. Balfour.
Mr. Beckett Denison.	Sir Henry Havelock.
Sir George Balfour.	Sir Seymour Fitzgerald.
Mr. Birley.	Mr. Campbell-Bannerman.
Mr. Fawcett.	Lord George Hamilton.
Mr. Eustace Smith.	Mr. Stanley.
	Lord Edmond Fitzmaurice.

Another Amendment proposed, in line 4, to leave out from the word "interest" to the end of the paragraph—(Mr. *Fawcett*).—Question put, That the words proposed to be left out stand part of the paragraph.—The Committee divided:

Other Amendments made.—Paragraph, as amended, *agreed to.*

[Adjourned till Friday next, at Eleven o'clock.

Friday, 24th July 1874.

MEMBERS PRESENT:

The Right Hon. STEPHEN CAVE in the Chair.

Mr. Stanley.
Sir George Balfour.
Lord Edmond Fitzmaurice.
Mr. Birley.
Mr. Fawcett.
Mr. Campbell-Bannerman.
Mr. Eustace Smith.
Mr. Onslow.
Lord George Hamilton.
Mr. Dunbar.
Sir Henry Havelock.
Mr. Balfour.
Mr. Beckett Denison.
Mr. Grant Duff.
Sir James Elphinstone.

Amendment proposed, after paragraph 8, to insert the following new paragraph:—"Your Committee believe that the military expenditure of India has considerably varied for some years past, consequent on changes being carried out in the military system entirely unconnected with India, and would, therefore, propose that the fullest opportunity should in future be given to the India Office to make inquiry, when changes are deemed advisable, into the new organisation and system of the Imperial army, even when these may appear to be for Imperial interests, and not solely for the interests of India, so as to ascertain how far the financial and military arrangements of India are then or afterwards likely to be affected by the contemplated changes. Your Committee, in support of this view, may refer to some of the many alterations in the home military system that have taken place since the Sovereign resumed the direct rule over India, whereby the interests of India have suffered financially. The numerical strength of regiments of cavalry and infantry, the proportions of ranks, and the numbers of troops and companies composing the regiments, have been several times changed within this period; whilst the numbers of cadres, in proportion to the number of privates, have necessarily varied in India with these changes, with great increase of cost. The formation of brigades of artillery, and their location abroad, with their large complement of colonels and field officers, all receiving high pay in India; the varying numbers and strengths of batteries in India, and the promotion of first captains of artillery and engineers, in order to meet the wants of the home service, with the large Indian pay, have borne heavily on the finances of India. The addition made to the pay of the soldiers in 1866 and 1867, as also the permission to soldiers of seven years' service to extend their service, and anticipate the bounty due at the end of 10 years, and the more recent addition to the pay of the soldiers, have all been made for Imperial considerations, but have necessarily increased the Indian expenditure. The strength and number of depôts kept up in England to train recruits for the regiments in India, the numbers of recruits and other soldiers consequently kept in these depôts, as also the large proportion of higher ranks, and the great extension of the periods of training recruits, have added to the charges on Indian revenues. The several alterations that have taken place in the periods of soldiers' enlistment have necessarily shortened their periods of actual service in India, and have increased the payments of bounties, as well as the expenses connected with the transport of men to and from India. The short period of unexpired service of soldiers sent to India, under the shorter term of enlistment, and the reliefs of regiments with soldiers of short Indian service, have likewise affected the numbers embarking and disembarking. Your Committee would point out that, up to 1870, the effective strength constantly fell much below the established strength. The maintenance of the effective strength of all arms up to the full established strength agreed on to be the garrison of India, must necessarily be not only of financial, but of great political, importance; as also, that the means for keeping up that strengh, by supplies of men from home, should be at all times readily available. Further, whatever may be the total fixed strength of that force, it is advisable that the organisation and formation should, as far as Imperial considerations may permit, be the best suited to India for efficiency, as well as economy. Your Committee may, therefore, suggest, that not only should contemplated changes in the Imperial army be fully and freely communicated to the India Office, but that before being finally resolved on, a calculation be made as to the financial bearing of the proposed changes on the Indian revenues; and your Committee has every confidence that the interests of India would be protected by this combined military and financial examination as to the effect of the proposed changes.

Your Committee may add, that it would be advisable to enter on a similar inquiry in regard to the existing army organisation in India, in order to ascertain how far it is adapted to ensure efficiency and economy "—(Sir *George Balfour*).

Question, That this paragraph be inserted in the proposed Report,—put, and *negatived*.

Paragraphs 9—10, *disagreed to*.

Paragraph 11, amended, and *agreed to*.

Amendment proposed, after paragraph 11, to insert the following new paragraph:—"The differences of opinion regarding the home military expenditure that have arisen between the War Office and the India Office are consequent on the many duties in great detail devolving on the War Department connected with the European army in India, and the uncertain character of the many claims which necessarily spring out of these duties. The entire European force required for the garrison of India being now furnished from the regiments and batteries of the Imperial army, and the duty and responsibility of maintaining that force complete and efficient having devolved on the Secretary of State for War, the heavy expenditure at home for the service of the European troops in India has necessarily been incurred in the first instance by the War Department. These money claims necessarily spring out of the duties involved in raising and training recruits in England for dispatch to India, preparing home regiments and batteries for the periodical reliefs of corps for service in India, receiving invalided, time-expired, and discharged soldiers from India, and detaining them in hospital, and in depôts at home until disposed of. There are other very varied and numerous liabilities connected with the large European army in India, entailing, amongst other outlays, the payment of officers temporarily at home, belonging to the Imperial forces on duty in India; and as these duties have been carried on through the machinery of the War Office, and the expenditure on account has been directly incurred by that department, the War Office has the additional duty of subsequently claiming repayment from the India Office. All these money claims against Indian revenues have, since the 1st April 1870, entailed on the War Office extensive separate accounting, with the necessity of providing all the numerous vouchers for supporting every one of the many small items of charge inserted in the accounts. Further, all the accounts and detailed vouchers have to be examined, audited, admitted, or objected to by the auditor of all charges made at home against Indian revenues. This officer being directly responsible to Parliament for the anthenticity, in the fullest sense, of all payments made in England and entered in the Parliamentary accounts, is thereby under the necessity of seeing not only that all claims are sufficiently supported by proper vouchers, but that they are made under a fully recognised authority from the Secretary of State for India in Council, who alone can grant permission for the admission, in the first instance, of these charges, with the final liability of being objected to by the auditor as not justly chargeable against India. This minute accounting and detailed audit of all War Office claims against India, may naturally be expected to cause delay in settlement; and your Committee regrets to find that the outlays made for India, from 1st April 1870, a period of four years, have not yet been finally agreed to, though advances of money appear to have been made from the Indian Treasury to meet in part the expenditure by the War Office. Your Committee have also to express their further regret, that these delays in settling the claims have led to the serious evil of accounts of Indian revenues, &c., having been presented to Parliament without the important certificate from the Imperial Auditor, that the payments entered therein have been duly examined, audited, and allowed by him. Your Committee attach the greatest importance to the certificate of the Imperial auditor being affixed to the accounts of the India revenues, in proof of all charges against India being duly allowed; and as the examination of some claims may sometimes entail delays in effecting the final audit, within the year, of every charge against India, thereby preventing the auditor giving the required certificate, your Committee would suggest that in such case a supplementary account be laid before Parliament, wherein all the previously unsettled claims of the former years, whenever fully agreed to and finally allowed by the auditor, should be shown. But pending the complete settlement, the entries in the annual ordinary accounts should be so made as clearly to show to Parliament that the items are charges under suspense; and we further advise that this course be followed, as far as possible, with respect to all unsettled arrears of prior years. Your Committee would, however, fail in their duty in omitting to point out, that there is another and very conclusive cause for the delays that have taken place in adjusting these claims; and that is an alteration, since April 1870, in the mode of making up the claims, which involves the preparation of numerous detailed accounts of 'actual charges,' instead of payment by lump sums, as below explained. "Under the Act of 4 Geo. 4, c. 71, it was enacted that all money claims against India from the Imperial departments at home, for the effective services of the army in India, should be charged in accounts against India in the form of 'actual charges,' and be settled regularly every year. At the same time it was agreed, that as it was advisable to meet the liberality of India in the compromise then effected, India should contribute a lump sum of 60,000 *l.* per annum, paid in quarterly to the Imperial Exchequer, in clearance, as the Act states, of all claims then existing, or which may hereafter arise in connection with the retiring pay, pensions, and other outlays of this nature, on account of the European troops of the Imperial army detached from home for services in India. This annual settlement of accounts appears to have been regularly effected up to 1857,

1857, with one exception, owing to the claim made by India against the Imperial Exchequer for refunding, in accordance with promises stated to have been made, the ordinary pay and allowances of the troops detached from India for operations against China, for what is known as the first China War; and as this claim was finally refused by the Imperial Treasury after lengthened negotiations, delay in settling accounts was caused thereby. But, after 1857, on the Mutiny breaking out in India, there were extensive additions made to the European troops of the Imperial army for service in India, and with the existence of many novel charges against India, arising out of these additional demands for troops and stores, the settlement of accounts of home claims appears to have fallen into arrear between 1857 and 1860. Even the actual compilation of the accounts of claims appears to have entailed on the Imperial departments great labour and difficulty, quite apart from the difficulties in proving the claims and in obtaining payment. The very extensive augmentation, consequent on the Mutiny, of the Imperial force in India, in contrast with the smaller force maintained in India, when the Act 4 Geo. 4, c. 71, was passed, led to a claim being preferred, in 1858, by the War Office to the Treasury, for an inquiry into the sufficiency of the lump sum above referred to for the retiring pay and pensions. And subsequently, in 1860, the Treasury moved the War Office and India Office to inquire into the accounts with the Government of India, and into the long period they are necessarily, under existing arrangements, kept open, in order, as the Treasury and War Office then stated, 'that measures may be adopted for reducing the payments to be made by the East India Government in respect of these accounts to an average rate proportioned to the number of British troops serving from time to time in the territory, and that when once the scale is fixed the contributions should be paid by monthly instalments, including in the arrangements the contribution in aid of the non-effective payments.' The inquiries instituted to carry out this view in favour of lump sums were carried on by two separate committees, consisting of officers from the War and India Offices, and the Treasury (both under the presidency of Major General Sir Alexander Tulloch), and resulted in a provisional arrangement being submitted by the Committee on 31st January 1861, and provisionally accepted by the Treasury, War, and India Offices, that settlement of claims against India should be effected from 1st April 1861, by the Indian revenues contributing at the annual rate of 10,000*l.* per 1,000 men of all arms effective in India, based on the numbers borne on the 12 months' muster rolls; and that this rate of payment should cover all charges incurred at home by the War Office, for the effective services in England on account of the troops in India. Also, in lieu of the former lump sum for covering the retiring pay and pensions of the troops in India, an annual rate of 3,500*l.* per 1,000 effectives in India should be contributed out of Indian revenues. The Committee over which Sir Alexander Tulloch presided, proposed to continue their inquiries in view to defining more accurately the permanent rates to be paid by India for the several arms of soldiers; but this inquiry was never entered upon. The provisional arrangement, though only accepted for one year, was extended year by year, and continued in force from 1st April 1861 to 31st March 1870, a period of nine years, being then discontinued by the War Office, apparently owing to the assumed insufficiency of the rates to cover all the charge for which these lump sums were allowed. But as the accounts before your Committee do not supply details to prove this loss, your Committee advise a more complete investigation into the case. In 1869 a new Committee, known as Mr. Seccombe's Committee, was assembled, consisting of officers of the India and War Offices, to make arrangements for adjusting, from the 1st April 1869, the charges for effective services of Her Majesty's regiments on the East India establishment, on the principal of actual charges. That Committee, after careful consideration, came to the conclusion that it was advisable, in order to settle the claims between the War Office and the India Office, to revert to the system of 'actual charges' which was in force from 1824 up to 1861, in lieu of the lump payments adopted in the latter year. The Committee accorded their opinion that from the 1st April 1870, the claims of the Imperial Government should be adjusted by repayment of the actual charges on the general principles which governed the settlement of the accounts for recruiting depôts and other home services, from the year 1824 to the date of the introduction of a capitation rate. That Committee has submitted four Reports, but all mainly relating to only one of the many items of charge against India, that is, the cost of recruits raised and trained by the War Office. The members of the Committee, though all agreeing to certain rates of charge to be provisionally paid by India for the expenses of supplying recruits of different arms, and having advised the settlement of all such claims at these rates for two years, from 1st April 1870 to 31st March 1872, differed as to the data on which the military establishments of depôts should be maintained. The Committee was unanimous as to the costly nature of these depôts, but the officers of the India Office specifically objected to the large establishments of officers and non-commissioned officers belonging to the depôts, and contrasted the then far heavier cost of supplying recruits for service in India with the low average cost under the Warley depôt system of the East India Government, and recorded minutes of dissent on this point, which still remains undecided"—(Sir *George Balfour*).

Question, That this paragraph be inserted in the proposed Report,—put, and *negatived.*

Paragraph 12.—Amendment proposed to leave out from the words "It has been," in line 1, to the words "arrived at," in line 5 (inclusive), in order to insert the words, "desired to settle the payments to be made by the India Office to the War Office by means

of a committee composed of permanent officers of the two departments. But although comparatively little difference has been found to exist between the members of the two departments on matters of detail and of account, yet great difference prevails between the departments and between their respective officers, as to the principles on which those details and those accounts ought to be adjusted"—(Mr. *Campbell-Bannerman*),—instead thereof.—Question, That the words proposed to be left out stand part of the paragraph.—The Committee divided:

Ayes, 11.	Noes, 2.
Mr. Balfour.	Mr. Onslow.
Sir Henry Havelock.	Mr. Campbell-Bannerman.
Mr. Dunbar.	
Mr. Eustace Smith.	
Sir James Elphinstone.	
Lord George Hamilton.	
Mr. Stanley.	
Sir George Balfour.	
Mr. Fawcett.	
Lord Edmond Fitzmaurice.	
Mr. Birley.	

Another Amendment proposed to leave out from the words, "Your Committee have been informed," to the end of the paragraph—(Mr. *Beckett Denison*).—Question put, That the words proposed to be left out stand part of the paragraph.—The Committee divided:

Ayes, 11.	Noes, 3.
Mr. Balfour.	Mr. Beckett Denison.
Sir Henry Havelock.	Mr. Onslow.
Mr. Dunbar.	Mr. Campbell-Bannerman.
Mr. Eustace Smith.	
Sir James Elphinstone.	
Lord George Hamilton.	
Mr. Stanley.	
Sir George Balfour.	
Mr. Fawcett.	
Lord Edmond Fitzmaurice.	
Mr. Birley.	

Another Amendment proposed at the end of the paragraph, to add the words, "It appears indeed that so large a question of public policy is not usually submitted by the Executive Government or by Parliament to the discretion of any individual, however eminent; nor, indeed, would it seem to be fair to any individual to cast such a burden upon him. The decision, it must be observed, is not intended merely to govern the expenditure of any particular year, but to settle the principle on which in future years the relative expenditure of India and of the United Kingdom is to be apportioned. The Committee, however, understand that the departmental committee, with its new president, will merely inquire into the facts and details of the question, and that its settlement will rest with the responsible heads of the departments"—(Mr. *Campbell-Bannerman*).—Question put, That those words be there added.—The Committee divided:

Ayes, 5.	Noes, 10.
Sir Henry Havelock.	Mr. Beckett Denison.
Mr. Dunbar.	Mr. Balfour.
Mr. Eustace Smith.	Mr. Onslow.
Mr. Campbell-Bannerman.	Sir James Elphinstone.
Mr. Fawcett.	Mr. Grant Duff.
	Lord George Hamilton.
	Mr. Stanley.
	Sir George Balfour.
	Lord Edmond Fitzmaurice.
	Mr. Birley.

Question put, That the paragraph, as amended, stand part of the proposed Report.—The Committee divided:

Ayes, 13.	Noes, 2.
Mr. Beckett Denison.	Mr. Onslow.
Mr. Balfour.	Sir Henry Havelock.
Mr. Dunbar.	
Mr. Eustace Smith.	
Sir James Elphinstone.	
Mr. Campbell-Bannerman.	
Mr. Grant Duff.	
Lord George Hamilton.	
Mr. Stanley.	
Sir George Balfour.	
Mr. Fawcett.	
Lord Edmond Fitzmaurice.	
Mr. Birley.	

Amendment

Amendment proposed, after paragraph 12, to insert the following new paragraph:—"Your Committee suggests that in the interval between the adjournment of the House and its re-assembling next Session, the permanent officers of the Departmental Committee, consisting of officers from the War and Indian Offices, should, under the supervision of the arbitrator, continue the inquiries into all the details of charges which are now incurred by the War Office on behalf of Indian interests, and for which charges Indian revenues are considered liable. Your Committee would indicate some of the heads which appear to need special investigation, such as the strength of depôts and the ranks composing these depôts, and whether, as pointed out in the dissents of the officers representing the India Office, these regimental depôts are or are not in excess of the requirements for training men, both in respect to numbers in the different ranks and in the number of depôts. Also whether, as suggested in the 12th paragraph of the letter from the Under Secretary of State for India, dated 8th September 1871, to the War Office, the depôt arrangements for training recruits for India could not be simplified by being kept to the minimum establishment requisite for the provision of recruits. This view is also indicated in the 4th paragraph of the letter from the Government of India, dated 15th May 1873, to the Secretary of State, in which it is recommended that the depôt be kept on a reduced scale, and more resembling that of the present depôt of the Guards. Your Committee would also point out for investigation the periods fixed for actually training the recruits for the several arms, and whether these periods are proper; and next, whether from the evidence given before your Committee, and as stated in the letter, dated 14th April 1874, from the India Office to the War Office, the recruits are sent to India with much less training than the agreed on period. Your Committee would also urge a further investigation into all the many items of charge making up the total cost of recruits, especially the large addition of one-third of the cost for deaths, desertions, &c., referred to in the report of the Departmental Committee, dated 28th February 1870; also, in the other items of charge alluded to in the letter from the Government of India of May 1873, and generally, into all the heads of outlay detailed in the Appendix to the Report of the Departmental Committee, dated 24th November 1869. Your Committee would also advise an inquiry into the mode of adjusting claims of the War Office against Indian revenues arising subsequently to the 31st March 1872, there being, as stated in the letter dated 14th April 1874, from the India Office to the War Office, no arrangement as yet fixed on as to the final adjustment of charges for effective services. Your Committee would also advise an inquiry into the arrangements for adjusting the non-effective charges which your Committee have been unable to commence on, and whether the retiring pay, pensions, and other charges of this nature should be adjusted by the contribution of a lump sum, as under the Act 4 Geo. 4, c. 71, which continued to be paid up to 31st March 1861, or by an average rate of 3,500*l.* per annum, based on the average number of effectives in India, as agreed on under the recommendation, dated 31st January 1861, of the Committee over which Sir A. Tulloch presided, and which sum continued to be paid till 31st March 1870. Or, whether the actual charges for pensions, based on the actual service rendered to the Imperial and Indian Governments shall be followed for settling these claims. This detailed inquiry would lead to the collection of information which would at least aid in bringing to a settlement most, if not all, claims between the two departments; and if a complete settlement should not thereby be effected, the information then obtained would facilitate the labours of this Committee if re-appointed next Session"—(Sir *George Balfour*).

Question proposed, That this paragraph be inserted in the proposed Report.—Amendments made in the paragraph.—Question put, That this paragraph, as amended, be inserted in the proposed Report.—The Committee divided:

Ayes, 12.	Noes, 2.
Mr. Beckett Denison.	Mr. Onslow.
Mr. Balfour.	Mr. Campbell-Bannerman.
Sir Henry Havelock.

Mr. Sampson Lloyd.	
Mr. Campbell-Bannerman.	
Lord George Hamilton.	
Mr. Stanley.	
Mr. Birley.	

Another Amendment proposed, in line 7, to leave out the words "in reference"—(Mr. *Eustace Smith*).—Question put, That the words proposed to be left out s tand part of the paragraph.—The Committee divided:

Ayes, 9.	Noes, 5.
Mr. Onslow.	Mr. Eustaee Smith.
Sir Henry Havelock.	Mr. Dunbar.
Mr. Balfour.	Sir George Balfour.
Sir James Elphinstone.	Mr. Fawcett.
Mr. Sampson Lloyd.	Lord Edmond Fitzmaurice.
Mr. Campbell-Bannerman.	
Lord George Hamilton.	
Mr. Stanley.	
Mr. Birley.	

Another Amendment proposed, in line 9, to leave out the word "subordinate," and to insert, "in harmony with"—(Sir *George Balfour*),—instead thereof.—Question put, That the word "subordinate" stand part of the paragraph.—The Committee divided:

Ayes, 8.	Noes, 6.
Mr. Balfour.	Mr. Onslow.
Sir James Elphinstone.	Sir Henry Havelock.
Mr. Sampson Lloyd.	Mr. Dunbar.
Mr. Campbell-Bannerman.	Mr. Eustace Smith.
Lord George Hamilton.	Sir George Balfour.
Mr. Stanley.	Mr. Fawcett.
Lord Edmond Fitzmaurice.	
Mr. Birley.	

Another

Another Amendment proposed, in line 12, after the word "misunderstood," to insert the words "and magnified"—(The *Chairman*).—Question put, That those words be there inserted.—The Committee divided:

Ayes, 8.	Noes, 6.
Mr. Balfour.	Mr. Onslow.
Sir Henry Havelock.	Mr. Eustace Smith.
Sir James Elphinstone.	Mr. Dunbar.
Mr. Sampson Lloyd.	Sir George Balfour.
Mr. Campbell-Bannerman.	Mr. Fawcett.
Lord George Hamilton.	Lord Edmond Fitzmaurice.
Mr. Stanley.	
Mr. Birley.	

Paragraph, as amended, *agreed to.*

Amendment proposed, after the last paragraph, to add the following new paragraph: "In conclusion, your Committee would suggest that, as they have not had time to investigate the various home charges which are not connected with military expenditure, they should be re-appointed next Session. As much evidence was taken in reference to these charges by the India Finance Committee, which sat during the three previous Sessions, it is probable that the inquiry might be completed within a reasonable period"—(Mr. *Fawcett*).

Question, That this paragraph be inserted in the proposed Report,—put, and *agreed to.*

Question, That this Report, as amended, be the Report of the Committee to The House,—put, and *agreed to.*

Ordered, To Report, together with the Minutes of Evidence, and an Appendix.

MINUTES OF EVIDENCE.

Tuesday, 12*th May* 1874.

MEMBERS PRESENT:

Mr. Stephen Cave.
Sir George Balfour.
Mr. Balfour.
Sir Thomas Bazley.
Mr. Birley.
Mr. Campbell-Bannerman.
Mr. Dalrymple.
Mr. Beckett Denison.
Mr. Dunbar.
Sir James Elphinstone.
Mr. Fawcett.
Sir Seymour Fitzgerald.
Lord Edmond Fitzmaurice.
Lord George Hamilton.
Sir Henry Havelock.
Mr. Sampson Lloyd.
Mr. Onslow.
Mr. Eustace Smith.
Mr. Stanley.

THE RIGHT HONOURABLE STEPHEN CAVE, IN THE CHAIR.

Mr. JOHN MILTON, C.B., Mr. ROBERT P. DAYE, and Mr. RALPH HENRY KNOX, called in; and Examined.

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*.

12 May 1874.

Chairman.

1. (To Mr. *Milton.*) You are Accountant General of the Army?—Yes.

2. (To Mr. *Daye.*) You are an Assistant Principal in the War Office?—Yes.

3. (To Mr. *Knox.*) You are Estimate Clerk in the War Office?—Yes.

4. (To Mr. *Milton*). You appear on behalf of the War Office to explain the system under which home charges for recruits raised for India are made?—Yes, and to give any information that the Committee may require regarding charging India with the home charges incurred in this country.

5. Will you explain that system shortly?—As the Committee probably are aware, from 1824, under the Act of the 4th George the 4th, accounts of all the home charges incurred on account of India were rendered. They were prepared from the pay lists and other accounts furnished to the War Office; and were consolidated by a Department of the Treasury, who recovered the amount from the India Company.

6. I think the Treasury sent the accounts to the Board of Control, and they were afterwards transmitted to Leadenhall-street?—I believe so; we sent the account in to the Treasury, who paid our bill, and then proceeded to make their claim against the India Company.

7. You only dealt with the Treasury in the matter?—Yes. That system proceeded for many years; and in the year 1860–61 a committee was appointed, consisting of members from the Treasury, from the India Office, and from the War Office, to investigate the subject of the home charges for India, on the base of the actual expenditure and payments during 24 years prior to the mutiny of 1857.

Chairman—continued.

8. That was what is ordinarily called Mr. Seccombe's Committee, was it not?—No; the Committee in 1860-61 was Sir Alexander Tulloch's Committee. They came to the conclusion that a capitation rate on each effective soldier in India should be paid at such sum as would serve to repay the expenses of keeping up the forces.

9. Will you state who were the members of that committee?—Sir Alexander Tulloch, Mr. C. H. Anderson, Colonel Jameson, Mr. Sandoz, the Auditor of the India Office, and Mr. Foster, of the Treasury. That capitation was calculated on the number of effectives of Her Majesty's troops in India, distinguished from the European troops of the Company's service, as shown by monthly rolls to be serving in India, and the calculation was that the wear and tear of that force might be kept up by a payment at the rate of 11 *l.* 1 *s.* 6 *d.* for each infantry soldier, of 15 *l.* 16 *s.* for each cavalry soldier, and of 23 *l.* 13 *s.* for each artillery soldier. Those being the figures arrived at by the committee, the Home Government agreed to take 10 *l.* a head for all arms, being a reduction in favour of India of 9 per cent. for each infantry soldier, 30 per cent. in favour of India for each cavalry soldier, and 57 per cent. in favour of India for each artillery soldier serving in India.

103158

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*.

12 May 1874.

Chairman—continued.

10. Those being the Queen's soldiers serving in India?—Her Majesty's troops serving in India.

Mr. *Onslow*.

11. Were the first figures that you gave the figures from the year 1824 to 1860, or were they recommendations of the committee?—They were recommendations of the committee of 1860-61, founded on the actual accounts kept and paid from 1834 to 1857. This arrangement of a capitation rate continued from time to time, and was renewed, provisionally, for eight years. But in 1868-69 the committee known as Mr. Seccombe's Committee was appointed. That committee consisted of two officers of the India Office and two officers of the War Office, and still exists, with some change in the persons.

Chairman.

12. What was the date of their first report?—Early in 1869. This committee reported in their third report in favour of a price current, or tariff, or commuted charge, for each recruit embarked for India; thus changing the basis of payment from the number of men serving in India to the number of men actually embarked for India. This mode of recovering the home charges has been approved for two years up to the 31st of March 1872, coupled with the payment, by the India Office direct, of the furlough pay of officers at home, of the colonels' pay for the several regiments, battalions, or brigades serving in India, and the advances of men on board ship to and from India and this country. The recommendation of the War Office members of this committee was in pursuance of the plan of only demanding a repayment in part from India, modified by the Secretary of State, who waived the battalion charges. As these charges included the cost of commanding the men, of paying the men, of medically treating the men, of instructing the men in musketry, and of equipping them through the quartermaster, the result of that concession was that all those duties are now performed for recruits going to India free of any charge to the revenues of that country.

13. Then would you modify the statement that the charges are made on the principle of actual charges?—That was the principle, but it was modified in amount.

Sir *H. Havelock*.

14. The charge for them is a charge against the home revenues?—Yes; that is to say, we recover no part of the pay of the battalion officers at home on account of their duties towards Indian recruits.

Chairman.

15. Were the members of that committee unanimous in their report?—In regard to the facts and figures on which that report was grounded I do not think there was any divergence of opinion; the Indian members questioned every sum we put before them; we justified every sum before it was admitted; in which process I might point out that India would be likely to get the advantage, because it was clear that what we claimed to bring against them was canvassed, and not admitted till approved, and equally clear that anything that we omitted to bring forward, as home recruiting charges, lapsed; and this was illustrated by the case of forage. In our second Report the

Chairman—continued.

forage was forgotten on behalf of the War Office; afterwards attention was drawn to it, and it was admitted by the Indian members. I only mention this to show that the tendency of that system must be to give an advantage to the party on whom the claim is made.

16. Will you explain what accounts might have been rendered that would not be admitted?—No accounts could be rendered, but there might be some small services performed towards these recruits that were not brought forward, because I must inform the Committee that these were not all direct charges; there were indirect or average charges; for instance, the proportion of the cost of repairs of barracks could not be a direct account, but indirect, and a share of the staff of the recruiting districts, and so on; and in collecting all the incidental charges on which our home officers were doing certain duties towards the Indian recruits, we might possibly omit some; we could create none.

17. Then your statement is, that the charges made were only direct charges, and that there were certain indirect charges, a portion of which might have been placed against the Indian revenue, which you were debarred from doing by your instructions?—Certainly; there were many indirect charges that we were instructed not to urge against the Indian Government; but the sum agreed by us included both direct and indirect or average charges.

18. Were there any indirect charges which you placed against the Indian revenue?—Yes; the sum placed by us as the cost of the recruit included direct and indirect charges. I instanced as indirect charges the cost of wear and tear, and maintenance of the barracks in which the men were housed, and the cost of the share of the staff of recruiting districts, they being raised in the same recruiting districts as our home troops; for instance, the paymaster was paid so much a year for paying 1,000 men; 500 of them were English and 500 Indian, so that one-half of his pay was a clear cost incurred for India.

19. All those indirect charges which you could easily apportion were apportioned in the way you have mentioned?—Yes.

20. But there were others difficult to apportion of which India got the benefit?—Yes, they were the more remote; the controlling staff of the Horse Guards, for instance, or the Secretary of State's Office; no doubt that office includes many persons whose duties arise from the British troops being employed in India.

21. Does the 10*l*. include the direct and indirect charges which you are now talking about?—It does; it was based upon those indirect and direct charges; the more remote indirect charges were omitted.

Mr. *Campbell-Bannerman*.

22. I think that the 10*l*. was not the result of the investigations of the Committee of 1860, but was a sum which was adopted by the Government very much in favour of India?—Certainly.

23. The investigations of the committee, based on direct and indirect charges, as the honourable Member has said, led to higher sums being charged, 11*l*. 1*s*. 6*d*. for the infantry soldier, and so forth?—Yes; they led to 11*l*. 1*s*. 6*d*. being chargeable; but only 10*l*. was charged.

24. What

Mr. *Fawcett*.

24. What is the date of this report to which you are referring?—The report of Mr. Seccombe's committee was in 1869.

25. But there is one committee to which you referred as Sir Alexander Tulloch's committee, and there is another committee of which you and Mr. Seccombe were members, and Mr. Daye was secretary?—Yes.

26. The date of Sir Alexander Tulloch's committee was what?—In 1861 that committee sat.

27. It seems to me that in speaking of "the committee," you have not kept sufficiently clear which committee you are referring to?—The committee that sat in 1861 fixed the capitation, which lasted for eight years.

28. That was not Mr. Seccombe's committee?—No; Sir Alexander Tulloch's committee, that suggested the capitation rate, sat in 1860-61.

29. And none of the evidence that you have given yet has referred to the committee of which you and Mr. Seccombe were members, has it?—I have continued my narrative up to that committee, which eight years after suggested the contribution by tariff according to the number of men embarked.

Lord *Edmond Fitzmaurice*.

30. I understand that the higher charge, that above 10 *l.*, which you say would have been the real charge, was never actually levied?—Never. Whilst the committee presided over by Sir Alexander Tulloch was still engaged in its inquiries, the Government accepted provisionally the 10 *l.* per man. That rate was continued and never increased. Although the final inquiries of the committee led to the higher sums I stated, the 10 *l.* continued for the whole period the capitation rate was in force.

Chairman.

31. Up to what year?—To the year 1870.

Lord *Edmond Fitzmaurice*.

32. That continued, roughly speaking, for 10 years?—For nine years.

Chairman.

33. You have given us instances of indirect charges which were apportioned, perhaps you can give instances of indirect charges which were not apportioned?—In the second report of Mr. Seccombe's committee, dated 24th of November 1869 the Appendix, Class 3, states the "Expenses affecting depôts of regiments in India which have not been matter of account between the Imperial Government and the Government of India, namely, proportion of the expense of the general staff, medical staff, commissariat staff, commissioned chaplains, military departments, Chelsea College, asylums, &c., expenses of female hospitals, billiard tables, and rooms for officers, recreation rooms for men, and cost of games and gymnastic instruction, and cost of utensils, &c., school of music, Kneller Hall, school of cookery." They were the more remote indirect charges which were waived.

34. Now will you proceed with your statement?—I think that the statement which I have given brings us down to the present time, observing that the arrangements under which that fixed tariff has been accepted between the India Office and the War Office has expired in March 1872, that the great changes then anticipated, and now since partially carried out by the Government, in the organisation of the troops in this country rendered the data, on which we had been able to proceed to that point, utterly beyond our power till we had some experience in it. The consequence is that the rates for the past year and for the current year are still a matter to be settled between us and the India Office.

Chairman—continued.

35. On what basis have the payments been actually made for the last two years?—No final payments have been made; in fact, no claims have yet been rendered for the last two years.

36. How do you explain these questions with regard to the increase in the charge for recruiting raised in the Report of 1869, of Mr. Seccombe's committee?—Having submitted to our colleagues who represented the India Office on that committee the figures as closely as we could possibly calculate them of the cost of a normal recruit fully trained and fit and efficient for foreign service, the War Office members then submitted to the committee that it was perfectly clear that for every hundred men whom we embarked we had raised a good many others who did not embark; that the wear and tear or dead weight of the depôts, before the men were brought to the moment of embarking, was very heavy; and the War Office members claimed from the Indian members that for every three men embarked four men should be paid for at the tariff price agreed to for the different recruits. The Report states that this would be justified by an annexed memorandum, but through some lapse that memorandum was not annexed to the Report when rendered.

Sir *George Balfour*.

37. Will you be able to give in that memorandum now?—Yes. I propose to read the memorandum which I afterwards prepared and forwarded semi-officially to the Chairman, Mr. Seccombe, for future reference, in case that arrangement should ever be questioned.

Chairman.

38. Showing your reason for charging four men for three?—Yes. "Memorandum regarding the dead weight of the Indian regimental depôts. The propriety of charging against Indian revenues an increased rate of cost for each recruit embarked for India, in consequence of the dead weight of the Indian depôts of cavalry and infantry regiments will be apparent from the annexed Return (*Return handed in*, vide *Appendix*), of the establishment of the depôts, for drill and training, of the actual strength of those depôts, of the actual number of recruits sent out thence as drafts to India, and the number of invalids and time-expired men disembarked, during each of the seven years, from 1861-2 to 1867-8, both inclusive (*see* Committee's Report of 11th March 1869, page 4). By this Return it will be seen that while the average strength maintained throughout the period was 8,494 men, 2,196 recruits, on an average, were embarked annually, who, at an average training of nine months each, account for 1,647 for the entire year. Further, an average of 3,521 invalids and time-expired men were brought back from India, who, at an average detention at the depôt of, say, three months, account for 880 for the entire year, leaving 5,967 men throughout the year as the dead weight of these

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*.

12 May 1874.

Chairman—continued.

these depôts. Deducting from that number 1,841 men as the average fixed establishment of officers, non-commissioned officers, and drummers maintained for the purpose of drilling and training the recruits, it results that 5,773 men were entertained at the depôts to furnish 2,196 recruits. The addition, therefore, of 200 per cent. to the ascertained cost of each recruit would have been justified by these figures, in lieu of 33 per cent. only, as agreed to by the committee." To test that view, I yesterday got prepared at my Office a statement (*Statement handed in*, vide *Appendix*), showing what proportion of the home charges for Indian regiments would have been finally borne by Imperial revenue during the eight years of the capitation rate,—had this tariff price been the mode of settlement during that time in lieu of the capitation rate; and I find that whilst we should have recovered for the recruits at those tariff prices 1,320,000 *l.*,—of which 330,000 *l.* was the additional 33 per cent.,—we should have been out of pocket during those eight years, that is, the British revenues would have remained unrecouped, 1,700,000 *l.*, and if the 33 per cent. complained of had been further remitted, we should have been out of pocket over two millions sterling. Therefore, we are prepared by any probing of the figures to prove that the dead weight, or wear and tear, of the depôts is far in excess of the 33 per cent.; or one man in four for whom we have claimed payment.

Sir *George Balfour*.

39. That is to say, your calculation is made upon the sum you received?—The sum we should have received, had we been going on this tariff during the eight years, from 1861 to 1869; it amounts to above 200 per cent., which was required to be added to the ascertained cost to recoup or repay the British revenues for the charges that could be proved to be incurred solely on account of the Indian forces in this country; this is to say, we might have charged three times as much, instead of only charging one-third more.

Chairman.

40. What was the charge per head of each arm of the service, which you take as your basis in that calculation?—The lower rate agreed to by the Secretary of State for War, on Mr. Seccombe's Report, namely, for each cavalry man 136 *l.* 13 *s.* 11 *d.*, and for each infantry man 63 *l.* 8 *s.* 5 *d.*

41. Were those figures agreed to by the Indian members of the committee?—They were.

42. A "lower rate," in comparison to what?—A lower rate in comparison to what the committee state might be a fair charge. Mr. Seccombe's Committee drew out generally the cost in three forms; the cost of what the soldier received himself, the cost of his company for drilling him and training him, and the cost of the battalion to which that company was annexed for commanding him, medically treating him, instructing him in musketry, equipping him through the quartermaster, and otherwise. Those three charges, the personal charge, the depôt charge, and the battalion charge, were stated in this Report, and the battalion charge was waived by the Secretary of State for War in favour of India.

43. Can you give in figures the difference between the two?—£. 136 13 *s.* 11 *d.*, as against

Chairman—continued.

144 *l.* 9 *s.* 5 *d.*, making nearly 8 *l.* difference for every cavalry recruit, and 63 *l.* 8 *s.* 5 *d.* for each infantry man, as against 66 *l.* 19 *s.*, being 3 *l.* 10 *s.*, or nearly 6 per cent. diminution.

44. A diminution of nearly 6 per cent. between the higher and lower charges?—Yes, a diminution of 6 per cent. between the higher and lower charges by the omission of all battalion charges.

45. But I see an objection taken in page 2 of this same report of Mr. Seccombe's Committee; if you look at paragraph 9 you will find that 205 *l.* is stated as the cost of each soldier sent to India by the War Office?—Yes.

46. How do you explain that?—It comes to very much what I have been laying down, that to recoup ourselves absolutely for the full charges would have required us to multiply the sums of 63 *l.* and 136 *l.* by two, if not by three

Mr. *Fawcett*.

47. That is not the point, is it; you state here, do not you, in that report, that 205 *l.* is the actual cost to India of the recruit?—No; that it was the result of this calculation; the total amount of Indian depôt expenses in this country divided year by year by the total number of recruits whom we succeeded in embarking.

48. But anyone reading that paragraph, I think, would come to no other conclusion than that what you meant by that is, that the cost of each recruit to India at the present time is what you state, 205 *l.*; do not you think so?—The cost of the recruit upon the period ending in 1867-8.

49. That is what India had actually to pay?—No; that was the cost of the article, but not the charge for the article. The cost to prepare that finished article was 295 *l.*; we sold it, from 1870 to 1872, for 63 *l.*

Chairman.

49.* The 205 *l.* is not the charge against India, but the whole cost of raising the recruits?—The whole cost of raising recruits with other home charges incurred for India in this country.

Mr. *Sampson Lloyd*.

50. Are the figures which you have given to lead the Committee to believe that for the period which you speak of there has accrued to British revenues a loss of 1,700,000 *l.*?—No; the statement made by me assumed that during that period we had in that manner settled the accounts; but as the period in question was from 1861 to 1869, I would remind the Committee that during that period the payment was upon a calculation of the capitation on effectives in India, and that my comparison for the eight years was given only to show that the experience of the past proved that the tariff price fixed from 1869 was not excessive.

Chairman.

51. Then what you wish the Committee to understand is that if during those eight years the tariff of 63 *l.* and 136 *l.* had prevailed, the loss to the British taxpayer would be as you have stated?—Would have been about 200,000 *l.* a year, or 1,700,000 *l.* altogether.

Sir *George Balfour*.

52. That is for the eight years from 1861 to 1869?—Yes.

Lord *Edmond Fitzmaurice*.

53. Then your full calculation is a sort of calculation of arrears?—Having fixed the tariff after the

Lord *Edmond Fitzmaurice.*

the experience of those years, I then go on to show that the rates so fixed would not have repaid the whole expenses of those years, and that the expenses of those years might have been made to justify a tariff price of at least double. It was on the actual account of those eight years that we based our experience of the actual cost, and found the price which we ought to be paid to recoup ourselves.

Mr. *Eustace Smith.*

54. Am I right in understanding that what you mean is that if the recommendation of Mr. Seccombe's committee had been adopted, England would have got 1,700,000 *l.* less than she did?—No; what I wish the Committee to understand is this, that Mr. Seccombe's committee fixed the tariff price for the future at a sum arrived at from the expenses of the past, and generally the expense of training the men; that price I felt called upon to justify. I justify it by producing the figures of Mr. Seccombe's committee, and I test it by showing that had that been the principle on which our expenditure had been settled during the previous eight years the British revenues would have lost 200,000 *l.* a year; therefore I press upon the Committee the conclusion that these tariff prices were not excessive.

55. That if the recommendation of Mr. Seccombe's committee had been adopted during the eight years when it was not in operation England would have lost 1,700,000 *l.*?—Yes.

Mr. *Campbell-Bannerman.*

56. The new arrangement was more favourable to India than the old?—Certainly; if we had been paid for those years by the tariff prices only, we should have been left unrecouped 200,000 *l.* a year.

Sir *George Balfour.*

57. That is to say you ought to have had 200,000 *l.* a year more given you?—No; that is to say, that at those rates we should not have been adequately repaid, and the sum which represented the inadequacy was 200,000 *l.* a year.

Mr. *Dunbar.*

58. Then you have profited to the extent of 200,000 *l.* a year?—No; we have avoided a dead loss.

Chairman.

59. What you mean to state is this, that if the charges which you now mention as having been fixed upon by Mr. Seccombe's committee as the proper charges to be made had been in operation for those eight years, they were so favourable to India that this country would have lost 200,000 *l.* a year more than India repaid it; is not that so?—Yes.

Lord *Edmond Fitzmaurice.*

60. Then if that is the case, this country gains?—No; it would have lost 200,000 *l.* a year more than India would have repaid it on that basis.

Mr. *Fawcett.*

61. You mean that during the eight years previous to 1869 England received 200,000 *l.* more than she would have received during the whole of those eight years, supposing this proposal of Mr. Seccombe's committee had been in existence?—Yes; in fact, that during those eight years the depôt charges were at the rate of 205 *l.* for each recruit embarked.

Mr. *Fawcett*—continued.

Lord *George Hamilton.*

62. Am I to understand that you take the eight years, 1861 to 1868, as normal years?—They were the years the recorded expenditure of which had been carefully made during the provisional existence of the capitation rate.

63. But were they not exceptional years, and therefore any average based upon those years is not a fair comparison, is it?—I am not aware of anything exceptional.

64. If you look at page 2, paragraph 9, of Mr. Seccombe's report, you will see "the figures in the Return C show a cost of about 205 *l.* for each soldier sent by the War Office to India; but this must be modified as regards one or two exceptional years, during which, although the depôts remained at their full strength, very few recruits were required for India in consequence of each regiment in that country having been very largely reduced." And if you look at the Table C, you will see that in the year 1862-3 the average cost of each recruit embarked is 376 *l.*, whereas in the next year it is only 134 *l.*; partly owing to exceptional circumstances in the year 1862, the average cost of the recruit during the whole eight years was very much increased?—But I must submit to your Lordship that the very instance you give shows that the exception was righted the next year.

65. But would not 134 *l.* be nearer the normal cost than 376 *l.*?—I think not; the next year was 228 *l.*, and the total average is 205 *l.*

66. If you struck out the one exceptional year, you would very much reduce the average, would you not?—I do not think very much; but the base is so broad that you can afford any amount of margin to be stripped off between 63 *l.* and 205 *l.*

Sir *Henry Havelock.*

67. Is this the statement of the case, that in 1869 a calculation was made, based upon the actual cost of the eight previous years, from 1861 to 1869, and then it was ascertained that upon the average the cost of the soldier had been in those eight years 205 *l.* a year; that is so, is it not?—The cost of the depôt charges had been at the rate of 205 *l.* for each recruit embarked.

68. But during those years the British revenue had been receiving, on an average, something like 200,000 *l.* a year less than it will receive for the future if the charges against India are made on the basis of that calculation?—The charges against India will be for the future about 200,000 *l.* a year less than they were during the years in question, so long as the present moderate tariff charges for the recruits prevail, assuming that the number of recruits remains the same.

Mr. *Sampson Lloyd.*

69. Then England, as compared with India, loses 200,000 *l.* a year by the present scheme, assuming the army to be kept up to the present strength?—Assuming the depôts to be kept up on the same large scale that is the case, but the recent measures of the reorganisation of the army will put an end to those separate depôts.

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*.

12 May 1874.

Mr. *Milton*, C.B., Mr. *Dayr*, and Mr. *Knox*.

12 May 1874.

Sir *Henry Havelock*.

70. It appears that in 1869 certain calculations were made, based upon the actual cost of the eight years from 1861 to 1869, and on that it was found that the average cost to this country during those eight years for the training and the maintenance of each recruit had been about 205 *l.*; is not that so?—Yes; including every species of depôt charges.

71. During those eight years what had been the average charge to India for each recruit?—That we cannot give any return of. It was not based on the question of the actual cost of each recruit, but based on the assumed or ascertained cost of fortifying the battalions abroad. The receipts under the capitation rate shall be laid before this Committee. But, generally speaking, I think it nearly recouped us the amount of the actual home charges.

72. What was the amount, roundly, charged to India for each recruit, on an average?—My impression is that the capitation rate hit it excessively close, and that we were nearly repaid through the capitation rate our actual recorded expenses. (*Return handed in,* vide *Appendix.*)

Chairman.

73. If that were so, it would be about 205 *l.* a man?—Yes; and the new tariff prices will be very much cheaper to India than was the capitation rate.

Mr. *Fawcett*.

74. Just now you said that the cost of recruits to India was not 205 *l.*, and now you say it is?—I say that India has repaid us, not per recruit, but through the capitation rate, for a cost which represents 205 *l.*

75. That is the practical point which I want to get at; during those eight years really (I do not care in what way it was done) the recruits cost India 205 *l.* each?—Yes; subject to the variation that may be shown by the Return to be made, as to whether the capitation did or did not fully recoup us our expenses.

Mr. *Campbell-Bannerman*.

76. You think that the 10 *l.* per man serving in India comes very near to 205 *l.* a recruit; but the committee of Mr. Seccombe have not gone into that, nor have you ascertained that accurately by figures?—No, we have not.

Chairman.

77. How did you ascertain it, then, because upon that basis you fix your present charge?—No; we did not fix our present charge upon the basis of actual expenses, but on the basis of the necessary expenses of training, &c., of a recruit. The recommendation of the third report was founded upon the ascertainment of what it would cost to raise, drill, equip, and embark an efficient recruit, without any reference to the depôt charges of the past.

78. But then you have been comparing that cost with what you say India has paid during the last eight years?—The tariff price so ascertained has been challenged as excessive. I then go back to the ascertained figures of the previous eight years to show what the depôt charges were.

79. You did ascertain what the cost was there?—We have laid that before you in Mr. Seccombe's first report.

Mr. *Onslow*.

80. India practically benefits by 200,000 *l.* a year by the new tariff?—Assuming that the number of recruits embarked remains about equal to those embarked during the eight years in question, she would.

81. All things being equal, India would benefit to that extent?—All things being equal, she does. If the force were doubled or halved, or any great change took place, it is another question; but if her demand for these finished articles continues unchanged for the next five years from what it was during those eight years, she will save 200,000 *l.* a year by the tariff price agreed to by her members on our committee.

Mr. *Campbell-Bannerman*.

82. That 200,000 *l.* a year you can account for in a great measure, partly by a less costly organisation here, and partly by the fact that certain indirect charges which were taken into account in the calculation which results in 205 *l.* per recruit are now omitted?—Clearly. I could not justify having agreed to that low tariff price, which in itself, as accepted, was less than I recommended, but for the knowledge that the future arrangements of the military forces in this country were such as to largely diminish, for the future, the cost properly assignable to India.

Lord *Edmond Fitzmaurice*.

83. What I meant just now was that I understood from you (and I believe now I fully see what you meant) that if you had made the full charge to India which you considered yourself morally entitled to make, but which you did not make, and if repayment had been made on that basis, then on that basis England would have gained, but under the present basis you still consider it is India that gains?—The suggestion of a tariff, or price per recruit, never existed prior to 1869; therefore there was no suggestion in 1861 that we should be paid so much per recruit, which would have resulted, had it been accepted, in a loss of 200,000 *l.* a year for those eight years; but the payments during those eight years were founded on the principle of a capitation on the effectives in India; the payments, I believe, will be found to have nearly recouped the British Government for the expenses in this country on account of India; whereas had that tariff, recommended in 1869, been in operation in 1861, England would have lost 200,000 *l.* a year.

84. When I used the word gained, I did not mean beyond what England was entitled to; but I meant your calculation having been made, and having brought out the figure of 205 *l.*, I understand that you are not now going to make the full charge which, morally, you considered that you would have a right to make on India; India, therefore, gains to that amount; but if the full charge was made, then, in proportion to the present actual repayments, England would gain the difference between the actual repayment and the repayment which you consider, under certain circumstances, you might be entitled to charge?—Yes, all things being the same.

Mr. *Onslow*.

85. With regard to this cheaper organisation of the British army, will it require you to reckon on that extra man to send out three men now?—That question we have not at all considered. The arrangement of the tariff has been accepted for one year, and provisionally continued for a second, terminating in March 1872; and the

Mr. *Onslow*—continued.

the conditions of recruiting in this country for India under the new organisation are so absolutely new that they must be carefully looked into in every figure; I should not like to bind myself to it, but my impression is that it will not be necessary to charge for this extra man, and for this simple reason; a great part of that 33 per cent. was incurred in consequence of men of the depôt, raised solely for India, and available solely for India, being unfit or unready to embark when the drafts went from this country; in consequence, they remained on our hands for another 12 months till we could embark them in the drafts of the ensuing year; and it will be evident that that was a very heavy charge. Now, these men will be taken and used in the forces of Her Majesty's battalions in this country, and after having done 12 months' duty in this country will go to India next year.

Chairman.

86. There is no proposal in Mr. Seccombe's Committee to continue that charge of four men for three, provided that the charges which we have been talking of, 63 *l.* and 136 *l.*, are those which are adopted?—That is only from year to year.

87. But if your proposal to make these charges of 63 *l.* for infantry and 136 *l.* for cavalry were adopted, you do not consider that the charge of four men for three ought to be continued also, do you?—The new organisation which I have been alluding to affects the infantry but not the cavalry. For the cavalry recruit the wear and tear will be the same. For the infantry recruit the dead weight will not be the same. Under the new organisation, in fact, the infantry recruit who could not embark for India is available for England. As long as he was available only for India he was a dead weight in this country, and was properly charged against India.

88. Is it proposed to continue that charge as regards the cavalry?—The charges for both infantry and cavalry are passed for two years only, and are not in force by any sanction yet given beyond the 31st of March 1872. The committee under Mr. Seccombe's presidency will consider both the question of the cavalry and that of the infantry for the past two years; and it is evident that there will be great modification in the future conditions of the infantry service. It is not so evident to me with regard to the cavalry service.

89. But with reference to those figures of 136 *l.* for the cavalry and 63 *l.* for the infantry, were those figures intended to include the charge of four men for three?—Yes. The previous figures show that those sums are 33 per cent. over the actual necessary cost.

Mr. *Campbell-Bannerman.*

90. Those are figures which have not only been proposed but which have been acted upon for certain years?—For two years we have sent in our claims, but no payments have been adjusted for a single year yet. Advances from time to time are made on account, leaving only the balance to be adjusted.

91. That is a mere question of carrying out the organisation in practice, but the arrangement on that footing has been agreed to between the India Office and the War Office for those two years?—Yes.

92. And now it remains for Mr. Seccombe's Committee to meet again and arrange how the charges shall be made for the year subsequent to the 31st of March 1872?—That is the case.

Mr. *Campbell-Bannerman*—continued.

Chairman.

93. Then, in fact, the recommendation for those two years has really been acted upon, though the money has not passed?—Yes.

Mr. *Onslow.*

94. By what I understand you to say, the Indian Government was virtually paying for a portion of the effective strength of the army in England, because it was paying for this fourth man, and he was on the effective strength of the British army?—No; he was available only for India, and did us no service.

Mr. *Fawcett.*

95. But as regards all these men whom India is paying for in England, when the Secretary of State for War says that the effective strength of the English army is so many thousand men, what it really means is, so many thousand men, out of which number India is paying for all these men at the depôts, and charged as a portion of the effective strength of the English army?—I am not prepared to admit that in the slighest degree. With reference to the statement of the Secretary of State, on moving the Estimates, I believe a deduction is made by him.

96. Can you show that; is not this a fact, that when the Secretary of State for War asks a vote for so many men who are in England, that includes a vote for the men who are at the depôts, and who are being supported out of the resources of India?—There is no doubt of that.

97. Therefore it comes to this, that a portion of the effective strength of the English army in England is paid for by India?—No; I think I am going beyond my duty if I attempt to explain the Secretary of State's views in the House of Commons; but I understand that the number taken in a vote by the Secretary of State is simply the number of the men who shall be liable to the Mutiny Act, not the effectives or efficients, for it includes every recruit from the day he is enlisted.

Sir *George Balfour.*

98. But all the recruits for India are now included in the depôts at home, and taken in the Army Estimates, are they not?—Now, under the new system, a man unable to go to India becomes an available man at home, and will be no longer charged to India; and that explains what I meant when I added a fourth man to every three; I did not say that there were 25 men to every 100 sitting at home in the barracks, but I provided for the breakages—the deaths, the desertions—and all the dead weight, which I calculated at 33 per cent., and which I hope I have succeeded in showing was considerably more.

Mr. *Stanley.*

99. The cost of those men was the cost incurred in providing a certain number of men; these are men not provided?—Just so.

Sir *George Balfour.*

100. (To Mr. *Knox.*) There is no distinction between the Indian depôts and the home depôts now?—No; the depôts formerly belonged to one battalion only, and therefore they could be shown

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox.*

12 May 1874.

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*.

12 May 1874.

Sir *George Balfour*—continued.

as belonging to the Indian army; now each depôt belongs to two battalions.

101. And from time immemorial, the depôts of regiments were formerly shown separately?—Before the capitation rate the numbers of the Indian depôts were not voted in the Estimates. They were included in the establishment serving in India.

Chairman.

102. (To Mr. *Milton.*) I think there was some exception taken to these figures by some members of Mr. Seccombe's Committee, by making a comparison between them and the expense of the Warley Depôt. I think you have something to say upon that point. In this 9th paragraph the 205 *l.* was compared with the 19 *l.* 15 *s.* or 26 *l.*, with regard to Warley; what reason can you give for that enormous disproportion of the two figures?—The statement of the cost at Warley was supplied by the Indian members of the committee; we had no means of checking it, or of ascertaining exactly what it meant. I think I must take blame to myself as a member (a junior member then) of that committee for not more questioning that Return; but it occurred to me then, and it occurs to me now, that the items are not fully comparable. As I understand the Return from Warley, it is simply the expenditure incurred at that station. In fact, for the purposes of account, Warley was a little bit of India at that time. That account does not, as I understand it, include the expenses that were incurred in our districts for enlisting and raising the men; and it certainly does not include what I should conceive must have been a very large item, the further drilling of these men in India, to bring them to that point of efficiency which is now required before a recruit can embark for that country. If that is the case, we are in this 9th paragragh simply comparing the cost of the raw material as against the cost of the complete and manufactured article.

103. Do you know how many months the recruit remained at Warley?—I do not; but I should say that, calculating from the figures here given, three months was the outside. That does not apply to the period of the mutiny, when, I believe, they were shipped as fast as they could be clothed.

104. How many months do you consider that they ought to be in training now before they are sent to India?—His Royal Highness the Commander in Chief laid down the period of six months as the minimum; consequently the Indian members of our committee considered it only fair that the average should be taken at seven months.

105. How many do you actually charge them for?—Seven months.

Sir *George Balfour.*

106. Does each recruit receive six months' training, do you believe, before going to India?—That is a fact that I cannot speak to; I know that recently, in consequence of a motion that was carried in the House of Commons, urging the Government not to allow any man to go to India until he was 20 years of age (a motion which, if fully carried out, will of course enormously increase the cost of the recruits, who, enlisting at 17½ or 18 years, would have to continue under that regulation 2½ years in this country, instead of seven months), His Royal Highness has been

Sir *George Balfour*—continued.

compelled, while sending men of long training, that is 12 months, who were 20 years old, to send men of very short training, but with the age requisite to allow them to go. Therefore I believe there have been some complaints of very young recruits being sent out; I am certain we could show that they were more than overbalanced by the mature character of those men retained in this country, because of the vote of the House of Commons requesting that no men might be sent out under 20 years of age.

Chairman.

107. Then I understand you to say that the difference between Warley and the present depôt system is, that in the present depôt system you charge all the expense of recruiting and all the expense of turning out a thoroughly trained and finished soldier, whereas in Warley both those two ends were wanting, and only the short amount of drill that took place while they were at Warley, varying from a few days to three months, was all that was charged?—That I understand to be the effect of that Return.

Lord *George Hamilton.*

108. Would you look at page 35 of the Reports, where you will find this: "For instance, on the 13th January 1874, a draft of 133 men proceeded on Her Majesty's ship 'Crocodile' to join the 8th Brigade Royal Artillery, in India. It included 68 men of less than three months' training, and of those 42 embarked in less than two months, and nine in less than one month from the date of their enlistment. On the same day a draught of 76 men proceeded to join the 73rd Regiment at Bombay. It included 37 men of less than two months' training, and of those no less than 26 embarked within one month of the date of their enlistment." Now, for every one of those men India had been charged for seven months' training?—Yes; or rather she will be by and by, if the present tariff prices are extended to 1873–74.

109. But that was, I suppose, not more than an oversight?—No; I think it is the effect of the measure that I have just mentioned; the Parliamentary necessity to have a certain age overruled His Royal Highness's view of the necessity of training; the men must be sent to India, and as there were not enough men trained of the requisite age to go, recruits, who were young soldiers but old men, must go. But I am going away, I think, from my position as an accountant in speaking on these matters.

Mr. *Stanley.*

110. As I understand, the calculation was made on the basis of the seven months' training; subsequent action in the House of Commons induced His Royal Highness to send the men out at an earlier period, and that alteration did not necessarily at that time affect the calculation?—The order for retaining men till they were 20 years of age did not exist at the time those calculations were made; it is the Parliamentary necessity to have men over 20 years of age overruling the necessity to have well-trained men.

Mr. *Campbell-Bannerman.*

111. And such a fact as that would probably not affect the average, because where there is a case of an old man of short service being sent out, there

Mr. *Campbell-Bannerman*—continued.

there are many cases of young men being kept at home for an unusually long period to complete the age?—Yes; and I have stated that that regulation if carried out will largely enhance the cost of the recruit; and, incidentally, I may mention that I understand that the authorities at the India Office will object to paying as for recruits for men who went out with the draft having a service of a period of one year or two years, being in fact men kept until they were old enough to go.

Mr. *Fawcett.*

112. I want to clear up this point; when you talk about "old men" being sent out, what it means is merely that recently India has had sent out to her boys, or, if you like to call them so, men of the age of 20; they have only been in the service, perhaps, for one month, and, young as they are, India has to pay for them as if they had been trained seven months; they are not old men; they are youths of 20?—I should perhaps have used the expression "men of a certain age," or "men who are of the required age of 20;" and it will be clear to the honourable Member that a young man taken in at 18, if kept to the mature age of 20, would cost 24 months' training instead of seven months.

113. Still a person of 20, after having enlisted one month, may now be shipped to India, and has been shipped to India, and India is charged as if that man had been a recruit for seven months and been all that time?—No doubt; and for the man who walks alongside of him on to the ship with 18 months' training she paid only for the same seven months.

114. We have no security whatever that there is any limit to the number of these persons sent to India, have we?—You have only the limitation which His Royal Highness's declaration not to send out inefficient men to India affords.

Mr. *Beckett Denison.*

115. Men who may be just as raw, in fact, as those formerly going from Warley?—I am afraid that under that limitation of 20 years they have been in some instances.

Mr. *Campbell-Bannerman.*

116. These are matters regarding which the Adjutant General or His Royal Highness himself could give better information than you can?—Yes.

Sir *James Elphinstone.*

117. Have you any knowledge with reference to the cost of those men going out to India who were alluded to by Lord George Hamilton?—We have not the personal cost of each man, but, given the service of each man, we could make a calculation.

118. Have you considered, now that troops can be sent out by railway from the point of disembarkation, which was not the case in the time of the East India Company, whether it is necessary to have any training at all in this country?—If they were not trained here they must be trained there, and the cost of training will probably be equal, if not greater, in India; but that is a question which I would ask to be excused from speaking about.

Chairman.

119. The idea when the depôt was at Warley was that they were trained on board ship, or in India, was it not?—Yes.

Sir *George Balfour.*

120. If we sent for the returns of the men sent out to India as recruits, and ascertained the numbers under the age of 19 and above 25, those returns would then show the information desired?—Yes.

121. And if we sent for returns of the training given to recruits sent to join the serviceable troops and companies in India, showing those with a training less than three months and more than four, they would also give information on the number of recruits trained?—The most exact Returns can be furnished of the length of service, and of the age of every recruit who embarks; but it will be obtainable from His Royal Highness's office, not from the Accountant General's Office.

122. You understand the word "recruit" to mean what the common acceptation of the word gives, a very young soldier who has enlisted in the last two or three years and proceeds to India in that time, or do you give a wider scope to the meaning of the word "recruit" than that?—I only attach to the word recruit the meaning of a man who is still under tuition, prior to being declared an efficient soldier. So soon as he is an efficient soldier, he takes the rank of a soldier, and ceases to be a recruit.

123. Then India is not chargeable for any men who do not fall within that category?—India is not chargeable in the account of Home Charges for any men that are efficient, assuming that you can send them to India as soon as they are efficient men; but if by reason of there being only one season in the year in which men can be sent from this country to India, men are detained in this country for Indian purposes long after they are efficient, India is chargeable for them.

124. The returns that you have sent in to the India Office would give us the information that we require of the ages of the men you send out, and the periods for which they were trained and enlisted?—No; those returns can be obtained from the Adjutant General, and form no part of our claim at present; we have claimed for all men sent out as drafts. The most accurate and full account of the length of service and of the age of every man embarked can be obtained.

125. And the numbers claimed have already been sent into the India Office for two years?—Yes.

Chairman.

126. Is there anything else that you would like to state before the Committee proceed to examine you on the evidence which you have already given?—I think, with a view to showing how uniformly the policy of the War Office has been to accept a partial repayment from India of the actual expenses, I might state the case of the non-effective charges. In the non-effective charges a similar policy has been adopted. From 1824 to 1861, 60,000 *l.* a year was accepted in payment of the non-effective charges or pensions, &c., of about 30,000 men, the British force then employed in India; this amounted to only 2 *l.* a man.

127. What were those non-effective charges?—All pensions and all payments to men made after their being sent to this country and discharged unfit for further Indian service. In 1859–60 it was shown by the committee presided over by Sir Alexander Tulloch that this ought to be 5 *l.* a man; but as the number of troops in India had been recently largely increased, it was fixed at 4 *l.* a man by the committee;

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*.

12 May 1874.

Chairman—continued.

mittee; and, again making a reduction, the Home Government said that they would agree to 3 *l.* 10 *s.* a man, being a reduction of 12½ per cent. on the minimum price named by the committee. Since 1870 the payment has been by actual actuarial calculation. For 10 years, from 1861 to 1870 the capitation rate prevailed, and then this basis was taken up; and since 1870 the payment has been by actual actuarial calculation, based on the periods of service relatively passed in India or elsewhere. But here again India has received her usual advantage, as we do not reckon as Indian service the period of training for India for which India has paid, nor the period men are at home from India to recruit or restore their health.

128. That exists at present?—That system exists at present, and under it the charge to India has very largely increased.

129. Is there anything else which you wish now to state?—Nothing further occurs to me.

Mr. *Eustace Smith*.

130. Was the seven months charged for recruiting based on the average period that was required to form a recruit, or the actual time that was required to form a recruit?—It was based upon the minimum that His Royal Highness laid down as the minimum period that he would be satisfied to have a recruit trained in this country; the minimum was fixed by His Royal Highness at six months; the Indian officers were asked by us, and agreed, that the average should not be the minimum, but the moderate addition of one month above the minimum.

131. Then, taking that as the proper time to form a recruit, may I ask you, as an accountant, whether you would consider it fair to charge India with the full amount of training when that recruit has only been a month in training?—So soon as an average rate was agreed to, as an accountant I am indifferent to the facts of each individual man's case; I charge the seven months for a man of one day or of three years.

132. Then, seven months being agreed upon as the average time, would you consider it fair that India should also be considered to reap the full benefit of a recruit who has been two years in training already, although that recruit has, practically, been an integral part of the British army during those two years?—We ascertained, to the best of our power, what is the average period that a man should be under training; and the expense of training him for that period is the amount that an average recruit costs.

133. But if His Royal Highness considers seven months as the proper time, it is evident that India suffers materially by getting a recruit with only one month's training, and I do not see that India benefits by getting a recruit with 18 months' training?—But I can show to you that I have suffered by paying for that man for 18 months, and only getting paid back seven.

134. But he is an integral part of the British army, practically, during that time, is he not?—No; he has no duties in the British army. The Secretary of State has decided that a man available for India is no part of the effective force of this country, and any charges incurred on account of that man are incurred directly and solely on account of India.

135. But he appears on the Estimates as a part of the British army, as a matter of fact, does he not?—As a matter of fact he does, for the purpose of subjecting him to the Mutiny Act.

Mr. *Eustace Smith*—continued.

Mr. *Fawcett*.

136. And is available for duties?—There are no duties for him.

137. In case of invasion, for instance?—Every Englishman is available in that case.

138. In case of an emergency he forms one of the British army, practically?—And so does the man who has got one month's training.

139. He is just as much at command in any emergency when we may require him for the use of the army, just as much bound to serve England, and assist her in anything she may want him for at home, as one of the Guards?—Yes, and just as much as the untrained civilian who has cost nothing for training.

Mr. *Stanley*.

140. He is not available for colonial duties, is he?—No.

141. He cannot be transfered to any regiment, can he?—No, not transferred to any regiment, or ordered to any duty in this country, otherwise than for preserving the peace, as any British subject is liable to the duty.

142. To the extent which you have named, he has been kept available for India?—Yes.

Mr. *Fawcett*.

143. If India is invaded he is practically of no use to India. If England is invaded that soldier is in England for the service of England?—No more for the service of England than any other British subject; but he is available for the protection of India as quickly as he can go across.

144. But he is available to this extent here, that he is available as a trained soldier. Take the case of one of these men who you say have been in depôts for two years; His Royal Highness has said that seven months is a fit time to train a soldier; he is, therefore, ready to serve England as a trained soldier during a great part of that two years?—No doubt he is; but India has paid only the seven months necessary to make him a trained man for India.

Sir *George Balfour*.

145. But you are aware that the Defence Commission of 1859 distinctly included amongst the defensive forces of the kingdom, the whole of the depôts available for the defence of the nation?—I am not aware of that; but I think it would be manifest to the Committee that the argument which has just been used would forbid us to charge against India a single penny for any man in this country.

146. I merely mention the thing to show you that other parties have taken the same view that many Members of the Committee do, that those connected with the depôts of the kingdom are maintained for the defensive purposes of the kingdom?—That is not a matter of account, and is scarcely within my province.

Mr. *Onslow*.

147. These men can be called out for military duties as a guard of honour, or to quell a riot, and in fact in various ways in which civilians cannot, and India is paying for these men who are available for home duties?—India is paying for these

Mr. *Onslow*—continued.

these men to be made fit for Indian service. That on an accidental occasion you might make a strong man who is available for India useful to this country there is no doubt; but if the argument is pushed, it would result, as it appears to me, in preventing a single penny being claimed from India for any man in this country.

Sir *Henry Havelock.*

148. Is not this the case, as per contrâ on the other side, that India has the benefit of a large number of men for whom she has never paid at all under the existing system; in this way, that supposing a draft of 80 men is required for a regiment in India now, and there are only 40 men available at the depôt to fill up that draft, the other 40 men under the existing system would be filled up from the home battalion, and would be men for whose training up to that time, it may be two or three years, India has not paid?—Certainly; and when this man embarks India will be only charged for seven months.

149. At the same time India would get the benefit of the previous one, two, or three years' training which that man has undergone in the battalion?—Yes.

Mr. *Fawcett.*

150. But suppose a recruit goes out to India, and he comes back as a trained soldier from India, India has had to pay all the expense of his preparation, and he comes back to England as a trained soldier, and England receives him, never having paid a shilling for that?—Do you mean when he is broken down in health?

151. No; I am not assuming that he is broken down in health?—But he returns only when he is no longer wanted there, or when he has lost his health there.

152. You do not mean to say, do you, that every soldier in a cavalry regiment, for instance, coming back from India is of no use; they are trained soldiers, are they not?—Yes.

153. Are not some of the best regiments at the present time in the English army regiments that have served in India?—I am not able to distinguish between good and bad regiments.

154. You said that these men came back as broken down in health; I will only put it in this way; England receives a trained soldier, she having never contributed a single shilling to his expenses in training?—Certainly; she receives him at the end of his service, when he is in one of two positions, either having closed his service as a short service man, in which case he is not worth one penny to England, or having lost his health in India, when he is worth very little more.

Mr. *Campbell-Bannerman.*

155. Following up what has just been said, is it not the case that although it may be true that in case of emergency those men who are here for Indian service would be available for this country, it is equally true that in the case of an emergency in India the whole British army can be drawn upon by India without her having paid any part of the cost?—No doubt, as was stated by Mr. Cardwell, in the letter to the India Office, of 24th April 1872, India is always able to remain safe with a peace establishment, knowing that she can raise it to a war establishment on the shortest notice from the resources of the English army.

Mr. *Campbell-Bannerman*—continued.

156. And if it is true that some men come home trained soldiers from India, and serve in England, without England having paid any part of their cost, it is also true that soldiers, the cost of whose training we have paid entirely, go out to India as trained soldiers, and she pays no part of that?—Exactly.

157. In fact, it is a partnership between the two countries, and it is impossible to allow one of those partners to indent upon the other for a manufactured article, paying merely cost price for it?—Yes, or something a little below it.

158. As to this correspondence which is now before us, the previous reports of Mr. Seccombe's Committee I think were presented by Mr. Eastwick, and printed separately; but in this instance it has been presented by the India Office, and a certain correspondence is appended?—Yes.

159. The first letter is addressed by Mr. Thom to the Secretary of State for War, on the 8th of September 1871. The answer, signed by myself, went back on the 24th of April 1872. A further letter was sent, signed by Sir Thomas Pears, dated the 9th day of August 1872, and that letter remains unanswered to this day?—It does.

160. Can you say, from your knowledge of what goes on in the War Office, why it was not answered; did you receive any instructions on the subject?—I did. I took the instructions of the Secretary of State upon the subject, and he desired that it should remain unanswered for a time, intending that the War Office answers should be given before the East India Finance Committee of the late Parliament. In February 1873 I was under orders to prepare to appear before the Committee of that Parliament, and it was intended that I should there state generally the answer to that letter as to the cost of recruits, but the subject was not entertained by the Committee of last year.

161. That was the reason of the delay?—Yes.

162. Then there is a further letter of the 14th day of April, that is to say, last month, enclosing a paper from India. Have you seen that letter; I presume it has reached the War Office?—It has.

163. Has it been answered?—No; it reached the War Office on the 19th of last month.

164. And this Paper was moved for in the House of Commons on the 28th?—It was ordered to be printed on the 28th.

165. Now we must refer to this Paper a little. There are several references there to the old Warley Depôt, and the rate of charges at that depôt. You said, in answer to a previous question, referring to the statement appended to one of the Reports of Mr. Seccombe's Committee of the cost at Warley, that you had had no opportunity of financially reviewing the items of that statement; but looking at it generally, have you any observations to make on that statement, which shows an average cost per man during 10 years of 19 *l.* 15 *s.*?—Only, as I observed before, that the statement, whilst without doubt it is perfectly complete in itself, is not complete in the history of the recruit. It omits, as I understand, all the cost of raising him and bringing him from the civil population to Warley, and all the cost of what I cannot but conceive must be a very heavy further expense, the drilling him

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*.

12 May 1874.

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*

12 May 1874.

Mr. *Campbell-Bannerman*—continued.

when he arrives in India; and I would suggest that it is much the same to the cost of Indian revenues whether the drilling is in this country or in India.

Mr. *Fawcett.*

166. Is there any evidence to show what this 19 *l.* does include; are you stating merely an expression?—I am saying it from the heading of the Return, and the statement of the members of that committee is this: "We annex a Statement showing in detail the charges under each head at Warley." Therefore I am justified in saying that it does not include the expenses prior to Warley or subsequent to Warley.

167. But you were on that committee, were you not?—Yes; and I have already taken blame to myself for not more closely challenging that comparison. Our first Report was simply an *ad interim* Report, suggesting a temporary continuation of existing arrangements while the committee was making further investigations.

168. There was another representative of the War Office, was there not, on the committee?—Yes.

169. And you both signed the report?—Yes.

Mr. *Campbell-Bannerman.*

170. But you accept those figures?—I do accept them; I do not controvert them in the least. I maintain (and I know that the Indian members also admit this to a great extent) that it is a comparison of the raw material with the manufactured article. The training of Warley was admitted not to have turned out efficient men, but to have proceeded on the principle of rather training in India.

171. There are two averages given in that statement, one of 19 *l.* 14 *s.* and the other of 26 *l.* 7 *s.* It appears to me that 26 *l.* 7 *s.* is a much more regular average?—That was done with the spirit of fairness that has distinguished the Indian members in every transaction on that committee; they did not wish to give a general statement that should include so exceptional a year as the year of the Mutiny, when the men were shipped as fast as they could be clothed.

172. And, therefore, for the purposes of comparison, even if this were a proper statement of the charges, the 26 *l.* 7 *s.* 5 *d.* should rather be taken than the other figure?—Yes.

173. At that time the force in India, which was recruited in that way, was comparatively small, was it not?—Very small; I think the European troops might have been about 12,000 men.

174. And there was a considerable body of Imperial troops at the same time serving with them?—Yes, to the number of about 30,000.

175. So that in all this correspondence and evidence that has been given to this Committee, when we hear of returning to the old system, that does not mean that the whole British force in India is to be recruited on the Warley principle and charged on that principle; that system never applied to the whole British force in India?—That system never applied to Her Majesty's troops serving in India, only to the Company's troops raised in this country.

176. Can you draw any inference as to the length of time that recruits stayed at Warley from the figures?—I think the figures given in the two specimen years lead to the conclusion that it was an average of three months.

Mr. *Campbell-Bannerman*—continued.

177. And I daresay you are well aware, being so well acquainted with these things, that the Royal Commission to inquire into the sanitary state of the army in India reported against the Warley depôt system?—I am not aware of that.

178. Would you read a portion of that report (*handing it to the Witness*)?—"Deputy Inspector General Stewart has pointed out the necessity of greater attention being bestowed on these conditions of a soldier's service. He states that no man ought to go out to India under 20 or from that to 25, and this opinion is supported by a great amount of testimony contained in the reports from the stations. Dr. C. Smith states that for the first few years of service men are very apt to suffer from fevers and inflammatory diseases, partly from greater constitutional liability, partly from inexperience, in the case of young soldiers arriving in India who take no care of themselves at all. Sir A. Tulloch is of opinion that recruits might be enlisted at 18, provided they had two or three years' training in a temperate climate before being exposed to a tropical climate, or to the fatigues of a campaign. All the evidence derived from the stations is to the effect that none but fully drilled men should be sent to India. The only question on which any difference exists is the place where the troops should be drilled. It has been proposed that the drill should take place at some intermediate station, as *e.g.*, at the Cape, for the purpose of accustoming the recruit by degrees to change of climate. But the great preponderance of the evidence is in favour of completing the drill at home, and sending the soldier, fully formed both as to age and habits, direct to his destination. From want of attention to these primary conditions growing lads, who are very susceptible to disease when weakened by fatigue, have been sent out to India to learn their drill; their unformed constitutions are exceptionally liable to injury, and the over zeal of an injudicious commanding officer or adjutant may lead to loss of health and efficiency, if not of life. We have here, then, a well-known preventible cause of disease, or rather of predisposition to disease, which can be put a stop to. It is true that under the altered circumstances of the army since the amalgamation of the two services, these evils will be less likely to occur; but any way, the past experience is sufficient to prove that they should be avoided in future." That is in the sanitary report of 1863.

Mr. *Fawcett.*

179. But that does not apply to Warley; it applies, does it not, to the present system?—It applies by aggravation to Warley, where the training was less; by mitigation to our country, where the training is more.

180. You stated, just now, that until the action of the House of Commons recruits were sent under 20 years of age?—Yes.

181. Therefore, all that you have been reading there applies to the present system just the same as it does to Warley?—It may apply in principle, but I submit entirely differently in degree. Surely a man who has been on training and good food for seven months is far better fitted for this state of affairs than the man who has been three months or one.

182. But to make it applicable to Warley you have to show, from official documents, what was the

Mr. *Fawcett*—continued.

the age of the recruits that were sent out from Warley, and what has been the age of the recruits that have been sent out under this new and expensive system?—The same report states the fact, "At the time of the mutiny it (the aver age time spent in depôt) was about six weeks; and it happened occasionally that men were embarked for India on the day of their arrival at Warley."

Lord *Edmond Fitzmaurice.*

183. Since the time that Major General Pears and Mr. Seccombe gave evidence before the Committee that sat on these questions during last Parliament, I understand that there has been a change in the depôt system?—I think not during that period. Since the sitting of Mr. Seccombe's committee, who reported on it the second time in 1869, there have been very great changes in the depôt system.

184. I will read an extract from an answer of Major General Pears, and I will ask you whether that represents the depôt system as it at present exists. If it does not (and I imagine it does not) perhaps you would just state what changes have been made, and if those changes in any manner affected the system of accounts He says, in answer to Question 235, "In the re-organisation, if I may so call it, of the British army two years ago, the War Office determined that there should be in connection with every battalion in India two companies at home, which should be attached, and considered as depôt companies to the corresponding battalion in India (each battalion now on foreign service has a corresponding battalion in this country, at least it is the wish of the War Office to arrange that as far as they can), and it was assumed that, to a certain extent, those two companies would become chargeable on the Indian revenues"?—I am unable to agree with that answer, as I understand it, because the committee under Mr. Seccombe did not assume at all what would be the future organisation, but proposed a rate that should be adopted for one year at a time, to be reviewed so soon as the system of the new organisation came into operation, and we could obtain some experience of the expense of such organisation.

185. I suppose there is no doubt that a considerable increase of expenditure has been caused in these matters of depôts of recruits by the fact that whereas, under the arrangements of the old East India Company, their recruits were all in one or two large depôts, the present depôts are comparatively very much more scattered?—No doubt.

186. Have you ever considered at all (or do you consider it in any way within your province, because I do not wish to trespass against the rule which has been laid down by the Chairman) whether the number of officers and non-commissioned officers attached to these depôts is out of proportion, and larger than it was under the old system of the Company?—The new organisation will unquestionably bring a larger number of officers and non-commissioned officers to the brigade depôt; but at the same time it is accompanied by the fact that the duties will be very much enlarged beyond what that of an ordinary recruiting depôt was under the old system.

Sir *George Balfour.*

187. You have been in the War Office for nearly 30 years?—More than 30 years.

Sir *George Balfour*—continued.

188. You are cognisant of the fact that India derives advantages from the troops in England, that England has also derived advantages from the troops in India, and that lately England drew from India a considerable number of battalions of infantry for Abyssinia?—I am aware of that, but I am not aware of the fact which appears to be enforced by the letter from the India Office, of the 9th of August 1872, that whereas India in her dire emergency could draw upon England, England in her dire emergency drew upon India. I submit that the India troops were not sent to Abyssinia, because England had no troops to send, but because they were more handy. The one case is the case of a large reserve kept up at enormous expense, and available; the other is the case of two parties employing, by agreement between themselves the troops that were nearest at hand for the purpose.

189. And has England paid for the troops sent from India to Abyssinia?—All the extra expense caused by their being employed on that campaign has been paid by the British revenues. The standing pay of the men has been paid by India at the same cost to her revenue, whether they stood in India or Abyssinia.

190. Did England pay for the European troops sent from India to Persia?—I think not.

191. Did India pay for the European troops sent to China, consisting of a strong force of infantry and artillery, European and native?—No; they were paid for by the British Government.

192. Perhaps you will kindly consult on that question, whether England paid a single fraction for the pay of the troops sent to China?—I will satisfy myself. My impression is that the whole of the troops sent to China were paid for by the Imperial revenues; but there are so many Chinese wars; which do you mean?

193. The expedition of 1840 and 1841?—That is more than 30 years ago, and my experience in these matters does not go so far back. But I should have thought that was wholly an East India Company's war.

194. Will you kindly explain what was the moving cause which induced the War Office to give up the capitation rate of 10 *l.* per man for effectives in India, and 3 *l.* 10 *s.* for the non-effective charges?—I do not know that there was any particular moving cause as regards the 10 *l.* for effectives. I think there was a great deal of interchange of accounts, almost as laborious and as irksome as when actual accounts were rendered and paid; and in calculating the payments upon the effectives in India a very great delay occurred in completing the returns throughout the whole of that country. As regards the 3 *l.* 10 *s.* for non-effectives, that rate was given up because it was believed by the Secretary of State for War not to be adequate; and such proved to be the case on actuarial calculations being substituted.

195. Was it not mainly on the supposition that the sum paid on account of the troops in India, at the rate of 10 *l.* a head, was insufficient to cover the charges incurred at home?—No, I think not.

196. Considering that you have made the calculation of the cost of recruits at the rate per head upon the expenses of the troops at home as the charge which ought to fall upon India for recruits, is not that rate of charge affected by the

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*.

12 May 1874.

Mr *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*.

12 May 1874.

Sir *George Balfour*—continued.

the insufficient total sum which you formerly received under the capitation contribution at the rate of 10 *l.* per head upon the effectives in India?—There seems to me to be a little misapprehension in that question; we do not base the charge or tariff upon the troops in this country, if you mean the total effectives, as we did in India for the capitation; but we have ascertained, with the greatest care we were capable of, what was the cost of a normal recruit trained for an average period, and supplied and equipped in this country fit for service in India. The details of those calculations are given to every halfpenny, and the result was a price current as the cost of that manufactured article when it was handed to the party by whom it was required.

197. Is that calculation not shown at page 5 of the first Report laid before Parliament?—No.

198. Does not it bring out 205 *l.* per head?—That Return states the cost in annual totals, but it does not give the particulars; it gives the entire cost of the depôts, including men waiting for discharge, and including men sent home from India to recruit their health, as well as the actual cost of the recruit. In making our price current, or tariff, we took the cost of one recruit.

199. Having regard to the fact that the sum which the War Office would have received under the capitation contribution of 10 *l.* a head depended upon the number in India, and as that number has been kept for a series of years below the fixed establishment, the sum receivable by the War Office would thereby be very considerably diminished, would it not?—If the numbers in India are low, the receipts by the War Office are low; if they are high, the receipts by the War Office are high. That rate of 10 *l.* a man was based upon the experience of 24 years, during which actual amounts to the last halfpenny were kept of what was the cost of keeping up a thousand men effective in India. That experience might or might not be valuable; it was based on 24 years. It was an average upon that period, and was the only foundation on which such a system as a capitation rate could be based.

200. At page 11 of the first Report of the committee of which Sir Alexander Tulloch was chairman he calculated that the depôts then at home would be sufficient to supply infantry regiments in India, then a thousand strong, with men trained at the depôt complete and effective in all respects?—The statement as the base of his calculation is "that each infantry depôt, being intended to keep effective 1,000 men in India, the cost of it may, in an approximate calculation such as the present, be held as applicable to that number."

201. Was that depôt as then formed considered sufficient to keep that number of a 1,000 strong effective?—I believe so.

202. Was the force in India then kept effective or far below the establishment?—I cannot say; the Returns would show.

203. Would you kindly prepare a Return for the Committee to show the sum which ought to have been received under the capitation contribution of 10 *l.* per head of effectives in India, supposing the establishment to have been kept up to the full number, and the sum received for the number actually effective?—Yes. (*Return handed in,* vide *Appendix.*)

Sir *George Balfour*—continued.

204. Having regard also to the strength of the depôt, did the cost of the depôt entirely fall upon the War Office out of the payment of the 10 *l.* per man?—Yes.

205. Was that depôt kept above or below the strength?—There were variations in the strength of that depôt; sometimes it was above the strength, and sometimes below.

206. At page 5 of the first Report you will see that the depôt strength was very considerably above the establishment?—You are speaking now of the period subsequent to the actual accounts, and during the capitation; the depôts were, on an average, largely above the establishment.

207. To that extent, therefore, that the men were in excess of the establishment, the War Office has incurred charges extra to what they need have done if they had kept the numbers within the establishment?—Yes, certainly; but I am not prepared to say that a single man less could have been maintained for the purpose of keeping efficient the army in India.

208. Then, perhaps, you will kindly make a return of the depôts strength up to the latest date, so as to show the number of troops as far as the returns will state, which have been kept at the depôts of late years?—That return can only be obtained from the Adjutant General.

Mr. *Dunbar*.

209. Was that 10 *l.* capitation grant charged on the fixed establishment, or on the number actually in India?—On the number actually serving and effective in India, taken monthly.

210. I think you said that the Warley statement was insufficient, because it did not charge the expense of recruiting and of conveying the recruits to the depôts?—Yes, so I understand; the Warley return professes to be a return of expenses at Warley.

211. If you look at page 4 of the first Report, you will find the expenses of the officers on the recruiting staff and the other expenses included?—But the pay of the men from the date they enlisted until they left the district, the cost of conveying them to the head-quarters of the district, and every species of charge of that kind did not come into the Warley accounts, because they were in the War Office accounts. The men were inspected by War Office officers, and then were taken in charge by an adjutant, who was paid by the War Office, and the whole of those charges, prior to the man arriving at Warley, are in the War Office accounts, not in the Warley accounts. We raised the men in our districts, we medically examined them in our district, and then they were sworn in by the magistrates, and detained for a certain number of days in London or Liverpool, and then after that they were sent to Warley. The final bounty issued within the precincts of the Warley barracks was, of course, in the Warley accounts. All the charges out of the precincts of the Warley barracks were charged in our accounts. But that is not at all a large sum; I only insist that the Warley account is defective, as a comparison, in this way, that it did not take the expenses before Warley nor the training after Warley. I have taken blame to myself as a member of that committee for not having more thoroughly sifted this comparison; but taking that (as on the face of it it is) as a statement of expenses disbursed at Warley in Warley barracks on

Mr. *Dunbar*—continued.

on account of these men, I have maintained before this Committee that it neither includes the expenses of the men before they join at Warley, nor the heavy expenses of training them after they left Warley. You must see whether the two things you are comparing are similar. That return is instructive to show how cheap it can be done, but it is not a comparison.

212. Before the re-organisation of the army a recruit was specially enlisted for a regiment serving in India?—Yes.

213. And could not be transferred to any other battalion?—That is the case. When I say "could not," of course there was no power to do so. He might be transferred with his own consent.

214. But now a recruit is enlisted generally for the brigade?—Yes.

215. And after the battalion is despatched to India he is at the disposal of the Government, to be sent to any part of the world?—I understand it is so.

Mr. *Beckett Denison.*

216. You have laid great stress upon the fact of the recruit that is now sent to India being a very much more valuable man than he was under the old system, the Warley system, on account of his lengthened training in the depôts now?—Yes.

217. If it were shown to you from the Returns that, owing to one cause or another, the average period of seven months was very much diminished, would not that alter your conclusions?—Do you mean my monetary conclusions, or my sanitary conclusions?

218. The monetary conclusions; would you still think it fair, as a matter of account, if it turned out by these Returns that the recruit sent to India, instead of an average training of seven months, had something very much in diminution of that seven months, to charge India with the cost of the superior article?—No, I think not; if it can be shown that the average of the recruits of those two years does go below the seven months, India is in a position to reclaim a rebate on the price agreed on.

219. With regard to a question which fell from Sir Henry Havelock, as to the advantage which India gained by having a number of trained soldiers sent out to fill up the vacancies in the regiments, and the training of whom is not charged to India, I think you said that it is the custom to charge seven months of those soldiers' training to India?—The agreement is, that for the draft, that is, men sent out to reinforce corps already in India, the charge shall be what an ordinary recruit trained for seven months will cost.

220. Then, if it be taken for granted that seven months is a sufficient time to make a good and efficient recruit for India, is it not a loss to India every day that he remains in this country over and above the time that is necessary for his preparation?—Certainly not; it is a loss to us, because we are retaining him for seven months and a day, and we are paid for seven months only.

221. But India has to pay for the relief of that man under the short time service very much oftener than under the old system?—I understand you are speaking of a few months or days now.

222. It might be so long as the difference between seven months and eighteen months or two years?—The honourable Member is aware that the system of short time service is not applicable to any part of the period to which these figures relate. My impression is that India gains by keeping her men for a short time, and sending them home and replacing them.

Mr. *Beckett Denison*—continued.

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*.

12 May 1874.

223. What is the rule about not sending out men who have a less time to serve than two years?—I think the rule is, that for short service men those who have not got two years to serve are not sent out; long service men who have not got three years are not sent out.

224. Will you turn, please, to page 24 of this printed correspondence, at paragraphs 8 and 9 of Mr. Thom's letter. Paragraph 8 says, "The committee stated in the same Report that the annual average of recruits required for an infantry battalion in India would be 60, and the total number required would be 3,000; allowing, however, the very liberal proportion of one-third for death and desertion, there would be in the aggregate 4,000 men for seven months of the year, or its equivalent, 2,333 recruits for the whole year, with an establishment of 100 captains, 102 subalterns, 100 colour-sergeants, 300 sergeants, 200 drummers, 300 privates, maintained at an aggregate cost per annum of 68,406 *l.* 17 *s.* 6*d.*, being something more than half of the pay and personal expenses of the men themselves." Then paragraph 9 says, "This arrangement gives 200 combatant officers for 2,333 men, or about 1 officer to 12 men, and 1 non-commissioned officer to every 6 men, while the proportion of combatant officers to rank and file in a battalion on actual service in India, where they are still far short of a war establishment, is only 28 combatant officers and 43 non-commissioned officers to 820 rank and file, or 1 commissioned officer to every 29 men, and 1 non-commissioned officer to every 19 men." May those figures be accepted as a correct statement of the number of recruits, and the officers detailed for their instruction?—I see no objection to the mode in which it is presented.

225. Have these figures come under your revision as a member of Mr. Seccombe's Committee?—Hardly, because this involves the whole question of what is the proper strength for a depôt. That question is settled by the Horse Guards, and not permissible to the accountants to question.

226. Then I will not ask you your own opinion as to that?—My own impression is expressed as a member of the committee, that for the mere purposes of recruiting that is not necessary; but there are other considerations which render it impossible, as I understand, to carry on the service of India without having that number of positions for the officers in this country to remain at.

227. Will you turn to page 10 of the second volume of the East India Committee's Report. At Question 239 you will find this: "I observe that there is also a charge in addition to that of 68,489 *l.* for 2,500 infantry, at 27 *l.* 7 *s.* 11 *d.* per man?" The answer is, "Those are the men with the regiments. The system is, and has been for some time, in respect to every man that goes out with the regiment a finished soldier, for the War Office to charge the India Office so much, and for the India Office to charge the War Office for every man that comes back; and this is the

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*.

12 May 1874.

Mr. *Beckett Denison*—continued.

balance struck between the two charges, on account of men embarked for India in excess of men returned from India, say 2,500 men at the fixed rate per man of 27 *l.* 7 *s.* 11 *d.*"; does that system still continue?—Yes; that is the present settlement for men going with their regiments, or returning with their regiments, leaving the amount of reinforcements to be paid for at the higher rate of trained men as recruits.

228. Then the next Question, 242, is, "There is another item, 'Invalids and time-expired men awaiting discharge,' 30,000 *l.*"; and the answer is "Yes; when men come home from India invalided, pending their examination before the Medical Board and their final discharge, the East India Government are charged with their pay, as they are supposed to belong to the Indian establishment during that time." That also still continues?—Yes.

229. Then the next is, "'Pay of colonels of cavalry and infantry of the British forces,' 55,000 *l.*"; what is the meaning of that?—Every regiment in India has its colonel, usually a general officer, not an effective officer, with the regiment; but at home we pay that, as he belongs to and is a member of a regiment which is serving in India." Now I want to ask you upon that, where there are two battalions with one colonel, what is done?—India pays only one-half.

230. In the case of the Rifle Brigade?—India pays rateably per battalion; for a regiment with two battalions and one colonel, each battalion pays 500 *l.* for its colonel. In the case of a regiment with four battalions and two colonels, in the same way each battalion pays 500 *l.* for its colonel.

231. Do I rightly understand you to say that the capitation rate is now done away with?—It ceased from the 31st of March 1870.

232. But Mr. Seccombe says this, in answering a question on the same page, Question 258, "This present arrangement of charging the actual expenses, that is to say, so much per man, is more advantageous to the Indian Government than the old capitation grant, is it not?" General Piers says, "No, I doubt that;" and Mr. Seccombe says, "The capitation rate also comprised other items, which you will come to presently; the furlough pay of officers and the depôts of British regiments serving in India. We are paying this year 658,000 *l.* for 61,000 men"?—"Paying this year" here means paying the claim for two or three years before. That was the great reason of the capitation arrangement being put an end to, the delay that was involved in getting a settlement.

Mr. *Fawcett*.

233. The War Office, on this committee we have been speaking of, had just as many representatives as the India Office, had it not?—The War Office had two members, and the Indian Office had two members, and, with the usual advantage which we always give to India, they had the chair.

234. You had a gentleman as secretary who was a War Office official, and whose ability is mentioned?—Yes; I think a more impartial tribunal could not have been formed.

235. And that Report (there are two Reports) you say the representatives of the War Office agreed to?—Yes.

236. There are several very strong statements

Mr. *Fawcett*—continued.

in that report; do you think that any impartial person reading those two reports through could come to any other conclusion than this, that it was the intention of that report to convey the idea that India under the modern system was paying a very much higher price for recruits than she did under the old system, and that some charges were thrown upon her which she ought not to bear?—I would rather say that some charges had been thrown upon England which she ought not to bear; but that we from that day proposed that the payment from India should be at the rate of each man embarked as a finished article, and it was clear that the excess would fall, not upon India, but upon England.

237. But the whole of your recommendations have not been carried out?—It is no part of a subordinate's duty reporting to his superior to ask whether his superior attends to his recommendations or not.

238. I mean up to the time of that report, the drift of your recommendations is that India had been over-charged?—I do not quite accept that; we animadverted strongly upon the heavy expenses at the depôts during the years preceding our report; but those expenses were not borne by India, but by British revenues, the settlement then being on a basis wholly independent of the actual expenditure.

239. But then do you not see that it comes to very much the same thing. After taking an account of all those heavy charges, you calculate that the cost of these recruits to England is 205 *l.* per man?—Yes.

240. You have admitted that the price paid by India was nearly the same; therefore if a great deal of money was wasted it comes to this, that 205 *l.* represents the actual cost of the recruit, and as India paid that amount she paid a great deal more than she ought to have paid; not simply as a matter of balance between her and England, but she paid an extravagent price for the recruit?—It might, or might not be so; but I ask your attention to the fact, that that price is fixed upon the experience of 24 years preceding those large depôts which were then objected to.

241. But there are two things which I think it is very important should be kept distinct. In the first place, there is the question as to whether England improperly charges India, that is one question?—Yes.

242. But then, although England may not charge India a penny more than the recruit costs her, and may even charge India less than the recruit actually costs her, it may be an extremely bad bargain for India if England administers her army so extravagantly and inefficiently as in the end to bring out a great cost for the recruit?—But I wish to point out to the honourable Member that we did not fix the tariff upon what it had cost, but upon what it ought to cost; and therefore, having arrived at the fact of what it ought to cost, we asked India only to pay us what it ought to cost. What it did cost was a loss, not to India but to England.

243. But your calculation, you see, arrives at this very strange result; you admit that the cost of these recruits at Warley was 26 *l.* a head; you are responsible for that statement; you signed the report; of course, if you were guilty of an oversight, I regret it?—I was a party to the Return being printed, certainly.

244. You say that a slight addition may be made,

Mr. *Fawcett*—continued.

made, so it is not 26 *l.*; we may say 28 *l.*?—I would rather say 58 *l.*, without any information. We are comparing the raw material with the finished article.

245. But I am not considering now what is the value of the recruit sent from Warley as a recruit, landed at Bombay or Calcutta; but what I am now putting (and that is the important element first of all to draw your attention to) is, what was the cost of the Warley recruit to India when that recruit set sail from England, and what is the cost of the recruit under the present system; and you are a party to the statement that the cost of the Warley recruit was 26 *l.* 5 *s.*, and the cost of a recruit, under the new system, is 205 *l.*?—Yes; and I remain a party to that statement, and I again repeat that the cost of a Warley recruit was 26 *l.*, and the cost of a recruit from our depôts was 205 *l.*, and I leave anybody to compare the two articles.

246. The Warley recruit was, on the average, trained for three months; the Commander in Chief recommends that the recruits under the present system should be trained for seven months?—Yes.

247. Now, taking those eight years (we know how long the Warley recruit was trained, namely, for three months) from 1860 to 1869, when you investigated the matter, and during which years the cost of the recruit was 205 *l.*, both to India and England, can you tell me how long on the average were those recruits trained?—I think we can obtain Returns.

248. But did it not strike you that in comparing the cost of the two systems that is one of the very first things to consider?—I hardly admit that; we had the greater fact of what it cost.

249. Have you any official evidence to show that they were trained for double the time that the Warley recruits were?—I am sure that Returns can be given.

250. When can you furnish them?—I should not at all; the Adjutant General would.

251. There is nothing whatever in your report, or in those elaborate returns that you have given, to contradict the statement, which I believe is true, that these recruits have not been trained for anything like, on the average, double the time of the Warley recruit?—I do not understand what "elaborate returns" you refer to.

252. I mean the elaborate investigation; and this part you have never investigated?—The elaborate investigation as to the cost. When we came to that point we at once abandoned all arrangements in the committee that should be founded on the past cost. We took a new line. We ascertained what the Commander in Chief of the army considers as the minimum period in which a man can be properly trained and sent out as an efficient soldier; and adding a small sum thereto for the average, we ascertained to a penny what that ought to cost.

253. But it must be in your recollection that I did not draw you away from any of these considerations of account, but that when I have asked you, and other honourable Members have asked you, questions about the small charge of the Warley recruit, you have merely said that you objected to treat that as a matter of account, and you said, "Look how extremely raw these recruits were." Now, as you have made that statement to qualify the advantages of the economy associated with Warley, I ask you now to prove in what respect these recruits that were sent out under this new and costly system were more efficient, the depôt system I mean, which cost 205 *l.* instead of 26 *l.*?—It was not a new system; it was concurrent with the existence of Warley.

Mr. *Fawcett*—continued.

254. But I am comparing the two; where is your evidence for telling me that the recruits that were sent out from Warley were so extremely raw that, although they were cheap, they were very inefficient; and where is your evidence to show me that the recruits sent out from the depôts were better trained; what official returns, I mean, have you to show that?—Surely the evidence is manifested by the fact that they cost 205 *l.*

255. That obviously is no answer, because it is easy for a Government department to waste a great deal more than 200,000 *l.*?—It is clearly an answer for all purposes of the comparison of the cost that I instituted; we could give you those Returns, I believe, to a day.

256. But your evidence, you see, will now be printed; you make a distinct statement about these Warley recruits. If anyone now in the House of Commons, referring to the great cheapness of the Warley system, says that under that system India obtained her recruits for 26 *l.* 5 *s.*, an honourable Member appealing to your authority will say, "Those recruits were the raw material, and the recruit sent out from the depôt at a cost of 205 *l.* was a finished article;" he will justify that upon your authority; I want you to give your evidence for that or withdraw it?—I would withdraw it if, upon being allowed to obtain those Returns, they failed to prove the fact; but I think the honourable Member is losing sight of the fact that after applying to the Commander in Chief, as to what he held to be the necessary drill for the soldier, I had a right to assume that as being the actual period.

257. You have got no official evidence to prove it. The Commander in Chief may fairly say, "I consider that a certain time is necessary to train a recruit," but it does not follow that the recruit has been trained for that time?—But as the Commander in Chief is the officer by whose orders each man individually is placed on board ship after it has been determined that he is fit to go, if his report was officially laid before Mr. Seccombe's Committee, that a drilled recruit means on the minimum six months' drill, it justifies me in assuming that those recruits, on the average or minimum, were at least six months in training.

258. He may say it is desirable, but where is the Commander in Chief's statement that the recruits, on the average, who have been put on board from the depôt are properly drilled recruits?—He has not stated that; he has stated that the recruit in the minimum must be six months in training.

259. If the Commander in Chief had stated that they had been actually, I should have accepted that, but he has not, you say?—And as His Royal Highness stated that they should be, I accepted that.

260. It must be obvious to you, that a Minister of War, or Commander in Chief, may wish many things to be done, but various reasons may prevent him doing them; for instance, we cannot suppose that those recruits put on board ship, as shown by the quotation read by Lord George

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*.

12 May 1874.

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*.

12 May 1874.

Mr. *Fawcett*—continued.

Hamilton, some of whom had not been recruited for more than a month, were put on board at the wish of the Commander in Chief, any more than anyone can suppose that the Warley recruits at the time of the Mutiny were sent out after a few days, because the Indian authorities wished to send them out, but it was as a matter of necessity in each case?—Under the altered conditions consequent on the vote of the House of Commons in the one case.

261. But when you state that the cheap Warley recruits were raw material, and that the recruits sent out from the depôt were a finished article, you have not in your own knowledge any official statement to show how long they were trained?—No.

262. Now, admitting that the wishes of the Commander in Chief have actually been realised, and that these recruits have been trained as the Commander in Chief wishes for seven months or six months, we again come to this result, that as the Warley recruits were trained three months and the depôt recruit trained six months, the Warley recruit, trained half as long as the depôt recruits, only cost about one ninth of the amount?—Yes.

263. Therefore, considering and making allowance for the time, and supposing that the depôt recruits are trained twice as long as the Warley recruits, the depôt recruits are four and a half times as costly as the Warley recruits for each month?—That is the result of the form of comparison that the honourable Member has adopted.

264. I adopted the figures given to me?—And in that comparison sight is lost of the entirely different organisation of the two depôts.

265. I am now considering the cost to India; we arrive at that result month per month under the new system of organisation; the new system of organisation is so much more costly that month per month the depôt recruit costs four and a half times as much as the Warley recruit?—I must ask leave to interpose; as to the "new organisation," the honourable Member is speaking of an organisation that existed 50 years ago.

266. I mean, under the depôt organisation?—Under the depôt organisation the result is this, that the whole charges for which India was liable come per head per recruit to 205 *l.* for the Queen's army, and 29 *l.* or 26 *l.* for the Warley recruit.

267. Now you say that some of these recruits on the Indian depôts stop on the Indian depôts two years before they are sent to India, do you not?—There are many who have served two years before they embark.

268. During the two years therefore these men are on the strength of the English army, forming a portion of the effective strength?—Yes.

269. A man under the short service system is enlisted for a certain period, is he not?—Yes.

270. What period is that?—Six years.

271. Therefore, if he spends two years in England, he can only serve four years in India?—Less than that, because there is the period of his voyage home.

272. Then, if she wishes to induce him to serve a longer period, India can do so by offering a very considerable sum of money?—I do not know that it requires much bounty payable in India.

273. Do you know what it is?—No.

274. But, as a matter of fact, India pays him a premium to stop?—I have no doubt India pays him a premium to come into a second period of service; I have no doubt it is inconsiderable compared with the whole cost.

275. The longer this man stops in England the more frequently India will have to pay this bounty?—The man cannot go on six or seven times for re-enlistment; he will go in for a bounty a little earlier; that is all the difference.

276. It is obvious that if all the men stopped here two years before they went to India none of them can serve in India more than three and a half or three years before India would be called upon to pay them the bounty?—Yes.

277. Therefore, the greater the number of men who serve in England for a long time as recruits before they go to India, the more frequent will be the number of these bounties which India will have to pay?—Mathematically speaking, that is the case.

278. You have spoken of the great service which India derives from England by having England constantly to draw upon for troops?—Yes.

279. But now, whenever England has drawn upon India for troops, this has taken place: the very moment that the soldier is put on board the steam-vessel, from that time till he comes back to England again India pays every shilling of his expense, does she not?—In some cases that has been the case; I question whether it was so in the China wars.

280. That was for an English purpose, not for an Indian purpose?—Was the first China war entirely independent of India?

281. There can be no doubt of this, that when the troops were sent out to India in the time of the Mutiny, as a matter of account every shilling of the expense of those troops from the time they left England to their return was borne by India?—Yes.

282. Now contrast that for a moment with what was done in the Abyssinian war; that was admittedly an Imperial war?—Yes.

283. England borrowed troops from India, did she not?—Yes.

284. Just the same as India borrowed troops from England during the Indian Mutiny; and not only did India render England that assistance of the loan of troops, but India paid the ordinary pay of those troops when they were fighting in Abyssinia?—That is a matter of fact; its value as a matter of account I don't pretend to give.

285. That is a matter of fact which is on record, is it not?—There is no question of the fact.

286. Then we arrive at this result, do we not, that if England assists India with troops, the very moment that the assistance begins India pays the cost?—Yes.

287. Whereas, though India has been frequently called upon to assist England with troops, as was the case in the Abyssinian war, a portion of the pay of those troops is thrown upon India, and not borne by England?—Is accepted by India; I do not know that there was any "throwing"; I was no party to that; and if I had been an accountant in the India Office, I venture to say that every word which I wrote on the subject would have been contrary to any such arrangement, for a more extraordinary arrangement I never knew. But if the honourable Member were right

Mr. *Fawcett*—continued.

right in his argument, we should never charge India anything for troops, as it seems to me.

288. In what way do you think that the argument leads to that result?—You instance a case in which Indian troops went and fought a British war, and were paid for by India. Therefore, to be friendly, and nice, and reciprocal, England must always send her troops to India, and not be paid for them, I suppose.

289. The argument shows the palpable injustice with which India has been treated, does it not?—That argument shows that the payment of the Abyssinian troops by India was very exceptional.

290. Does it not also suggest that if the same thing was done by India towards England, suppose India had the power to carry on such a transaction as that towards England, it would bring about a result which is so unjust as really to suggest a smile at its folly?—It can only prove this, that India should have all the troops she liked from England without paying for them.

291. And if you carried out logically the policy which was pursued towards India, that would be the result which we should be landed in?—Yes.

292. A question was put to you just now by Mr. Denison, from which it appeared that if a regiment is in India, and an honorary colonel is attached to that regiment, India pays for that honorary colonel?—Yes.

293. Therefore India at the present time is paying for a great number of colonels who may never set foot on the Indian soil?—Yes, just as she pays for regimental agents, who never go to India.

Mr. *Onslow.*

294. Considering that India pays for these recruits, having been trained in England, on an average for seven months, that they go out to India, and that at the end of their period of serving they come back to England and form part of the army reserve, would it not be the case that India, therefore, pays in a great measure for the army reserve in England?—No doubt any member of the army reserve who has acquired his experience in India has been trained by India; that is all I can say.

295. He might be paid wholly out of the India revenue?—Yes.

296. And, I suppose, a very considerable portion of the army charge in England would be paid for out of the Indian revenues?—Yes; clearly, during the period they rendered service to India.

297. Considering that the army in India may be called upon, and has been called upon, to fight battles wholly on account of England, in any portion of the globe, and that the abolition of the local European army was a part of the Imperial policy, are you of opinion that India is justly called upon to pay anything at all on account of the capitation rate?—I am.

298. Will you give your reason for that opinion?—Because the clear understanding of the last 50 years with the Indian Government, ratified by the Act of Geo. 4, assigns to India the payment of all expenses on account of the British army that can be directly traced to service in India.

299. You must recollect that there is a different state of things now from what there was in the time of George the Fourth; now, India is Imperial, under the Crown?—Yes; but the revenues of India are still as distinct as when they were under the Company.

Mr. *Onslow*—continued.

Sir *Henry Havelock.*

300. Remembering the fact of there remaining in England a large army of reserve, partly in the shape of soldiers who have passed through an Indian training and partly in the shape of soldiers in depôts, and regiments who are kept trained in a high degree and are necessarily available for an immediate need, does not that admit of the effective force in India being kept at a lower figure than it otherwise would be?—I think there can be no question of that, as laid down by Mr. Cardwell in Mr. Campbell-Bannerman's letter to the India Office.

301. For instance, during the years immediately succeeding the Mutiny there were kept in India some 72,000 effective men; that has been reduced in succeeding years to about 59,000 effective men?—Yes.

302. Is it not the fact that the difference between those two figures is kept in England, at England's expense, but immediately available for Indian needs?—Certainly.

303. With reference to the comparisons that have been made here as to the cost of training under the old system of training and the present system, by which recruits are trained and sent out to India in a thoroughly finished state, do you not consider that the data given as to the cost of the Warley depôt are very unreliable for the purposes of that comparison, in consequence of there being no recorded figures to show either what the average time of training soldiers at the Warley depôt was, whether or not very considerable charges are omitted from the Warley statement, but included in the present cost?—With reference to the first point, as to the period of training, the accounts are wanting. With reference to the fact that many charges are included in the statement C, as compared with Warley, that is manifestly true. In the cost of the 205 *l.* is included, for instance, the recruit's share of his colonel's 1,000 *l.* a year. In fact, the whole organisations of the two depôts are quite different.

304. In fact, the data given as regards Warley are entirely useless for matters of comparison with the present calculation, because the calculations are made on entirely different conditions?—Yes; the return was given as a matter of instruction, and was put in by the India Office members of that committee, and, as I have said, inadvertently admitted by me; for comparison might, had it been canvassed, have been shown to be really not fair in any respect beyond this, that it showed that if the whole system of recruiting the British army was changed, and if a depôt, like that at Warley, was adopted as a better one, that would be about the rate it would cost.

305. Assuming, as we have, that the Warley recruits in former days were sent out after an average training of about three months' service, would not the cost of their training be entirely incorrectly stated, unless the cost of their subsequent training for many months in India were also taken into account?—So it appears to me;

Mr. *Milton*, C B., Mr. *Daye*, and Mr. *Knox*

12 May 1874.

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*.

12 May 1874.

Sir *Henry Havelock*—continued.

in fact, the Warley Return is not the cost of a trained recruit at all, but of the raw material.

306. Whereas the data on which the charges proposed to be made against India are now based are calculated upon the condition of a fully trained soldier, who has undergone seven months' training?—Yes.

Chairman.

307. An honourable Member has asked me to put one question to you; that is, whether you can give a statement of what the other items in the Warley accounts ought to be, so as to make it perfect; have you any means of giving such?—I am afraid those accounts are destroyed; they are the pay lists of a period that certainly ceased in 1857, and I do not believe that they are any longer in existence. But the amount of the home charges, that is for the period prior to the Warley Return commencing, are excessively small. I only mentioned it by the way, to show that the Warley Return was defective for comparison; it did not take the beginning of the man as a fresh recruit, nor the end of the man as a trained recruit; if you put 5 *l.* a man as the cost for each recruit for that prior period, it would be a very fair average.

Lord *George Hamilton.*

308. Do you observe that this Return A. does not pretend to include clothing, arms, and accoutrements?—B. is the explanation; there is one special return for that.

309. But this Return A. does not include clothing, arms, or accoutrements?—Just so; that is another illustration of the incompleteness of the Return.

Mr. *Denison.*

310. As to that difference of charge for men sent to India, and men returned, an average of 27 *l.* 7 *s.* 11 *d.*; how is that made out?—Page 7 of Mr Seccombe's second report gives that at paragraph 14, and that report gives those two items, the details of which are given in Appendices B. and C.; page 11 gives the details of cavalry to every penny, and also the details of infantry.

311. You have said, I think, that everything that is done in the matter of charging soldiers to India is in accordance with the Act of Geo. 4, that is to say, that every charge for the British soldier which can in any way be regarded as for service in India is charged to Indian revenue, and in pursuance of that India is charged with the cost of the soldier from the date of his being put on board ship, whereas England is not charged again with that same man until he is discharged from Netley, or wherever he is?—Yes; the voyages both ways are charged against India, being solely incurred for Indian service.

312. Do you think that under the altered condition of the Indian service, recruiting, short time, and everything else, the principals of that Act of Geo. 4 can be fairly worked out?—I think the principle is unassailable, that any charges that are incurred by the Imperial Exchequer, solely for India, and which would not have been incurred if India did not exist on the face of the earth, are fairly chargeable to Indian revenues.

313. And that, you think, would cover this excessive charge for the recruiting depôt system?—That would cover all necessary charges.

Friday, 15*th May* 1874.

MEMBERS PRESENT:

Mr. Stephen Cave.
Sir George Balfour.
Mr. Balfour.
Sir Thomas Bazley.
Mr. Birley.
Mr. Campbell-Bannerman.
Mr. Dalrymple.
Mr. Beckett Denison.
Mr. Dunbar.
Mr. Fawcett.
Sir Seymour Fitzgerald.
Lord Edmond Fitzmaurice.
Lord George Hamilton.
Sir Henry Havelock.
Mr. Sampson Lloyd.
Mr. Massey.
Mr. Onslow.
Mr. Eustace Smith.
Mr. Stanley.

THE RIGHT HONOURABLE STEPHEN CAVE, IN THE CHAIR.

Mr. JOHN MILTON, C.B., Mr. ROBERT P. DAYE, and Mr. RALPH HENRY KNOX, re-called; and further Examined.

Mr. *Stanley*.

314. YOU stated, I think, at your last examination, in answer to a question from the honourable Member for Guildford, that there might be cases in which men were enrolled in the reserve forces whose whole army service had been given to India, and who had been wholly paid for by India; are you aware whether those men, together with a great many other men, who have been paid for wholly by the Imperial funds, are liable as reserve men for service in India?—Yes; belonging to the first-class reserve, they are liable in case of emergency to be called to the ranks, and then to serve in India or elsewhere.

315. Apart from the actual cost of men while serving in India, have the Indian Government been called upon to contribute in any form to the expenses of this reserve?—No, in no part; the reserve is an arrangement of the last few years, I mean to any extent; and it will be, most probably, one of the questions before the next adjusting committee, Mr. Seccombe's committee, if that continues, to consider whether any portion of the cost of the reserve in this country should be charged against India, being the retaining fee for future service which will be as available in any emergency for India as for any other part of the world.

316. In addition to these army reserve men, the first-class army reserve who are liable to be called upon for foreign service, is there not an additional class of reserve men in the militia?—Yes, certainly; the militia reserve receive a retaining fee of 1 *l.* a year, for which they are liable at any time of emergency to be called into the regular army, and sent to India or elsewhere.

317. I think there are about 30,000 men so enrolled?—Yes, costing 30,000 *l.* a year, for which, at present, no charge has been made against India.

Mr. *Stanley*—continued.

318. When a price current was agreed upon in Mr. Seccombe's committee, was it supposed that those prices would repay the cost of the home depôts?—No, certainly not. The price there agreed upon for infantry men of 63 *l.*, of course, would not at all approach what had been the cost of the infantry depôts, as shown by the tables so often quoted, amounting, on the number of recruits embarked, to 205 *l.* per recruit. That 205 *l.* is open to some explanation; but in accepting 63 *l.* as the tariff price for future recruits for India, it was only done by the War Office members in the full expectation that arrangements which were then in operation by the finance branch in connection with the Horse Guards would in future greatly reduce the dead weight of those depôts. Every exertion was made to attain that object, and it has been attained to a very great degree, for I have here Returns, which I will furnish the Committee with, showing the number of men left in this country at the termination of the embarking season. By the 31st of March all embarkations of the year are over, and this Return is dated in March 1869. The number then remaining at the depôts, excluding those depôts of regiments which were returning to this country that year, also the depôts of those regiments that embarked for India that year, was 4,992 men. A similar return for the 31st of March 1872, which is exactly the same embarking period, for there has been no change in that, gives the number left at the depôts as only 3,008; whilst a similar return for March 1873 gives the number remaining at the depôts at 2,907. (*Returns handed in*, vide *Appendix*).

319. And that economy, the difference, namely, between those two numbers of 2,907 and 4,992, would represent the result of the efforts made by the Financial Department at home to reduce expenditure which would otherwise have been

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*.

15 May 1874.

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*.

15 May 1874.

Mr. *Stanley*—continued.

charged to India?—Which would otherwise have fallen upon England, and would not have been repaid in any adequate amount by the tariff price agreed upon for the recruit; our only ground we had for agreeing to that low tariff price was our hope of reducing for the future the cost of the depôts.

320. Has there been any proposal made by Mr. Seccombe's committee as to diminishing the number of companies at home at the depôts?—The tenour of the protest of the Indian members, I think, in the third report, is with reference to the unnecessarily large establishment of the depôts.

321. Would the reduction of the 2nd company, in your opinion, materially decrease the cost of a recruit to India?—No; I do not think that it would have enabled us to have quoted a lower price for the recruit; the depôt establishment to which the Indian members then objected consisted of two captains and two lieutenants; the former company, which was the model which they wished it reduced to, was one company, called the Recruiting Depôt Company, but it consisted of one captain, one lieutenant, and one ensign, or two subalterns; now no ensign or junior subaltern is kept at the depôt; therefore the present depôt establishment is four officers against three. But in our calculations for those recruits the committee will observe that we divided the cost of each depôt into 80 portions, being the number of recruits which it was capable of training; those 80 portions, therefore, divided the depôt companies of the 50 regiments in India into 4,000 portions for each year, but our actual number of recruits or drafts embarked for India during the last four years, that is, from the period ever since the capitation ceased, has only averaged 2,022. It is therefore clear that we are repaid only one-half of those 4,000 portions into which we divided the companies. Adding the fourth man, it comes to about one-quarter, which will not have been repaid; therefore the reduction of the captain, which does not represent a quarter of the depôt, would not have enabled us to have quoted a lower price for the recruit.

322. Have you been able to get out any Return to show the Committee whether during the time of the payment of the capitation rate India had repaid, or nearly repaid, the actual cost of the home charges?—Yes; during the eight years during which the capitation rate was the sole mode of settlement between ourselves and the India Office for the home charges, the most accurate accounts were kept at the War Office for the cavalry and infantry, and to some extent for the artillery, exactly as if we were going to send in our annual bill; and the consequence is that we are now able to compare the bill which would have been sent in and the receipts under the capitation; and allowing for the ordinary loss annually by men not returned from India, we come to the result that the loss to the British revenues during the eight years was 408,000 *l.*, being 51,000 *l.* a year. And I may remark that had the proposed minimum rate of 11 *l.* been accepted instead of 10 *l.* (the Committee will remember that the rate proposed for infantry was rather more than 11 *l.*, for cavalry 15 *l.*, and for artillery 23 *l.*), that would have exactly covered it. The 51,000 *l.* would represent roughly the number of men on whom the pollage was collected in India. If we could exclude the artillery from both sides of this Return, I believe the loss to Imperial revenue could be shown to be double, or over 800,000 *l.* odd.

Mr. *Stanley*—continued.

323. Will you put in the Return I have asked for?—Yes. (*Return handed in*, vide *Appendix.*)

Lord *George Hamilton.*

324. Is that calculating the cost of every recruit at 205 *l.* per head?—Yes; that includes the period during which those figures apply.

325. That basis of calculation is on the assumption that the average cost of a recruit was 205 *l.*?—Yes; I was going to offer an explanation about that. The 205 *l.* will be evidently seen by the Committee to be the division year by year of those totals as given in that Return; but as the number of recruits varied very much the fairer plan would have been to divide them by the total number of recruits, as in the Warley return. That would have reduced the average cost to 173 *l.* But in answer to the noble Lord's question, I may say that the figures I now state as to the 11 *l.* do apply to the period during which the rate of 205 *l.* or 173 *l.* per recruit embarked is arrived at.

Mr. *Stanley.*

326. (To Mr. *Knox.*) Before we leave this question, I should like to ask you whether it is not the case that you had a great deal to do with the carrying out of the details of those reductions which were made in the expenses of the home depôts?—Yes, in making the arrangements.

327. Would you be able shortly to state to the Committee the leading features of the reductions which were then made?—It was found on experience, as has been stated, that at the Indian depôts a very large number of men were always serving, whereas it was contemplated in making the calculations that the number that would be there constantly would be comparatively small. On examination of these facts it was ascertained how these large numbers were made up, and it appeared clear that it was in consequence of our carrying on the system of obtaining drafts for India in accordance with the regimental regulations. Under that system the number of men who were constantly returning from India as invalids and as time-expired men under the short service system, and were sent to the depôt before discharge, was very large. The invalids who were coming home for the purpose of recruiting their health were very numerous; and it was also found that men were enlisted so short a time before the period for sending the drafts to India that the time did not admit of their being thoroughly trained before the period came round for sending out the drafts, and therefore it was not possible to send them with the drafts of the year. The result was that a large number of men were accumulated at the depôts, which led to the large cost of the depôts during the years which have been mentioned.

Mr. *Fawcett.*

328. Those were the eight years?—Yes. When a man was invalided from India if it were found after the voyage home that he became convalescent

Mr. *Fawcett*—continued.

valescent he was not discharged, but he was sent to the depôt of his regiment. If when he became quite restored it was found that he had not two years, or from eighteen months' to two years' more service to complete his short period of service or his period of service towards pension, he was never sent out to India, because it would not be an economical arrangement to send a man with that short period of service in him to India. One of the first arrangements to reduce this large number of men at the depôts was made in 1869, when a special Warrant was obtained from Her Majesty to admit of men in that position being discharged from the army on a slightly reduced permanent pension. That cleared the depôts at once of a considerable number of men who would have been retained for perhaps a couple of years on the establishment of the depôt as a charge to that depôt, not being available for any other service but service in that depôt. Then subsequently to that it was decided to stop the system of continuous recruiting which had up to about that time existed; up to that time men were recruited for Indian regiments without respect to the period of sending the draft abroad. It was thus found, as I before stated, that men were raised for the regiments perhaps a couple of months before the draft went abroad; they were thus, when the draft went abroad, not trained recruits, and therefore not available to form a portion of the draft. It was decided, therefore, that when the minimum period for training a recruit had been reached before the period for sending off the draft all recruiting should stop; so that by that means we had no recruits on our hands that were not available to form a portion of the draft, when the draft was sent out, instead of having, as we had before, a considerable number in hand whom we had to train for more than 12 months before they could be sent abroad. By that arrangement the number of men at the depôts was considerably reduced also. Thus we found by pressing this plan upon the Horse Guards that the number of men that remained behind at the Indian depôts, although still considerable, was nothing like so large as the number which had remained during several of the preceding years. Thus the state of things which has been alluded to by the Accountant General of the Army was brought about, that instead of having some 5,000 at the depôts at the time that the drafts were completely despatched, we had only something like 2,500, which is very nearly a similar proportion to the numbers which used to be at the old depôts before the system of the capitation rates, and before the amalgamation of the armies took place in 1861.

Mr. *Stanley.*

329. Will you be able to furnish us with the date of that?—Yes; the figures here quoted give the numbers of 3,008 and 2,907, but these numbers include a small number of recruits that had been raised in the meanwhile between November and March, the date of the Return.

330. If you look at the evidence at Question 176, there is a contrast drawn between the old and the new system. Now, when we hear about the old system, I must repeat a question which was asked of the Accountant General before; the old system does not mean that the whole British force was recruited on the Warley principle; that never was applicable to the whole British force in India, was it?—Not to the British force, not to the 24 regiments of the regular army that served in India before 1861; they were not recruited upon the Warley system, but upon the regimental system which has obtained for all the regiments of the army since they have formed a portion of the Imperial forces.

Mr. *Stanley*—continued.

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*.

15 May 1874.

331. (To Mr. *Milton.*) Will you look at the answer to Question 12, and will you be able to give the Committee in general terms any outline of the reasons which induced you to report in favour of the price current, of the tariff, or commuted charge in the place of the capitation. Could you briefly lay before the Committee the objections which, I believe, you entertained to the working of the capitation grant?—The main objection was the great delay that took place in obtaining the basis of our claims against India. That basis was founded upon returns of every effective soldier serving in every portion of India, and it was found to be sometimes 18 months, sometimes two years, before the returns of those effectives reached this country. It was therefore another considerable period before they were agreed upon between us and the India Office and the settlement took place; that was therefore the main objection to the existing system of the capitation. When, however, Mr. Seccombe's committee met, and the proposal for the price current was suggested in lieu, it recommended itself to the judgment of every one of the members, and from its first suggestion it was adopted as by far the more satisfactory mode of adjusting the accounts, being, in fact, the now approved system of paying by results.

332. (To Mr. *Daye.*) I think I understood that claims from the India Government have not yet been rendered for the last two years, or rather they have not been finally adjusted?—We have not agreed upon the rates, and consequently no accounts have been rendered.

333. And the system has been that large advances have been made, and the final balance remains unsettled?—Yes; we have rendered accounts for 1870–71 and 1871–72, but none have been rendered since that date; but in the meantime advances have been made by the India Office to the Treasury on account of these services.

334. But the final balance of accounts remains unadjusted?—Yes.

Mr. *Fawcett.*

335. When you say 1871–72, there has not been any adjustment for three years?—No; the accounts of 1870–71 and 1871–72 are under audit now at the Audit Office; no final adjustments have taken place since the termination of the capitation.

Chairman.

336. And the accounts have not been admitted as correct, have they?—No.

Mr *Stanley.*

337. (To Mr. *Milton.*) Mr. Seccombe's committee will meet again, and will arrange how these charges are to be subsequently made, will it not?—At present that is the arrangement. The recommendations of Mr. Seccombe's committee

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*.

15 May 1874.

Mr. *Stanley*—continued.

have been approved by the two Governments for the two years ended 31st March 1872; the basis on which it should be settled for the following year, to March 1873, and again for the year to March 1874, is not yet determined, the question of the organisation of the army as lately adopted having not brought sufficient experience yet to enable us to say with any accuracy what would be a fair settlement for those years; and my own impression is (in fact, I am prepared to say so at Mr. Seccombe's committee), that our recommendation should be that the Government should accept the present tariff prices for another year, perhaps for two; that would bring us, with the present system, to the 31st of March 1874.

338. Then there will be continual fluctuations in this basis of accounts until this new organisation is entirely completed?—No doubt it will be the case, the India Office being of opinion that the proposed organisation will so largely reduce the cost of recruits as to render it to their advantage to have the system and the prices revised constantly from time to time; we can have no objection to that. Of course a permanent arrangement would be more easy, but would not be so free from objection.

339. Inasmuch as your inquiry is based upon actual charges, you have perhaps no very definite information to speak upon with reference to the effect of short service; but have you ever, either individually or in that committee, had occasion to consider the effect which short service will have upon the adjustment of these charges?—Not quite in the adjustment of the charges, because the charges being made by direct reference to the result, that is the number of men sent out, the system of paying by the tariff prices will be unaffected by that; but that the number to be so paid for will be largely increased I cannot doubt, as the short service will render so many men continually necessary to be renewed in the army, that the number sent out in draft will bear a far greater proportion to the strength of the corps itself or the regiment than it does at present. My own impression is that a much shorter service in India for the corps themselves could be effected with great saving of life of the soldier, and with little, if any, increased expense. It may appear a paradox to say that transporting such large bodies of men across the world twice in 10 years instead of once would not be more expensive; but then, on the other hand, it must be remembered that in effect we do so by the individual return of those men. The corps itself may remain for 50 years in India, but the number of men will be found to average very little more than five or six years individually; and many economies, it has struck me, might attend the removal or relief of those corps *en masse* instead of the renewal or supplying of them by drafts. I only state this in answer to the question whether individually I had ever considered the effect of short service upon India. If you could prove that it would be more economical to India to return her regiments every five years, instead of every 10 or 12, it is quite clear that those men who have only got to serve for six years will not be more expensive to India.

Chairman.

340. In that case, would India receive anything for the men returning who had only a short time to serve?—As to those who renewed their service, which would be a very common thing, I think, when the men saw that their next period was a home service one, India would, of course, get the value of men returned by her for further service.

341. Your meaning is, that in that way it would be more economical to India?—In that way I think it would be more economical to India, and there is no question, I believe, of the economy of human life that would attend it.

Mr. *Stanley.*

342. Those men being replaced at home by others recruited for the purpose?—Those men being replaced in India by men raised for another service of six years, who would go out and serve five years, and come home either to join the reserve or to renew their service for a second period at home, and go on to a pension.

Lord *George Hamilton.*

343. Is it not the fact that in regard to all soldiers coming home from India who have less than a year's service to expire, India does not receive this sum?—No; she does not receive any sum for any man in his last year of service.

344. The service is only considered service with the colours, not in the reserve?—Certainly not; but the present arrangement, your Lordship is aware, has not affected those men who have come in on the new system; there are no men who have yet served six years under the new army system.

345. So that the question has not yet arisen?—The question has not yet arisen what will be the effect upon the men of the new system of short service; and therefore I said, in my answer, probably an inducement to remain a second period for home service would lead a great many to renew their service.

Chairman.

346. That is entirely speculation?—As regards any proposal laid before Mr. Seccombe's Committee, certainly.

Mr. *Eustace Smith.*

347. If a man who had been enlisted for short service came home from India a short time before the expiration of that service, India would get no credit for him?—None.

348. Supposing when the time expired he re-enlisted in this country?—It could be so arranged that India would get the credit of that.

Mr. *Fawcett.*

349. Is that provided for; is there any security for it?—No; we are speaking of the future.

350. You may make, of course, a prospective arrangement; has India the smallest guarantee that such an arrangement will be carried out?—She would have a guarantee before the arrangement was entered into.

351. What evidence have we now that such an arrangement will be carried out for her benefit?—None, as the arrangement does not exist; but if it is proposed it will be accepted by India with due guarantees, I presume.

352. But this short service system has come into

Mr. *Fawcett*—continued.

into operation; it will have a great present effect on the finances of India, and it will have a great prospective effect, and it will be a very important thing for the Committee to ascertain at the time when this short service system is carried out, what guarantees have actually been given to India at the present time that her interests will be protected, and I want to know, as to this arrangement that you speak of, whether a promise has been given to the Indian Government that it shall be carried out?—No, not even suggested that I know of.

Mr. *Stanley*.

353. My question to you was, whether these matters had ever been considered before the committee; you say that they have not yet arisen before the committee?—Before Mr. Seccombe's committee no such views have been entertained or proposals made.

Mr. *Eustace Smith*.

354. In the case of long service men, under the old system where men were enlisted for 10 or 12 years, and they came back with only a short time to serve, and were re-enlisted, has India ever got any credit for their long re-enlistment?—No, I should say certainly not, unless they went out again.

355. It was never done in the past?—No, but the terms are future; the men up to the year 1871 have enlisted only for 10 years, which is considered the Indian period.

356. But if a man came home at nine years India got no credit for him?—No, if she had had nine years or eight and a half years of his service. The honourable Member will observe that not only is the comparison between a period of six years and 10 years, but that comparison becomes all the stronger when you exclude the period of training and the period of voyage to India. The residuum to India in the one case is far more in proportion than in the other.

Lord *George Hamilton*.

357. You consider the present arrangement of actual charges more favourable to India than the old system of a capitation rate?—Yes; certainly a much lower price to India.

358. And I think you said in your previous evidence that if the establishments had been maintained as they had previously been at the present rate, England would be losing 200,000 *l.* a year?—Yes.

359. In the first report of Mr. Seccombe's committee there are two statements included; one is in reference to Warley, and the last is in reference to the establishment of Indian depôts for the years 1861 to 1868; how did you arrive at the cost of each recruit; did you take the total number of persons, officers as well as men, on the recruiting establishments, and then divide them by the annual amount of recruits who were sent out to India?—The question of dividing it among the annual number of recruits sent out to India, your Lordship will find on the face of the return. We there state the number of men, and therefore perhaps your Lordship's question is limited to this, what are the constituent parts of that sum, "approximate amount of Home charges for depôts, including recruiting expenses and pay on passage out and home." That is the sum that we have compared as against the number of recruits.

Lord *G. Hamilton*—continued.

360. I was rather questioning you in reference to an answer which you gave in your previous evidence on page 6, at Question 38. You give in a Return, and you say, "By this Return it will be seen that while the average strength maintained throughout the period was 8,494 men, 2,196 recruits on an average were embarked annually;" what I want to arrive at is this: do you take the cost of each recruit by dividing the cost of the total number of men by the amount of recruits annually sent to India?—Yes, year by year. I observed just now, that had we taken it man by man in the eight years it would have come to 173 *l.* instead of 205 *l.*

361. But then in calculating the cost of 2,196 recruits who annually go out to India, you include the expense of maintaining the remaining men not sent out to India on the establishment?—Yes.

362. Then if the average strength is 8,494 men as against 2,196 recruits sent out to India, for every recruit that goes out to India three men are charged who remain in England?—That would have been the dead weight on that principle; therefore I maintain that I was most moderate in asking for the dead weight to be allowed as one man to three, instead of three men to one.

363. That is to say that under the late system four men were kept in England to send one out to India?—That was the result arrived at in the summing up of the depôts; but in that number is included, first, the number of trainers, secondly, the number of men sent home from India to recover their health, who on becoming convalescent, and being pronounced to be possibly fit for further service, must be retained at the depôt for one year before they can embark again; if therefore the embarking term came round when they had been there, say eight months, they would have to wait for another year; again, in that number were then included the number of men sent home for the purpose of being discharged on their time expiring; again, in that number were included the men sent home for permanent pension, and in the Memorandum which I had the honour to submit to the Committee, I stated what was about the fair average of detention of those men, namely, three months. I therefore deducted one-fourth of the number from the number existing, and that showed the residuum; but the whole of that formed the dead weight which had come, to the extent that it then existed, into the calculation of the 24 years on which Sir Alexander Tulloch and his committee based the capitation rate. In experience we find that taking all those our loss would have been about 50,000 *l.* a year, or would have been fully met had the capitation been 11 *l.* instead of 10 *l.*

364. But whatever may have been the cause, the result was that the depôts in England consisted of a strength four times the number of recruits annually sent to India?—Yes, that was the fact; the term "depôt expenses" is more properly applicable to the case than "recruiting expenses," because those depôts contained, as I have shown, not only the new men raised, the new men being trained, and others detained for training, but also convalescents whom we hoped

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*.

15 May 1874.

Lord *G. Hamilton*—continued.

to send out again, the time-expired men going to discharge, the pensioners going to discharge, and another considerable item, the pay of the men both on the passage out and on the passage home, which was paid by us and recovered through the capitation rate from India.

365. The cost of transport to and from India, of course, has nothing to do with the number of men on the establishment?—No; I am not speaking of the cost of the transport. I am speaking of the pay of those men whilst on board, the whole of which cost is included in those depôt charges.

Mr. *Fawcett.*

366. But 205*l.* does not include the cost of transport, does it?—Not of the ships, but the cost of the pay during the passage out and home.

367. Therefore it does not represent anything like the real expense of India in getting the soldier?—No; there is the cost of his conveyance to be added.

368. But if India, for instance, is buying a cannon, you would not say what price she gave for it in London; you would say what she had to pay for it, when she had it, at the place where it was wanted; and in the same way these soldiers are not the least use to her till they are on Indian soil; what should you say was the cost of the transport?—I cannot say; it does not come into the Army Accounts.

Lord *George Hamilton.*

369. It is on the Admiralty Accounts?—Yes.

Mr. *Campbell-Bannerman.*

370. But that item is excluded from the Warley account?—Yes, from both statements alike.

Mr. *Fawcett.*

371. It appears that in the Admiralty Accounts it is 260,000*l.* a year; therefore, calculating the number of men who are sent out and were brought home, you easily get the average of each; what is the number of men?—I think roughly 8,000 a year may be said to go out, and 7,000 or 6,500 to come home; that is 15,000; that comes to about 17*l.* a man, roughly.

Lord *George Hamilton.*

372. I dare say you are aware that exactly the reverse of that which you have described as the system prevailing at the depôt was the system at Warley; that the establishment was much less in numbers than the amount of recruits who were annually sent out?—Yes; but I do not believe that Warley was in any way an invaliding station or sanatorium for recovering the health of the men, or for the reception of them on their being discharged, which was done in India; the European troops were discharged in India, and sent home, not to any depôts but to civil life.

Mr. *Beckett Denison.*

373. They all had their passage found home, had they not?—Yes; but they were discharged from the service in India.

Mr. *Stanley.*

374. Warley, was a recruiting depôt and nothing more, was it not?—Warley was a receiving depôt for recruits, and nothing more; we paid for raising them, and they kept them there and shipped them as quickly as they could.

Mr. *Stanley*—continued.

Lord *George Hamilton.*

375. At page 4 of the report of Mr. Seccombe's committee you will see that there are many charges included in the sums given for Warley; there was the cost of recruiting at the different stations, and pay of officers and non-commissioned officers, but still you assert that this statement is not in any way exhaustive?—I assert that the Return is complete in what it professes to be, the cost expended and disbursed at Warley; it does not tell anything of the expenses disbursed for the man before he got to Warley, nor of the expenses disbursed for him after he left Warley.

376. The system under which the recruit cost 205*l.* was admitted to be rather an expensive system at the War Office, and Mr. Seccombe's committee sat rather with a view of suggesting alterations by which recruits could be more economically provided, did they not?—No; Mr. Seccombe's committee was only to agree upon a price current, not to agree upon a mode of recruiting.

377. Still they suggested a reduction of the establishment, did they not?—I think the Indian members entered a protest against the unwieldy establishment; but the efforts of the finance branch, as described by Mr. Knox, were those that followed the fact of those expenses being so heavy.

378. If you look at page 16, you will see that there is a Report which you signed, and you express your "concurrence in the view taken by the committee presided over by Major General Jameson, in their Report, dated 5th of August 1869, that for the purpose of raising and training the number of recruits required for battalions of infantry in India, it is not necessary to maintain more than one company with the depôt in this country"?—Certainly.

379. Therefore the proposals which were contained in this report were made with a view rather of reducing the expense of recruits?—Yes, for the purpose (as had been the case with the first report, which was an *ad interim* report) of calling strongly the attention of the authorities to the subject of the heavy depôts which were maintained in this country of the regiments in India.

380. Therefore the committee did, indirectly, admit that the cost of recruits was high?—Yes; that the staff, if it were only for the purposes of recruiting, was higher than was necessary.

381. Then you state that, according to a calculation which you made, the total amount paid by India, under the capitation rate, involved a loss upon England of 408,000*l.* during the eight years that the capitation rate was in force?—Yes, the figures show that the recorded expenses during the period were greater than the capitation repayment to the amount of 408,000*l.*

382. That is calculating that every recruit cost 205*l.*, is it not?—No; that calculation has not come into the question; it applies to nearly the same period to which those figures apply, certainly. Instead of saying that each recruit cost 205*l.*, the more proper expression would be that the home charges, including invaliding, journeys out, journeys home, and detention for health, were

Lord *G. Hamilton*—continued.

were in this country as 205 *l.* is to each recruit who went out; but not for that recruit.

383. Is not your calculation based upon the assumption that the recruit cost 205 *l.*?—Upon the assumption that the home charges are at the rate of 205 *l.* for every recruit.

384. That calculation is arrived at by a somewhat curious method, because you take the average of each year, and then you take the average of the years, that is to say, that calculation is arrived at by an average of averages?—Yes; taken year by year, as I explained a little while ago.

385. If you take the more simple mode of calculation, which is to divide the total amount of expenditure on depôts by the amount of recruits sent to India, you will find that the charge is reduced from 205 *l.* to 173 *l.*?—Yes; we have stated that.

386. Therefore, there is a difference between the more simple method of calculation and the more complicated of 32 *l.* per recruit?—Yes.

387. If you multiply the number of recruits sent to India by the difference, that is, 15,376 recruits by 32 *l.*, which is the difference between the two methods of calculation, you will find that the amount will come to 491,032 *l.*?—Yes.

388. Then, because you assume the less simple method of calculation, India has paid that 491,000 *l.*?—No, she has not paid one penny on that basis at all; for the period which we are speaking of, India paid so much per head for every man in India, not for every recruit who went out.

389. Yes; but you in your evidence said that the capitation rate amounted to about 205 *l.* per recruit, did you not?—No.

Lord *Edmond Fitzmaurice.*

390. Does not Lord George Hamilton mean the charge which might have been made, not the charge which was made?—Perhaps his Lordship does.

Lord *George Hamilton.*

391. What I understood was that the actual amount paid by India was about 205 *l.*, and that you further estimated that, upon the basis of a recruit at 205 *l.* per head, England had lost 408,000 *l.* by the transaction?—No, that is not the case; we did not come to that result on any calculation per recruit. We dismissed that complicated system that your Lordship pointed out just now of the double averages, and we went back to the original facts. We had in a return (which I have had the honour of laying before this Committee) a statement of the total recorded expenditure year by year, and the total receipt under the capitation rate; comparing those two and leaving out of question whether the recruits cost 205 *l.* or 173 *l.*, we came to the result that whilst England had disbursed during eight years a total of 5,492,000 *l.*, she had recovered through the capitation rate 5,084,000 *l.*

Mr. *Stanley.*

392. Perhaps you will look back to the answer which you gave at Question 74, "Just now you said that the cost of recruits to India was not 205 *l.*, and now you say it is? (*A.*) I say that India has repaid us, not per recruit, but through the capitation rate for a cost, which represents 205 *l.*" That is the answer which you wish to give?—Yes.

Mr. *Stanley*—continued.

Lord *George Hamilton.*

393. Therefore, the general average of 205 *l.* may be struck out as worthless, may it not?—The 173 *l.* is a more simple item, and I can have no objection to its being put in the room of the 205 *l.*

Mr. *Sampson Lloyd.*

394. Does the 173 *l.* include the expense of sending the recruit out and back from India?—No, not the transport.

395. Who pays that?—It is in the Admiralty Vote, unless directly taken up by India; his Lordship has stated that it amounts to 260,000 *l.* through the Navy Votes per annum; you may add about 17 *l.* a man for that item, therefore.

396. So that the 173 *l.* really comes to 190 *l.*?—Yes.

Lord *George Hamilton.*

397. I still want to get at the origin of this 205 *l.*, because it does not seem to be a mere matter of account. You charged India for the cost of the recruits, and you calculated that cost at what per head?—The first point of your Lordship's position is a little inaccurate, if I may be allowed to say so. We did not during that time charge India with reference to her recruits at all. If any one year had occurred when there was not a single recruit sent out, India would have paid us to the last farthing the same amount as she did. She paid us the settled sum founded on the number of men in India, by which it was calculated in a long series of years we could keep up the wear and tear of those forces.

398. What sum did she pay per head for recruits?—She never paid per head for recruits; the recruiting and home charges cost us during that period at the rate of 205 *l.* for every man who embarked, 173 *l.* or 205 *l.*, whichever way the Committee take it. The payments made by India on the capitation did not amount to that by 408,000 *l.* in the eight years, or 50,000 *l.* a year.

399. The amount paid by India did not amount by 408,000 *l.* to the cost of the recruits calculated at 205 *l.* per man?—Just so.

400. If you take the real cost of recruits at 173 *l.*, there is a difference of 32 *l.* between that and 205 *l.*?—The total expenditure which we are now dealing with does not vary one penny, whether by the complicated system of averaging averages we bring it to 205 *l.* per recruit, or by the simpler system we bring it down to 173 *l.* per recruit. The one starting point in both cases is the actual expenditure recorded.

401. But I want to know what has India paid per head for her recruits during those eight years?—If you take it year by year, it is 205 *l.*; if you take it for the seven years, it is 173 *l.*; identically the same base of calculation applies to the one as to the other.

Mr. *Fawcett.*

402. You mean that India actually paid 173 *l.*, and on the average 205 *l.*; and that paying those amounts she did not pay England as much as the recruits cost England by 400,000 *l.*?—Quite so.

403. So that if India had paid England on the principle

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*.

15 May 1874.

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*.

15 May 1874.

Mr. *Fawcett*—continued.

principle that England should lose nothing, a considerable addition would have to be made to those figures of 173*l.* and 205*l.*?—No; the result of it is this, that the home charges cost us per recruit 173*l.*; India paid us per recruit 146*l.*; 205*l.* is the figure taken year by year, if each year is taken by itself; 173*l.*, if we take the whole number during the seven years; because if we send out in any one year an unusually large number of recruits, the average rate is, of course, less per recruit; and if in any one year we had sent out only two recruits, the average rate on those two recruits would have been 129,000*l.* each.

Sir *George Balfour*.

404. Let me try and see if we can unravel this confusion; you state that the net charge incurred by the War Office was 5,492,267*l.* during the years that the capitation rate was in force?—Yes.

405. And that the charge, if there had been no capitation contribution, would have been made against the Indian Government, 5,084,010*l.*?—The charges against the Government of India.

406. And you thereby lost the 408,000*l.* to which you have referred?—That is the difference between the amount we were repaid by the capitation and the amount of the home charges as recorded.

407. But the sums in that figure of 5,492,267*l.* comprise many other charges besides that for the recruit?—Yes; I illustrate that by saying how much each recruit bore on his back.

408. The difference of 408,000*l.* which you show on that statement may be due, may it not, partly to the increased cost of the recruit, but partly to various other charges independent of the recruit?—No; because the capitation was founded upon all those items during the 24 years from 1834 to 1857. There is one item I did call the attention of the Committee to, that is the increase of the pay of the soldier which took place in the year 1866–67, and added one-sixth to the pay of every man; therefore, as that was an alteration since the capitation was fixed, it threw out all the calculations.

409. The 5,084,010*l.* which the War Office received from India was intended to cover not only recruits but the pay of officers on furlough, and a variety of other charges of all kinds, was it not?—It covered everything.

410. The agreement entered into in 1861 was distinctly for the purpose of putting an end to all claims on account of all actual charges whatever by a lump payment?—Just so.

411. But out of the 5,492,267*l.* which was paid by the War Office during those years, there was only 2,666,100*l.* paid on account of recruits?—On account of the depôts.

412. One year is wanting in this statement, at page 5 of the Report, and there is an extra one in what I will call Mr. Daye's Return?—As we sat in March 1869 we could not, of course, give it for the year 1868–69; one is for seven years, and the other for eight.

413. Therefore, to compare the two accounts, I have now taken the one year away from Mr. Daye's Return, and I find that the total charge was 4,812,378*l.* to the War Office, whereas the amount received from India was 4,499,700*l.*?—I have no doubt you are right.

Sir *G. Balfour*—continued.

414. These are the results of the whole series of years, deducting the one year of 1868-69?—Just so.

415. Consequently the disbursement on account of the recruits, which you show in your Indian Committee's Report, being 2,666,100*l.*, has to be taken away from the 4,812,378*l.* of charges?—Yes.

416. Therefore the loss which the War Office has sustained by the capitation rate not being sufficient may have been caused by the increased charges which were thrown upon the War Office by the larger number of officers, for instance, who have come home and received their furlough pay, may it not?—Of course every officer who comes home on furlough pay increases the cost.

Chairman.

417. What we want to understand is how these two conclusions were arrived at from the same set of figures; can you explain this any further?—They were arrived at by the somewhat complicated system alluded to by Lord George Hamilton; we stated in each year the average cost of one recruit. We then proceeded to repeat that process for seven years; we then added those seven averages together and divided them by seven and came to another average. If, on the contrary, we had gone back to the primary elements, and added up the total number of recruits for the seven years, the result would have come out different.

418. Then the result would have been the smaller sum mentioned?—The result would have been 173*l.*; and it must come out different, unless every year exactly the same number of men are sent out.

Lord *George Hamilton*.

419. Then in reference to your previous evidence we are not to understand that India has paid at the rate of 205*l.* per recruit through the capitation rate?—Yes; she has nearly paid that, but not by so much for each recruit, but by the operation of a system which I hope I shall be able to make intelligible to the Committee, namely, the difference of men on passage to and from India. During the period up to 1857, on which Sir Alexander Tulloch's Committee founded their capitation, actual accounts of the home charges were rendered and paid by India; but that left to be considered the wear and tear of the corps that went out to India; about 1,500 men a year do not return; I do not mean that that represents the mortality in India, because there is a great item of it consisting of men who volunteer to remain after their corps have come home, and take another period of service in India. So soon as the capitation rate was introduced, it was the only source of settlement between us and India; but at that period the British force in India was enormously beyond its normal state in consequence of the large bodies of troops sent out for service in the Mutiny, and for holding India after the Mutiny. Consequently in 1861–62 a vast number of these men were returned to this country, men who under the old system would have brought to India some 27*l.* apiece. The amount in 1861–62 of that disturbing cause was 149,616*l.*, and India under the capitation rate got no credit for it; but the whole sum paid by them was on the capitation rate. Consequently, whilst

we

Lord *G. Hamilton*—continued.

we have lost 408,000*l.* during the period on our recorded home charges as compared with what India paid us, India has not paid that loss in money, but has repaid it to some extent in the men whom she would have been entitled to have had credit for, had the old system continued. (*Return handed in,* vide *Appendix.*)

420. Now, in reference to the present system, you prefer actual charges to a capitation rate?—Certainly; I proposed that plan of tariff prices fixed on actual charges to Mr. Seccombe's Committee; it recommended itself to every member, and it is the fairest and most equitable mode in which we can make our charges, to calculate what is the cost normally of a fully trained recruit, to take care, as far as possible, that none go out to India but those who are fully trained, and to charge India for that trained recruit such sum as we have agreed, item by item, to be the fair cost of raising him and training him.

421. But is it not a fact that no accounts as yet have been sent to the India Office for recruits during the past two years?—Two years' accounts have been sent, and are under consideration or audit at the India Office.

422. But does not this present system rather lead to disagreement between the two offices, the War Office and the India Office, because the natural tendency is for one office practically to include every item, and for the other to exclude every item?—I pointed out that in that case the advantage would be as usual with India, because, whilst we could not invent any item we might forget some. Every item printed there was laid before the very able accountants and financial officers of the India Office, and accepted on distinct proofs. They have since been laid before the world to be canvassed by officers and others. If any ground can be shown for altering that price current it should be altered, and I would submit that that is the only point that should be considered.

423. But would not the War Office be much more independent if they could rely on a certain sum being annually paid to them by India, and in return supply India with the necessary number of recruits?—That might be a loss to the Imperial exchequer, or it might be a gain. It would be very rough and ready, and of course easy, but it would be very unsatisfactory, and could never be the right sum.

424. But now, if the War Office wished to lengthen or to shorten the service, the amount of the recruits whom India would require varies according to the length of service?—Yes.

425. And those India has to pay, or she possibly may get the advantage of alterations in which she has no voice?—I submit to you that anyone coming to another to purchase or obtain an article has no voice in the price asked for that article. We are called upon by India to supply recruits; we have a perfect right to say what the character and conditions of the training of the recruit shall be, before he leaves this country for India, more especially because in a year or 18 months he may be returned to the general army of Her Majesty; we therefore say that he shall be a man of such and such training and qualifications, and we say to the purchaser, you shall have no word in the amount of his qualifications or training; you shall pay us a portion of the price he costs us,

Lord *G. Hamilton*—continued.

Mr. *Milton*, C.B., Mr *Daye*, and Mr. *Knox*.

15 May 1874.

and if you do not pay that we cannot supply the article that you require.

426. That is all very well, but you may employ a very costly method of manufacturing the recruit?—No doubt; but I maintain that the purchaser is perfectly helpless in that matter.

Mr. *Onslow.*

427. According to your views, then, India has no voice at all?—We say India shall have only this voice; she shall pay what has been considered by the manufacturer the proper and necessary expense of the article, or, rather, a part of the expense. Of course to the extent that India comes to us to purchase those articles it is for her to settle; she determines the force in India, and she comes to us to buy at our price.

Mr. *Dunbar.*

428. Could she not come to any other shop?—No; there is no other shop that the Act of Parliament allows her to come to.

Lord *Edmond Fitzmaurice.*

429. England is, then, in the position of a monopolist?—She is the only depôt where the article exists.

430. Do you think it is fair to insist so much upon that, and not to consider what India, supposing it was not a monopoly, might be able to get the article for?—Certainly that should be considered, and we have done that by being satisfied at all times with a partial payment of the actual expense.

Mr. *Fawcett.*

431. But I should like to give you an opportunity of correcting what I think is an inaccuracy; you said that India came to England and asked England to supply her with recruits. Is not that a statement which is not quite accurate; was not this amalgamation of the two armies forced upon India; did she ever ask for it?—The amalgamation of the army was not the commencement of recruits for India.

432. I mean before that she could supply recruits; she had a local army of her own?—She had a small local army of her own out of all proportion to her requirements at the time this arrangement was made.

433. Still now, as a matter of fact, she is obliged to get all her recruits in this way from this manufacturer, who you say has a monopoly?—Yes.

434. As a matter of fact, your evidence would lead to the conclusion that she came and asked England to compel her to deal alone with her for recruits; is that the case?—So far as my answer may be considered in any way political, I should like it to be modified to any extent.

435. It is the fact I want?—Which was the moving power I am hardly able to say; she comes to the Commander in Chief, or any officer you like, and says, "I want a certain number of recruits;" she must pay the cost price of those, and the equity of the price demanded consists in the manufacturer laying before her inspectors a careful detail of every penny that that article cost him in manufacturing, challenging them to show that that is not the case, or that the expense is unnecessary, and then calling upon her to pay a portion of that cost price.

 436. What

Mr. *Milton*, C.B., *Mr. Dayc*, and Mr. *Knox*.

15 May 1874.

Mr. *Campbell-Bannerman.*

436. What you meant was not that India as a country came to this country and asked for certain things, but that the India Office, representing the Government of India, comes now under the arrangement which at present exists, as a matter of public policy and under the Acts of Parliament, to the War Office, and asks for a certain number of recruits?—Certainly.

437. You did not mean to go into the question of the general Imperial policy as between England and India?—No; that is quite beyond my province.

438. But merely as to the practice between the two Governments, as at present constituted?—That is all I wished to refer to, and I should be sorry for any other meaning to be given to my reply.

Mr. *Sampson Lloyd.*

439. How much more does the Queen, as Mistress of India, pay for recruits trained for Indian service than the Queen, as Mistress of England, pays for recruits used in the English service?—Not one shilling; the rule of His Royal Highness has been that every recruit passed into Her Majesty's service shall be equally well trained, whether going to India, the Mediterranean, or for home service.

440. The Queen's Government in India does not pay more for recruits for Indian service than the Queen's Government in England pays for recruits to be used in any other service not in India?—That is not quite so, because the circumstances of the climate of India prevent her from taking the manufactured article at all times of the year; she can only take it out of the storehouses at certain periods, and it must be kept in store till that period comes round, at great expense to her. But the new organisation of the army, by which the men will be available for other than Indian service, is the point on which we mainly rely to justify the modified charge now paid by India for each recruit.

441. But with the exception of sending the recruit out to India and back, if he returns, and the expense of keeping him so much longer in depôt than he would be for other service, the answer would be "Yes"?—Yes.

Mr. *Campbell-Bannerman.*

442. In reference to this subject of the relations between the two Governments, I think you have answered in the affirmative a question asked you as to India having no voice in the matter, so that if the authorities at home chose to shorten the service or lengthen it, or change the organisation, or do anything they please, India would have no voice; but is it not the case that the Secretary of State for India and the Secretary of State for War are members of the same Cabinet?—Yes.

443. And if the service of the soldier were to be shortened or any step of that kind were taken, it would be done by Act of Parliament, and would have to be submitted to the Cabinet before it was introduced; so that it is not absolutely true that India has no voice, but there is a means of consulting the separate interests of India before any step is taken?—Clearly so; India as a consumer has no voice, but the Indian Government is represented in the Cabinet, without whom no alteration can be made.

Lord *George Hamilton.*

444. I dare say you have seen the last Report of the Inspector General of Recruiting?—Yes but I have not had time to read it.

445. I want to call your attention to a short paragraph there: "Men enlisted for 'short service' may, at the expiration of three years' service in the ranks, with their own free consent, and with the approval of their commanding officer, be permitted to pass at once into the first class of the reserve, and there complete the unexpired portion of their engagement in that force." This is not a question which has been brought before the Cabinet, but that alteration would clearly affect recruiting for India?—Certainly, if it applies to men while serving abroad.

446. But does it apply to men serving abroad?—It applies only to men in this country, I think.

Mr. *Stanley.*

447. Considering that the paragraph to which the noble Lord has referred states that men may, "with the approval of their commanding officer, be permitted to pass at once into the first class of the reserve," would you not read that with a reservation that the commanding officer might have some voice in recommending it for favourable consideration or otherwise?—I should think so, and in that way it would not apply to men serving abroad.

448. It would be governed by such considerations as the place where a man was serving, and the facilities of his returning home, and so forth?—Yes.

Lord *George Hamilton.*

449. You are still strongly in favour of the present system of actual charges, as against any system of paying a lump sum, such as the capitation rate, which might be fixed on an equitable basis, and revised at given periods?—Yes, I am; your Lordship will see that the settlement of the capitation rate involves watching increase or decrease of the force in India by the most accurate returns monthly throughout the year, which returns, in practice, we find excessively difficult to obtain, and I believe I may say that during the whole period of the capitation rate the charges were never once settled on that basis. They were compelled always to be settled on give and take principles, there being mistakes traceable in the different returns which could only be reconciled by the give and take, on that principle of equity and fairness which has marked every operation between the two offices.

450. But could not Mr. Seccombe's Committee, from the actual charges at which they had arrived, also arrive at a fair basis of a capitation rate?—No; there was no element there that could have supplied that, because the cost of one recruit is no key to the problem—and a very difficult one it is—of the cost of keeping up the whole effective establishment. We found that fact so hard to arrive at that we said, instead of paying a lump sum for supplying the wear and tear of the establishment, you shall pay a fair price for every recruit you send out to keep it up.

Mr. *Campbell-Bannerman.*

451. Of recent years a good many changes have been introduced, changes of organisation, which have had the effect of lessening the charges

Mr. *Campbell-Bannerman*—continued.

charges which India ought to pay for recruits; is not that so?—For the period which we are starting with, that of Mr. Seccombe's Committee, undoubtedly that is the case. For the period prior to that the operation was entirely in the opposite direction. The introduction of arms of precision, the absolute necessity that men should not be sent out to India to go through those drills in India, but should be fully drilled before they left England, the increase of pay to the men amounting to one-sixth additional, all tended to make the expense of the recruit larger. At the time Mr. Seccombe's committee was appointed all those were taken into consideration, and in view of the organisation being in future likely to cause very great reduction of expenses, a sum of 63*l.* was accepted, in lieu of what would have been a much larger sum.

452. Take, for instance, the expense which was incurred, to which you have already alluded, in keeping a recruit at the depôt after he was trained for a considerable period while he was waiting for the draft being despatched to India, and at the other end of the operation in retaining at the depôt a useless invalid, who could not be employed for British purposes because his regiment was in India, and who could not be sent to India because he was an invalid, both of those great sources of expense have been very materially modified?—The new system of organisation is calculated to remove them altogether, and to reduce the recruit for India to the position of making him in no way more expensive than an ordinary recruit for the colonies or for this country.

453. Some questions were asked with reference to the future operation of short service. Short service will not come into operation so far as the discharge of the men from the regular army is concerned until 1876, will it?—So I understand.

454. And if it then tends in any way to complicate matters, that complication will be met by the effect of the new organisation, whereby short service men coming home with less than one year to serve will not be detained at the depôts, but will be transferred to the home battalion and will be useful for our English purposes?—No doubt the entire tendency of the new organisation is to make a man when he is in this country available for the service of this country; and the moment he is in that position the War Office ceases to have or to make any claim upon India for his cost. Whilst he was in this country only available for Indian purposes, and it was not possible to send him to the colonies or for duty anywhere else, except protecting the peace of the country, he was a dead weight due wholly and solely to Indian requirements, and equitably charged against India.

455. You are aware that in the Army Enlistment Act of 1870 a provision was introduced allowing men to be recruited for general service?—Yes.

456. The effect of that was to enable the War Office more easily to reduce that dead weight at the Indian depôts?—Yes; it might have that effect.

457. Because men could be transferred to other regiments?—Yes; men could be transferred to other regiments; within 15 months of his enlistment he could be transferred.

458. During the periods to which your examination has been confined, namely, the periods when the capitation rate existed, and the years which have already been dealt with by Mr. Seccombe's Committee, systems were in force which are now really obsolete?—Certainly.

459. There are no Indian depôts properly so called under the new organisation of the army?—When the new organisation of the army is complete there will not be any.

460. A recruit will now be enlisted for a brigade composed of two battalions?—Yes.

461. One of which may be in India and the other will always be in this country?—Yes; that is the intention of the new organisation.

462. And after a brief period of training he will be passed into the home battalion and will serve in it?—He will be passed into the home battalion in three months, I will not say to serve in it, but to be trained in it. I say so because the letter from India, which concludes the correspondence before you, treats the three months as the period for training a recruit, and states that that should be the period for which alone India should pay. But I wish to point out that he only goes to the home battalion for a further and better training.

463. But so soon as his training, consisting of the three months at the depôt, plus the balance which is required to make him a perfect soldier with the home battalion, is over, he will cease to be chargeable to India, and will become a British soldier, and will serve until he is shipped off in the draft?—Yes, India being only by our arrangement of the price current responsible for the first seven months of his service.

464. All these changes to which I have alluded, owing to the recent localisation scheme of the army, as it is called, have not yet been taken into account by Mr. Seccombe's Committee?—They have not.

465. And when you meet to discuss how the charges are to be based for the future, of course that will be a very important element in the consideration?—No doubt the leading element.

Sir *Seymour Fitzgerald.*

466. If Mr. Seccombe's Committee meets again, and reconsiders the charge which is to be made against the Indian Government, and which is at present too high, would the alteration they suggest apply to the accounts of the years 1872-73 and 1873-74?—If it could be shown that the circumstances which modified their opinion led to a lower charge, I should be the first to advise the Secretary of State for War to reconsider the accounts for the earlier period.

467. Nothing has passed which reaches the existing tariff applicable to those two years?—Nothing is immutable; the tariff price has been passed as far as it could be, officially approved by both the Secretaries of State, and confirmed by the Treasury; but as all these parties are open to any representation made for an equitable adjustment, I feel sure they would adopt one.

468. I understand you to say that the new system would, in your opinion, not justify a continuation of the charge of 33 per cent.?—Precisely so; that is the only one item, in my opinion, that would be largely affected by the new organisation; that would not be entirely swept away, because under every organisation there must be some small amount of desertion

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*.

15 May 1874.

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*.

15 May 1874.

Sir *S. Fitzgerald*—continued.

and deaths; but the great preponderating weight in that 33 per cent. was the fact of the man not being ready when the time came for him to go, and being compulsorily kept till he was ready to go.

469. Am I correct in understanding that after a recruit has been three months under drill he then passes into a battalion and becomes available for Imperial purposes?—No; he goes to the battalion for further drill, for the battalion drill, including the most important part of his drill, the musketry instruction; and the consequence is that he is not ready for embarkation to India, as an efficient recruit, one day earlier than he was under the former system; he still requires six months of drill, and it will be at least as long under the new system, where he is partially trained in the recruiting depôt, and finally trained at the battalion. But that man will not be the man to go out to India; that man will form the lower stratum of the battalion, and India will obtain the men from the upper stratum, being the fully trained men. Those considerations were unfortunately not before the Government of India, it would seem, when they wrote their letter attached to this correspondence.

470. Then the only direction in which you think there would be a qualification would be in reference to that which you call the dead weight?—Certainly; that would be very largely modified. It is unavoidable under the late system of regimental depôts; it vanishes with the system of battalion organisation. It is not unusual under the system which has prevailed for a man to absent himself a few days before the draft embarks. In fact, a number of men are marched down to the vessel in excess of the draft, to be ready to take the place of those who escape, and those who escape at that moment are here at India's cost for 12 months. Now they will remain in Her Majesty's troops, and not be a charge to India.

Chairman.

471. You will still have the difficulty that a draft may be wanted in India, and that you may have to send out men of 20 years of age who have not had more than a month or two's training?—Certainly, that will be a difficulty; but India gets the top stratum of the battalion at home, leaving the young men in the battalion at home, and his Royal Highness will then have a number of trained men to put his hand upon.

Sir *Henry Havelock.*

472. Is it not the case that in past years these trained soldiers have formed the draft?—In the drafts from the depôts of late years it is the case.

Mr. *Denison.*

473. As Accountant General, you of course have experience of the army in all parts of the world?—Yes.

474. You have stated quite properly that the principle is, with regard to India, that the cost of the soldier, from the first hour of embarkation to the last hour of discharge, shall be borne by India, under certain rules and conditions?—Yes.

475. Will you state in what respect that system differs from the system which prevails in Canada or at the Cape of Good Hope?—Taking Canada when there were Imperial forces there, no

Mr. *Denison*—continued.

account was kept of the cost of the regiments, as against the colony, for it was not paid by the colony; they were Imperial forces, paid uninterruptedly from Imperial revenues whilst in Canada.

476. There was not any local increased rate of pay, is that so?—They had colonial allowances, and those again were paid by the Imperial Exchequer.

477. And at the Cape of Good Hope?—At the Cape of Good Hope the same; there is a small allowance, but the men never go out of the Imperial Exchequer in those colonies.

478. There are some of the colonies, are there not, which pay the whole of their own military charges; Ceylon, for instance?—No, I think not; they pay us a commuted sum.

479. Do you know the principle of that commutation?—No; I have not been a party to that.

480. (To Mr. *Knox.*) Can you answer that question?—The Ceylon Government is supposed to bear the full expense of the whole of the force in Ceylon, including the cost of recruiting it in this country and the passage of the men out and home. Their contribution until recently was 160,000*l.* a year, but in consequence of the reduction of the Ceylon Rifles their future payment is under re-consideration.

481. And how with reference to Hong Kong and the Australian Colonies?—We have no troops in the Australian Colonies at all, and in Hong Kong we get a small contribution to the extent of 20,000*l.* a year, I think, which does not in any way repay us the cost of the force employed there.

482. India, then, is the only country which is charged on this principle of paying the utmost farthing?—Except Ceylon; Ceylon pays the utmost farthing.

Chairman.

483. (To Mr. *Milton.*) You have seen this last letter in the correspondence before us. At the bottom of page 39 are the recommendations by Lord Northbrook and the Indian Government; I should like to have your opinion upon those recommendations. The first is, "That the charge for the home depôts of regiments serving in India should be divided into two parts, the one representing the value of the presence of such troops at home and of the general service rendered by them, the other representing the value of the labour of raising and training recruits for the battalions in India; the latter may be fairly charged to this country, while the former should be borne by Imperial revenues." What is your opinion upon that recommendation?—My opinion is that that recommendation is entirely rendered futile by the new organisation; that the depôt will be entirely at the expense of Imperial revenues, and not one shilling of it will be chargeable against India beyond the expense of training those recruits that are actually sent from this country to India; the new organisation, as I have already pointed out, has the effect of rendering all these men available for Her Majesty's service anywhere; and therefore they cease to be peculiar to India, or chargeable in any way against India.

Sir *Seymour Fitzgerald.*

484. Take the case of a man who has been recruited

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*.

16 May 1874.

Sir *S. Fitzgerald*—continued.

recruited at 18, and cannot be sent out; he has been for two years in the battalion at home performing duties, or may be sent to the colonies; do you mean that no portion of the training of that man should be charged to the Imperial Government?—The whole portion is; if he is sent out to the colonies he never comes under Indian charge; if at the end of two years, at the mature age of 20, he is sent to India, we do not add one penny for that fact, but give her that recruit, charging her for seven months' training only.

485. But for a shorter service?—Yes; but we cannot help that, when Parliament has laid down the law as to the age.

486. Still an Imperial Government has the benefit of that man's service for two years?—Yes.

487. And you charge the full cost of training him to the Indian Government, and you put upon the Indian Government the necessity either of inducing him to re-enlist or of having out another recruit to supply his place?—Yes, that would be the fact. The honourable Member is speaking of the future, because the short service has not yet been applied to any part under the re-organisation. I was speaking more of the past; but it is clear that that point suggested by the honourable Member, and which I shall make a note of, must come before the revising committee as one of the elements, and they are numberless, of the total change of condition of the Indian recruit of what he will be in the future from what he has been in the past.

Chairman.

488. The second recommendation is, "That the charge for the cost of training the infantry recruit should be limited to three months, during which he remains at the depôt"; what is your opinion on that?—I have already stated and, I trust, shown that that is a mistake; that his training is not completed when he leaves the depôt, for he has only gone from a preparatory school to a public or bigger school to finish under better and more expensive circumstances his training till he is completely efficient.

Lord *George Hamilton.*

489. They do sometimes, however, go out with only three months' training?—There have been instances which no doubt will be explained to you by the Adjutant General or by His Royal Highness, in which, under the pressure for recruits during the last two or three years, in consequence, as I understand, of the operation of that order for men not to be sent out under a certain age, they have been compelled to send recruits who had the age but not the efficiency. But the Government of India are here arguing not upon exceptions, I presume, but upon the future system, which I submit with all due deference they have totally misunderstood.

Mr. *Campbell-Bannerman.*

490. Under the new system it is extremely unlikely, if not impossible, is it not, that any recruit should go out with only three months' training, because the recruits will be sent from the home service battalion?—I have no hesitation in saying that the system, independently of exceptions, is, that they shall not go out till they have had that full training.

Mr. *Campbell-Bannerman*—continued.

491. Not only is that the principle, but when the new system comes into operation of enlisting for a brigade of two battalions, the contingency of the necessity of sending out men with three months' training can hardly arise where you have a whole battalion to choose from, and you can send, if you like, the old men instead of the young men?—Clearly; I only wanted to guard myself against individual cases that may arise from time to time of a single man who may have had a training under other conditions, and is anxious to go out at once.

Lord *Edmond Fitzmaurice.*

492. But when they are in the home battalion, are they counted as part of the Imperial army?—Yes; as all recruits under drill are.

493. I mean they appear on the Estimates?—They do; from the very day when he enters the service a recruit is reckoned among the effectives provided for by the Estimates.

Mr. *Fawcett.*

494. When was this resolution passed about not sending out men of less than 20 years of age, which you say is responsible for the fact that men only recruited a month have been sent to India?—I have said that it appeared to me that that was the result of that resolution; I believe that resolution was passed in 1872.

495. But I can prove to you, and you are probably aware of the fact, that before the resolution was passed, in 1870–71 men were sent out in considerable numbers to India who had only been recruited a month; therefore, the resolution cannot be responsible for it?—I have no doubt that that may have been the case in some instances. Of course, in these arrangements we have not proceeded upon those facts, but upon what was laid down to be the system. The system communicated to us by the military authorities was, that as a system the men would have six months' training.

496. But as Mr. Campbell-Bannerman says, that in future you will always be able to send out men who have been recruited more than six months; I say judging from the past it does not at all follow that men will be sent out with six months' training, although you have the power of doing so, because it seems to me as far as I can discover, that there is no reason why in 1870 you should have sent out men who had only been recruited one or two months, and yet you did?—I do not know on what evidence the honourable Member states that.

497. I will bring it; can you state the contrary?—I find by a Return which I will hand in to the Committee (*vide* Appendix), that the infantry recruits in 1870-71 estimated as wanted in India were 4,273, and the number of all the recruits that could be sent was 3,225; and therefore it is clear that the Adjutant General was driven to his last man. In 1871–72 the demand was 2,570, and all that could be mustered and sent out was 2,150 recruits.

Mr. *Stanley.*

498. The Adjutant General will be able to give us that information, I presume?—Yes. (*Return handed in.*)

Mr. *Fawcett.*

499. You say that England could not help it; but

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*.

15 May 1874.

Mr. *Fawcett*—continued.

but we are considering its bearing on the finances of India. In 1870 a great number of recruits were sent out who had only been recruited a month. Under the present system, suppose that recurs, has India any security that if a recruit is sent to her, who has only been trained a month, a demand will not be made upon her for seven months' training; it would be, would it not?—With reference to that, I would say that of course it is possible to do what I have already mentioned in Mr. Seccombe's Committee, that it might be advisable to charge India a daily rate for her recruits. By the present arrangement the charge is made upon an average of seven months; and if I am to allow India a lower charge for a man who went out in four months, I must get from India a higher charge for a man who went out after nine months.

500. I want to get at facts; now these accounts during the last two years are at present under consideration between you and the India Office, and what I understand is this, that you, as a representative of the War Office, are going to make a demand upon India to pay you for a recruit as if he had been trained seven months, although we know that in some cases he has only been trained a month?—The demand I have made is entirely conformable with the agreement with the India Office, namely, that without any names or otherwise I shall charge an average rate for the number of recruits going out.

501. Then am I to understand as a fact that at the present time India is called upon by the War Office (I am not saying whether it is just or unjust) to pay for all of her recruits as if they had been trained seven months, although some of them have only been trained one month; that is a matter of fact, is it not?—If you will say "a less period than seven months," I will say certainly.

502. We have had it in evidence that some of the recruits have been sent out with less than a month's training; those recruits will have, will they not, to be paid for under the arrangement which now exists as if they had been trained for seven months?—If those recruits embarked prior to the 31st of March 1872, we have claimed for them at the average rate.

503. And what are you going to do in future; you are going to do the same, are you not?—No one knows.

504. Then, according to that, you have been supplying India with recruits (as you say, compelling her to take them, and she must take them from you) during the whole of 1873, and up to the present time, and neither you nor India knows in the least degree upon what terms those recruits have been supplied?—Certainly; it is for future settlement, on obtaining sufficient data.

505. She is to go on buying an article, and she does not know even the principles on which she is buying?—Certainly.

506. The terms of the bargain will be referred to the representatives of the two offices, the War Office and the India Office; supposing they disagree?—I am happy to say there has been no experience of the case, but in that case it would be referred to the Cabinet that rules both.

507. In which you are aware that India has one representative, and England 15?—I am not aware of it, but it may be so.

Mr. *Onslow*.

508. In the case of an epidemic in India, which is a common occurrence, what guarantee is there under this new system that India would get trained recruits to fill the vacancies?—This question goes upon India demanding more from us than we can find. I can only say every effort will be made to supply the demand at a most reasonable cost. He must be a trained recruit when he goes out, and a very moderate charge is made for that.

509. But is there, under this system of Lord Cardwell's, any guarantee that India will get a sufficient number of trained recruits to fill up the vacancies that will occur in case of an epidemic?—I should say the guarantee there is that the Government will behave fairly to India; I, as accountant, would only charge for the number that actually went.

510. But they did not in former years, because they had not given the full training?—Because India demanded the article at all costs: "If you have not a finished article, send us the best you can," and we have constantly been obliged to put men on board ship to fill up vacancies. And another point: I think it will be found, for instance, that almost every one of these young men has been sent out solely because India represented, fairly enough, that she had got the ships; there were the berths, and they must be filled.

Mr. *Stanley*.

511. I presume you were in this position: India demanded of you, taking the strict letter of her demand, a man of 20 years of age with seven months' training, who had been enlisted for a particular regiment, and if you had not that man, complying with all the supposed conditions, you sent the best you could?—So I understand.

512. And you were obliged to do it in fulfilment of the demand?—I have no doubt that the Adjutant General or some other officer of His Royal Highness's office, will explain that that is the system under which they have proceeded uniformly.

Lord *George Hamilton*.

513. Lord Northbrook, the Governor General of India, and Lord Napier, the Commander in Chief, who are responsible for the efficiency and discipline of the army, recommend that the period of training should be reduced to three months; would it be in the power of Mr. Seccombe's Committee to take into consideration the proposed change?—I should say certainly not, because we do not know whether His Royal Highness would for one moment consent to sending such men, but I am satisfied from what has passed between His Royal Highness and myself that he would not consent to any such modification, assuming that the authorities in India were contemplating such an arrangement.

Sir *Henry Havelock*.

514. Did I understand you to mean in reference to training that that recommendation was that it should be for three months?—The charge for training is, more probably, what is meant by the recommendation of the Indian Government.

Chairman.

515. The third recommendation is, "That the items of charges which are arrived at by general averages should be supported by detailed statements

Chairman—continued.

ments showing how they are arrived at"?—Yes, we could give the fullest details. Those details were laid before Mr. Seccombe's Committee, which agreed to every figure, and there is not the least reason why they should not be published either to this Committee or to any other public authority whatever.

516. Upon that point you are in accordance with the recommendation?—Yes; they appear to require further information, and we are quite ready to give it.

Sir *Henry Havelock.*

517. Mr. Fawcett asked a question relating to this very point as to what guarantee there was that under the existing new system a supply of trained men to India would be kept up, meaning a guarantee that the men would not be sent out untrained; is it not the case that in consequence of the entire body of the home battalions being now the area from which drafts to India are made up instead of the very much smaller area formerly of the depôts, there is a perfect certainty that the full number of men will be forthcoming, and that they will be fully trained soldiers?—There is no doubt of it; in fact, the contrary consideration which has been put by an honourable Member presses us in the other direction, that the men will be so long trained that they will have lost a great part of their service, and become more expensive on that account.

518. In the correspondence now before us from the India Office a great deal has been said of the increased charge to India in consequence of the new system of two company depôts, and I observe that in the volume of the Evidence of 1873, at page 893, an item of decrease of charge to India in the year 1870-71 of 151,900 *l.*, and that is explained to have arisen from two sources: the one the reduction of the Indian establishment of two regiments of European infantry, of which you will see the cost was 136,000 *l.*; that leaves, therefore, a reduction of charge annually to India of 15,000 *l.* The reduction of charge is stated to have taken place from the reduction of the establishment of the remaining 50 regiments from 10 to eight companies, with an increased complement of privates; is not, then, this a permanent reduction to the charge against India of 15,900 *l.* annually, caused by this same regulation, that is to say, the change to two company depôts which has been complained of as causing an extra charge to India?—The charges which the honourable Member refers to are the charges of effective troops in India. The infantry in India has been reduced from 52 regiments to 50, but that does not affect the question of the two company depôts, which existed ever since 1857.

Sir *George Balfour.*

519. (To Mr. *Knox.*) The honourable Member refers to this change, that 52 regiments of infantry were serving in India in 1870, and the Secretary of State authorised a reduction to 50, with the same number of privates?—Yes.

520. Therefore we struck off two depôts in this country?—There were only 50 depôts required at home for the 50 regiments.

521. There was a very great reduction which Lord Cardwell made in the Indian army?—The Indian Government pressed very much for a reduction of military expenditure in India, and that was the mode adopted.

Sir *G. Balfour*—continued.

522. And Lord Cardwell approved of the reduction in infantry battalions on service in India from 10 to eight companies, and he then consolidated the whole of the privates of 39,000 previously scattered over the 52 regiments into 50 regiments, with the same number of privates?—Very nearly the same number of privates.

523. And therefore India, by that great reform, did effect the great reduction that the Accountant General has just observed as having been made in the military expenditure of India?—Quite so. (Mr. *Milton.*) And to that extent the observations of Sir Henry Havelock are perfectly correct, that the home charges have been decreased, whilst the number of effectives remained in round numbers the same in India.

524. (To Mr. *Knox.*) The infantry of India was reduced from 520 companies to 400 companies?—Yes.

Sir *Henry Havelock.*

525. (To Mr. *Milton.*) Then, in fact, that is a reduction in the expense to India which ought to be taken into account as against the increased expenditure of the home charge in England?—It will undoubtedly lessen the total home charges in this country.

Chairman.

526. A Member of the Committee wished me to put this question to you: In case a soldier is 18 when his period of training is finished, and he is then sent for two years to do duty in England, and at the end of two years, being 20, he is sent to India, is it the fact that India would have to pay for seven months' training of that man?—Yes, that is the present arrangement; whether the audit of the India Office will lead to an application to have that modified, I cannot say.

Sir *George Balfour.*

527. In that statement which you have got before you, in the years between 1862–3 and 1867–8, I find you received from the India Office 3,915,320 *l.* on account of the capitation rate?—Yes.

528. I make out by your own estimate of your office, prepared by your own department, you ought to have received 4,228,820 *l.*, and that you have therefore lost 313,500 *l.* short paid by India?—If the honourable Member will allow me to draw a distinction between estimate and fact, what the difference is between what we expected to spend and what we got repaid, I do not know.

529. (To Mr. *Daye.*) Have you not been in the habit, when making up your accounts, of taking the establishment in India at the calculation of 10 *l.*?—No; the number of effectives in India.

530. That you have been paid according to the effectives in India is a fact?—Yes.

531. (To Mr. *Knox.*) But your estimate is made up of what the established strength of India ought to be?—Yes.

532. And therefore that establishment would have been maintained by the War Office if the number sent out had been sufficiently great to keep up the established force?—The full establishment was of course the number which it was expected would be maintained during the year.

533. But inasmuch as that established strength

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*.

15 May 1874.

Sir *G. Balfour*—continued.

was not maintained to the full extent, but the effectives were a very considerable number below that established strength, thereby the War Office lost the 10 *l.* per head of that diminished number?—In some years the establishment was below its strength; in some years it was quite up to its strength; in recent years it has been above its strength.

534. Do you think you will be able to prove by returns that, until the last two years when attention was drawn to the subject, the effectives have ever been equal to the establishment?—No; I think they have generally fallen short, because we are not allowed at any time to go above the establishment, and we are endeavouring to come up as closely as we can to the establishment; therefore the probability is that they are a little below.

535. Would it surprise you to learn that the strength had been 6,000, 5,000, and 4,000 men below the fixed number?—I know that it has sometimes been considerably below.

536. And that therefore the War Office have, practically speaking, lost the advantage which they might have gained by the payment for increased numbers?—We certainly did not receive payment for the full establishment, but for the reduced numbers.

537. The entire control rested with the War Office and the Horse Guards, in respect to keeping up the number. The India Office never did apply to the War Office to have the recruits sent out, but it was left optional with the War Office?—We frequently received a letter from the India Office, urging us to send out as large drafts as possible, in order to maintain the full force of the establishment in India.

538. The evidence which you have given to-day distinctly shows that you have brought down the strength of the depôts very considerably?—Yes.

539. And that the strength of the depôts now is very considerably below the strength shown at page 5 of the first Report?—Yes, very considerably.

540. Therefore, if the same measures had been taken then, to send out the recruits which have been taken of late years, or to prevent the depôts being swelled up to that extent, the cost of the depôts would have fallen very considerably below what it was?—Yes.

541. Therefore, the sum stated at page 5 of the first Report as showing the total expenditure on account of the depôts might have been very considerably diminished if that system had been in force?—Yes.

542. To whatever extent that might have been diminished, the average cost of the recruits would also have been diminished?—Yes.

543. You stated that you had now brought down the depôt strength to very nearly the strength which existed in former years, before 1857?—Proportionately.

544. Relatively with the number of regiments being no greater in India than before 1857?—Yes.

545. Will you be good enough to state what the strength of the depôt was before 1857?—The depôts before that time were merely skeleton depôts, so far as our establishment was concerned, although the actual numbers present at the depôts seem to have been similar to those that have been maintained since 1861; the establishment which was allotted to the depôt consisted then of one captain, two lieutenants, and one ensign, six sergeants, one trumpeter, and five corporals; so that it was a mere skeleton. No privates whatever were included in the establishment allotted to the depôt, but large numbers of privates were always there, that is to say, that we had to keep up a large number of men at the depôt in order to turn out the drafts annually required for each regiment, under the regimental system of enlistment. I find on looking through one year, as a specimen, that we had on the average at the depôt throughout the year something like 67 men, and, besides those, 43 men on passage; these men were counted in the establishment which was supposed to exist in India, the establishment of each regiment consisting of 1,000 rank and file; that 1,000 were all supposed to be in India, but a certain proportion of them were at the depôt or on passage. The average number during that year that were on service in India was 920, the average number on passage 42, and the average number at the depôt 67. So that although we had not an establishment allotted to this depôt, we had always on an average 67 privates there.

546. Still with that small depôt the regiments were kept singularly effective in India by that small establishment at home?—An average of 920 out of 1,000.

547. I have looked over the strength during 10 years which were given in the Army Estimate during those periods, and I will hand you a return which you can verify at leisure, by which you see that the strength in India was then closely kept up to the established strength, except on the 1st of January 1854, when the alarm took place about the war with Russia?—The actual number of men present in India I have no means of verifying, but the Adjutant General will have the means of doing so.

548. Will you take that return and verify it, showing the efficient of strength of infantry and cavalry in India from 1846 to 1854 (*the Return was handed to Mr. Knox*)?—I see no reason to doubt the accuracy of the Return.

549. (To Mr. *Milton*.) You stated several times, and very properly so, the testimony borne by Sir Alexander Tulloch with respect to the charges that should be borne by India; in fact, he was the moving spirit in arranging for fixing the capitation rate?—He was.

550. The country are deeply indebted to that able officer for his economical views?—Yes.

551. You stated also that you considered that it would have been quite impossible of late years to have kept up the depôts with less than two companies?—No; what I said was that for the pure purposes of recruiting there could be no reason for keeping up a two company depôt; that is exactly the contrary, you see.

552. Are you not aware that when the discussions took place connected with this very capitation rate, Sir Alexander Tulloch considered that in ordinary times one company was quite sufficient for the purpose of maintaining the regiment in India up to the establishment?—I think that is his evidence.

553. That therefore all this time India has been burdened with two companies instead of one company, which Sir Alexander Tulloch previously calculated upon?—India has paid for two companies, but I have no doubt upon very good reasons,

Sir *G. Balfour*—continued.

reasons, to be shown by the military authorities.

554. Still the fact is that Sir Alexander Tulloch then, having all the statistics at his command, considered one company quite sufficient to supply the recruits required by the regiments in India?—No doubt Sir Alexander Tulloch said that, and cautiously avoided all the other considerations which his Royal Highness will lay before you.

555. The data upon which Sir Alexander Tulloch proceeded were based upon half the establishment which has been kept up?—Having a very great opinion of Sir Alexander Tulloch's cleverness in figures, I should be sorry to admit that, because his views have come out so close with the double establishment.

556. Now, with reference to the weight of authority which you have given to Sir Alexander Tulloch in connection with the charges on India, are you not aware that the whole of the discussions between the India Office and the War Office were referred to Mr. Hammack, and that Mr. Hammack gave it against the calculation made by Sir Alexander Tulloch, in favour of the economical manner in which the troops of the Indian service were kept up in contrast with the cost of the troops in the Imperial service?—I am not sufficiently acquainted with those old Reports.

557. Perhaps you will refer to Parliamentary Paper 330, of 1860?—I have no doubt it is the fact.

558. (To Mr. *Knox.*) You were asked a question connected with the power of control over the military expenditure in India. Is it within your knowledge that when General Peel increased the pay of the troops in 1867 that was done without any communication with the India Office?—I cannot say so; I am not aware what communications did take place.

559. Are you not aware that the Recruiting Commission, upon which that increase took place, carefully abstained from recommending any increase of pay, but advised various reductions to be struck off?—The recommendations of the Recruiting Commission consisted of a large number of various advantages which they thought should be given to the soldier; and, instead of granting those specific advantages, the Government decided to add 2 *d.* a day to the pay of all the men in the army; the expense of the two measures amounted to about the same.

560. But still, inasmuch as the changes recommended by the Recruiting Commission carefully guarded against any increase being thrown upon the pay of the soldier in India, the departure from that recommendation necessarily threw upon India an expenditure which has been variously calculated at from 200,000 *l.* to one-third of a million?—I am not aware of the recommendation of the Recruiting Commission that the increased expenditure in India should be avoided.

561. (To Mr. *Milton.*) The tendency of those recommendations of the Recruiting Commission was entirely to avoid a direct increase of pay to the soldier?—No doubt the feeling of that Commission was, that any direct increase of the bare pay was not so advisable as the removal of a number of small stoppages, that were small in amount, but irksome and wearisome both to the soldier and to the accountants. The Government, on the contrary, thought it be better to capitalise these in the round sum of 2 *d.* a day increased pay.

Sir *G. Balfour*—continued.

562. But if those recommendations of the Recruiting Commission had been carried out, as far as you know, none of these changes would have affected the soldier in India?—I do not know at all the system of stoppages from the pay of the soldier in India.

Chairman.

563. Would it not affect the charges in this country?—It would affect the charges in this country far more than in India. Instead of abolishing stoppages, General Peel gave the soldier the extra 2 *d.*

Mr. *Fawcett.*

564. You say that you know nothing about how it affects the charges in the army in India; then the conclusion we are to draw from that is this, that changes are made at the War Office which practically greatly affect the finances of India, and there is no one there in the least degree responsible, to point out what effect it would have upon the finances of India; you say that you do not know?—I said that I did not know the system.

565. Then you could not know the effect?—I can know, as an accountant, that an additional 2 *d.* a-day must cause an extra expense.

566. I understood this, that the Recruiting Commission recommended the abolition of certain reductions that might have affected, to a certain extent, the expense of the army in India; that recommendation was not attended to, but instead of that, against the recommendation of the Commission, and without consulting India, the Secretary of State for War of the day gave a blank increase of the pay, which did produce a very great effect on the finances of India; and you say that you do not know, although you are Accountant General, what that effect was?—I was not Accountant General then.

567. Who was likely to know at the War Office what would have been the financial effect if the first recommendation had been carried out?—I do not think any immediate authority in the War Office exists on the subject. We should have had to consult the accountants of the India Office, or the Government of India. I meant that I did not know whether, for instance, there was a stoppage for sheet-washing in India. That was the character of the petty stoppages to which I was alluding.

568. I think this is an illustration of the system; one thing is proposed by a Commission which would have a certain effect upon the finances of India; that recommendation is not carried out, but another plan is adopted which produces a much greater effect on the finances of India. The first recommendation is disregarded, and another plan is adopted without any one being in the War Office to point out what the effect to the finances of India would be. Therefore, India is absolutely unprotected as far as that change is concerned?—That appears to be the logical result of your argument. Whether it is the practical one depends upon what communications took place between the Indian Government and the Home Government before that change was made.

569. Of course my object is to find out the practical result. There are three officials from the War Office here; can you produce the smallest

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*.

15 May 1874.

Mr. *Milton*, C.B., Mr. *Daye*, and Mr. *Knox*.

15 May 1874.

Mr. *Fawcett* – continued.

smallest evidence that there was any communication made between the War Office and the India Office on the subject?—No; these communications would be made by the *Dii Majores*, the heads of the office, and not by the subordinates.

570. Then the only persons to find that out from would be the heads of the office?—Yes; the only authentic information would be obtained from them. I do not know whether it was settled between General Peel and the India Office.

Sir *George Balfour*.

571. You were not Accountant General at the time this change was made by General Peel?—No.

572. But you were Accountant General when the late increase of pay was made in the pay of the soldier, doing away with the stoppages?—Yes.

573. On that occasion there has been, practically speaking, a small increase of pay to the soldier, has there not, of about a halfpenny?—Yes.

574. That increase has also been given to India, has it not?—I am not aware of how it has applied to India.

575. Suppose you accept my statement that the increase has been extended to India, then India has also been obliged to incur a considerable increase to her military expenditure by that augmentation?—My impression is, that before that Warrant was carried out India was consulted. I know that before any Warrant is of any effect in India it is submitted by the India Office to Her Majesty; but the whole question of that Warrant was the grant of a free ration in this country. My impression is, that that had already existed in India for many years, and, if so, the leading principle of that Warrant had already been adopted by India.

576. The practical thing was, that the system at home was assimilated to what had been in force in India for a number of years?—So I understand.

577. Still there was a slight increase in order to effect that useful change in the home army?—Yes.

578. And whatever increase was given there it is probable has been given to the Indian recruits also?—It was for the Indian Government to say whether they would extend that Warrant to India or not.

579. Now I will take the 37th Regiment of foot; in 1866 it went out 699 strong; that was nearly 250 below its established strength; in the year following, I see drafts to the extent of 126 men were sent out; under these circumstances, would you think, as Accountant General, that you would charge for these 126 as recruits, or as drafts?—Recruits and drafts are the same thing.

580. What do you charge for the 699 then sent out?—The rate agreed upon for the difference of men on passage; 27 *l.* 7 *s.* for an infantry soldier.

581. You charge for men sent out in complete battalions, 27 *l.* 7 *s.*?—Yes.

582. But you charge more for recruits sent out?—Yes.

Mr. *Fawcett*.

583. What is the difference?—£.63 for the recruit, and 27 *l.* for every man as he stands in the ranks.

Sir *G. Balfour*.

584. Seeing it was the duty of the War Office to send out regiments complete in number, would you charge these drafts sent out as recruits or not?—I should charge for them as recruits sent out by the India Office, as was done.

585. Seeing that the regiments have gone out very considerably short of the numbers for a long series of years until the last two or three years, do you consider that it is quite right to charge India for all the men needed to raise up these regiments to the fully-established strength?—Yes, as drilled recruits.

Mr. *Fawcett*.

586. Is the Secretary of State for India consulted as to what the full strength of a regiment should be?—Yes, because the force is settled by the Cabinet, of which, as you have already stated, he forms one-sixteenth part.

Sir *G. Balfour*.

587. I will call your attention to the fact that the establishment of an infantry regiment in India was reduced in 1861 by 261 of all ranks, and only one officer was struck off in respect of that great reduction?—Yes.

588. About these recruits; is there no fixed period for training the recruits of the cavalry and infantry?—Yes, the whole of our proceedings were settled on that basis; we got a letter from the Deputy Adjutant General, which is printed at page 12 of the proceedings of the Committee, and is the base, in fact, of the whole of our proceedings; "Royal Horse Artillery, nine months; Royal Artillery, eight months; Cavalry, nine months; Infantry, six months."

589. Do you hold to the fact that each individual must be trained for that period before you charge the whole sum which is agreed upon, or do you consider that averages may be taken to justify you to make the charge for the men?—No; the whole principle of the agreement under Mr. Seccombe's Committee between the Indian Government and Home Government was, that the average should be taken; because it was impossible to follow out without great labour (which is money) the history of each individual recruit; it was therefore determined to ascertain what was considered an efficient recruit, and to pay for the number of recruits embarked as efficient.

590. Was it not a condition of the new arrangements, based on the discussions that took place in 1860, that the contrast was drawn between the Warley recruits and the recruits of the Imperial army, that the latter were much superior to the other, in respect to being fully trained and fit for effective service?—I believe it never was a matter of doubt on either side of the committee.

591. If therefore you found on examination that the demand which you sent in for 1870–71 and 1871–2 for men sent out to India included men who had been less than one month, and that large numbers had not been more than four months, would you still consider that these men were thoroughly trained and fit for war service?—I should certainly conclude that men who had been for one month in the army were not efficiently trained, and certainly not so efficient as if they had had six months' training.

592. Seeing the vast importance to India that the most effective men should be available and ready for war in case of need in India, is it not right

Sir *G. Balfour*—continued.

right for India to pay the full value for the soldier so trained, and that any shortcomings in respect to that training should be allowed for by the War Office?—I think if the question was of that moment to India which you suggest, the course India would take would be not to seek to recover 3*l.* 10*s.* or 7*l.* 10*s.* per man, but to make the strongest representations that the men sent out were not such as she required.

593. To that extent the proceedings of that committee are now open to examination?—Yes.

594. With regard to soldiers enlisting for service, is it not the fact that the service in India has been, as a general rule, very popular?—Yes.

575. Was it not the fact that India could always obtain recruits when the other branches of the service could not obtain them?—India, I believe, had never any very great difficulty in filling up the small force of Europeans which she raised in this country.

596. Was it not the fact that the Imperial army could always get recruits for the regiments on duty in India when they had long service in India?—I should not like to be drawn into a discussion of the effect of long service or short service upon recruiting.

597. Was not the infantry, when the mutiny broke out, filled up to the full establishment, and yet, during the Crimean War, the infantry was never within 50,000 men of its full strength?—I am not aware of the figures to which you allude.

Mr. *Birley.*

598. Is it the fact that the Secretary of State for War has the power (of course, under Her Majesty's authority) of issuing a warrant to increase the pay of troops serving in India without the concurrence of the Secretary of State for India in Council?—No, it is not. No warrant obtained by the Secretary of State for War has any validity in India; the measure contained in that warrant can only be made operative in India by the obtaining by the Secretary of State for India in Council a similar warrant from the Queen under his counter signature.

Mr. *Fawcett.*

599. But the Secretary of State for War may issue such a warrant without obtaining the consent of the Secretary of State for India, and that warrant would affect the pay of all the soldiers who are being maintained by India in England, would it not?—Yes; that would again affect the cost of the manufactured article, which I maintain we have a right to fix.

600. Could you put in for each year, say from 1860, the number of infantry, cavalry, and artillery who are in England, classed as belonging to a portion of the effective strength of the English army, who are each year maintained out of the revenues of India, I mean indirectly?—Yes; I think there would be no difficulty, say from 1853 up to 1872. There must be a modification as regards the artillery, because we have never had a separate Indian depôt for the artillery (*Return handed in*, vide *Appendix.*)

601. Are you aware that in some years, in the year 1860, for instance, there were as many as 18,500 infantry and more than 1,000 cavalry in this position?—I do not think the numbers were quite so large.

Mr. *Onslow.*

602. After your experience in the War Office, is it your opinion that when any organic change is made in the British army India should be consulted?—I am of opinion that the Indian Government is consulted in every one of these organic changes; for no organic change can be made in the army by the order of the Secretary of State for War; it must be by the Cabinet.

603. Is it the fact that when Lord Cardwell introduced this new army scheme India was consulted?—How can I say what passed between the Secretary of State for India and the Secretary of State for War in the Cabinet.

Mr. *Fawcett.*

604. I find from a Return here that the figures for 1860 were on the 1st of July 17,000 infantry and 1,200 cavalry, constituting a portion of the effective strength of the English army maintained out of the revenues of India. Therefore, what practically takes place is this, that when the Secretary for War asks the country to vote so many millions for the support of so many men, that is not after all a correct statement of the men; he gets so many millions for the support of so many men; but a portion of the army are always maintained out of the revenues of India?—A portion of the army as represented by those who embark.

Mr. *Stanley.*

605. (To Mr. *Knox.*) Of course, in the preparation of the Estimates, it is your duty to prepare the resolution voting the number of men, placed before Parliament every year?—Yes.

606. Will you state to the Committee the form in which that vote was taken before 1861, and the form in which it has been taken since that date?—Before 1861 I have stated the number of privates that were maintained in England to provide the drafts for India were not given in any establishments fixed for home service; although they existed at home, they were not included in the number of men voted in the Army Estimates. When, however, the European Local Indian army was transferred to the regular army, and the arrangements of the capitation were introduced, then establishments of privates were given to all the depôts of the regiments serving in India, and then the number of men was voted by the House of Commons by a resolution in these words, "That a number of land forces not exceeding" a given number of men ("including," a given number, "all ranks to be employed with the depôts in the United Kingdom of Great Britain and Ireland of regiments serving in Her Majesty's Indian possessions) "be maintained for the service of the United Kingdom of Great Britain and Ireland from" the commencement to the end of the financial year. Then in 1870–71 that was slightly altered, and the wording describing the Indian depôts was as follows, "including an average number of" (number given) "all ranks to be employed with the depôts in the United Kingdom of Great Britain and Ireland of regiments serving in Her Majesty's Indian possessions." Since, however, the new organisation was introduced, the number of men has been voted in the following form: "That a number of land forces not exceeding" (a given number) "be maintained for the service of the United Kingdom of Great Britain and Ireland, and for depôts for the training of re-

Mr. *Stanley*—continued.

cruits for service at home and abroad, including Her Majesty's Indian possessions from" one date to another.

Mr. *Fawcett*.

607. (To Mr. *Milton*.) But that does not state at all this fact; it says how they are employed, but it does not say how they are maintained; it does not bring out the fact that a portion of the men voted by the House of Commons are maintained by the revenues of India; taking the English Estimates, the Army Estimates, as produced in any year, the Army Estimates show that there are so many men constituting the effective strength of the English army, and that so much money is going to be spent upon them, but those Estimates do not in any way indicate, do they, that a portion of those men are not maintained with money voted by the House of Commons?—The same Estimate states the amount expected and estimated to be obtained from India in repayment of those men.

608. But it does not state the number of men who are maintained by India?—There are no men maintained by India; repayments are made on account of a number of men shipped to India. The whole question is whether they are paid directly or indirectly by India.

Mr. *Fawcett*—continued.

Mr. *Stanley*.

609. They are all provided for in the Estimates, and a statement is also printed in the Estimates that the money is expected to be repaid by India?—Yes.

Sir *Henry Havelock*.

610. With reference to what has been stated about the comparatively greater popularity of the Indian local service in former days, is it not the case that there were several hundreds of civil appointments in India which were open to the soldiers of the Company's service, and from which the soldiers of Her Majesty's service were excluded?—I have no information on that point, but I have no doubt of the fact.

Friday, 5th June 1874.

MEMBERS PRESENT:

Mr. Stephen Cave.	Mr. Fawcett.
Sir George Balfour.	Lord Edmond Fitzmaurice.
Mr. Balfour.	Lord George Hamilton.
Sir Thomas Bazley.	Sir Henry Havelock.
Mr. Birley.	Mr. Sampson Lloyd.
Mr. Campbell-Bannerman.	Mr. Onslow.
Mr. Dalrymple.	Mr. Eustace Smith.
Mr. Dunbar.	Mr. Stanley.

THE RIGHT HON. STEPHEN CAVE, IN THE CHAIR.

Major General Sir THOMAS TOWNSEND PEARS, K.C.B., called in; and Examined.

Major Gen. Sir *T. T. Pears*, K.C.B.

5 June 1874.

Chairman.

611. WILL you state to the Committee what position you hold in the India Office?—I am Secretary in the Military Department.

612. You know the object of this inquiry; perhaps you would state what part you have taken in conducting the correspondence on Military Finance with the War Office?—I think I may say in general terms that in the Military Department we conduct correspondence with the War Office on questions of military organisation and equipment, but not on the details of financial adjustments.

613. Now, the Committee wish to avoid as much as possible taking you over the same ground you were taken before, on the former Committee on Indian Finance, when you gave very elaborate and valuable evidence; but I will ask you what are the main points brought under your notice in controversy with the War Office?—I think the most important point that we have had to discuss in the War Office has been that which has been so much already before this Committee, that of the charge for recruits sent to India; that involves a very large expenditure of money, and, therefore, I look upon it as the most important question that I have had to do with; but there are various questions arising from time to time between us and the War Office, which although they are not so large in their consequences are equally difficult to settle in the absence of any very broad and intelligible principle on which they should be based.

614. I will first ask you, are your opinions upon this subject expressed in the letters laid before Parliament from the India Office to the War Office?—As far as concerns the charge for the recruits for India they are expressed in them, but those letters touch upon no other points.

615. Perhaps, now, you will state your objections to the system pursued by the War Office as a matter of principle?—My objection is that the organisation and machinery by which they affirm that they procure recruits for the army in India is of such an elaborate and such an expensive character and is so organised with

Chairman—continued.

reference, not only to Indian requirements, but to the requirements of European policy, that it is not fair to charge India for the actual cost of the recruit as due to that organisation, and that was the view taken, I think, in those letters to the War Office.

616. Do you mean by that answer that India is charged with expenses which are really Imperial?—Exactly so.

617. And that if you were left to yourselves you could carry out the same results upon a simpler and cheaper plan?—Certainly.

618. Do you think that India should be considered by itself, and not with reference to its connection with England in such matters?—I think certainly so, in a great measure; but I admit that it is a difficult question, and as I said on a former occasion, I think the first thing we want, and the great thing we have always felt the want of, is a principle that should underlie all these questions of detail between us and the War Office. I think the two questions to be settled are, first, whether India ought really to be called upon to pay for the whole of the expenses involved in the maintenance of our dominion there, as I may say, by force of arms; and, secondly, if that be taken for granted, whether we should admit as the cost of the men and the material which we send out for that purpose the actual cost as given by the War Office. I think those two principles underlie the whole of these questions, and I do not think they have ever yet been fairly and fully discussed or determined. The late Secretary of State for War, Lord Cardwell, was in the habit of saying that he looked upon India as a partner with the Imperial Government in army matters. I think that most men interested in India would repudiate that principle; but the very assertion of it, I think, shows that the real principle remains to be considered and determined; it would be very desirable that it should be so.

619. You are considering the question now as a point of policy to be determined by statesmen, rather than as one of detail to be deter-

Major Gen. Sir *T. T. Pears*, K.C.B.

5 June 1874.

Chairman—continued.

mined by accountants?—The first question is one of policy, most decidedly. The second question is, whether when the War Office say to us, "We will give you a gun which costs us 150*l.*," we are to pay that, although we may see that they charge us in that for a very elaborate and costly machinery, establishments, and so forth, which they may require to keep up here for European purposes, and not for Indian purposes. That is the second question, whether we should pay the charge as they give it; it is the same with the recruit.

620. You have, of course, to a considerable extent, the power of regulating the quantity of men and material that you require in India?—As a general rule, I may say that we have the power of always regulating the amount of material, and generally the amount of men; but of late years it has become much more difficult to regulate the force in India. Formerly, I believe, under the Court of Directors, they never had any hesitation, if they felt that they had a regiment or two too many in India, in sending them home, and the War Office received them, and that was the end of the matter; but now the force in England being limited by the annual votes, there is always a difficulty, a very serious difficulty, in sending home men of the British army, regiments, we will say, from India to England, though we may not want them there. We experienced that difficulty five or six years ago, when Lord Mayo was very anxious to reduce the force in India, and he proposed to send home five regiments of infantry, I think, several of cavalry, and some artillery; and the War Office found it so exceedingly difficult to receive all these men and regiments that they proposed another arrangement, one of reorganisation altogether, which would save the Government of India as much or nearly as much money, but would render it unnecessary to send so many regiments home; so that we could only send two regiments of infantry home instead of five.

621. Do you mean that if you wanted to send a regiment home you would have, up to a certain point, to pay its expenses at home?—Yes; they would easily draft the men away; but I am afraid that we are still paying for certain of the officers who came home on that occasion. I am not sure that I am quite right in saying still, because the accounts are not come in, but I know that accounts are coming in, perhaps two years old now, representing charges on that account.

622. Then do those troops that are sent home in that way, and paid for by India, form part of the troops voted every year in the Estimates?—I cannot speak positively, but I think it will be found that they do. I do not examine very minutely the Army Estimates, but from what I have seen I think they are included.

623. With regard to recruiting, will you shortly state your opinion as to the advantage or disadvantage of the system which is now pursued by the War Office, with regard to sending recruits to India and the charges made for them?—Well, the advantage, for which, of course, due credit may be given, is that their system tends, professes at least, to supply men fully trained and of mature age, thoroughly fit for service in India or any foreign country; but the disadvantage is that the depôts are so widely distributed and so multiplied that we have to pay for a much larger number of officers in proportion to

Chairman—continued.

the men that we receive than we ought to pay for, or that is at all necessary. I think, in the case of the infantry branch of the service, it will be found that we have to pay the full pay at home of about 200 officers for training 3,000 men; I speak from recollection as to the exact number, but I think it is something of that kind.

624. I think we had it in evidence the other day that the charge against India for recruits had been reduced, that it had fallen from 205*l.* to 136*l.* and 63*l.*; could you give any opinion on that point?—I think that that charge of 205*l.* should be looked upon as an imaginary thing altogether. It is a delusion. It is no doubt the case that, for a certain series of years, the average charge for recruits, taking the whole cost of the depôts, was very high; 205*l.* was derived from an erroneous mode, in my opinion, of taking the average; it should have been about 170*l.*, I think; but, at the same time, it was due to the very large number of men that they retained in the depôts quite unnecessarily, and which they charged on the recruit; but it must be remembered that we did not pay that, and, if we had had to pay the charge of the depôts, long before those seven years had elapsed we should have made some inquiry into it; but that was under the capitation rate, so that the loss fell entirely on the War Office, and we knew nothing of it.

625. Have you formed any opinion as to the effect that the system of short service will have upon recruiting?—Well, the system of short service is rather an anxious question for us. We are afraid that it may lead to the necessity of relieving the men in far greater numbers than we do now; but I was in hopes that, as a set-off against that, we might save, and we shall save no doubt, something by fewer invalids coming home, and by fewer married men having to be supported out in India and fewer casualties; and we hoped that a considerable number of these men would be induced to re-engage for a longer service in India; but some late orders from the War Office, about which we are now in communication with them, have rather startled us because they seem actually to place a bar upon men re-engaging after the first six years at all, and to enable some of them, if they please, to come home after three years. That is a thing that I am afraid would lay an intolerable burden upon us; but that is now the subject of correspondence.

626. Will you state what was that order of the War Office to which you refer?—It seems to prohibit any men but those who bore a certain grade, the non-commissioned officers, or those who are likely, as they say, to make good non-commissioned officers, re-engaging; those alone as we understand are to have the privilege of extending their service beyond six years. And, again, there is another clause which enables them after three years' service, if recommended by their commanding officer, to leave the colours and be transferred to the reserve. We do not profess clearly to understand how the War Office means to work that, but it was sufficient to alarm us at the India Office; we thought if a man went out after a year's service to India, and came home after three years, it was a serious question.

627. Was it a Royal Warrant?—No; a Circular from the War Office, I believe.

628. The

Sir *Henry Havelock.*

628. The Army Circular of the 1st of May is what you are alluding to?—I do not remember the date of it. We have had no reply from the War Office, but I hope that we shall get a satisfactory reply, and find that we are not right in that construction of it.

Chairman.

629. I think that your special duty, when a requisition is made by the Government of India for troops or stores, is to consider the requisition and to make application to the War Office, is it not?—My duty is to lay the requisition before the Secretary of State. If it is for men, we apply to the War Office; if it is for material, we instruct the store department to see that that material is procured generally from the War Office; the trade is open to us, but we find that it is better on the whole, more especially better for British troops, that they should be armed as uniformly as possible, and therefore we go to the War Office to procure those stores.

630. You have no complaint to make of the system of obtaining stores through the War Office, because it is a voluntary act on your part to do so or not; is not that the case?—Well, it is hardly voluntary; there are many cases in which we should be greatly hampered if we were dependent on the trade, and therefore in many cases I may say that we have no other resource.

631. Have you any complaint to make of the price which you pay to the War Office for those stores which you purchase or obtain from them?—I have myself nothing to do generally with the prices; I hear a good deal about them, and I do not think that we have anything to complain of as comparing those prices with the trade; but I must speak under correction, because it is not my business; but we have now, and have had for some time past, an inquiry going on by an intra-departmental committee as to the mode in which those prices are framed; the question as we call it of per-centages. They are in the habit of charging us (the Admiralty do the same thing) very high per-centages as representing our share in the general charges, we may call them, of the various establishments; that is to say, in addition to the material and the labour actually expended on any article, they charge a per-centage upon the whole of the establishment, and I believe even interest on capital expended at such a place as Woolwich and other places; and that makes up a very large item in the aggregate cost; and that question is now under consideration between the two departments, as to what the principle should be.

632. It is being considered by a competent committee composed of officers of both departments?—Yes.

633. Is there any other information which you would wish to give to the Committee, or any opinion, confining yourself strictly to the question of the expenses paid in England?—The only other question that we have had does not involve expenses paid in England; we have questions very often of dispute between ourselves and the War Office which do not involve very large amounts, but, as I said before, they illustrate the want of some principle as our guide. I may instance that of passages of officers proceeding to and from India; questions constantly arise, and the question itself, as a general one, is in rather an unsatisfactory state. They maintain, or have

Chairman—continued.

maintained several times, that we should pay all passages of officers who are entitled to free passage under Royal Warrant to and from India, for whatever purpose they go or come; we say (and we are following the traditions of the Court of Directors), "If you send an officer to India for your purposes as a matter of discipline and organisation, or for his own convenience, or if you bring an officer home from India for your own purposes here, you must pay and not we." That is one of the questions.

634. Is not that question reduced very much by the employment of transports?—No; because the troop ships are ours, and we do not give one of the men if he has not a claim upon us, but only one upon them, a passage on board our troop ship, unless they will pay us the full cost, which they are unwilling to do; we do not give any person a passage on the troop ship who is not entitled thereto from us on public grounds. Then there are questions of organisation which sometimes arise, and they are very embarrassing and troublesome ones; I may instance that of the promotion of all captains of artillery and engineers some time ago to be majors; we are almost helpless in a case of that kind. The Secretary of State for India, I presume, would not venture to offer his opinion upon questions of that nature as purely questions of military discipline and organisation, but all he can do is to bring to the notice of the Secretary of State for War that any measure of that kind, though it may cost him in the Imperial Exchequer very little, may cost us in India a very great deal. That was the case on that occasion of the captains being all made majors, and also in the recent reorganisation of the Medical Department; our scale of paying in India being so much higher than the scale here, the difference to us from any such measure is very much larger than to England.

635. In those cases India had to give the increased pay of the rank to all the officers that happened to be in India at that time?—Yes, it is expected that we shall; we have not done it yet with the artillery majors, but I think it likely that after a time we shall do so. We had a reason for not doing it at first.

636. Is there any other point that you wish to bring before the Committee?—Nothing else that occurs to me at this moment.

Sir *Henry Havelock.*

637. Your contention, as far as I understand it, is that the present arrangements proposed by the War Office are likely to result in very greatly increased cost to India, as compared with the former ones?—If you mean in regard to recruits, yes, in comparison with the cost under the Court of Directors.

638. With more special reference to what is called the Warley system?—Yes.

639. Then it is entirely a question compounded of the considerations of cost and efficiency; they are the two elements that enter into the question?—Yes.

640. It is not a question that can be determined from the point of view of the cost alone, can it?—Certainly not.

641. You have given the very greatest attention to those matters, and I understand that the opinions expressed on the part of the India Office in these letters are such as you mainly concur in;

Major Gen. Sir *T. T. Pears*, K.C.B.

5 June 1874.

Sir *Henry Havelock*—continued.

in; in fact, you drafted most of these letters, did you not?—I drafted one of them.

642. Are you prepared to define the degree of military efficiency which comparatively results from the present depôt system, as compared with that of the recruits who went out to India under the Warley system?—I am not; but I believe that there have seldom been better or more serviceable soldiers than the soldiers of the old East India Company proved to be, and I speak from my own observation. I think that it does not follow necessarily that the men are better ultimately as soldiers from being drilled here than they would be if they were drilled at a favourable station in India; although they may be more efficient, and are so, perhaps, when they go out, they are not necessarily more efficient soldiers in the end.

Mr. *Fawcett.*

643. After the end of the first year you mean, I suppose?—Or the first six months after they have been trained.

Sir *Henry Havelock.*

644. But does it not arise from the present system, and will it not more particularly arise from it when it is fully developed, that India will be the gainer, because, instead of drawing small numbers of under-aged and very partially trained men, by now having the whole of the battalion in England to draw from, she will be certain of receiving perfectly trained soldiers, of full age and thorough efficiency?—They were not, as a general rule, under-aged in the time of the East India Company; very few men, I think, will be found to have been under 19.

645. At this moment I am not speaking of the Warley recruits, but of the comparative efficiency of recruits that have been sent out by the system in force between 1861 and 1871 say, and those who will be sent out to India when the present organisation, which is I believe now on its trial and not fully developed, comes into full play, say next year?—It remains to be seen how they will work that, because there will be an extreme difficulty in their sending out men if they are only to be enlisted for six years in a manner profitable to us; if they do not send them out till they are matured soldiers, they will have served half their time in the army.

646. You speak under correction in that I presume, because 18 months would be the limit?—No; I thought you were speaking of getting men out of the battalion as made soldiers; if you confine it to 18 months, it will be so far a disadvantage to us that we shall have less service to get out of them before they come home.

647. At the same time you will get a man of considerably more formed constitution, and therefore taking that into consideration with the limit of age of 20 years now fixed, you will get a man much less liable to break down in the first few years of his service, and to be brought home as an invalid?—I think so; but under the present system we shall get so much less work out of him if he is enlisted at 17, which, I believe, many of them are, and we do not get him till 20, or if he is enlisted at 18, and we do not get him till 20. We want to get them, provided they are physically able men, as soon as we can.

648. But equally under the Warley system, you had no guarantee that a man who represented himself as being 18 was not 16 or 17?—I can only trust to the official reports which I have looked at, and very few indeed will be found under 18.

649. At all events, with the increased trouble given now to ascertaining that point, it is more likely that the full age will be obtained, is it not?—I believe the secret of that is that the Indian service is, and I hope always will be, very popular with the men. The Warley depôt got men more easily than the English army did.

650. Is it not the case that there was one particular feature in the Indian service, with respect to the local soldiers of the East India Company, which then existed and does not now exist, and which fully accounts for the comparative popularity of the service then; you, as having been many years in India, are aware that there were a great many, amounting to several hundred civil appointments, in the Department of Public Works and others, which were open for the soldiers of the East India Company, and not open for their comrades of the Queen's service serving with them; that was so, was it not?—I think not; I think there were not so many then as now, and now they are open to the whole of the British service, and to so great an extent that to my great surprise the Inspector General of Recruiting here mentioned that as an objection rather, whereas it seems to me to be one of the strongest inducements for men to recruit in the army, that they have these prizes in India.

651. At the same time, is it not the case that in former days, when these appointments existed in about the same number as now, they were open solely to the soldiers of the East India Company, and not to those in the Queen's service?—I am not certain; but even if it were the case the civil departments were nothing like what they are now.

652. Such as they were, the whole of those appointments were open to the East India Company, and not to the soldiers of the Queen's army?—I believe they were; I think it is very likely, but I am not sure of it.

653. You were speaking on the point of the relation of India to England, as being by some considered in the nature of a joint partnership, and that is the view taken of it in the correspondence before us in one or two of the letters by Lord Cardwell; but I was somewhat surprised to hear you say that officers connected with India, yourself amongst the number, would be inclined to repudiate that?—Yes.

654. Are you of opinion that the relations existing between India and England are not in the nature of those of a joint partnership in which the interests of both are intimately concerned?—I do not say that the interests of both are not intimately concerned, but the meaning of a partnership is that they should share alike, or rateably in all the expenses of the empire, and I say there is no instance of such a partnership as that where one partner has the whole of the power, and the other has to pay his full share of the expenses; I do not call that a partnership.

655. We have evidence in your letters that India is very actively and energetically represented by your office, so that you cannot say that one party has the power of making the other pay whatever it chooses?—Is it not so in the army?

Major Gen. Sir *T. T. Pears*, K.C.B.

5 June 1874.

Sir *Henry Havelock*—continued.

656. If the whole of the policy of the War Office is liable to be modified, on a consideration of your arguments, I do not think that holds good?—But I am speaking of the organisation of the army, more particularly of the organisation of the War Office and the organisation of the Horse Guards; and it has often been said that India should bear her share of those, the fact being that she has no voice in those.

657. Lord Cardwell says, does he not, that although those charges, he thinks, might be made against India, he expressly refrains from suggesting any of those being made against India, and has no intention of making them?—It is quite clear that the Duke of Argyll did not read it in that way, that there was no intention of doing so. It is not the first time that those charges have been suggested; they are rather dangerous, even as suggestions.

658. Do not you, then, think that our maintenance of our position in India, that is, through the agency of such an efficient military force as shall give no hope at all of disputing our rule there, therefore most strongly conducing to the tranquillity of the country from rebellion and to its consequent prosperity, is one which has the strongest financial importance and bearing on its welfare?—That it is of importance that we should maintain our dominion there and prevent what is called rebellion, I admit; but it does not necessarily follow that India is to pay all the expense of doing that.

659. You are probably aware that, especially within the last few months, a great deal of attention has been directed in India to the nature of this inquiry, and that it has very much been debated in all the Indian papers and discussed; you read the Indian papers, perhaps?—Not very closely; I see, of course, that they notice it and take an interest in it.

660. Do you think that while these questions as to the apportionment of charges between England and India are really under discussion, it is desirable that statements should get into the native papers which are likely to lead to the belief that there is difference of opinion here, and that there are a certain section, including, as I understand you to infer, the whole of the War Office and the Horse Guards, who are inclined to press upon India charges to which she is not fairly open, and for which there is not any proper excuse; is not this whole question at present under discussion, and is it not rather premature that statements having that tendency should be published to all the natives of India and commented upon in the native Press without the replies, as it were, on the other side being published at the same time?—Really I am not competent to form an opinion upon that; that is a matter of policy that I know nothing about.

661. In point of fact, there is a letter in this correspondence which has been published without any opportunity having been given for the answer to it on the part of the War Office to have been published?—That has been laid before Parliament I think you mean; I have nothing to do with that.

662. You state that you look with a certain amount of apprehension at some new regulations which have been issued from the War Office with regard to recruiting the army in general, which seemed to imply that soldiers may be brought away from India, after three years' or six years' service. Now, of course, when you speak of a measure in that way you have made yourself acquainted with all the provisions of that circular?—I have read the Circular.

663. But do you find anything in that Circular which prevents any soldier in India from continuing his service in India indefinitely, if you offer him proper inducements, just the same as in former days?—Yes, I do, as I read the Circular; and that is the reason that we have addressed the War Office on the subject; if they satisfactorily show that it is not so, I shall be very much pleased, but I could not read it otherwise.

664. Does not this question come under the same category as those which I have spoken of already, you giving an opinion here formed on one side of the case, when we have not had an opportunity of hearing the other side?—I do not know that it is an opinion; it is a fact; I stated that there was a clause in a certain circular which contained certain provisions, as I read it; I made no comment on them except that it may be very inconvenient to us.

665. Have you seen the statement made by Lord Sandhurst in the House of Lords on Monday last, stating that he, who you are aware has very great experience in the question, is of opinion that under the short service regulation the average length of a soldier's service in India will probably be very much about what it was in former days?—I have not seen it.

666. The point that he specially referred to was this: that now, by giving India men of more mature age, although they may have passed some of their service in England, the probabilities are that they will serve effectively a longer time than they did formerly; and also he drew attention to the fact that in former days, though the principle of service in India was long service, still from men going out young, and a variety of other causes, a very large per-centage of soldiers, immensely more than at the present time, broke down, and came home; and the conclusion which he drew from that was, that the probabilities were that under the new regulations the average length of service of the soldier would be about the same; I thought you might also have formed an opinion on that point?—I have not seen the statement you refer to.

667. Then as regards the recruits who formerly went out from Warley, their average of service in this country was about three months before they went, I think?—I presume it was about that.

668. But then that does not at all represent the full period of their training, because they underwent a long subsequent training in India when they joined their regiments?—Yes, whatever they required.

669. Whereas under the present system a soldier's whole training will be complete in England before he sets foot in India?—It is not the practice here, as far as I understand, to give all the soldiers the longer period of training; many of them we find have been embarked when they have been a month recruited.

670. You are referring to three or four years past, I suppose?—No; to the last troopship season, the last we have had returns for at all events; there are men frequently found who have enlisted one month, two months, or three months, and it must necessarily happen so; if they allow an average of seven months they can only

Major Gen. Sir *T. T. Pears*, K.C.B.

5 June 1874.

Sir *Henry Havelock*—continued.

only get that by sending some of the long service men and some of the much shorter service men, but we never contemplated their sending men under three months; but they have sent them under the present system many men.

671. You say the present system, but the present system is not in full operation yet?—I mean by the present system the one existing at the present day; we send 3,000 or 4,000 recruits every year.

672. You are stating, in fact, that that is partially the case with the troops embarked in January 1874?—I did not say January 1874, but I said for the last season.

673. But a paragraph in the correspondence, to which Lord George Hamilton has kindly drawn my attention, bears out what I am saying, that even so recently as January 1874 the present system had not yet come into operation, because the men embarked were about half of them young men whom you were obliged to take, because they were the only men that could be found at the depôt, and the other men were men who had served longer periods, who were taken because they were of the prescribed age; therefore, you cannot speak of the present system?—I do not know what the present system is, if it is not the system that has been in force since the Army Organisation Bill, that is to say, 1871.

674. The question before us is one of the efficiency and the cost of the system now coming into operation; all your arguments are addressed to a system long past?—But these Returns are for 1874.

Mr. *Campbell-Bannerman.*

675. Probably there is no real difference between you and the honourable baronet; the new system is in operation in one sense; but, of course, it has not begun to tell yet upon the recruits; a sufficient number of recruits have not yet been enlisted for brigade service to enable us to work the home battalion as a sort of reservoir for India; so that, although the system is in operation, it has not yet begun to tell?—I see what you mean; but, of course, we know nothing of the progress you are making with your system; it is your system not ours.

Mr. *Dunbar.*

676. Have you considered what term of service would be most advantageous to India; I mean, suppose a man went out having five, or six, or seven years to serve; have you formed any opinion as to what number of years would be the best, considering the interests of India, both as to the man's cost and efficiency?—Well, I cannot say that I have; but I am inclined to think that a short service, with a power of continuing at his own discretion, and that of the authorities in India, would be most favourable.

677. What do you mean by a short period?—I think seven or eight years, considering the time that has to be passed in this country before he goes out; and I myself, at the time the Army Bill was under consideration, proposed seven years instead of six.

Sir *Henry Havelock.*

678. And the periods proposed by the War Office Circular are, in point of fact, periods of three years, six years, and 12 years; so that the average of them is just what you say, namely, seven?—But, as I understand it, no man who is

Sir *Henry Havelock*—continued.

enlisted for six years' service is at liberty to extend it to 12, except under narrow conditions.

679. If you knew how it was worked you would know that a man is never excluded unless he is an inefficient soldier, or is likely to become medically unfit; it is obviously for the interests of the service, if he desires to keep on in the service, that he should do so?—I know nothing of how it has been worked, but in the terms of the Circular he seemed to be precluded from it, unless the commanding officer reported him as a man likely to make a good non-commissioned officer. Now, some of your most efficient soldiers may be men not likely to make good non-commissioned officers.

Lord *Edmond Fitzmaurice.*

680. I do not suppose that you would object to the description of the relations between India and England if anybody were to describe them as an unequal partnership, though you object to "partnership" alone?—No, I should not object, excepting that it would be so extremely vague that I do not think it would lead to any satisfactory conclusion.

681. By an unequal partnership, I should mean a partnership in which, although the parties to the partnership were looked upon generally as jointly and equally responsible, the real power lay with one of the parties; that, I suppose, would fairly describe what, in your opinion, is the relation between the India Office and the War Office?—That I take to be the sort of partnership that Lord Cardwell admits.

682. You were alluding just now to a passage in a letter from the War Office, in which you said that, in your opinion, the War Office reserved its right to make other charges which you would yourself consider to be of an unjust character. I presume the passage you alluded to is the one in the letter dated the 24th April 1872; it is a long passage, and I need not trouble the Committee by reading it, but I presume that is the passage at page 12?—That is the passage to which I referred.

683. And you consider that in that passage the War Office implied that they did consider that they might, under certain circumstances, attempt to charge India with other charges besides those for recruits?—Well, I should not say that they considered that they might attempt that, because they evidently did not consider that; but that we were fairly liable if they chose to urge it to those charges; that I understand to have been the meaning of the War Office.

684. In the letter in reply from the India Office I observe the following passage: "Mr. Campbell's letter further intimates that the same principle on which this charge is defended would equally justify many other charges which are not now actually made, but which it is distinctly said Mr. Cardwell reserves his right to bring forward at any future time. Of these other charges Mr. Campbell's letter furnishes a list." Does not that read as if in the opinion of the India Office it was considered quite possible that those charges might be advanced?—Yes.

685. The charge for a Warley recruit, I think, in the old times was put at 26 *l.*?—£. 27.

686. That, I suppose, you would consider on the whole rather delusive; I mean it did not include what you practically would yourself admit had

Lord *Edmond Fitzmaurice*—continued.

had been the real cost of the Warley recruit?—No; it did not include everything.

687. I hardly suppose that there is any wish now at the India Office to return to a separate system of recruiting; it is rather that it is considered that the present system may be considered on the whole good in its general idea and outline; but that the working out of the details is very unsatisfactory?—If we considered our own interests, and the efficiency of the force in India and no other points, we should certainly desire, I think, at the India Office to have separate depôts for the Indian service at a cheaper and a more advantageous mode of proceeding, as far as we are concerned.

688. Then would you, in fact, wish to return practically to something approaching the old state of things?—Yes.

Sir *Thomas Bazley.*

689. Is it your opinion that, with perfect safety to India, the charges relating to India could be reduced, I mean the whole charge in connection with the Government of India. You mentioned sometime ago, for instance, that some regiments charged to India were unnecessary, and therefore were a burden to it?—I said that if regiments were unnecessary in India there was a difficulty in these days in returning them to England and throwing them again on the hands of the Imperial Government. I did not say that there were at the present moment any surplus troops in India.

690. But is it your opinion that the general charges falling on India might be reduced by economical arrangements?—I think, as regards recruits, decidedly.

691. And in any other respect that you are aware of?—No; I cannot think of any at this moment; there is no doubt that a separate force might have been maintained in India for Indian purposes, at a cheaper rate than the present British force; but there is no prospect of that, and I, for one, do not think it desirable to revert to that.

692. Do you think that the charges incurred in this country for the government of India are equitable, from the Secretary of State down to the lowest officers that are paid, and also including the general cost of our palatial establishments?—I do not think that there is anything strikingly large or objectionable in what are called the home charges, as regards the actual government of India in this country. I have never been led to think, or to believe, that compared to the magnitude of the empire, and the revenues of that empire, the home charges for its administrations are high; but we have to speak of the charges brought against us, for certain purposes, by the Imperial Government here; and it has always been a grave question in my mind whether the British Government and the British people ought to demand the uttermost farthing from the people of India, as the cost of maintaining their dominion in India; that is the question, I think, and always have thought, which underlies the whole of these inquiries; they did not do it, as I understand, with any of the colonies; and I think we might come nearer home and find countries in which the people of those countries did not bear the whole charge of keeping them in order; that is a question for wiser and more experienced men to decide, but I think it never has been fairly faced.

Mr. *Balfour.*

693. It is universally acknowledged that the new system of recruiting is much more expensive than the old one; but, on the other hand, by sending out men of more mature years some saving is effected; I should like to know if any pecuniary estimate has been made of that saving?—I am not aware that there is any pecuniary saving effected.

694. I thought there was, because they had not to be sent home to be invalided so much?—I do not think that has been proved; it is not their being sent out of mature age which causes that, though it may in a minute degree; but it is the shorter service of the men that is supposed to lead to fewer men being invalided home. I have no doubt that is true; men who would have been invalided now come home at the expiration of their service probably.

Mr. *Dalrymple.*

695. I suppose you would admit that it is very difficult to say at what point the interest of India begins to be involved in any expenditure, because it might be said that India is indirectly benefited by anything that beneficially affects the Empire?—No doubt that might be said.

696. Apart from any recommendation that this Committee may make, is the question under consideration anywhere at present as to how far India should be relieved from the expense at present falling on her?—I am not aware that it is.

Mr. *Sampson Lloyd.*

697. Can you tell the Committee a little more in detail what charges India bears which are Imperial in your opinion; in the first part of your evidence I understood you to say that India bears charges which are, or ought to be, Imperial in their nature; will you specify them?—I do not profess myself to be in a position to define those charges; I do not think that it would be easy to do it; but what I meant to say was this, that where a charge of a recruit sent to India is obviously raised by a certain measure of organisation, which organisation is adopted with a view to European policy, to our position as a leading power in Europe, then we may take a great proportion of that charge to be due, not to Indian policy or Indian demands, but to European policy; but it is obviously impossible for me to define what that proportion is. I might say that the charge for the present organisation of the army into brigade depots, which adds so very largely to the expense of a recruit as compared with a more centralised system, seems to me to be an arrangement made with regard to the requirements of a comprehensive European policy, and not with regard to the demands of India, and that I do not think India should be charged for it.

698. From what you have said, I understand you to be of opinion that that system increases the expense to India?—Yes.

699. I understood you to say that a separate system, in your opinion, if you had it, and if you had only to look to Indian interests, would be cheaper, and, from a consideration of Indian interests alone, would be more desirable; could you at all point out to the Committee how the charges actually incurred may be more equitably apportioned?—No; I think that is a matter that must be settled by people who go into the details of those charges.

700. In fact, that there is not more to be added than

Major Gen. Sir *T. T. Pears*, K.C.B.

5 June 1874.

Mr. *Samuel Lloyd*—continued.

than already exists in the correspondence before us?—No, I think not.

Mr. *Campbell-Bannerman.*

701. You said in answer to the Chairman that India, if left to itself, could carry out its arrangement for military service more cheaply?—Yes.

702. What do you mean by "if left to itself"?—I meant if they were to make their own arrangements for supplying British troops to India.

703. Where would they get the British troops?—In England and Ireland.

704. So that they would recruit in competition, or, at all events, concurrently, with the British service?—Yes, as they did before.

705. The number of recruits sent out from Warley under the East India Company's *régime* was comparatively small, was it not?—Yes, comparatively small, compared to what it would be if we had the whole force now in India to supply; about a third part, perhaps.

706. So that when such an expression is used as "recurring to the old state of things," there really is no old state of things to recur to?—There is an old system.

707. But applicable only to a very small portion of the force?—The old system might be made applicable to the whole.

708. But in that case of course the difficulty would be very much greater of raising 4,000 or 5,000 recruits than of raising 1,500, and the competition with this country's Imperial recruiting would be proportionably enhanced?—The competition would be somewhat greater, but I do not think that would be of material importance, because, as regards the recruit market, it would be merely the Indian Government recruiting a certain number of men for India, instead of the British Government, who do it now; you would not increase the number of men in the aggregate required for the army.

709. I understand you to say that it is sometimes maintained, on the part of the War Office, that it is not sufficient that the actual cost of a recruit should be paid, but that you go even further in the other direction, and maintain that even the actual cost should not be paid?—No; I do not think I have said that.

710. I think you said that was the second question which you thought deserved consideration. The first was, whether India should pay for the whole expenses of our dominion, and the second was whether she should pay the actual cost?—I put that as a question which I would leave to wiser and more experienced heads than my own. I did not say that I held the opinion you have mentioned.

711. You did not mean to lead us to infer on which side your judgment lay?—No; I am quite prepared to say what my judgment is, but I think it a very difficult question, and one to be settled by very experienced and impartial men.

712. I am not going into the theory of partnership, because it is well known that there are two strong views on that point, and I do not know that any good could be got by going into it; but you spoke of Imperial charges, and said that India was charged for expenses really Imperial; you therefore bring forward as due to India claims of an indirect nature, similar to those which the War Office put forward as due to this country, and to which you objected?—I do not understand what claims you allude to.

Mr. *Campbell-Bannerman*—continued.

713. In the War Office Letter, which has been quoted from, it is maintained that there are certain indirect charges which might possibly be considered as properly chargeable to India; and I understood you to say that you had great objections to a vague assertion of that sort being made?—Yes.

714. But do not you yourself make a similarly vague assertion with regard to these Imperial charges?—No, I do not think so. All these charges to which I object, and which I say are distributable between Indian requirements and Imperial requirements, serve in my mind to illustrate the necessity of one general rule being laid down as to whether we should be considered partners, and whether we should pay the whole of the cost of anything which is provided for us, including the expense of the organisation through which that is provided, or whether we should merely be charged what the article would cost India if it were prepared to meet India's demands alone. I instanced, therefore, the cost of the recruit. I say that if any body of men were told to raise 20,000 men for service in India here, they would set about it and do it in a far cheaper way, and get quite as efficient men as you do by a system of organisation which is adopted to sustain the position of England as a great European Power, and, with reference to the organisation of foreign armies in Europe, and which enhances the cost of a recruit generally, the cost so enhanced being thrown upon India.

715. That is merely a conjectural opinion, is it not?—It is an opinion that I think will be pretty generally admitted.

716. You are aware that the War Office has generally consulted the India Office before making any change of organisation?—Not always.

716.* As a rule, is it not the fact that, either by official communication or by personal interviews, the India Office is made aware of any change that is contemplated, and they are consulted as to how that change will affect them?—Well, there are some very important cases in which, as far as I know, there has been no consultation at all; and the fact is, I believe, that they overlook very often the mode in which it will bear upon India. Now, I may instance a case where the War Office added 2 *d.* a day to the soldier's pay, which costs us about 250,000 *l.* a year in India; but we were not asked whether we were prepared to bear that, nor were we consulted in the matter at all, so far as I know; and during the late reform in the pay of the army, brought forward in the early part of last year by Mr. Cardwell in the House of Commons, it took us all by surprise; we knew nohting about it; but we saw that it would bear upon us very heavily in India, and it did so.

717. The removal of stoppages you allude to?—The increase of the net pay by 1½ *d.* to the soldier.

718. There were no stoppages to the pay of a soldier before in India?—No stoppages for rations.

719. So that there was no necessity of consulting the India Office in order to do that?—The addition of 1½ *d.* a day to the pay in England was calculated to create a great difficulty, unless some such increase were given in India.

720. And the additional pay which was given will ultimately be met, roughly speaking, by the abolition of the re-engagement penny; are you aware

Mr. *Campbell-Bannerman*—continued.

aware of that fact?—No; nor do I think that it will be wholly met.

721. The re-engagement penny was stopped in 1870, was it not?—Yes.

722. That was a great advantage to India, was it not?—Well, I do not know; there will be very little re-engagement under the new system I am afraid. It is to our advantage in India that men should re-engage as much as possible, even if we pay them an additional penny a day; I think in your own estimates the saving of a penny a day fell far short of the cost of the measure.

723. For the moment it did, because the men who are at present in receipt of the re-engagement penny will obtain the advantages also of the increased pay, but as those men die out, the one will balance the other; the saving from the abolition of this re-engagement penny will, roughly speaking, cover the addition to the pay, will it not?—The fact is, by the very same measure I think you were doing all you could do to discourage re-engagement, so that you can hardly look upon the saving effected by the abolition of the penny a day as an advantage to India.

724. You have referred to the proposals of Lord Mayo in the Blue Book which is before us, for reducing military expenditure in India; those proposals were met by the War Office by proposals almost equally advantageous to India, were they not?—No; they were not so advantageous by any means; as a mere matter of pay it was shown that we should save at the time about the same; but there were other contingent expenses connected with the employment of regiments in India that would have effected a larger saving in the end to us; we should have dispensed with barracks and effected a variety of savings of that kind.

725. India proposed to dispense with a certain number of cadres?—Yes.

726. And that was objected to at home?—Yes.

726.* But was it not the fact that a few years previously the second battalion of the first 25 regiments had been raised expressly for Indian purposes?—I do not know; very likely.

727. After the mutiny India required an additional supply of troops, and those second battalions were raised expressly for Indian purposes, were they not?—Very likely.

728. And then the India Office asked the Home Government to reduce a certain number of those battalions, having a few years previously insisted on their being increased?—Yes.

729. Does not that bear out the statement that the Home Government is subjected to a great many difficulties and expenses on account of India, which, if the connection with India was not so close as it is, it would be relieved from?—I have not seen that the Home Government has been subject to any serious expenses; there are difficulties, and in the India Office we have fully appreciated those difficulties; but I presume that the War Office increased the army materially for the Crimean campaign, but when they fell back upon their home establishment, I imagine (I speak under correction) that they made much shorter work of their spare battalions than they would be prepared to do if we sent regiments home from India; we knew if we insisted upon bringing five or seven regiments home it could only be done by all the officers being placed on half-pay, and there was no desire to do

Mr. *Campbell-Bannerman*—continued.

Major Gen. Sir *T. T. Pears*, K.C.B.

5 June 1874.

so serious an injury to the service if it could be avoided; and, therefore, the scheme which the War Office proposed to produce as great, or nearly as great, a financial saving was readily accepted by us, recognising, as we did, the difficulty the War Office would be placed in.

730. The War Office scheme gave a battalion of 820 bayonets, costing 34,400 *l.* each battalion, instead of one of 790 bayonets, costing 36,600 *l.*?—Yes; but that does not give the relative saving that would have been effected by the adoption either of the proposal of the Government of India or the proposal of the War Office.

Mr. *Fawcett.*

731. But can it be proved that any regiment with 820 bayonets only costs India 34,000 *l.*?—The cost can be shown to a shilling of course, as far as regards the mere pay, but we have other expenses that are not included in the War Office estimate in India, and which they did not take into consideration; there are very large expenses connected with barrack accommodation, and family allowances and establishments.

732. That question, then, would lead to an error if it caused people to think that India gets a regiment for 34,000 *l.*; there are collateral charges?—I think I may say, that certainly that will not comprise all the cost; there is the passage out and home, and barracks, and barrack allowances, and establishments.

Mr. *Campbell-Bannerman.*

733. But referring to this correspondence in the letter signed by yourself, of the 9th of April 1870, you expressed generally the concurrence of the India Office in the proposals of the War Office?—Yes.

734. And did you find on that occasion any disposition on the part of the War Office to neglect or set aside the interests of India?—No; I cannot say that there was any disposition to set aside the interests of India, but there was an indisposition very naturally to put themselves to the great inconvenience of adopting the views of the Government of India on the subject; and we did not press it.

735. Adopting them entirely, that is to say?—Yes.

736. But there was a readiness to meet those views as far as it was possible?—I think that was inevitable; if some such scheme as that had not been put forward by the War Office to meet the views of the Government of India financially, we must have insisted, as I understand it, upon the regiments coming home, whatever it might cost; and we should then, I presume, have had to bear the half pay of the officers; and it must be remembered that we are bearing now, I believe up to the present day, some of the cost of officers who have been unprovided for.

737. You represent (and no one can do it better) the interests of India in negotiations with the War Office, and you point out to them, no doubt, as you point out here, the many respects in which you think that India suffers financially by the subsisting arrangement; but you are well aware that on the other side of the question, if this country was free from India, we could enormously reduce our military expenditure?—Yes; but you would not have nearly so efficient an army, and you would not be so great a military power; nothing will persuade me that the pos-

Major Gen. Sir *T. T. Pears*, K.C.B.

5 June 1874.

Mr. *Campbell-Bannerman*—continued.

session of India is not of great importance to this country, both politically and in a military point of view, as well as commercially; in a military point of view your best training ground has been India; you have 60,000 men there.

738. If we had to keep up 120,000 men instead of 180,000, surely it could be done very much more cheaply than it is at present?—I do not know that, because, as far as you are concerned, we pay the uttermost farthing, I believe, for the maintenance of the troops in India.

739. Taking the very question of recruiting, if, instead of requiring 20,000 recruits a year we required 15,000, they would be very much more easily got, would they not?—Of course.

740. It is the last 5,000 recruits who are the most difficult to find?—You know that subject better than I do.

741. If you were raising a subscription, for instance, the last 100 *l.* is the most difficult to get?—No doubt; but I may be allowed to add, in reply to that, that I think the great advantage offered by the Indian service to a certain class, both of officers and men, is a great inducement to men to enter the army; I have often used the expression that I think India is, for the British army and War Office, a sort of rich grazing-ground, turned to very good purpose very often by men who wish to get to a country where they are exceedingly well paid, and where service is very popular; it is very popular, I believe, with the rank and file; and I think there are obvious reasons; and I think it is a great advantage to the whole army that they should have such a service.

742. On the other hand, you are aware that there are many considerations per contra; that if we had only to consider our position in Europe we should adopt an organisation very much simpler and less costly; and that the difficulty in the way of all army organisation in this country is India?—I suppose not only is India so, because as long as you are a colonial power you must be prepared to employ troops in any one of the colonies where they may be required.

743. But you are aware that we do not now keep troops in the distant colonies?—Yes; but we must be prepared to send troops there in case of an emergency.

744. With reference to short service, I think you stated (from my point of view, very fairly) that it by no means follows that short service will be expensive to India?—I am in hopes that there will be some serious sets-off against it; but, as I said, no doubt we shall have to bring more men home, and to take more men out, which will be a considerable cost to us; but there are items in our expenditure which I hope will be avoided or reduced.

745–746. As a rule, under the old system, men did not stay longer than five years in India, on the average, did they?—I should doubt that very much, but I cannot speak with certainty.

747. Before short service was introduced the head-quarters stayed out 10 years, did they not?—Never so short a time as 10 years; it was nominally 10, but until very recently no regiments have been so short a time as 10 years in India, as far as I know.

Mr. *Onslow*.

748. Except cavalry?—Cavalry might, but even they have been hitherto 10 years in India.

Mr. *Campbell-Bannerman*.

749. Then there will be a saving under the new system, in not having men who have returned from India hanging at the depôts chargeable to India and useless to England, will there not?—Well, I do not see that there ought to be any great saving. These men ought never to have been allowed to hang at the depôts at our expense. I do not know whether they will be, but I believe for some time past the understanding has been that we should bear their cost for six months, and then they must either be discharged or drafted to a regiment at home.

750. In future, if they are enlisted for a brigade of two battalions, one battalion being at home, it will always be possible to post them at once to the other battalion, and India will be therefore immediately relieved?—I suppose that will depend upon whether the home battalion is full or not up to its strength. I do not know whether the War Office could take them if they were surplus; that is for them to consider.

751. You stated that brigade depôts would increase the expense in enumerating what were called Imperial charges; in what sense do you think they would increase it?—I mean as compared with more centralised depôts. You have too many officers for the purpose of providing the number of recruits that we want in India.

752. How many officers will there be at the brigade depôt chargeable upon India?—Four, I understand, and all the non-commissioned officers of the two companies, and a certain number of the rank and file.

753. The whole of those officers will not be chargeable to India, will they?—They are now.

754. The charges under the new brigade depôt system of which we are speaking have not yet been fixed?—That has been fixed according to the new brigade depôt system by that committee, under a sort of protest from the various members of it.

755. But Mr. Seccombe's Committee has not had the new brigade depôt system under consideration, has it?—They have had precisely the same system, though it may not be what you now call the brigade depôt system. The proceedings of the committee, if I remember right, were subsequent to the organisation of the brigades in England into a battalion of 12 companies at home and a battalion of eight companies abroad; and it was arranged by those committees, under something like a protest, that the officers and non-commissioned officers, and a certain number of the privates of two of those companies at home, should be thrown upon the charge for the recruits going to India. Those recruits in an infantry regiment are estimated to amount to about 60 per annum. The consequence is, as they are to be trained on an average for seven months, we have four officers for the whole year for an average number of 35 men.

756. That is not the brigade depôt system; that is the affiliated depôt system?—Well, it may be, but the charge is the same to us, unfortunately, whatever it is called.

757. That is a system which is now obsolete?—That is what we want to know; as regards the charge, we are still paying that. I do not mean to say but that the War Office may be prepared to reduce that charge considerably, but we have had no alteration yet.

758. But you speak of the system, according to which two companies of a battalion serving in India

Mr. *Campbell-Bannerman*—continued.

India were attached to another battalion serving at home?—It was more than that; they were called one regiment of two battalions; and it was distinctly explained that there were 12 companies at home (not 10 of one regiment and two of another) and eight abroad; that was the way it was organised; and then, having so organised it, they said of the 12 companies at home two shall be considered as the depôt for the battalion abroad.

759. But under the new system there will be a brigade depôt, separate from the home battalion and from the Indian battalion; which two battalions will be linked, and recruiting will take place for the two as a brigade?—Yes.

760. And it will remain, will it not, for Mr. Seccombe's Committee to determine what portion of the expense of the brigade depôt so constituted shall be chargeable to India, and what portion to the home battalion, for whose recruits it exists equally with the Indian battalion?—If the Secretaries of State determine to bring the question again under the consideration of the Committee, that will be the point to be considered.

761. It has never been under the consideration of Mr. Seccombe's Committee?—When I say the question, I mean the question of the charge for a recruit; then they will have to consider the two questions which will arise again: are we to bear a share of this depôt organisation which you allude to, or are we to consider that that organisation is adopted, as I have said before, for purposes which lead to an expense that you have no right to charge rateably to India?

762. So that when you talk of the large number of officers and non-commissioned officers for the small number of recruits for which India pays, you refer to the system which has gone on hitherto, but it cannot be predicated with certainty of the system now introduced, can it?—I can only speak of the charges which have been brought against us, which are determined, and which we are still supposed to be liable to at this moment.

763. A system which is now exploded?—You have the same system of having the two battalions linked, and the four depôt companies; I speak of what is actually in force now.

764. These are considerations which are fairly treated by Mr. Seccombe's Committee, which come under their review?—Certainly; but I do not believe that they have any authority at the present moment to re-open the question of the charge for the recruit.

765. They have only fixed it for two years, have they not?—They have fixed it for two or three years, and since then they have received no instructions, as I understand, to meet to reconsider the question.

766. But do you doubt that they will be called together again?—I have no knowledge on the subject.

Mr. *Eustace Smith.*

767. No principle of charge has been approved for the last two years?—The principle of charge was approved to last for a certain time, and since that time no re-consideration has been made, and therefore the accounts are unadjusted.

Mr. *Campbell-Bannerman.*

768. And no system of charge can be adopted without the consent of both offices?—No.

Mr. *Campbell-Bannerman*—continued.

769. And therefore, the natural thing would be to refer the matter again to Mr Seccombe's Committee or some similar committee?—I suppose so.

770. With regard to the recruiting Circular, which came out the other day, and of which you speak apprehensively, you are aware that it is a permissive Circular, that is to say, that if men are passed into the reserve after three years' service only, it is done with the consent and on the recommendation of the commanding officer?—Yes.

771. No man can claim it as a right?—No, I believe not; it is with the consent and on the recommendation of the commanding officer.

772. And have you any reason to apprehend that the War Office would work that Circular to the disadvantage of India if you pointed out how it would injuriously affect you?—No; I should think not, if it were pointed out; but unfortunately we were not consulted when it was written, and there it is, left to the commanding officer.

773. But you appear to have presumed at once that it would be worked to the disadvantage of India?—Certainly, if left as it is, because the commanding officer is not bound to think of the interests of India; it rests with him. A man comes to him and says, "I wish, having served three years, to go home," and he may say yes.

774. But the Adjutant General would have something to say that, would he not?—Not under that Circular; I should think it would rather dissatisfy the soldier if the War Office issued a Circular of that kind, and it was found to be a dead letter in India, made so at the instance of the Indian Government.

775. But the commanding officer would have to act in concert with his superior authority, the Adjutant General, before he determined what he was to do with his men, whether he passed them into the reserve or not?—I do not think it would be so, according to the terms of that Circular.

776. At all events, you have brought it to the notice of the War Office?—I have no doubt that they will look into it and prevent its acting injuriously to India.

777. You do not suppose, for a moment, that the Adjutant General at the War Office would do anything so very unjust to India as to allow wholesale transfers to the reserve to be made in regiments, creating an unreasonable charge upon India?—I should think that, if the wording of the Circular is such as I believe it to be, he would find it very difficult to interfere; and I have no reason to believe that he would of himself, viewing it as a question of military discipline, take such a lively interest in the financial affairs of India as to do for a soldier in India less than he would do, under the same circular, for a soldier in England. I presume, under that Circular, any soldier in England recommended by his commanding officer to pass after three years' service into the reserve will be, as a rule, allowed to pass into it; and, as it is a mere question of military arrangement, I presume the same thing would happen in India under the rule as it now stands, unless they were to insert a clause saying "with the sanction of the higher military authorities," or something of that kind. Then the Government of India might step in and tell the Com-

Major Gen. Sir *T. T. Pears*, K.C.B.

5 June 1874.

Mr. *Campbell-Bannerman*—continued.

mander in Chief that it must not be done in India.

778. I have no doubt the War Office would prevent its being done injuriously to India; but if the case were as you say, that this rule, being introduced for this country, must be made applicable to India, and would not work well there, is not that a proof of what I was saying before, that our connection with India prevented us in many cases from adopting what would be the cheapest and best organisation at home?—Very likely, if you only think of the organisation at home; but I did not say that, if the rule were introduced here, it must necessarily be introduced in India. I said, if the clause stands as now, then you must apply it to a soldier in India as well as in England; but you might have a different regulation, as you very often have for a man on foreign service.

779. Then there is only one other point which I wish to question you about; you say that a great many recruits have gone out lately with less than seven months' training?—So I am told.

780. Can you state that as a fact?—Yes; it is in that correspondence, I think, stated by Mr. Seccombe.

781. One or two instances are given?—I think there are a great many more. It has been his business more than mine to look at the numbers, but I have seen the rolls.

782. You are aware that the rule laid down by the House of Commons as to the ages of recruits going out to India caused great inconvenience for some time, and made it necessary sometimes to send out a recruit of over 20 who had had insufficient training, rather than a recruit of under 20 who had had sufficient training?—It may be so, very likely.

783. That may have been the cause to some extent of this occurrence?—Yes.

Mr. *Onslow*.

784. Could you in a few words state to the Committee how your mode of recruiting for India would be cheaper than the present mode of recruiting for India; you have merely said that you think it would be; would you give us your reasons for thinking so?—Simply because I think if you had a central depôt, one or more, as might be considered sufficient, you might recruit with a very much smaller staff the same number of men that you want. The general expenses of the depôts would be very much less. The old East India Company at Warley had about six officers generally for the whole of their recruits.

785. In fact you would revert to the old system?—Something of the same kind, centralising your recruiting authorities.

786. I put this question to Mr. Milton, and I should like to put it to you; considering that India now pays for the whole training of the recruit in England, including the transport from England to India, and considering that under the short service system a man may leave in three or in six years, coming home to England and being put on the reserve, that is on the effective strength of the English army, India pays the whole expense of the training of that man?—Certainly.

787. Therefore a great portion of the army reserve in England would be paid for wholly by India, and not a fraction of the training of that man would be paid by the English revenues?—The whole of the cost involved in making that

Mr. *Onslow*—continued.

man a soldier would be borne by India; you cannot say that the cost of the reserve would be borne by India; that would be borne by the British Government.

788. Still he would be on the effective strength of the British army, having been paid for wholly by India?—Yes.

789. I should like to know how you would propose to get stores for India in a cheaper way than they are got at the present time; I know from experience that that has been a very sore point with the Indian Government, the enormous expense of the stores sent out to India; how would you propose to get them cheaper?—I think I said, in reply to a former question, that I was not aware that there was any fault to be found with the War Office for the charges made for the stores, or that we could get warlike stores equally good at a cheaper rate.

790. I am talking of general stores?—I am afraid I could not speak on that subject.

791. I think you stated, in answer to a question by the Chairman, that the cost of sending certain officers out to India should be, in your opinion, borne by the Imperial revenue, and not by the Indian revenue; what class of officers do you mean by that?—Well, there are officers who go out under the authority of the War Office, for instance, in exchange from one regiment to another.

792. I do not know whether you are aware of this case; do you recollect Colonel Sennant going out to India in connection with scientific purposes?—Yes; he is an Indian officer.

793. But he took out a staff from England with him?—I dare say he did; it was all done at Indian expense; I think it was fair enough; he is an Indian officer, always employed in India, and India was ready to bear its share, which would not be very great, for observations of that kind.

794. It was for English purposes, was it not?—But for scientific observations of that kind the Indian Government are ready to bear their share of the expense.

795. I think they bore the whole of that?—Of the expense in India they probably might, but I cannot say for certain.

796. Since you have been in the office, has it been the practice that organic changes should be made in the army without consulting the India Office?—No, as a general rule, as far as my recollection serves me, they were sometimes discussed; but in some cases I think they would not have been unless we had heard of them, and raised some objections. There was the remarkable case of the promotion of captains of artillery to be majors, which led us into considerable cost, or will do so; and I think it will be found that we were never consulted on that at all, until it was suggested to the War Office that we heard it was going to be done, and then we had several conversations, but there was no official reference to us whatever; very likely they did not see at the time that we had anything to do with it; I do not mean to say but that the moment they find that our interests are concerned they are quite ready to discuss it.

Mr. *Campbell-Bannerman*.

797. You are constantly in communication with the Indian Military Secretary at the War Office?—You mean the Assistant Military Secretary. Constantly.

Mr. *Campbell-Bannerman*—continued.

798. So that you have every opportunity of hearing of things of this nature?—Yes, and then I take notice of them.

Mr. *Onslow.*

799. If the War Office gives you notice of these charges, is it the rule for you always to ask the opinion of the Viceroy and the Government of India as regards these charges?—Generally, if we find there is time; but in some cases there really is not time, and therefore we take it upon ourselves, and when they are going to propose a measure which we think for the interest of India we do not think it necessary to do so.

800. Without consultation with the Viceroy and the Government of India extra charges are imposed on India, even though India may not consider, *quoad* India, that these charges are beneficial?—I should be sorry to answer that affirmatively, because in all these cases they are charges that have arisen out of what the War Office and the Horse Guards consider to be necessary charges, and we are not in a position to dispute the necessity of such charges in the British military system. In the case I refer to the War Office and the Horse Guards said, after deliberation, "We will convert all our first captains of artillery and engineers into majors." We cannot say, "That is a very imprudent arrangement;" all we can say is, "It will cost us so many thousand pounds, and we hope that you will avoid it if you can."

801. Do you, or do you not, think that India should have been consulted as regards the present system of getting recruits, so that she should have given her opinion whether the present mode was beneficial to India or not in comparison with the former mode?—I do not think we could expect to be consulted on the purely military part of the question; but we may fairly be warned that a measure is under consideration, and that it will probably cost us so much more money; and then the two Secretaries of State, or the two departments, might consider the matter, and try to find out some mode of saving the Government of India from this large additional cost.

802. I think you have been in the office since the termination of the Indian Mutiny?—I have been in it since 1861.

803. Just after the amalgamation?—Yes.

804. Is it your opinion that during the time you have been in the office since India has been under the Crown, India has paid charges to which she has not been justly liable?—That depends entirely upon the point of view from which the question is seen.

805. I mean, is it your opinion and that of the India Office that she has?—There are no charges but charges of a very trifling kind, made or admitted, that could not be very fairly supported from Mr. Cardwell's point of view, of our being partners; but it leaves the great question open, whether we are partners, and ought to be charged the full cost of these things, no matter how that cost is occasioned.

806. In one of your answers to Sir Thomas Bazley you say that the home charges of the Government of India in England are not excessive. Do you mean by that to bind yourself to the opinion that the present mode of governing India in England is the best and cheapest possible?—No; I should be sorry to offer an opinion on such a subject.

Mr. *Fawcett.*

807. You have given several instances of changes being carried out by the War Office and the Horse Guards which produce an important effect to the finances of India without the Indian authorities being consulted, have you not?—I gave one or two instances.

808. You mentioned the case of the pay of the soldier being raised, which would throw an additional charge on India of about 250,000 *l.*—Yes.

809. As a set-off against that, Mr. Campbell-Bannerman mentioned the abolition of the re-engagement penny, did he not?—No; he was alluding to a subsequent change in the pay which took place last year. It was not a set-off against the 250,000 *l.*.

810. Against another change, however?—Yes. But this abolition of the re-engagement penny affords another instance, does it not, of what you were saying, that changes are carried out affecting the finances of India by the War Office and the Horse Guards, without consulting India; because the abolition of the re-engagement penny might discourage men re-engaging in India, and in that way throw an additional financial burden on India, might it not?—It might do so.

811. Is there any evidence that when the authorities at the Horse Guards and the War Office contemplated adopting, and did adopt, the short service system, they considered the financial effect on India of that change?—I think they were not altogether unmindful of it.

812. But has there ever been any document brought to light which shows that they ever even took the trouble to consider what the financial effect would be upon India; is there any official record showing that?—I am not aware of any such.

813. I have asked for any official record; I have not been able to obtain any, and you say that you are not aware of any such?—I am not aware of any such.

814. Then, after what you state, that changes may be carried out by the War Office and Horse Guards, which affect the finances of India without consulting India at all, the question of partnership may be exhibited in this light, may it not, that two people enter into partnership, A. and B.; A. takes the control of the expenses into his own hands, and says, "I will conduct the establishment on certain principles;" those principles would involve a certain expense; "you, B., shall not be consulted, but whatever the aggregate expenditure is, you, B., in the end must contribute your quota:" that is the kind of partnership between India and England, is it not?—I think, so far as regards the expenses due to the organisation of the British army, it is so.

815. Therefore, it is very different from the ordinary notion of a commercial partnership, in which it is supposed that each of the partners should have a voice as to the expenditure?—Certainly; but I do not mean for a moment that it would be convenient or possible for a department like that of the Secretary of State for India to interfere, or be consulted even, on questions of military organization.

816. I am not saying that now; but if the idea of a partnership is presented it is well, is it not, that the exact nature of the partnership should be exhibited and described; and with regard to your own opinion you think that I have not described the exact nature of the partnership incorrectly?—I think you have not.

Major-Gen. Sir *T. T. Pears*, K.C.B.

5 June 1874.

Major-Gen. Sir *T. T. Pears*, K.C.B.

5 June 1874.

Mr. *Fawcett*—continued.

817. Now, you have mentioned an instance of the uncertain effect produced upon the finances of India by the present system of recruiting which Mr. Campbell-Bannerman has described, as far as I can understand, as the new brigade system; you do not know, and no one else knows, what effect that will have upon the finances of India, or what principles will be adopted to regulate the charge for India; that has not been determined, has it?—It has not.

818. Therefore it comes to this, that a change is carried out in the Indian army without actually taking the trouble to ascertain on what principle; when that change is carried out, the charge associated with it shall be borne by India?—It is a change, not in the Indian army, but in the British army.

819. Still that change will affect the finances of India; but no trouble was taken before the change was carried out to determine in what particular way the future charges of India should be appropriated?—No; and I do not think it was necessary that that should be determined before the change was carried out. When the military authorities in this country determine that such a system is desirable I think it reasonable that they should then, in communication with the Indian Government, settle a fair and proper apportionment of the charges between the two countries.

820. But suppose a certain change in the army is going to be carried out, or is contemplated, that change produces an important financial effect upon India; considering the critical nature of Indian finance (for the condition of Indian finance has been so critical, that in order to raise 500,000 *l.* it was necessaryto impose a tax, which produced a most serious amount of discontent from one end of India to the other), and considering that India is an integral part of the British empire, ought it not to be am important element in determining whether that change ought or ought not to be carried out, to decide beforehand what the financial effect will be upon India?—Certainly; I think, as far as possible.

821. Because this is quite possible, that you may conceive of some change to be carried out in regard to which there is a difference of opinion, whether, so far as England alone is concerned, it would be advisable to carry it out; but when you consider the financial effect of that change on India, it may make it very undesirable, even looking upon it as an Imperial question?—No doubt.

822. And, as I understand you, changes have been repeatedly carried out without ascertaining, or endeavouring to ascertain, the financial effect on India?—Yes; but the changes to which I allude may be divided into two classes; the one class comprises those changes which necessarily and inevitably lead to a certain charge on Indian finances, such as increase of pay and variations in the grades of officers serving in this country; but a change in the organisation of the depôts at home does not necessarily lead, and ought not necessarily to lead, to an enhancement of the charges to India.

823. But, as I understand you, it is possible that it may lead to that?—It is only possible, if the two Secretaries of State at the head of the Departments and the Treasury cannot agree upon some equitable arrangement by which a fair and

Mr. *Fawcett*—continued.

equitable portion of the charge shall be made against India.

824. But for 12 or 15 years you know, with reference to recruits, they have not succeeded in arriving at an equitable plan?—The present system has only lasted about four years; they had the capitation rate before that, and it was investigated with great care and attention, and fixed upon, what was generally considered the basis then adopted in India of paying for all its expenses, an equitable arrangement.

825. Still you did not think the principle was an equitable one?—I said that it was open to question the principle of the Indian Government paying everything that it cost us to keep India in subjection.

826. There are changes relating to the pay of the soldier of which you could at once calculate the financial effect on India; there are other changes, such, for instance, as the introduction of the short service system, of which it is more difficult to calculate, that they require a much more careful investigation to ascertain the financial effect on India; as I understand you, you are not aware that that element of the subject was even considered by the military authorities in England when it was introduced?—I think it was considered, but not officially discussed; we had a great many conversations on the subject with Mr. Cardwell, and I can safely say this, that in the conversations the probable cost to India of a shortened service was fully and frequently discussed, but it was never gone into or placed in an official shape, nor was it ever gone into very closely.

827. Was the India Office, before this short time service was carried out, or the Government of India, ever officially asked to state their opinions as to the financial effect of it; are there any despatches on the subject in existence?—I think not.

828. There may be of course conversations, but still there is this important change carried out, and the officials are never asked in an official way to state their opinion as to the financial effect on India?—I think that is so.

829. Now, coming to another very important branch of the subject to which you have alluded, you say these questions of charges may or may not be referred to Mr. Seccombe's Committee, I mean the charges under the new system "of brigade depôts?"—Yes.

830. Now, suppose they are referred to Mr. Seccombe's Committee; there are two representatives on Mr. Seccombe's Committee from the India Office, and two from the War Office?—Yes.

831. And suppose they cannot agree; they have not agreed, have they, or come to any settlement as to the principle of charging recruits during the last year?—They have not been called upon to consider that since they made their Report two or three years ago.

832. Then, according to the present plan, you are going on on a kind of happy-go-lucky principle?—No, according to the present plan, until some other charge is determined upon, that which was fixed by their Report holds good.

833. Not for the last year, does it?—Unless they determine on some other.

834. And you do not know whether they will or not?—No.

835. Therefore at the present time the affair is in an absolute state of suspense?—It is so.

836. Now,

Mr. *Fawcett*—continued.

836. Now, suppose you referred it to this Committee (this seems to me to indicate the essential principle of the Government of India), and the representatives of the India Office and the War Office cannot agree, then it becomes a question between the two Secretaries of State, and ultimately a question for the Cabinet, does it not?—I presume so; but the Secretaries of State, I believe, sometimes refer things of that sort to arbitration if they cannot agree.

837. Still it does after all come to a question for the Cabinet, does it not?—Not necessarily; I have known a case in which it was referred to arbitration, and they have agreed to accept the decision of the arbitrator, some impartial man of experience, on whose judgment they can rely.

838. Can you give me any instances of such arbitration, and state who was appointed as arbitrator?—Yes; we had a long and rather tiresome controversy with the Admiralty last year, I think, regarding the adjustment of some expenses arising out of the troop service, and we could not agree, and the First Lord of the Admiralty and the Secretary of State for India agreed to refer it to the arbitration of Mr. Stansfeld, and then his decision was immediately accepted and the matter was closed.

839. Could you mention any other instances?—No, not at this moment. There is an arbitration at present going on on some question between the India Office and the War Office.

840. You have mentioned certain charges, in reply to Sir Thomas Bazley, borne by India; I will ask you this question, but do not answer it unless you like: can you explain to me on what principle it is that the salary of the Secretary of State of State for the Colonies, and the whole of the expense of the building of the Colonial Office, and the salaries of all the clerks of the Colonial Office, are paid for by England, whereas the salary of the Secretary of State for India, and all the expenses of the India Office, the new building, and everything else, are paid for by India?—I cannot explain it by anything else than the fact, which I believe to be the fact, that the British Government paid for the troops employed in the colonies generally

841. Not now?—For all the troops that they have; India and Ceylon seem, according to the last accounts, to be the only two foreign settlements that paid anything at all approaching to their military expenses.

842. But you cannot suggest any other reason for the fact which I have put before you, except that the principle is carried out with regard to the army?—No, I can suggest no reason.

Sir *George Balfour*.

843. You have been asked certain questions with reference to recruits raised for India; was it not the fact that India could always obtain recruits when the other branches of the home army could not obtain them?—I believe so.

844. In the course of a year after those 10,000 were discharged from India, is it not the fact that there was a force of upwards of 16,000 men found in India by recruits raised in this country?—I cannot speak to the figures.

845. Still, in 1861, you are aware that upwards of 17,000 men were transferred to the service of the Imperial army?—Yes, I am aware that a large number were transferred.

846. But the exact number you leave in doubt?—Yes.

Sir *George Balfour*—continued.

847. There never was any complaint with reference to the class of men obtained for India for Indian service in former years, was there?—I think not. The only complaint I ever heard was that there were too many gentlemen among them.

848. But still they were intelligent and good soldiers in every respect?—Very much so, as far as I can remember them.

849. You are also aware that both the Recruiting Commissions, after careful inquiry, distinctly reported that, in respect to recruits, India was always well supplied?—I do not remember the Report, but I have no doubt they would say so.

850. Then, again, with reference to men re-engaging for service in India, it has always been the practice and always been easy to obtain any number of men to volunteer for further service from regiments going home to regiments remaining in India, has it not?—Yes.

851. And by payment of a small bounty India was able thereby to save a large expense on account of passage?—Yes.

852. A question was asked by the honourable Member for Stirling as to the fact of 25 battalions having been raised when the Mutiny in India broke out; do you think it just to say that India ought to be charged with that large increase, seeing that during the whole war in the Crimea England only had 105 battalions, with an established strength of 170,000 infantry, whereas, in the Indian Mutiny the force never came up to 140,000 men and officers, and yet 25 battalions were forthwith formed?—I do not quite understand the object of the question.

853. The object of the question is to see whether India ought to be charged now for the large augmentation to the army which took place in 1857, namely by adding to its infantry 25 extra battalions?—But India never has been charged for anything but the troops, as I understand, that were serving in India.

854. I did not mean charges in the way of expenses; but the statement was, that in consequence of the Indian Mutiny, England was obliged to add to her army to the extent of 25 battalions?—No doubt the addition of a large number of troops, whether for a rebellion in India or a war in the Crimea, would lead, when their services ceased in this country, to considerable embarrassment in disposing of them.

855. But if the war was carried out in the Crimea with only 105 battalions, with a larger force of infantry than was maintained during the Mutiny, it does not seem right to say, does it, that the Indian Mutiny was the cause of that number of infantry battalions being increased?—I assume from what Mr. Campbell-Bannerman said that they were raised at the time, and for service in India. As I understand, he merely stated the fact, to show that the breaking up of regiments after the Mutiny was quelled led to considerable embarrassment to the War Department here.

856. With regard to the depôts; can you remember how many changes in the depôt establishment have taken place since the Crimean war, in connection with Indian service?—No, I cannot say.

857. You remember the depôt strength of 15 officers and men maintained at home before the mutiny for every infantry regiment in India, for supplying recruits to the battalion in India?—I do not remember that.

Major Gen. Sir *T. T. Pears*, K.C.B.

5 June 1874.

Sir *George Balfour*—continued.

858. You remember that when the mutiny broke out they forthwith raised the depôts to 221 men and officers?—I remember that they were augmented.

859. Do you remember that in 1861, at the urgent request of the India Office, the War Office and the Horse Guards diminished the depôts to 121 men and officers?—I remember there was some correspondence on the subject, but I could not speak at this moment as to the actual figures.

860. Still you remember, at the time you entered the India Office, there had been a great reduction?—Yes.

861. Then in 1870 another reduction took place in the establishment of the depôts, did it not?—I think that was during the existence of the capitation rate.

802. It was at the close of the capitation rate?—Then almost immediately after the close of the capitation rate came the new organisation of having with every allied battalion two companies to form the depôt of the battalion in India.

863. And the strength of those companies was somewhat reduced then, was it not?—We did not trouble ourselves about the strength of the companies; we merely considered and determined how much of that strength should be charged to India, and, as I said before, the strength that was to be charged to India was the whole of the officers, the non-commissioned officers, and, I think, nine privates.

864. In the course of your evidence you referred to the former idea about India bearing certain charges of a general nature, the Commander in Chief's pay and other general charges?—Yes.

865. Is this the letter to which you referred, a letter dated 24th January 1861, and addressed by Sir Alexander Tulloch to the War Office, containing this passage: "That Indian revenues should be made, in respect of depôts and recruits, to bear a portion of the general, commissariat, medical, and ecclesiastical staff of the army of the United Kingdom; also of the expense of military prisons, of the offices of the Secretary of State for War, of the Commander in Chief, and of other military departments, and of Chelsea and other military hospitals"?—I was alluding, I believe, to that correspondence, not to that particular letter; but I remember only that Lord Herbert, who was, I think, Secretary of State for War at the time, said he would waive those charges in consideration of the value to England of the services of the men at the depôts."

866. Still that is the instance to which you referred, at all events; the charges are of that character?—Yes.

867. And are these the charges to which you referred in that letter to the War Office as excessive charges?—They are not precisely the same as those mentioned in the correspondence recently laid before Parliament; some may be the same, but they are equally of a general character.

868. And it is these charges that there is so strong an objection to India being in any way made liable for?—Yes.

869. You have mentioned that you think that those charges which are Imperial, in connection with the raising of recruits, should not be borne by India. You are aware that the Governor General of India has also made that same suggestion?—I am aware that in a recent letter Lord Northbrook has made a suggestion of the same kind.

Sir *George Balfour*—continued.

870. Do you think it is possible to divide the charges in such a manner as to enable the War Office and the India Office to come to a satisfactory settlement; I refer to the division which the Governor General of India in Paragraph 30 of his Despatch suggests?—I do not think it would be possible or reasonable to attempt to divide the charges upon any arithmetical principles; but I think a few experienced and impartial men might take the question, with all these details before them, and might, considering the relative position of the two countries, then fairly be expected to arrive at a sound and equitable conclusion as to what ought in fairness to be charged to India, and what ought not.

871. But you have no data at the present moment to suggest to the Committee by which this settlement could in future be effected?—No.

872. There was some confusion in reference to the charge for recruits which at present exists. Is it not the case that the demand which has been sent in for two years is based upon calculations made during the time that the capitation rate was in existence?—I am not aware that it is; as I am not a member of the Committee, I cannot speak with certainty, but I believe that most of the calculations contained in their Report are made on the actual facts at the time; they took the various charges involved in the soldier's pay and maintenance, and recruiting expenses at the time at which they were considering that; but as I am not a member of the Committee, I cannot speak with any certainty on the subject.

873. Still those charges have been calculated out in regard to the number maintained in these depôts from year to year?—I do not think that the charges which the committee arrived at, and which are the last charges that have been determined, had any reference to the number of men from year to year retained at the depôts, because the Committee will find, if they look at the Report of that Committee, that instead of taking any particular number of men as actually retained at the depôts, they took an arbitrary number for whom the charge should be made, and no more; they took the pay of four officers, all the non-commissioned officers, and nine men; that was to constitute the whole of the establishment of the depôt for which India was to be liable; therefore it had no reference to the number of men that may have been retained at any former time in the depôt.

874. Will you kindly glance at page 5 of the Report of Mr. Seccombe's Committee, and see whether you have answered consistently with the fact?—I do not think the statement on that page was taken into consideration at all; it was merely a Return for information; but I do not think it will be found to have affected the charge they thought should be made prospectively for a recruit. This was to show them what had actually been expended on the depôts before; but I do not think it formed a basis of calculation for the future.

875. Is not that average of 205 *l.* which you see in the Return there the average to which you referred in the evidence, and objected to?—I referred to this with reference to that statement, and I think I said at the time that this state of things existed whilst the capitation rate was in force, that we had nothing to do with the depôts ourselves; that they may have cost the War Office 205 *l.*, but did not cost us that; we were

paying

Sir *George Balfour*—continued.

paying so much as a capitation rate for every man in India; but when Mr. Seccombe's Committee came to consider afterwards what should be the prospective charge for the recruit, they took no cognizance whatever of that cost of 205 *l.* during that time; that has not served, as far as I see at all, as a basis for their calculation.

876. But is it not the fact that the Committee from these calculations distinctly stated that India, so far from being overcharged by being charged 63 *l.*, ought to have been charged much more if the actual expenses of the depôts had been taken as the basis?—I do not remember the Committee saying so. It is some time since I have read their Report, but it is very possible they may have said so, and it would be quite true that if the actual expense which the depôts have cost the War Office were charged to us, it would be much more than is now charged; but that was apparently owing to some mismanagement in retaining a large number of men at the depôts; but the estimates now made of 63 *l.* for the infantry, and 136 *l.* for the cavalry, are based on the calculation of the actual cost of the recruit, and the actual cost of the two depôt companies at the time being, and here is the estimate given.

877. But seeing that they must have had data before them to arrive at that cost of 63 *l.* for an infantry recruit, and 136 *l.* for a cavalry recruit, and that those data were based upon the mismanagement connected with the retention of large numbers at the depôts, the expense to India has thereby been swelled to an unusual degree?—I do not think any of the items in this estimate of the present cost of an infantry recruit would be found to have been drawn from that statement, which showed that each recruit cost 205 *l.* They are all personal, individual charges, which can be known. They are quite irrespective of any management or mismanagement. There is the pay, there is the beer money, marching money, and all that sort of thing which attaches to the individual soldier; and therefore I do not think it depended at all upon the result of the management of the depôts by the War Office between 1861 and 1867, which is given at page 5.

878. What was the agreement, with reference to the capitation rate, at which infantry and cavalry soldiers should be paid for; how many months were they to be under training?—I do not remember; I think it was six. That was in General Tulloch's Committee, I presume.

879. But the capitation rate was fixed in reference to the period of detention in the depôts at home for the purpose of the men being perfectly trained?—No doubt.

880. Have you ever been able to ascertain whether that training was given to the soldier during that time?—No; we have no means of knowing, inasmuch as we were living under a capitation rate, which relieved us from all responsibility connected with the detailed working of the home establishment. We had no right to look into those details. We said, "We will pay you 10 *l.* a man for every soldier in India, and for that you must give us the number of recruits that we want from year to year."

881. They were to be perfectly trained recruits, were they not?—Yes, no doubt.

882. And do you happen to remember the

Sir *George Balfour*—continued.

number of months' training for an infantry or cavalry soldier?—I do not.

883. Perhaps you could ascertain it?—Yes, I could from the War Office, but we have not got it at our office.

884. Since the capitation rate has ceased, India is now charged for the recruits according to fixed rates, which charges must be paid for two years or longer, until such time as a new rate is agreed upon?—I believe the agreement was that it should last for three years, and I do not think it is said that if no new agreement is come to that should hold good, it would have to be settled between the two Secretaries of State. It was to be open to revision, and has not been revised yet.

885. Has the War Office sent in any demand for claims on account of the recruits since the capitation rate ceased?—They have, I believe, for the first year or two.

886. Have you been able to ascertain what charges they made for these recruits, and what number?—Yes; they charge us this lump charge of 63 *l.* for an infantry man; but they are subjected now to a close scrutiny in the India Office on the part of the auditor and others; they found that they had reason to object to a certain class of men sent out as recruits who were so much older soldiers that they had no right to charge for them. These things occupy a considerable time in scrutiny, so that I do not think any of the claims actually passed.

887. Are you aware whether recruits sent out for which the charge has been made by the War Office have gone through the regular course of drill which will make them efficient soldiers on arriving in India?—We know that some of them, in the case of the infantry, have not gone through the complete course. With regard to the cavalry, the number is fewer, and I cannot speak with certainty. With regard to artillery, all of them seem to have done so, because they make a separate charge for men who have gone through the whole riding course, and those who have not.

888. Perhaps you will ascertain, before next time, the period which men have been at drill and exercise before going out to India, both in the cavalry and infantry?—In regard to the infantry there is a statement in Mr. Seccombe's letter in that correspondence. I think the War Office would give that evidence better. I should, of course, be very glad to get it if it is wanted, but as they manage the depôts and send the men out, they could, of course, give it at once.

889. If you should have it at the India Office, perhaps you would place before the Committee some statements showing the period of service, the period of drilling which the recruits have undergone of late years before going to India?—We have very complete rolls, which I called for some time ago from the Horse Guards, which show us all that; but in that letter of Mr. Seccombe's I think there is an analysis given.

Mr. *Stanley*.

890. I suppose you could only give us at second-hand any return as to the amount of time of drill for the recruits; you would get it from the Horse Guards?—We could only get it from the Horse Guards; but as regards the infantry, and the cavalry, too, in fact, we do get returns for financial purposes, showing when a man enlisted, and

Major Gen. Sir *T. T. Pears*, K.C.B.

5 June 1874.

Mr. *Stanley*—continued.

when he embarked; but we do not know, out of six or eight, how many of those the man was riding.

Sir *George Balfour*.

891. Still, if they have not been more than three or four months enlisted, they could not have had more than that amount of drill?—Certainly not.

892. You mentioned that Lord Mayo's proposal was for the purpose of reducing five regiments, and that only two regiments were reduced?—Yes, of infantry.

893. Still there was a reduction of two regiments of cavalry?—Yes.

894. You are also aware that the War Office on that occasion also effected a very considerable economy in reducing the regiments of cavalry from seven to six troops, and the infantry from 10 companies to eight companies?—Yes.

895. And thereby India was spared no less than two complete regiments of cavalry, making total troops reduced, 23 troops in all?—I do not remember in the cavalry, but in the infantry, although they threw the 10 companies into eight, the number of fighting men remained nearly the same; the officers were reduced, and that constituted the essence of the financial measure.

896. Were not the infantry also reduced from 500 companies to 420?—The officers were reduced, but the men were merely thrown into the other companies.

897. That was the essence of Lord Mayo's plan, not to reduce the number of men, but to reduce the number of regiments by making them larger?—Yes; he wanted to reduce regiments.

898. The modification of that by the War Office plan was to reduce the number of companies and troops in each regiment throughout the extent of the service?—Yes.

899. And India was thereby supposed to have been benefited to the extent of half-a-million?—It was a considerable saving, not quite so much as Lord Mayo anticipated, but nearly; and we have to bear the cost, and are still bearing it, of the reduction and absorption of the officers.

900. You do not think you are yet free from that charge of the officers brought home?—No.

901. You made no objection at that time to that charge being borne by India for the officers who were reduced, did you?—We said that if the regiments were brought home we would bear the charge until the officers and men were absorbed into the home establishments; it was a clear saving, and we had every reason to hope that the War Office would dispose of the officers as soon as possible.

902. We have had many changes connected with the organisation of regiments in India, from eight companies to nine, and 10 and 12 companies, have we not?—Yes; there have been many changes.

903. Do you recollect any instance in which India was consulted, of late years, especially with reference to these changes in the regiments; I mean have the authorities here been consulted?—I cannot say whether in changes of that nature the authorities of the India Office have been always consulted; in fact, since I have been in office this change is the only one of the kind that I remember; previously to that there were changes occasionally made in the strength of regiments and their organisation; but we were only consulted on this occasion in so far that it

Sir *George Balfour*—continued.

was put before us as an alternative scheme to the proposal of the Government of India; therefore we were consulted in it.

904. But you remember the instance wherein the War Office reduced the strength of regiments by 261 non-commissioned officers and men, and the officers only by one?—I do not remember that.

905. Perhaps you will kindly refer to the correspondence that took place in 1861 connected with the question?—It will have been before my time probably; I will look at it.

906. Having few regiments in India of a considerable strength, instead of many regiments of a small strength, was one of the modes by which military expenditure in India could be kept down?—Certainly; the most economical organisation is that of having few regiments at a high strength; but that has always been objected to by the military authorities in India beyond certain limits, as rendering the regiments unwieldy, and they greatly object to the practice of dividing regiments for outposts, and so on.

907. But it is with reference to those that the mere pay of the non-commissioned officers and men forms but a small fraction of the total cost of a regiment?—Well, it is not so large a portion as might be supposed. I do not know that we should call it small at this moment; I cannot say; but I think the pay of the commissioned officers of a regiment alone is about one-third of the whole cost; but I am speaking from recollection.

908. But you are aware that the cost of the officers themselves is a much larger charge than the cost of the men?—In the infantry the pay is about the same.

909. And therefore with fewer regiments in India, but of a higher strength with a diminished number of officers, the charge for officers will be less?—Yes.

910. Therefore, seeing the great importance of diminishing the number of officers, the change in 1870, whereby officers were considerably reduced, was one mode by which the War Office succeeded in effecting economy in India?—No doubt.

911. Now with regard to the stores, you mention that the expense of stores is considerable; but it depends mainly, does it not, upon the demands of India?—Entirely.

912. And although the cost of stores has increased of late years, it is entirely owing to the quantity that has been demanded, and the new description of stores that has been required?—Yes.

913. Now, with regard to the War Office expenditure, you thought there were some charges in the manufacturing establishments of the War Office which need not be charged against India?—I do not think I said so. I said that it was one of those questions which would arise out of what I consider to be one of the fundamental questions, whether we should bear a share in the maintenance of the large Imperial establishments, thrown upon each article as it is turned out from those establishments and manufactories; and it may be a fair question to put before experienced and impartial men whether that should be done. Their principle now is, as I have no doubt most of the Committee know, to charge upon every article, such as a gun, a per-centage upon the whole of the establishments; superintendence, interest

Sir *George Balfour*—continued.

interest on capital, maintenance of buildings, and everything of that kind; and in itself, as a matter of business, it is a fair enough way of apportioning the charge to any purchaser. But there is now a committee sitting to investigate the whole question of these per-centages, and it remains to be seen what the result of their deliberations may be.

914. In another committee which I am sitting on the per-centages were different altogether from what the War Office is charging?—They are different per-centages, but the principle is the same, in my opinion. Some people think that between two branches of the same empire the only charge should be the actual cost incurred by the manufacture of the article, which would not have been incurred if that article had not been supplied. Others think that India should be dealt with by the War Office and Admiralty as any purchaser would be dealt with by a manufacturer, and pay the full cost of the article, including per-centages, upon the whole of the superintendence and the capital.

915. If you could come before the Committee another day perhaps you would look over the Reports upon the manufacturing establishments of the War Office, and see what items there are there which you think might be omitted from the charges against India?—I am not prepared to say that there are any. I think, upon the assumption that we ought to be dealt with as ordinary purchasers going to an independent firm, all their charges are fair and usual. The charges will be found very clearly stated in the Report of the committee over which Sir James Fergusson was the chairman, on the supply of stores to India, and there we see what was the War Office charge.

916. You do not object to the three and a half per cent. being charged upon the capital employed in manufacturing stores for India, do you?—I say that it is a question to be considered as a part of the larger question as to the relation which exists between the two Governments; I see no objection to that, if we are to be treated as ordinary purchasers.

917. But still, looking at the comparative charges of the War Department for guns, for instance, and those charges made by Messrs. Armstrong, and seeing the difference in favour of the War Office charges, you would not think India unfairly dealt with, if India is benefited by having the advantage of the manufacturing department of the War Office, would you?—No.

918. Therefore the charges to which you refer of the Admiralty may probably appear to you to be of a different character from those included in the War Office charges?—It may be that, making an allowance for the difference of the article which they have to supply, they are very much of the same kind. The question is, when the Admiralty execute some works for us in connection with our troop ships, what they shall add and charge as adding to the actual material and labour; and that constitutes what they call the per-centage, and I believe that it mounts up as high as 25 to 30 per cent. on the actual cost for material and labour. It amounts to the same sort of thing as you find charged by the War Office for interest on building, share of administration, and all that sort of thing.

919. Still, if you compare the two per-centages,

Sir *George Balfour*—continued.

Major Gen. Sir *T. T. Pears*, K.C.B.

5 June 1874.

I hope you will find that those of the War Office are not open to the same objection?—I am not aware that the Admiralty charges are open to objection. It seems to me that they are not more, or much more so, than the War Office charges. That has not come under my observation, but it comes within the province of a committee which is now sitting. Whatever may be decided on this Committee on the Admiralty charges will, I think, as a matter of course, be brought to bear upon our transactions with the War Office and their transactions with us. That leads to the very large question whether we shall be considered as two friendly departments which merely charge each other the actual cost.

920. There is one charge connected with the War Office, and that is the pay of regimental colonels of regiments in India; do you think that the whole of that charge should fall upon India, seeing that these officers never perform any service for India?—I think that if the officers are to be maintained at all as a part of the regimental organisation it must fall upon India. If it is an admitted necessity that each regiment must have a colonel, wherever he is we must pay for him; we do not want him in India.

921. Is it not given in the form of a reward for good service rendered in former years?—It no doubt is so in fact, but at the present moment he is maintained as a portion of the British regimental establishment, and if we were to give up India altogether, and those 50 regiments were dispensed with, we should dispense with the colonels; not otherwise.

922. With regard to that sum of 250,000 *l.*, which you mentioned as the cost of increase of pay in 1866, you are aware that that was not altogether the charge for the pay; it was for re-engaging men at the same time?—It was; it was the whole cost of the measure, as I understand it, nearly.

923. But inasmuch as the re-engagement in 1867 was merely an anticipated re-engagement for 10 years, and that the cost did not go on year by year, the amount of 250,000 *l.* must be diminished by the sum due to the engagement of men in the subsequent year?—That I was not aware of.

924. You are aware that the seven years' men were allowed to anticipate their engagement at the end of the 10 years?—Yes; but I thought that was only for the special occasion.

925. But inasmuch as the cost of one year was swelled up very considerably by the liability which ought to have been spread over a series of years, the sum of 250,000 *l.* can hardly be said to be the actual charge from the twopence a day?—I have often seen it stated by Indian authorities; I thought that the whole of the arrangements involved in the charges of that year had cost us, not the pay alone, the sum of 250,000 *l.*, but it may have been a little below that figure.

926. The late increase of a penny halfpenny to the soldier was carried out for the purpose of making a very important change in the system of paying the army?—It was carried out in connection with that important change.

927. It was done for the purpose of doing away with stoppages, and preventing the soldier from supposing that he had his pay diminished?—Yes.

928. That system had been in force in India for many years; and the rations were entirely different from the pay of the soldier?—Yes.

929. Therefore

Major Gen. Sir *T. T. Pears*, K.C.B.

5 June 1874.

Sir *George Balfour*—continued.

929. Therefore the change was not necessary to assimilate the system in India to that at home?—I am afraid it was necessary for this reason, that the soldiers at home got a clear increase of pay in their hands, more than they had before, and if the soldiers in India saw that was the case, and did not get some tangible benefit, there was a general concurrence of opinion that it might lead to dissatisfaction.

930. Still the assimilation was made, not because India needed it, but because England needed it?—Yes.

931. Do you happen to remember the sum calculated for increase of pay from that measure?—They made an arrangement in India by which, without giving exactly the same amount of pay in addition, they have increased the soldier's pay all round, and, in fact, remodelled the pay tables to his advantage; and it has cost the Government about 60,000 *l.* a year.

932. And what do you calculate the majors' pay will be?—Between 30,000 *l.* and 40,000 *l.*, majors of artillery and engineers; and that is after withdrawing the battery contracts from them.

933. But if you withdraw the contracts from them you will have to provide extra charges?—Yes; but that is the estimate of the Government of India, after having made as near an estimate as they can of what it will cost them to perform the work now done by contract.

Sir *George Balfour*—continued.

934. There is, therefore, 400,000 *l.* altogether of increase to the pay and allowances of the Indian army in consequence of orders from home?—I am not aware of its being so much as that.

935. How much do you calculate it?—It will be nearly 350,000 *l.* at all events, and with a certain increase of pay for the medical service; I dare say it may not be far short of 400,000 *l.*

936. It has been remarked that India benefits by England supplying soldiers for India; is it not the case that England has benefited very considerably by India supplying soldiers for her service?—Very frequently.

937. You were commanding engineer in China in the first war?—Yes.

938. And India supplied a very large force for China?—Nearly the whole.

939. England did not furnish any portion of the pay of the troops on that occasion, did she?—Well, I believe not; but that is a financial matter that I am afraid I cannot speak of, but I think I have been told that she did not pay anything.

940. And likewise in the Persian war, India furnished a very considerable force?—Yes.

941. And no portion of the pay was paid by England?—I believe that is so.

942 India again furnished troops for Abyssinia, and no portion of the pay was borne by England?—Quite so.

Tuesday, 9th June 1874.

MEMBERS PRESENT:

Mr. Stephen Cave.	Mr. Fawcett.
Sir George Balfour.	Lord Edmond Fitzmaurice.
Mr. Balfour.	Lord George Hamilton.
Sir Thomas Bazley.	Sir Henry Havelock.
Mr. Birley.	Mr. Sampson Lloyd.
Mr. Campbell-Bannerman.	Mr. Onslow.
Mr. Dalrymple.	Mr. Eustace Smith.
Mr. Dunbar.	Mr. Stanley.

THE RIGHT HON. STEPHEN CAVE, IN THE CHAIR.

The Right Hon. WILLIAM ROSE MANSFIELD, Baron SANDHURST, G.C.B., G.C.S.I. (attending by special permission of the House of Lords); Examined.

Chairman.

943. YOU were Commander in Chief in India for a considerable number of years?—Yes, for five years.

944. And you were previously, I think, Chief of the Staff?—Previously to that I was Commander in Chief in Bombay for five years, and before that again I was rather more than two years Chief of the Staff.

945. Have you had experience of recruits sent from Warley and elsewhere during your command in India?—Yes.

946. Both of those sent from Warley and of those sent from the depôts of the British army?—Yes.

947. You have, perhaps, heard that it has been stated before this Committee that the Warley system was very much more economical; what is your opinion upon that point?—That must depend upon the point of view from which the recruits are considered; the Warley recruit was simply a lad put on board ship and sent to India, where he was transformed into a soldier.

948. You do not consider that the training which he received either at Warley or during the long voyage was sufficient to make him a soldier when he landed in India?—No; I consider that his education as a soldier commenced after he arrived in India; on the other hand, in the present day, the man arriving in India is already a trained soldier, and fit to take his place in the ranks.

949. What is the ordinary age of the recruits in the Imperial army?—The ordinary age of the recruit in the Imperial army is, on an average, about 18 years, when he is first enlisted; that is the regulation minimum age at which he can be taken; but we are aware that it often happens that young men force themselves into the service before they have attained that age; on the other hand, a certain proportion are older, probably touch 19; therefore I think you may say that, on the whole, you may take an average of about 18 years of age.

950. What time, then, are they retained in the depôt before they embark for India?—According to a rule ordered by Parliament three years ago, recruits are not now allowed to embark for India, on the grounds of health, till they are 20 years of age; I understand that this has been to a certain extent modified in practice, and that well-grown lads who have been thoroughly approved by the constituted medical authorities are allowed to embark a few months before they have attained the age of 20; but they must be considered as exceptions to the rule passed under the orders of Parliament.

Chairman—continued.

951. Then it follows that they are nearly two years in the depôt before they go to India?—It follows that they ought to be on the average certainly for a year and a half at the depôt before they embark for India. It may be as well to say here that it is no matter of option on the part of the authorities whether older men than these lads of 18 should be taken as recruits; it is simply a necessity to which we are unwillingly bound; that is to say, we cannot get men who are older than that to enter the ranks on account of the rates of wages in England.

952. If, when a regiment embarks, there are not enough of such men at the depôt, what is done with those who are under 20 years of age?—They remain at the depôt.

953. And how are the vacancies so caused filled up?—They are filled up by drafts from other regiments, of men at the proper time of life.

954. If the regiment suffers much in India, from campaigns or climate, how are the gaps filled up?—In the first place, they would be filled up from the depôt, provided the depôt had a sufficiency of men to fill such vacancies; if, on the other hand, the regiment had become non-effective, and the depôt had not a sufficiency of numbers, in such case it may be presumed that the regiment would be filled up by drafts from other corps at home, very much as a regiment embarked from England would be.

955. With volunteers from the rest of the service, you mean?—Yes.

956. And

Baron *Sandhurst*, G.C.B., G.C.S.I.
9 June 1874.

Baron *Sandhurst*, G.C.B., G.C.S.I.

9 June 1874.

Chairman—continued.

956. And is India charged anything for those men?—I believe not.

957. Merely for the recruits that come straight from the depôts?—Yes. There I must correct myself; I imagine that any man going to a regiment in England, from whatever source, for service in India would be taken as a recruit.

958. He would be charged in India as a recruit, you think?—I should imagine so.

959. On what principle, then, would the charge be made?—That is a question to which I cannot reply; it seems to me that a regiment being in India, and receiving men from England, from whatever source, all such men would come under the head of recruits.

960. Under the new system of short service, will it not be the case that soldiers will return more frequently, and that consequently India will have to pay the same as for soldiers who formerly were supposed to remain for 12 years?—It would appear so on the surface, but I am not quite sure that it turns out to be the case in practice; in point of fact, there is a very large amount of what goes by the name of re-engagement in India, and under the rules of re-engagement all men who are strong in health, and of a fairly decent character, would be invited to remain with their regiments in India after their first term of short service had been completed, and a great number of them do re-engage; as to what the proportion of the re-engagements may be, that I cannot say; that might be easily ascertained by a Return, I should think.

961. In such cases India would have to pay a bounty for each of those men who remained?—The bounty, I believe, is a very trifling affair indeed.

962. Do you think that under the old system a regiment was composed of many of the soldiers that landed, at the end of the 12 years?—I should say that there were none at all in it; they would be so few in number that you might positively say that the entire regiment which landed had disappeared at the end of the 12 years.

963. What were the causes of so many vacancies?—The causes of vacancies are death, in the first instance; secondly, invaliding; thirdly, discharge according to the terms of enlistment; fourthly, discharge by purchase; and fifthly, discharge on account of bad character.

964. Do many of the soldiers in the ranks obtain civil employments in India now?—A great many; I believe there is no more fertile source of vacancies in the ranks in India than the offer of employment in industrial and commercial establishments in that country, including the great railways, which are growing every year.

965. In such cases I suppose the discharge is purchased?—The discharge is purchased either by the man himself or, very frequently, by the employer. Although it does not come out before us in any official document, no doubt it happens that the discharge is purchased by the would-be employer.

966. Do you consider it an advantage to India that there should be that system?—Yes; I think, on the whole, it is a great advantage to India, and as Commander in Chief I never made the slightest opposition to it.

967. Would such a body of men be useful in a military point of view, in the case of disturbance of any kind?—Not only in a military point of view, but they would be of the greatest importance as the means of organisation for the Government in case of widespread disturbance, and maintaining order on railways, and so forth, wherever they might be employed.

Chairman—continued.

968. All these causes of vacancies would apply equally to a local European army, I presume?—Yes; they would apply in the same manner.

969. Then, at the end of a few years, even in the case of local troops, there would be very few of the original soldiers existing in the ranks?—I believe there would be no difference whatever; the same rules of discharge would have to prevail on account of so-called local troops as on account of troops depending on the War Office, and the conditions of service would certainly have to be the same; you could not have a condition of short service for an Imperial army which you denied to a local army.

970. Then do you think that under the short service system the actual shortness of the time spent by the men in the ranks, compared with the former system, is more apparent than real?—I think, on the whole, it is more apparent than real.

971. Have you any opinion on the advantage of the system of local troops in point of economy?—I do not think, myself, that there is any difference between the two systems in that respect. The rates of pay are sure to be precisely the same, whether they are local or whether they are Imperial; there was never any difference in former times in the rates of pay between the troops enlisted by the Honourable East India Company and those enlisted under the authority of the Horse Guards.

972. With regard to the cost of the depôts, have you formed any opinion as to how that cost should be divided?—It seems to me that the depôts themselves are matters rather belonging to the War Office and to British consideration, than to those affecting India. My own belief is that the fairer plan would be to charge on account of the Indian recruit the cost of his maintenance and daily pay for the average time that he may be present at a depôt, and I should be inclined to stop there.

972. But is it not the fact that the officers in those depôts belong to regiments in India?—The officers belong to regiments in India, but they are actually performing service in England; it may be said that they are reserve officers for India, but it is also true that they are reserve officers for England. These very depôts are in the performance of active military duty in England and Ireland for the garrisoning of the country and the preservation of peace.

973. At the same time without them the recruits for India could not be trained, could they?—The recruits for India, of course, get their training from them.

974. Would the new localisation scheme affect your argument or opinion upon this point?—The localisation scheme, as it is called, is still in embryo; we cannot exactly tell, as yet, what will be the final form taken by that scheme; but I think we see enough of it to be able to say, that as that scheme is more developed and becomes more complete, these depôts will have much greater duties to do, on account of the auxiliary forces, than is yet seen. At present the commanding officers of the depôts are the inspectors of militia in their several districts, and the colonels

Chairman—continued.

nels of militia regiments refer to them for instructions and orders on all points which, till the late scheme was introduced, used to be referred to the lord lieutenants of counties and the other authorities under whom the militia were organised. Now, however, the militia is put on a far more military footing than obtained in former days, and the relations between the militia and the line are accordingly drawn much closer. The tendency is to go further in this direction, and I think at no very distant date we shall see that the most important part of the duty of the officers and staff of the brigade depôts will lie with the militia rather than with the mere training of recruits for India.

975. You think that the depôts and the militia will become more closely connected, and that the commanding officers of depôts will be a sort of brigadier generals of militia?—That is very much what their position is now.

976. And with regard to the barracks and other appliances, do you consider that they will be adapted to the Imperial purposes without reference to India?—Yes; according to the localisation scheme, we must have those barracks, and we must have those depôts, it being understood that the depôts on account of regiments in India form but a part of the entire system of depôts as organised under this scheme.

977. And your conclusion is that we should only charge India for the actual maintenance of the recruit during the time that he is in the depôt?—That is the conclusion at which I have arrived. There is something to be said against that, but, on the whole, I think that is the better way of arranging it. The fact is the point is very small indeed; the difference of expense is not much; but the really important point to consider is, I think, the spirit between the India Office and the War Office, and what line of policy is indicated; but the financial result, either one way or the other, may be considered really a small point.

978. Do you see any reason for the different charge in the different arms of the service for training at the depôts?—According to the principles which have guided my views in this matter, I do not see any reason for drawing any distinction between the different arms of the service beyond that which may be indicated by the respective rates of pay. Thus, the rates of pay of the cavalry soldier and the artillery soldier are higher than the infantry rates; and, again, I rather think the Royal Engineer is paid higher than the other two, but I am not quite sure on that.

979. It seems that the rate agreed to is 136 *l.* 13 *s.* 11 *d.* for cavalry, and 63 *l.* 8 *s.* 5 *d.* for infantry?—That seems to me to be a difference which is too high; I do not see why that difference should exist.

980. What are the artillery arrangements for reliefs and supply of men which make that arm more expensive than the others?—The artillery arrangements are very different now as compared with former days, and there is, I think, an expense incurred which might be saved; thus the head-quarters of brigades, as they are called now, proceed to India. Several years ago I pointed out, when I was Commander in Chief, that this was an expensive and, as I thought, inconvenient manner of administering artillery in India, and that the head-quarters of brigades should remain in England, the batteries belonging to those brigades proceeding to India with a sufficient number of field officers for duty. That opinion I advocated very strongly when I was Commander in Chief, and I adhere to it still, as I think that both economy and convenience would result from it.

Chairman—continued.

981. I think I have gone through the points which your Lordship suggested to me; is there any other point upon which you would wish to favour the Committee with your opinion, keeping in view that the inquiry is a financial inquiry?—There are several other points, but the only thing is that that would spread the inquiry over a much larger surface; but I do not think that the points which have been alluded to are those which really affect finance very largely; I think that they are small points; they indicate rather the spirit existing between offices, but they really do not touch the essential points of military financial economy.

982. There is one other point which has just been suggested to me with regard to the transport of troops; could you give any opinion from an economical point of view with regard to the present method of transport of troops from England to India and back?—I have no opinion to express upon that; I believe that the present system is the best that can be adopted, and I am not in possession of sufficiently exact information to be able to have any judgment upon the relations between the India Office and the War Office, with regard to the expense incurred for the transport of troops to India.

983. We should like your opinion upon this: assuming that India requires an army of say 70,000 men, or whatever it may be, whether that army is, under the direction of the departments at home, rendered for Imperial purposes unnecessarily expensive to India?—I should have a difficulty in saying that, unless I had all the details of the expenditure before me.

984. Would you not be able to express an opinion as to the question of whether the army as maintained in India would be maintained on the same footing for Indian purpose if Imperial purposes were put on one side?—I do not exactly follow the question.

985 It has been stated that we maintain in India an army unnecessarily expensive, because it is an Imperial army, and we want it at home as well as in India, and therefore that there are certain expenses and certain matters of organisation which apply to an Imperial army, and which are unnecessarily expensive for India, though necessarily so, looking upon it as an Imperial army solely?—Such as what are the features of organisation referred to?

Baron *Sandhurst*, G.C.B., G.C.S.I.

9 June 1874.

Sir *George Balfour.*

986. Your Artillery Minute, for example, would be an interesting point on which you could speak?—I have already adverted to the question of artillery. With regard to the question of artillery, of course my Minute stands upon its merits, and I have nothing to say contrary to what is expressed in that Minute. That was written just before I laid down the command in India, I think. I do not know exactly how the Indian establishment stands now; it is four years since I left India, and I have not had an opportunity of following any changes which may have occurred in that interval of time.

Baron *Sandhurst*, G.C.B., G.C.S I.

9 June 1874.

Mr. *Campbell-Bannerman.*

987. I think the object of the Committee is to ascertain from you whether, in your experience, the home authorities have thwarted the Indian authorities in effecting economy of organisation in European troops in India. It is to ascertain that that they wish to have your opinion?—I should say to that that really these matters do not come before Indian authorities, that is to say, the people who are administering in India. As far as my recollection carries me, we get arguments and decisions from the Secretary of State for India; but the argument that may have previously been carried on between the Secretary of State for India and the Secretary of State for War would very probably not come before us at all. I think the India Office would be very chary indeed of sending out a hostile argument from the War Office.

Sir *George Balfour.*

988. Still it is the fact, is it not, that the hostile arguments were sent out in reply to your own recommendations connected with the organisation of artillery, infantry, and cavalry?—I rather think those must have reached after I gave up the command. I know I thought myself rather ill-used; I was there for six months, and I do not think I got an answer to that communication. I do not recollect even having seen an answer to it.

989. The object of the question was to ascertain from you whether, with regard to the changes which you recommended of reducing the regiments from 52 in number to 45, in modification of other proposals made in India, you adhered to that organisation as being the most economical for India as well as equally efficient for the military purposes of India?—I do not now know what number of regiments there are in India; I do not know what the establishment in India is.

Sir *Henry Havelock.*

990. Your Lordship is aware that representations have been made on the part of the India Office, instituting a comparison between the cost of what is called the Warley system and the present one. Has your Lordship formed any opinion with regard to the respective efficiency of those systems, with regard to the rapid supply of large bodies of trained men to India in case of war?—According to my appreciation of what you mention as the Warley system, the men who were sent out were not soldiers in any sense. I recollect in 1858, when we were grievously in want of troops, the India Office sent us out some thousands of young soldiers, probably from 4,000 to 5,000. Well, these men were absolutely untrained; they had just been taken from the tail of the plough, and we could make no use of them; we had to teach them from the very beginning, and yet these lads came out to be gunners and to be drivers of artillery. Everyone with a little military experience is aware that it takes a long time to make an artillery driver, and we did not know what to do with these men, and it ended by our turning them into cavalry, because we could not use them as artillery.

991. Then your Lordship would not be disposed to recommend any return at all to the Warley system, or anything approaching to it?—It seems to me impossible to do so, now that that very salutary regulation has been passed by Parliament, that a recruit is not to go to India till he is 20 years of age. The Warley recruit I take to have been 18 years of age, just as our own recruits were, but now that we have insisted upon older men being sent to India, I do not think that we could possibly revert to such a system as that.

Sir *Henry Havelock*—continued.

992. As regards one feature of difference between the present system and the past one, that is, that the men are entirely drilled and trained here before they go out, do not you think that there is a great advantage to the individual soldier in going through his training in this country instead of in India, and consequently an advantage to the country at large?—There is no doubt that the individual man gains in two ways as well as the country. In the first place, he learns his business in a climate which is propitious to him, instead of in a climate which does not admit of active military instruction for at least six months out of 12; but, secondly, there is the consideration of health to the man, which is of infinitely more importance than one of mere military instruction and drill. Now it occurred to me in 1867 and 1868 to write the most earnest representation home with regard to the extreme youth of the recruits sent to India.

Mr. *Fawcett.*

993. That was not under the Warley system?—It was not under the Warley system; but these were the young men who were sent out before the change of 1871; with regard to the age of the recruits was operated by the order of Parliament; and not only was it a most grievous thing to see these lads suffering in health, but my own personal responsibility as the Commander in Chief was directly involved, because the chief medical authorities brought it prominently to my notice that these young men were not fit for the duties thrown upon them in the plains of India, and we brought them up to the hills, and were put to all sorts of shifts accordingly; that being so, we got the reform passed by Parliament in 1871.

Sir *Henry Havelock.*

994. Then, it has been alleged that the present system of depôts, especially as regards their being organised in two companies instead of one, is unnecessarily expensive to India; but then again is not this a part of the same system which eventually gives very large reserves to this country which are also immediately available for need in India as well as in England?—Perhaps the better way of answering that question would be, to say that the whole army of England must be looked upon as much as a reserve for India as for the other necessities of the British Empire; and we have seen that in a very practical manner when great difficulties have occurred in the East. Thus the forces of England which were actually *en route* to active campaign in other parts of the world were turned off from the Imperial purposes at a moment's notice, to meet the wants of the province. That we saw on the occasion of the Chinese expedition in 1857, when the troops were turned off from their destination, which was a Chinese campaign, for the purpose of assisting our countrymen in India. At the same time the Cape colony was denuded of troops in order to reinforce the army in India which was in danger; and I believe it is also true that troops came from other colonies on the same account; and we also know every available regiment was sent from England at the same time.

995. Then, in point of fact, the reserve maintaned

Sir *Henry Havelock*—continued.

tained in England of 39,000 men, or whatever the figure is, is in so far a reinforcement immediately available for the needs of India?—That is one of the objects of the reserve which is kept at home, I take it.

996. And at the same time it is the case that India makes no direct payment for the training or maintenance of that reserve?—I apprehend not.

997. Then to that extent this matter ought to be considered as an item *per contrâ* against the expense which the present depôt organisation causes to be incurred to India, ought it not?—Yes, I think that might be generally so considered.

998. I think your Lordship expressed an opinion the other day in the House of Lords that the probable average length of service of men in India under the present system, when it should be fully developed, would be about the same as it was in former days in India?—I think so.

999. Then to that extent there is an undoubted gain to India from the extra health and efficiency of the men in the reserve, who are able at any time to be made applicable for her needs?—I do not know whether one could put that down in exact terms.

Mr. *Eustace Smith.*

1000. I think you said that you found that a quantity of men were sent out who were totally unfit for service, and who were totally unfit for soldiers, and who had to begin their military education entirely in India; I mean unfit for active duty at the moment?—Yes.

1001. That was at a special time, was it not?—No; I believe it was always the case, so far as I am aware, that the recruits in former days were shipped immediately after enlistment, provided that they could be got about that time.

1002. Did you find that they were deficient in any other respect, except in the want of military training?—No, I am not aware that they were.

1003. They were an equally good class of men?—I imagine that they were precisely the same class of men.

1004. Therefore, you would equally object to a soldier being sent out from the Imperial depôts with one or two months' training, as you objected to that former system?—Just the same.

1005. Do not you think that there is a considerable expense thrown upon India in consequence of the way that the recruits who are being trained for the Indian service are scattered about at different depôts, instead of being at some central depôt?—I hold an opinion that it is not particularly good for recruits to be kept in very large bodies; I think it is a very much wholesomer thing to keep the recruits at depôts of restricted numbers.

1006. You think there is a practical advantage in it?—I have not the slightest doubt of it; and as to its being a matter of greater economy, I do not think it tells one way or the other. We must have a certain number of men and a certain number of officers and non-commissioned officers to train these recruits, and it makes very little difference whether they all get together in large bodies or are in separate ones. I have already, in my former evidence, explained that these depôts are for many other purposes besides the mere training of the Indian recruits, and that those purposes are likely to increase upon them instead of to be diminished.

1007. Can you give any idea as to why the ex-

Mr. *Eustace Smith*—continued.

penses of the recruits at Warley were so very much smaller than the expenses of the recruits under the present depôt system, taking into consideration that the theory of the Warley system was that the recruits should be trained for three months, and that the theory of the present depôt system is that the recruits should be trained for seven months before they are sent to India?—But that theory is exactly contrary to the fact, is it not? The fact is, with regard to the ages that we have been considering, that they are on an average about 18 months at the depôt, from 18 months to two years.

1008. But it was accepted as a principle. I understood that seven months was to be regarded as the idea of the training that a normal recruit should receive on the average?—I have not seen these papers to which you refer, but that may be, and probably is, with regard to the time that it is thought necessary to turn out an accomplished soldier, that is to say, a man fit to take his duty in every possible manner; but this question of age is a different one; it is not with regard to his soldiership, but whether he is able as a man to stand the fatigues of India; and, therefore, now it has been determined by Parliament that he is not to embark till he reaches a certain age; and with reference to the age at which we can obtain recruits in the open market, it is found that we have to keep them practically for a long time at the depôts, because they are too young to embark according to the present regulations.

1009. You think it is the regulation that they cannot go out to India so young which has increased the cost of them so enormously?—It follows that it must do so.

1010. That is the principal cause, in your Lordship's opinion, of the increase of the cost?—It appears to me that that is the only cause of the increase of cost, so far as I am aware.

Mr. *Dunbar.*

1011. Your Lordship said that under the present system the men who went out as recruits were perfectly trained men; I do not know whether you have looked at the evidence given by Mr. Milton; I would like to direct your attention to his answer to Question 108?—I can only suppose, with regard to the cases referred to in that question, that these men had reached the proper age; that they were older than the generality of men as they are enlisted.

1012. In point of fact, then, the present system does not produce that advantage of having all trained men?—Generally speaking it does; that must have been an exceptional case.

1013. I think under the present arrangement the average is taken at seven months, and that no matter what time a man has been under training, he is paid for seven months; every man shipped now is paid for as being trained for seven months, irrespective of the fact of its being seven or ten; do you think it should be taken that way as the average, or actually for the time that he has been under instruction?—I should be inclined, as a matter of convenience, to take the average; I do not think seven months is nearly enough.

1014. I think seven months was adopted under the instructions of the Duke of Cambridge?—This I do know, that I never embarked a regiment to India (and I have to send four or five every year) from which I have not to deduct a very

Baron *Sandhurst*, G.C.B., G.C.S.I.

9 June 1874.

Mr. *Dunbar*—continued.

considerable number who are sent to the depôt, because they have not reached the age ordered for embarkation.

Sir *Thomas Bazley.*

1015. May I ask you if there be any expenditure in this country which could safely be reduced to the advantage of India?—Well, I am not sufficiently acquainted with the details of expenditure to give an answer to that question; I have already stated that I thought it better to take the time of the maintenance of a man destined for service in India by an average, and not to put other charges upon him; it seemed to me more equitable that the other charges should be Imperial charges; but as to how that would work out I cannot say, because I have not got the details before me.

Mr. *Birley.*

1016. I understood you to say that, under the Warley system, recruits went out as raw recruits from England and were trained in India, whereas now they go from the depôts as trained soldiers; have you any experience with regard to the training of recruits in India, either adverse or favourable to the Warley system?—Simply that I think it is very much better that men should be trained in England instead of in the hot climate of India.

1017. And so much better as to be worth the extra expense so incurred?—I think it better altogether that a young man should remain as long as he can in this country; as long as he is not efficient I think that he should remain in this country; and it is only when he is an efficient soldier that he should go to India, which is a much greater drain upon his constitution.

1018. If he went out at the age of 19 or 20 to India, could he not be trained in depôts there as efficiently as here?—I think it would be a very mischievous practice; and certainly a depôt in India would be a much more expensive thing than a depôt in England; for this reason, that the pay and allowances of officers serving in India are very much higher than the pay and allowances of officers serving in England.

Mr. *Campbell-Bannerman.*

1019. Almost the same object as is attained by sending out a recruit of 20 years of age is attained very often by keeping him well fed, disciplined, and set up, for perhaps a year, although he may be under the age of 20; although he may not have attained the age of 20, a young man who has been for 12 months under training, and well fed, well clothed, and living carefully, may be quite able physically to undergo the change to the climate of India, may he not?—He may be; but on the whole I think it is very much better that they should not go till they are 20 years of age; I should very much prefer that we should have a hard and fast line about it.

1020. I think your Lordship said that you thought this country should only charge India for the maintenance and daily pay of recruits?—Yes; that is what occurred to me.

1021. Then do you think it fair that this country should bear the expense of training the recruits?—Well, as the officers must remain here for other purposes, it seems to me that there is really no reason why there should be any particular charge on that account.

1022. But are the officers required for other

Mr. *Campbell-Bannerman*—continued.

purposes?—Well, as I explained, the tendency is very much to employ them for other purposes; I explained, with regard to the commanding officer of the brigade depôt, that he is quite as much for the purpose of the organisation of the auxiliary forces as for the training of these recruits; that is only a part of his duty.

1023. You are aware of course that the establishment of the brigade depôt has been increased in order that it may undertake those duties towards the auxiliary forces?—Well, I do not know how that is.

1024. A certain number of the officers at the brigade depôts act as adjutants of the militia regiments, do they not?—No, I think not; at all events, that is in a very experimental form indeed.

1025. But you are aware that that is the establishment fixed; the plan resolved upon is that there should be six captains altogether, two of whom should be adjutants of the militia regiments?—I was not aware of that, but it is merely giving them another title, because these are men who existed in the militia regiment before; it would be merely attaching them rather more closely to the depôt, but their duties would lie entirely with the militia regiment.

1026. But the brigade depôt, consisting of one lieutenant colonel, one major, six captains, four subalterns, and the non-commissioned officers, will undertake the duties connected with the auxiliary forces, the training of recruits for the home service battalion, and the training of recruits for the foreign service battalion, and it will come to be considered afterwards what proportion of their expense is properly due to the training of recruits for India?—It appears to me that you get into an infinitesimal calculation which is not of the slightest consequence to either country; that is the result which my mind arrives at with reference to such nice divisions. I do not think it is of the slightest consequence which country pays, it is so small. It is merely an indication of the relations between two great Government offices.

1027. But perhaps your Lordship is not aware of the proportion of what we consider the cost of a recruit which is due to the officers instructing; that the mere maintenance and pay, beer money, accoutrements, and so forth, of the recruit for seven months comes to (I am speaking of the infantry recruit), 30 *l.* 9 *s.* 4 *d.*; and the charge of the two depôt companies, of the two captains, the two subalterns, the non-commissioned officers, and so forth, who are maintained for the purpose of training him, comes to 17 *l.*; and in the case of a cavalry recruit to a very much larger proportion; so that it is not quite so infinitesimal as your Lordship supposed?—But these officers must exist somewhere; if they were not serving these depôts you must increase your establishments in India; and at the same time they are performing real duties in England.

1028. If we increased the establishments in India they would then, of course, be paid by India?—They would then, of course, be paid in India, but they would be doing nothing at home; now they are doing a great deal of necessary work in England itself; they are doing the work in England instead of doing it in India. If these depôts did not exist, if the army were precisely on the same footing as it was when I first went to India, some 30 years ago, then all these

officers

Mr. *Campbell-Bannerman*— continued.

officers who are now serving for the depôts would have to be in India, because we cannot do without them in India. As it is they are now available as a reserve for India, but instead of being on leave in England they are actually performing service in England and Ireland, and, as I believe, the service that they perform in England is really of a more important character to English interests than is shown in the mere training of recruits. For instance, we will take a depôt in Ireland; this depôt in Ireland, as it exists in the midst of a disturbed district, enables me to take military charge of that district, without sending a detachment from another regiment; I say that the duty performed by those officers in that district is a duty done in home defence; why should India pay for that?

1029. But does not your argument rather tend to show that they ought to be paid by India, because they are maintained here for Indian purposes; and it in any respect, as I have already explained, a brigade depôt is useful for other purposes, for training the auxiliary forces, or for our home purposes, that is a matter which may very well be taken into account in apportioning the charges; but I think your Lordship will admit that the great part of the duties which they perform are performed for Indian purposes in the work of training recruits for service in India?—I am not quite prepared to admit that; on the contrary, I say that the most important part of their duty is that which is done in the country where they are quartered and stationed. For instance, I take again the illustration which I just gave; the presence of a brigade depôt in a given Irish district enables me to keep that district in order; if a disturbance takes place I send the officers, and even these very recruits, before they are trained, perhaps, to maintain order, and so on. Surely that is a very important duty, and the presence of that depôt in that particular district enables me to dispense with another section of regular troops whom otherwise I should have to send from elsewhere. Now that is a thing of constant and daily practice.

1030. But surely, although they are found convenient and they may save the employment of other troops at certain places, yet they would only be employed in suppressing disorder or anything of that sort occasionally, and very rarely indeed; whereas they are daily and hourly engaged in doing work for Indian service, are they not?—Well, you know it is just the point of view that you take of it. I think the English service the more important of the two. The mere stationing of troops in given quarters keeps whole districts in order irrespectively of the mere putting down of occasional disturbance.

1031. With regard to the organisation of the artillery to which you alluded, you said that the head-quarters of brigades, you thought, should remain in England?—Yes.

1032. Did you mean that the whole charge of the head-quarters of the brigade should be paid by England?—When I wrote those opinions, some years ago, it was not on the economical ground as regards India and England, that I wrote the recommendation; it was a matter of organisation and general economy with respect to the application of artillery, but not as drawing any distinction between England and India. I should think that there would be a very proper demand, sup-

Mr. *Campbell Bannerman*—continued.

Baron *Sandhurst.* G.C.B., G.C.S.I. 9 July 1874

posing these head-quarters were in England, that the expense of those head-quarters should be defrayed by India, because they would be maintained solely for India. But there are other economical reasons for the charge; those economical reasons are as follows: that the maintenance of troops in England, both of the officer and of the soldier, costs a great deal less, so far as I am informed, than the maintenance of the same officer and the same soldier in India; therefore as these head-quarters would, I believe, do their work quite as well, if not better, in England than in India, it seems to me more reasonable to have them in England, where they would be enjoying an English climate, and costing less and doing the same work without difficulty, than to have them in India; and there is no doubt that generally there would be a considerable economy. As to how that economy should be divided, how much should fall to the province, or how much to the mother country, that would be a question which I have not considered; still there would be a general economy upon such arrangements.

1033. I asked the question because your Lordship's previous answer or statement on the subject might lead Members of the Committee and the public to think that you thought England should bear the expense of the head-quarters?—Head-quarters of an artillery brigade consist solely of the colonel and his staff and a few non-commissioned officers, and those are not people who would be applied in the manner that the brigade depôts are applied as we have just been talking of them.

1034. But you would not think it fair, would you, that India should have the services of all the active junior officers without paying anything for the maintenance of the senior officers, whose maintenance was necessary in order to provide promotion and complete the service?—I think it would seem to me to be right and equitable.

1035. You said that you were not officially aware of the action taken by the Home Government with reference to the proposal by Lord Mayo's Government for the reduction of the regular army in India; I think you said that you had left India before the answer came from home?—My answer referred to the answer to my Artillery Minute, which I wrote very shortly before I left India, but not to those proposals, which were made, partly, I think, in Lord Lawrence's time, and partly in Lord Mayo's, but which I have not seen since then, so that my memory would require to be refreshed; I have not cast eyes on the Papers since those distant years.

1036. Do you remember whether the authorities at home declined to adopt the measures of economy proposed in India, without substituting anything better, or whether they suggested other alternative proposals, which were finally adopted, and which were also in an economical direction?—Some proposals did come out from home, but I really do not carry in my memory what they were.

1037. You mentioned as one of the reasons why so many casualties occurred in India that men are discharged with a view to employment on railways in India?—Yes.

1038. You are aware that the money which is paid for their discharge goes to the Indian Government?—I really do not know; I never inquired into that. I believe that all payments in India go to the Indian Government.

1039. Are

Baron *Sandhurst*, G.C.B., G.C.S.I.

9 June 1874.

Mr. *Onslow.*

1039. Are you aware whether, since the passing of the Act of 1871 (I know it is since you have left India) recruits have been sent out to India fully trained?—Well, it is my belief that they have.

1040. Perhaps there will be in your recollection the arrival of the 3rd Buffs in India; the regiment was stationed at Barrackpore, and went up to Meean-meer at the beginning of the hot weather; is it in your recollection that that regiment suffered so materially in death because they were sent out as raw youths from England; that they suffered severely from the last attack of cholera in 1867 or 1868, and the reason alleged was that they were very young recruits, and that when cholera broke out they became so frightened that it predisposed them to catch the disease?—I really do not recollect; and I am sorry to say that I had to deal with outbreaks of cholera every year in my life when I was in command in India.

1041. You think that now soldiers going out to India at the age of 20 will not suffer in regard to health so materially as they did in former years?—It was represented to me by the chief medical authorities in the strongest possible manner, and it was upon their representations that I wrote to England.

1042. Therefore, on the whole, the present system of sending men out at the age of 20 in a long course of years is the cheapest for India?—I should think so.

1043. You say that you never put a stop to the system of soldiers leaving the service for civil employment, and that in fact you tried to encourage it as much as possible?—I did not say that I tried to encourage it; I did not oppose it; I left it to work.

1044. That, of course, is expensive to India, in a military point of view, because you require fresh recruits to fill up their places?—I do not even agree to that; if it were not for the presence of this body of Englishmen scattered over the country, who are all accustomed to the use of arms and to act as an organised body, I think it is very likely you would have to add considerably to your European troops.

1045. During the time that you were Commander in Chief in India was the number of soldiers in the army kept up to the full estimate on paper?—I think generally; at particular seasons of the year the army is tolerably nearly up to strength; then a certain number of months elapse during which casualties from invaliding, and discharge, and death, and so on, accrue; and there is a particular month when the regiments are at the weakest, that is to say, just before the drafts have arrived and after the invalids have gone home; but I think on the whole the army is kept fairly up to strength.

1046. You have no recollection that in your time the numbers were seriously below the estimated number; the number for which the Financial Minister had to provide money?—Would you mention any particular year?

1047. I should say the years 1869 and 1870; this document before me is not an official document, but it has come from yourself, and it shows that there was a very large difference, indeed to the extent of 6,000, according to your own figures, that is in the years 1869 and 1870, between the actual strength and the number that was voted?

Mr. *Onslow*—continued.

—I think it must have been exceptional, because certainly the impression on my mind is that generally, subject to the conditions that I have stated, the army is fairly kept up to strength. It may happen from accidental causes that it may fall below, but generally it is fairly up to strength.

1048. Probably another reason why India will not require so many recruits is on account of the number of sanitaria that we have at the present time?—I do not think that is quite a correct view. Since the fortnightly service for sending men home by steam has come into operation, and has become a regular practice, the medical men send home a great number of invalids from India who formerly were sent to sanitaria, and they come home to these depôts and are there treated; some of them go back to India again, others are discharged; but one result, as far as I am informed, of the establishment of the fortnightly steam service is, that a great number of men who formerly were retained in India in the hopes of effecting a cure, now come to England.

1049. But the fact of the sanitaria being opened and regiments being sent up there, naturally prevents them from catching the usual Indian diseases, and therefore in that respect my observation would apply, would it not?—In that respect of course it is to be hoped that they would have a good effect.

1050. Are you aware that India bears the whole charge of the transport of troops from England to India and from India to England in the troop ships?—I was making inquiries about that the other day in a very unofficial manner, and, as far as I can understand, India bears the expense of the transport of the men, but the ships, when they are employed for other than Indian purposes, are charged to the Admiralty.

1051. Do the troops directly they leave England get Indian pay and allowances; do you know if they do?—I really do not know; I do not recollect that point; I think decidedly not; I do not think that either officers or soldiers draw Indian pay or allowances till they land in India.

1052. *Vice versâ;* they get Indian pay and allowances from the time they arrive in India, do they not?—Yes.

1053. During your period of office can you recall any instances in which organic changes were made in the army of India without any consultation with yourself or with the Viceroy?—Unless you were to indicate something I could not say.

1054. We have had specified the extra twopence given to the British soldier?—That was done without any consultation with us, I believe.

1055. And that of course amounted to a very heavy charge, being placed on the Indian revenues without India being in any way consulted?—Yes; I suppose it was considered that the pay of the soldier having been raised in England, and the recruiting depending upon the pay of the soldier, that simply must be taken as the natural consequence, and that it could not be otherwise, that it was not a thing in which India could ask to be consulted, although it might throw a greater charge upon her revenues. That would not be so, of course, if India could find her quota of recruits; but as she could not, and as we could not get her quota without

paying

Mr. *Onslow*—continued.

paying this extra pay, it follows that the charge would fall upon her in that manner.

1056. Do you think it just to India that this enormous expense should all of a sudden be put on the Indian revenues, without any consultation with her?—India asks for an army from England; we can only supply that army from England by giving certain rates of wages; if those wages were not given the army would not be there, you know.

1057. I think it was in your time that it was agreed that India should pay something for guarding the coast and watching the seas in India; at the present time India pays so much to the English Government for the navy employed in Indian waters; I think it was during your time that that was agreed to by the Indian Government, was it not?—There was a complete administrative revolution made in consequence of the resolution of Lord Canning's Government to abolish the Indian navy. The Indian navy having been abolished for a certain time, the Indian seas were left without protection; pirates were beginning to spring up, the business of survey was stopped, and we were left in the most forlorn condition; and at last, in Lord Mayo's time (there had been much consultation previously in Lord Lawrence's time), an arrangement was made by which the Admiralty should in some form or other replace the old Indian navy; I believe that is how it stands now. I do not know the details.

1058. Do you think it is a legitimate charge on the Indian revenues that they should pay something on that account?—It seems to me quite right and legitimate, as it is entirely on account of the Indian seas that these ships are maintained, and it was at the urgent instance of the Indian Government that an application was made to the Admiralty, some years after it was determined at home, and after we had found out the abject state in which we were left to supply the want.

1059. Is it, do you think, just or fair to India that when what I may call troops on the Indian establishment are employed for Imperial purposes, such as the Abyssinian war, India should pay the whole of the pay of those troops when she did not get the benefit of them in any way whatever, they being in Abyssinia?—You raise such a very large question of policy there; you have to determine whether or not your proposition is true, that India got no benefit from the employment of those troops in Abyssinia.

1060. It is the fact that India paid for them, is it not?—Well, we will come to that afterwards; but is the proposition quite true, that a campaign of that kind can take place in a country within hail of India, where probably the Indian commerce plays a much greater part than English commerce does, and that India is not in the least interested in that contest? I do not think it is. You might as well say that India has never been interested in the Persian contests, and so on.

1061. But was it not generally considered that the Abyssinian war was wholly an Imperial war?—That of course must be a matter of opinion.

Mr. *Fawcett*.

1062. I understand you to propose that India should pay for recruits simply by paying to England the money for their maintenance on this ground, that the depôts at which the recruits are trained, and the recruits themselves, form a portion of the effective strength of the English army?—Yes.

Mr. *Fawcett*—continued.

1063. Or, in other words, drawing an illustration from the position which you now hold, you would say, as Commander in Chief in Ireland, that if the depôts of the Indian regiments which happen to be in India at the present time were removed you would feel it your duty to apply to have their removal made up for by having more soldiers sent to the army in Ireland?—That, of course, would depend upon the strength of the troops in Ireland.

1064. Suppose at the present time your strength of the army in Ireland was not one soldier stronger than you think it ought to be, if an order came to-morrow that the depôts of the Indian regiments should be removed, you would then feel that the army was not as strong as it ought to be, and you would apply for an increase of the number of troops in Ireland?—Yes, in such case, certainly.

1065. Therefore it is from considerations such as those that you consider that England gets an equivalent, from the fact that these depôts and recruits are in England, such an equivalent that she ought not to charge India more for the recruits than their simple maintenance?—Yes, I think that is a very fair description of the reasoning by which I have arrived at my conclusion.

1066. In 1867 and 1868 I understand that you wrote a very strong remonstrance to the Home Government against the injury which was being done to India by the extremely young age at which the recruits were sent out?—Yes.

1067. Those recruits that were sent out were as young as the Warley recruits, were they not, at the time you made that remonstrance?—I think they were.

1068. Then this letter of yours was in 1867 and 1868, and this plan of sending out extremely young recruits, so far as I understand, had gone on for some time; it was not an accidental circumstance, or else if it had been simply an accidental circumstance you would not have thought it your duty to write so strong a complaint?—This system had always existed.

1069. Then from that I understand that it had existed for seven years, we will say from 1860 up to 1868, the system of sending out extremely young recruits to India, and India suffering an injury from the fact that they were so young?—Yes; I did not take it from the point of view of its being an injury to India, but I took it from the point of view of its being such an inhuman thing towards the young men themselves. That it would re-act, of course, upon the Indian interests, if the regiments to which the recruits went had been suddenly thrown upon active service, followed as a matter of course.

1070. You are probably aware that during these seven years to which I refer, namely, from 1860 to 1868, in which these extremely raw recruits were sent out to India, India was paying for these raw recruits no less a sum than about seven times what was paid for the Warley recruits?—Well, is that so? because I have just heard 63 *l.* said.

1071. That is the arrangement that was made afterwards; but during those years up to 1869, during the existence of the capitation rate, we have had it given in evidence by the Accountant General of the Army, that the amount which India was

Baron *Sandhurst*, G.C.B., G.C.S.I.

9 June 1874.

Mr. *Fawcett*—continued.

charged for recruits was, according to one calculation, 205 *l.*, and according to another calculation, 170 *l.*?—Well, that seems to me to be excessive.

1072. Still the point I want to bring out is this, that we have had it represented to us that the Warley system was cheap and inefficient. No one can doubt its cheapness, but it is said that it was inefficient; we have had it given to us in evidence, or it has been tried to be represented to us in evidence, that the system which was introduced was undoubtedly costly, but was very efficient; what your evidence comes to is this, that this very costly system in which, taking the lowest estimate, no less a sum than 170 *l.* was charged for a recruit, instead of 26 *l.* which was charged at Warley, far from being efficient, was so inefficient that you had such raw recruits sent out to you that you were obliged to write a strong and urgent remonstrance to the home authorities?—Yes.

1073. You did that as Commander in Chief?—Yes.

1074. You wrote a very elaborate and (if I may be allowed to say so) able Minute on certain artillery reforms not long before you left India?—Yes.

1075. That Minute was published in a Parliamentary Blue Book, and the reply of the Commander in Chief to that Minute was also published; he was strongly opposed to your proposals, was he not?—Yes; I think he was.

1076. You had discussed them, and I believe I am describing them correctly, when I say that you, as Commander in Chief, proved that if these changes were carried out they would effect a great saving for India, and would add to the efficiency of the artillery service there, did you not?—Yes, that was the impression on my mind.

1077. Did not the Commander in Chief reject these proposals of yours, which you thought would have saved the money of India, and would have increased the efficiency of the army, chiefly on grounds which affected the organisation of the army in England, and not so much because he differed from you, and thought that it would not save money to India, and would not improve the efficiency of her army; he did not deny your position on those points?—I am not quite clear that I ever saw the Memorandum of the Commander in Chief; it certainly must have reached India after I left.

1078. Do you think, if it were put into your hands, you could recall it if you saw it (*the Blue Book was put into Lord Sandhurst's hands*)?—I have heard that some of those reductions have been made since, but I do not know how far that is accurate.

1079. But I was simply going to question you on this point; that Despatch of the Commander in Chief in England did not deny your positions, that the changes, if carried out, would have saved money to India, and would have added to the efficiency of her army; but the reason why they were not carried out was because of considerations affecting the organisation of the army in general, was it not?—Partly that; and also, speaking from my hasty perusal of it, he argues the question of the policy of reducing the number of guns in India, and so on, which he considered impolitic for State reasons.

1080. But now, to state one proposal of yours which was not allowed to be carried out, I believe you pointed out that a great saving would result from employing native drivers in the artillery; I think you made out a saving of no less than 150,000 *l.* a year; you, on your responsibility as Commander in Chief, having recommended that, on what ground was it refused; I will not enter into the question of the number of guns, but on what ground was the refusal based?—It is only fair to those who hold the opposite opinion to say that since the mutiny of 1857 it is considered by a great many officers that we should never have another native gunner or driver in the artillery in India. I myself do not hold that opinion so strongly; I believe that we may with safety have a certain reasonable proportion of both classes; but I know, in fact, I am quite certain, that the majority of officers are against me in that they have never got over the impression left upon them by the mutiny of the army in India; and I think I should be left in a small minority.

1081. But were you aware of the fact that these opinions were against you at the time you made the recommendation?—Yes.

1082. You did it of course on your own responsibility?—Yes.

1083. You also stated very strongly, did you not, that the artillery in India was over-officered?—Yes; in certain classes.

1084. Was that recommendation attended to?—I do not think it was.

1085. Was not that another instance of what I have been saying; it was not intended to deny the truth of your position when you asserted that the artillery was over-officered; but the reason why your proposals were not carried out was because of questions of military organisation not affecting India; there were a certain number of officers to be employed, were there not?—That brings me back to the question of presidencies and rival armies. There were a great many conditions involved in that consideration which were quite irrespective of the War Office; they affected the military departments of Madras and Bombay quite as much as the War Office; and then the India Office was extremely desirous of protecting what went by the name of the old Indian officer; on the other hand, the War Office probably said (I just caught a sentence to this effect in the Duke's Memorandum), "If we are to have these reductions, it is only fair that they should be made in the body which belongs to India, and not in the body which was created for English purposes, and not for Indian purposes originally." Well, the consequence was that each authority, whether it was Bengal, Madras, or Bombay, or whether it was the Government of India, or the India Office, or the War Office, on the other hand, was most desirous of protecting the officers belonging to its own establishment from reduction; I think that is explained in that way, and that I believe was the reason of keeping up so many field officers who were redundant. For instance, we will take the Bombay Horse Artillery; I strongly recommended certain arrangements, which have passed out of my head now, by which there should be a reduction involving a diminution of the number of the field officers in those armies; because we had this fact, I believe, in the Bombay Horse Artillery, that there was a lieutenant-colonel for every troop of horse artillery; well, these officers were protected, first, by the Bombay Government, and then by the Government of India, you may say, and

Mr. *Fawcett*—continued.

and then by the India Office as against the War Office; well, it was a natural thing for the War Office to say, "it is very hard upon us that we are to reduce our men because you have too many in India belonging to the old Indian establishments," and so on, and the result was, I believe, that for a long time no reduction took place; I believe, since I left India, the Bombay and Madras Horse Artillery have been in some measure amalgamated, but I do not know.

1086. You were asked just now, by the honourable Member on my left, Mr. Onslow, with reference to the difference between the effective strength of the army in India and the number of men who ought to be on it; the number of men for whom money was taken by the finance minister; in the year 1869-70 he pointed out a difference of no less than 6,000; but I understood you to state that you considered that exceptional in that one month?—I think so.

1087. But I will put this to you: I believe, taking the eight years previously, and taking the average month by month, you will find that there was on the average in each month of those eight years a difference between the effective strength and the nominal strength of the army of no less than 4,500 continuously for those eight years previously?—That I was not aware of; but, as I think I mentioned before, to the best of my recollection there is a certain month of the year when regiments are at their fullest strength, and then casualties occur during the remainder of the year.

1088. But this is not selecting any particular month; if a particular month is selected the figures become much more striking; but all the months are taken; therefore if in any month the regiments are up to their full strength, of course it will reduce the average; but taking it month by month, there is for the eight years an average deficiency of 4,500; you were not aware of that?—No, I was not aware that it was so many as that.

1089. In reply to certain questions, you said that, take, for instance, the Abyssinian war, India was to a certain degree interested in that war, and therefore I rather understood from you you thought it was not unfair that she should contribute, as she did contribute, to a portion of the expenses of that war?—I should think that on the whole it would be equitable that she should contribute something.

1090. Then, adopting the rules of equity, you could say, for instance, that England is interested in the maintenance of our Indian empire; sometimes there has been a war in India, has there not, which has been a war declared more by England than by India; that was the case with the Affghan war, was it not?—Yes.

1091. Then, if because India was in some indirect way interested in the Abyssinian war, having never been consulted in the matter, it was equitable that she should contribute a share of the expenses of that war, is it not far more equitable that England should directly contribute a portion of the expenses of the Indian wars, wars which have often been raised more as a question of English policy than of Indian policy; that was certainly the case with the Affghan war, was it not?—I think, in answer to a question from Sir Henry Havelock, I pointed out that the whole army in England is, in point of fact, a reserve to meet demands that may be made in different parts of the British empire. This affects India, perhaps, more strongly than any other dependency of the British empire, because it is so very much the largest; and I think it very likely, in fact I have the strongest possible conviction, that if it were not for India we should not have the necessity of keeping so large a reserve in England as we do now.

Mr. *Fawcett*—continued.

Baron *Sandhurst*, G.C.B., G.C.S.I.

9 June 1874.

1092. But would not that same remark apply to our colonies?—It does to a certain extent.

1093. The remark does not apply simply to India, but to the English empire generally?—I think it applies to the English empire generally; but we do not charge India at all for this reserve, just as we do not charge our colonies for that reserve.

1094. But is there not this difference between the two; looking upon India and England as integral parts of one great empire, which I understand to be your position, that if India, one portion of that empire, is called upon to lend England any troops, India pays for them; if, on the contrary, England lends the other part of the empire, namely, India, any troops, India again pays for them?—But India does not pay England for the troops which are maintained really as much for the support of India as for any other purpose in England.

1095. But has not experience shown that again and again it has happened that England has drawn troops from India; she drew troops from India for the Crimean war, which was the war in which India was never consulted; she drew troops from India for the Abyssinian war, for both the Chinese wars, and for the Persian war?—She drew, I believe, two regiments of European cavalry from India to assist in the Crimea, but those troops were not paid for by India; I take it they were paid for by England during the time.

1096. Then I will withdraw the question as to them; but it certainly did pay for the troops in Abyssinia and China, did it not?—I really do not know; I am not conversant with the finanacial details, but I should apprehend that only the native troops were paid for by India; that in the case of the European troops that went from India to Abyssinia their cost fell upon the Treasury, and that the Indian troops only were a charge to India.

1097. If you should find that not simply the native troops were paid for by India, but also the European troops in Abyssinia and China, it would alter your opinion as to the justice of the arrangement, I mean simply as a financial one; I am not now discussing whether India ought to have lent these troops to England in the Chinese wars and the Abyssinia war, but simply asking your opinion upon that as one of the financial arrangements?—I do not think that they ought to have paid for those; in fact, I rather think we made a struggle in India upon the subject.

1098. Then, again, with the native army; it seems to me in that case the more unjust to India, because the native army is maintained absolutely by India; none of those considerations apply there about a portion of the army being maintained in England, which acts as a reserve for India; the native army is in India, entirely maintained by India; therefore, if England uses any portion of the native army for her wars, it is the more unfair that India should pay for them, is it not?—That depends upon the

Baron *Sandhurst*, G.C.B., G.C.S.I.

9 June 1874.

Mr. *Fawcett*—continued.

question, whether India is to pay at all. It seems to me that some moderate contribution might have been made on general grounds, and therefore that the Indian troops, who were the least expensive portion of the Indian force, might fairly have been taken.

1099. You have objected to the principle of all these payments?—I rather think we protested against it, but I really do not recollect.

1100. I remember, because I brought it forward in Parliament about the Abyssinian war; I raised the question about India having to pay; at that time I think a very strong protest came from India as to the injustice of that?—Yes.

1101. I thought, from a previous part of your evidence, that it might be supposed that you were in favour of what took place in Abyssinia, and I asked you these questions, because the Government of which you were a Member, I believe, strongly protested againt that, and I thought, possibly, you would express that opinion still; I am simply asking you this, whether you think it was fair that European troops should be taken from India to Abyssinia, and should be paid for while they were in Abyssinia by India?— No; I do not think it was.

Sir *George Balfour.*

1102. What I understand from your replies is this, that looking at it in a broad point of view, which you are in the habit of doing, as a matter of policy the two Governments are bound to assist each other?—Yes.

1103. And therefore that India has lent to the Imperial Government her troops for the conquest of Java, the Spice Islands, the Straits of Malacca, the Mauritius, the first Chinese war, the war in Persia, and the war in Abyssinia; all that was assistance rendered by India to England?—I think, amongst the numerous operations which you have alluded to there are very great distinctions to be drawn. Now, for instance, as to Malacca and Java, and so on; all that relates to a time when it may be said that India carried on wars upon her own account, almost without any reference to England. For instance, with regard to that very business of Java, that was a thing which was entirely undertaken, according to my recollection, by the Governor General of that day, Sir Gilbert Elliot, and probably the Home Government had very little indeed to say to that. On the other hand, the war in Abyssinia was a thing of modern days, which depended entirely on the fiat of the British Ministry; therefore I do not think it would do to lump together all these different expeditions, and so on, as if they rested all upon the same principle, because certainly a hundred years ago India, with regard to her policy in those seas, exercised a very much greater independence than she does now. Now she cannot move a yard in the way of aggression or of carrying on war without the orders of the Government at home. It was a very different thing in the last century.

1104. Still we must look at the fact that the commercial enterprise of England was vastly extended by the operation of the Indian army; for instance, taking Ceylon; great extension has taken place there, both with regard to produce and commerce; then take the war with China, considerable results took place then?—But I think it has to be borne in mind that the commerce of India and the relations following on the extension of commerce, have been, perhaps, much more largely developed in the course of the last 40 years in India than they have been at home. Even when I left India the commerce of India was worth a hundred millions a year of our money; and that being so, it is quite clear that the obligations of defence, both with regard to the navy and to the army, have become very much more important than they were before that commerce existed; and therefore it is very difficult indeed to draw the line as to where the liability of one country shall cease and that of the other begin.

Sir *George Balfour*—continued.

1105. The object of my question was simply this, that seeing the mutual relations that existed between the two countries, and which I hope will ever exist, whatever difference exists about an affair like charges for recruits, it is desirable for the two Governments to be forbearing towards each other, seeing that they can mutually assist each other; that was the object to which I was directing my inquiries?—Of course one would like to see a perfect reciprocity if you could only get such a thing.

1106. You have been asked a great many questions about the recruits; would you be surprised to learn that many recruits have been sent out to India, even in the last two or three years, after less than four months' service at the depôt?—That was what was shown to me in a Return which I saw for the first time just now, I think.

Lord *George Hamilton.*

1107. Your Lordship means the Return in the Report of Mr. Seccombe's Committee?—Yes.

Sir *George Balfour.*

1108. That does not mean that the troops could have been drilled and made perfect soldiers of, does it?—No; certainly not.

1109. Are you aware that so far from the medical reports bearing out the statement that the young men under 20 years of age are unhealthy, the reports from the Medical Department show that there are fewer deaths amongst recruits under that age than in the classes above that age?—You see we are always told that doctors differ. It has to be recollected with regard to that question that every year that a man passes in a tropical climate his bias towards tropical disease becomes more confirmed; a man who has been 10 years in India is much more likely to die of tropical disease than the man who has been one year in India. But there is this point which, I believe, is not contested by medical men, that that pre-disposition to disease is greatly increased in individuals who go to India at an early period of life as compared with those who go somewhat later; therefore, although you may not have more deaths amongst the men of 18 years of age than you have amongst men of 22, still, *cæteris paribus,* if the man who went at 18 years of age lives to be 25, he is much more likely to be badly affected by tropical disease than the man who went out two years later. These are things which it is very difficult to state in Returns; but that is a point which, I believe, always affected the medical advisers under whose authority my representations were made, and I believe that to be the true and proper way of looking at the subject.

1110. It is a matter of opinion which no Return has shown. I would draw your attention to a Return, from which you will see that so far from

Sir. *George Balfour*—continued.

from the statement being borne out, that youths under 20 die in greater numbers than men above that age; a Return of the Medical Department itself distinctly proves the contrary?—Then it appears to me that whatever may be the Returns they do not go to the point which I have stated, and which there is no doubt was at the very foundation of all the advice under which my representations were made.

1111. You are aware that the capitation rate of 10 *l.* per head was agreed upon to be paid in 1861 by the India Government to the War Office, in order to cover all charges at home?—Yes.

1112. And that it was then distinctly promised that recruits, thoroughly trained and fit for soldiers, able to take part with a regiment, should be sent out on condition of that payment being made?—I do not know; it is so long ago that I really do not carry these things in my head, but I have no doubt you are stating what is correct.

1113. Are you aware that the depôt of the Guards is at the present time very much similar to the depôt which was at Warley in the old times of the East India Company?—I do not know anything about the arrangements of the Guards.

1114. That all the recruits of that fine body of men are sent down there, and are drilled and trained until such time as they are fit to take their place in the ranks?—I do not know what the arrangements are; but with the head-quarters of the regiment close by there is no analogy between the two cases.

1115. You mentioned that you thought it was unavoidable that the 2 *d.* a day which was added to the soldier's pay in 1867 should be paid for by India, and that no consultation was necessary between the two Governments on that point?—I should think not.

1116. But if an arrangement could have been made by which that increase of pay need not have been given, but by which other changes might have been made in the English army, so as to have avoided the necessity of increase of pay in India, would not that have been desirable?—Those are questions that one cannot give an opinion upon, questions of negotiations between Ministers on which I am not competent to give an opinion.

1117. During the time that you were in India you called attention to the expensive nature of the Medical Department of the British service, did you not?—I rather think I did.

1118. You pointed out how largely it had increased during the last few years?—Yes.

1119. Are you aware that since that time that branch of the military expenditure of India has very largely increased?—No; I know nothing about it; I have not been able to follow these details since I left India.

Mr. *Stanley*.

1120. I think I understand you to say that, in counting the cost of the recruits to India, you would charge the maintenance and daily pay, and stop there?—Yes.

1121. In considering these as matters of account, would you not consider that a man should be charged, to some extent, that which he represents in a money value as a cost to this country?—Well, I took a broad view, you know. I considered that he was about a year and a half under

Mr. *Stanley*—continued.

Baron *Sandhurst*, G.C.B., G.C.S.I.

9 June 1874.

training, assuming that our figures are right about the average date of enlistment, and the average date of his embarkation for India; and I took the broad view that equity was sufficiently met by charging for his pay and maintenance during the average period of his residence at the depôt.

1122. The maintenance and the daily pay would really represent, so to speak, the cost of the raw material, but that material would have to be brought into the shape necessary to be of service to India by instruction of various kinds; would you not consider that as part of the bargain for which India pays, that that instruction should be included?—Well, that was the subject of a very long examination; I thought that it might be waived as not being worth while to insist upon it, with regard to the other duties performed by the officers of the depôt, and so on, to which the recruit belonged.

1123. I do not wish to press you to enter into details, but do I rightly understand you to say that, taking the broad view of the question, to use your own words, you would set off the considerations of the cost which might be involved in those details by the general consideration of India becoming a reserve, to a certain extent, for any troops required for emergencies for Imperial purposes; or, to put my question in another way, against what would you balance the advantage which India would otherwise gain by being charged according to the principle which you maintain, only the cost of the raw material?—I pointed out that it appeared to me that the services rendered by the depôts to which the recruits belong are sufficient to make the cost of those depôts an Imperial charge, and therefore that equity would be sufficiently met by charging India merely for the maintenance and daily pay of the man himself.

1124. I think you stated that India makes no payment whatever for reserve; for instance, in addition to the reserve of men which England supplies to India in case of an emergency, there are militia reserves of a considerable strength; and also under the new system there will probably be a considerable number of reserve men; is it your opinion that India should contribute in no respect towards the cost of those?—I think not, because you know it would be introducing the principle of a direct tribute from India to England, which is a principle which has never been admitted at all by anybody.

1125. I think in more than one instance you stated that the Imperial army formed in many respects a reserve to the Indian one?—Yes.

1126. I would ask you, would not that which I have suggested be only an extension of the same principle which you yourself admit?—No, I think not, because I have said over and over again that India in that respect stands in the same relation to England as the other colonies; and as we do not charge the colonies or dependencies of Great Britain on account of the reserve power which lies in the army serving at home, so we should not charge India. I do not see why an exception should be made against India when we do not urge it against the other dependencies.

1127. At page 12 of a Return respecting recruits, which has been laid before the Committee, you will find, in a letter of the Financial Secretary of the War Office, a recital of certain indirect charges which, in the opinion of Lord Cardwell, relieve to a considerable amount the

Baron *Sandhurst*, G.C.B., G.C.S.I.

9 June 1874.

Mr. *Stanley*—continued.

expenditure of Indian revenues at the expense of the army in this country, may I ask you, taking these seriatim, very briefly your opinion as to those charges, which should or should not be made fairly a matter of charge, within the limits of which you have spoken just now; for instance, "the cost of the military staff and head-quarter departments at home"?—Certainly not.

1128. "The regimental staff of the corps to which the Indian depôts are attached or affiliated"?—No.

1129. "The full assessed cost of raising and training the soldiers who proceed, not as drafts or recruits, but as relieving corps, allowing to India for such sufficient men as return with relieved corps"?—Well, I believe we never have charged for that, and I do not see why it should be charged for.

1130. Would you charge India with anything of the cost of the educational establishments for officers and for men?—No; it must be recollected that India maintains educational establishments herself; for instance, the young Royal Engineer, when he goes to India, completes his education at the cost of the Indian Government.

1131. Would you apply the same principle, extending that question to garrison instruction?—Garrison instructors exist in India, and are paid by the Indian Government.

1132. As to experiments in arms and ammunition, would you say that the whole cost should be borne by the Home Government?—Certainly, because similar experiments are constantly in course in India.

1133. And with regard to the next question, I need hardly ask you, because it probably follows the last answer, "The cost of rewards to inventors of military weapons or machines"; but would you tell the Committee briefly upon what you would base your reasons for saying that the cost of the military staff and head-quarter departments at home should not be paid any proportion by India?—I am not aware that the staff at head-quarters has been increased in any sensible manner in consequence of the nearer relation drawn between India and England subsequent to the Proclamation of 1858; I believe that the only difference that can be said to exist is that there is an Assistant Military Secretary at the Horse Guards, and perhaps a few clerks.

Mr. *Campbell-Bannerman.*

1134. He is paid by India?—Then that subsides altogether.

Mr. *Stanley.*

1135. I think you stated that the Commander in Chief rejected some of the artillery reductions which were proposed in your Minute, to which reference has been made?—I think he objected to the entire scheme.

1136. May I ask (I have not the papers before me) whether there was not involved in that Minute some reference to the question between taking the battery or the brigade as the unit?—In my Minute, though, as I said, it is such a very long time since I read it that I cannot carry all the details in my head, I believe I argued that point very fully, as I have always had the conviction in my mind that the present system is not the best that could be arranged; and any change that I might have recommended probably started from that point.

Mr. *Stanley*—continued.

1137. That is a point about which, as a matter of fact, there is some division of opinion, is there not?—Very considerable division of opinion.

1138. As regards reliefs to the charges upon India when the late increase of artillery was made, were not a considerable number of Indian officers absorbed into that establishment who would otherwise have been charged on the non-effective charges upon the Indian establishment?—When the change was made, the four regiments of artillery were all amalgamated into one, and one of the difficulties that arose, and which led to the redundancy of the field officers, was, as I said before, the difficulty of disposing of these gentlemen, each establishment protecting its own. I am not aware that that made any difference to the non-effective list in India; I do not see why it should.

1139. Were they not brought in from the Indian list when the augmentation of the artillery took place?—It is hardly right to call it an augmentation, is it? it is the amalgamation of the several regiments.

1140. I am speaking of that which occurred in the last few years, when a considerable increase was made in the artillery?—Then of that I have no personal knowledge.

Lord *George Hamilton.*

1141. I think you have given the weight of your great authority to the opinion that short service in India will not increase the number of recruits which may be required; that is to say, more recruits will not have to be sent out annually in consequence of the new system of short service?—I think in the long run we shall arrive pretty nearly at that result.

1142. And in arriving at that opinion I suppose you calculated upon a considerable number of men re-engaging in India, and also volunteering to the regiments which remain in India when their own regiments are under orders to come home?—Yes, from those different classes.

1143. And I suppose the result of your experience is that the service in India is generally very popular with the men?—I think it is, on the whole; that they prefer it to serving at home.

1144. Should you say that if there was a separate European army in India it would be easier to get recruits for India?—No, I do not think so. The men who want to go to India know perfectly well the regiments that are in India, and those that are not.

1145. Under the present system India is charged for seven months' training of recruits in England; of that training, as no doubt you are aware, three months has to be passed at the depôts and four months with the home battalion. Would you charge India for the four months' service which the recruits do with the home battalions?—It seems to me that she ought to be charged for the entire time that the recruit is maintained at home; that is my view of it. My view is that she should be charged for the maintenance of the man for what I conceive to be a much longer period than seven months, and then that that should cover all the charges.

1146. But still England has the entire benefit of his services during those four months?—Then that goes to strengthen my position, that it is quite sufficient to charge on account of his maintenance and daily pay, and not to charge on any other account whatever.

1147. I do

Lord *George Hamilton*—continued.

1147. I do not think that you have had time to look at length into these Returns before us, have you?—No; I have not seen them.

1148. Might I ask you if you agree with the opinion expressed by the Secretary of State for India; in these two sentences he says, "The Secretary of State for India does not contest the necessity of India paying for its recruits, under whatever system is determined upon at home, as necessary for the efficiency of military training." He then goes on to say, "But if the cost of recruiting be swollen by an artificial system of charge, so as to include outlays which have really nothing to do with the cost of training, but are connected entirely with the organisation of the home garrison of England, he must record, as he now does, his protest against the principle involved, namely, that of charging India with any outlay which cannot fairly be said to be occasioned by the service of India"?—That is very much the conclusion to which my answers have all tended.

1149. And, in fact, if you could lay down a principle for the payment of recruits by India, it would be something to the effect of the words which I have quoted?—Yes.

Sir *Henry Havelock.*

1150. Your Lordship said that one of the economical recommendations you made, which was subsequently rejected by the Commander in Chief, was, that a certain proportion of native drivers should be employed in the artillery in India?—I think so; but I am speaking under great disadvantages, because I have not seen these Papers for a great many years, but I believe I did make some recommendations of that kind

1151. Is it within your Lordship's recollection that our defeat at Chunhut, on the 30th of June 1857, when Sir Henry Lawrence's force was overpowered and driven back into Lucknow, was mainly attributed by those who were present there to the fact that the native drivers, either from panic or from treachery, overturned their guns into the ditches by the roadside, or else cut their traces and galloped off the horses, so that nine out of his 13 guns were captured and remained in the hands of the enemy?—Yes, I am perfectly aware of that. At the same time a very exceptional state of things, which occurs once in a hundred years, is not, perhaps, a reason for entirely departing from a system which has worked well during those hundred years; and my view was, that when once the excitement of that civil war had passed away we could revert to a very modified system, which would reduce our expenditure, and which at the same time would not be fraught with the dangers existing under the old system, when the whole of the drivers of the field artillery were natives, instead of having a very small proportion of them natives.

1152. My only object in asking the question was, that I did not know whether that incident was in your Lordship's recollectiou?—I remember it perfectly.

Sir *George Balfour.*

1153. The last time you gave an opinion on the subject of the European forces in India was on the 2nd of April 1870, in your speech before the Legislative Council in India, in the following words: "But I am convinced that we should not go further, and that to attempt a diminution of the existing British force in India is an expedient fraught with so much danger as not to be thought of"?—Yes.

Sir *George Balfour*—continued.

1154. That was the opinion which you then expressed?—Yes.

1155. Therefore, in all the recommendations which you made then connected with that force you would desire to maintain the full strength of the force, but at the same time to maintain it as economically as possible?—Yes.

1156. Therefore, all your recommendations, with reference to artillery, cavalry, and infantry, were with that view?—Yes.

1157. Now it has been mentioned to you, and in your own speech here you quoted a Return which you specially called upon the Secretary to the Government to prepare, and by that Return it is shown that upwards of 6,000 men were then deficient in the force; and another question has been asked, by which you had been made aware that for a series of years the force has been considerably below its established number; therefore the system at home, which prevents your having the whole strength maintained in India, cannot but be defective?—It is extremely difficult, as everyone connected with the administration knows, to keep a force up exactly to the established normal strength; I do not think it is possible; you are never allowed to have a man over your establishment; thus the establishment is, say, 70,000 men; you are never allowed, for a single day, by your system of estimates, to have a man beyond that establishment; but how is it possible, considering what the casualties of service are from different causes, for you to produce such an exact equilibrium from month to month as that there shall not be a permanent deficiency of from 2,000 to 3,000 men; 4,000, I think, is rather high, but that you would have to reckon on from 2,000 to 3,000 I think is an absolute certainty on such a gross total as 70,000 on an average.

1158. But looking back to your experience when you commanded a regiment in India, your regiment was then far more up to its establishment, was it not, than the regiments were during the time that the payment of this capitation money was in force?—Just after the draft arrived it was so, but six months afterwards, from some cause or another, I had lost 80 or 90 men; and then six months more had to elapse during which casualties were always going on before another draft came, and, therefore, as I said, during the first six months after the arrival of the spring drafts your regiment is tolerably complete, very likely almost complete, and then for every month there is a decrement, and that decrement goes on accruing till the drafts of the next year arrive; and, therefore, as I said before, in one month your regiment is at the strongest in the year, and 11 months afterwards, perhaps, or ten months afterwards, it is at its weakest point during the year, but every month there is a decrement. Regiments are not now so strong as they were in those days; the strength of regiments in those days was, I think, 1,100 altogether; now I think it is not much more than 900; and the smaller the number of regiments, according to an administrative law, which I have no doubt you are more conversant with than I am, the greater will be this decrement on the whole; that is to say, it is more difficult to keep

Baron *Sandhurst*, G.C.B., G.C.S.I.

9 June 1874.

Baron *Sandhurst*, G.C.B., G.C.S.I.

9 June 1874.

Sir *George Balfour*—continued.

keep up a larger number of small bodies than it would be a smaller number of strong regiments.

1159. You remember the time when the depôt of your regiment was only 15, all ranks told, at home?—At the time to which you allude what has now been called the Warley system was, in point of fact, as nearly as possible the same system as prevailed for Imperial troops, the system which prevailed at Chatham on account of the troops for our regiments, that is to say, that they were merely depôts to receive recruits, and hardly entered into the question of training at all.

1160. Still, that system worked efficiently as regards the point of keeping the strength in India nearly up to its fixed establishment?—Yes; but it sent the raw material, and you must recollect it was then a time of long service, that is, of 21 years; the number of our men coming out every year omitted that demand which is now made upon us with regard to the shorter service; now we have to depend upon the good will of the men whether they will re-engage or not; formerly, at the time to which you allude, they all had to serve on till they could serve no longer, and then they died, a small number being invalided home.

1161. In 1861 the depôt strength of the regiment was 220 strong, was it not?—I do not remember.

1162. If you will accept that from me, when I mention to you that, by desire of the Viceroy, my reports made to him proved that the regiments were at that time 147 below their establishment; that shows, does it not, that however large the depôt is you cannot maintain the strength out in India to its full establishment?—That probably was from a difficulty in recruiting; it was owing probably to some cause of that kind.

Sir *George Balfour*—continued.

1163. If you examine the state of the Indian army during the time of the mutiny you will find that then, owing to the Crimean war, and from not sending out recruits, and from the withdrawal of four regiments from India, the force was reduced by upwards of 6,000 men?—I have no doubt you are right; I had nothing to say to India at that time.

1164. But your Lordship's experience and great knowledge of the state of India at that time would show you that if we had had that force in India, and if we had held Cawnpore in strength, those great disasters which befel us need not have happened if we had had our full establishment?—But to the best of my recollection (indeed I am sure I am right in that) Cawnpore was never held in strength after the second Punjaub war; after the second Punjaub war Lord Dalhousie alienated the greater part of the European forces to the north-west, and the whole of the line from Meerut downwards to Calcutta was held by native troops; it had nothing to do with the alienation of regiments to the Crimea.

1165. But you are aware that the regiment which was stationed at Lucknow was the regiment which was drawn from Cawnpore?—Yes, that was part of Lord Dalhousie's policy; after Oude was annexed he did transfer two-thirds of the regiment from Cawnpore to Lucknow; but that had nothing to do with the alienation of troops to the Crimea, or to Persia, or anywhere. I believe that those troops that went to the Crimea went entirely from the south of India; the 12th Lancers went from Madras.

Sir *Henry Havelock.*

1166. Cawnpore was left unoccupied, so to speak, was it not, because it was considered a comparatively unimportant place?—In those days the idea of a disturbance was not dreamt of.

Friday, 12th June 1874

MEMBERS PRESENT:

Mr. Stephen Cave.	Mr. Fawcett.
Sir George Balfour.	Lord Edmond Fitzmaurice.
Mr. Balfour.	Lord George Hamilton.
Sir Thomas Bazley.	Sir Henry Havelock.
Mr. Birley.	Mr. Sampson Lloyd.
Mr. Campbell-Bannerman.	Mr. Massey.
Mr. Dalrymple.	Mr. Onslow.
Mr. Beckett Denison.	Mr. Eustace Smith.
Mr. Dunbar.	Mr. Stanley.

THE RIGHT HONOURABLE STEPHEN CAVE, IN THE CHAIR.

Major General Sir THOMAS TOWNSEND PEARS, K.C.B., recalled; and further Examined.

Major Gen. Sir *T. T. Pears*, K.C.B.

12 June 1874.

Lord *G. Hamilton.*

1167. You have had a great deal of experience in the India Office; what is the result of your experience of the system of referring controverted questions to inter-departmental committees; are the committees as a rule able to arrive at a definite conclusion, or do they as a rule merely suggest an expedient?—I think, speaking generally, they are not so constituted as to arrive at a satisfactory definite conclusion, because they are generally constituted by the appointment of two members from each department; and, as there is no president or casting vote, it is evident that they must very often arrive at inconclusive results.

1168. And I think you, in your previous evidence, pointed out that a principle was rather required to be laid down which should enable them to know on what they were to act?—I think so. I think that is what is wanted.

1169. You are acquainted with that letter that Lord Northbrook wrote, which is included in the correspondence which has been printed for the Committee; there are three suggestions which he makes; I suppose it would not be competent for a departmental committee, Mr. Seccombe's Committee, to consider those suggestions?—Certainly not, I should say. The general understanding with us at the India Office is, that these inter-departmental committees are formed solely with a view of settling details, never of determining principles, which would be the case if those proposals, as I understand them, of Lord Northbrook's were referred to them.

1170. Then your opinion is, that whilst an inter-departmental committee is valuable for the statements which it would make on behalf of the respective offices, yet, for want of a principle to guide its action, it does not as a rule arrive at any definite conclusion?—I think so.

1171. Under the present system, which has been agreed to by the two offices, India now pays for recruits under the form of actual charges; does that system, do you think, give rise to much controversy between the two departments?—It has given rise to a great deal of

Lord *G. Hamilton*—continued.

controversy I understand; but correspondence on that subject does not pass through my hands; it is a financial arrangement. But I can, perhaps, instance one or two directions in which it has given rise to controversy. The charge there proposed is for a recruit, and among other questions of detail the question has arisen, what is to be considered a recruit? because we found when we got nominal rolls of the men who were embarked sent in that there were men of advanced life, that is to say, viewing them as recruits; men who had been in the army 10 or 12 years, and had been re-engaged, were put down in these lists as recruits, to be paid for as recruits. That was obviously unjust, and gave rise to controversy; I am not sure that it is settled yet. These men had been re-engaged, sent back to the depôts until the time came for their embarkation, and then included in what are called the drafts, and so charged as if they were recruits, whereas they had already served in the army for a considerable number of years as soldiers.

1172. What is the system of pension now in force in India in regard to privates?—The system of pension is entirely that laid down in the War Office regulations; and I am not very well up in that, but I believe that men are only entitled now to pension, that is the short service men, if they lose their health on foreign service; if they are invalided home from abroad they get, as a rule, a temporary pension, and if their health is certified after a time to be thoroughly broken down, and that as the effect of foreign service, the pension is made permanent; if they should have served a portion of their time in India and a portion out of India, the amount of that pension is charged between the two Exchequers rateably, but if the whole time was served in India India bears it all.

1173. Then if the re-engaged men are sent out in place of young recruits their health would be more likely to break down than that of young men, and thus India might have to pay pensions in consequence of their being older, is not that so?—Well, I do not think there is so much risk

Major Gen. Sir *T. T. Pears*, K.C.B.

12 June 1874.

Lord *G. Hamilton*—continued.

of that in the re-engaged men being sent out as in very young boys being sent out; the re-engaged men are never what you would call old men, and hardly ever middle-aged men; and it may be supposed that they have been pretty well tried and tested as to their physical health and powers; therefore I should not object to the re-engaged men being sent out to India; I should only object to their being charged the same sum as is placed upon recruits, which includes the cost of original training.

1174. The charge falls on them just the same as on any other recruit?—That has been the case; it is proposed, but it is disputed at the India Office at the present time, I believe.

1175. The result of the actual charges has been, has it not, that you have not had accounts for two years?—I think it is even more than two; I do not think that any of the accounts (but I speak under correction, as it is a Finance Department matter) have been settled for years subsequent to the cessation of the capitation rate.

1176. Would you be in favour of India paying a lump sum for recruits, something like the old system under the capitation rate, in place of these actual charges?—I should, certainly.

1177. Do you think there would be much difficulty in arriving at a basis upon which a fair and equitable calculation could be made as to the amount to be paid annually?—Well, I think there would be no difficulty if it were brought before a competent and an impartial tribunal, but that is the difficulty if it is left to the departments; that we have already experienced.

1178. Such a system would leave the hands of the War Minister much freer than the present system of actual charges, because he would know exactly what money he was to receive from India, and he would be able thus to calculate exactly the cost of any alterations which he might desire to make?—Precisely so; and he could do what he liked with the organisation of the British army at home, without any reference to the Government of India.

1179. Then you would be in favour of some such proposal, based upon some equitable calculation, and to be enforced for a certain number of years?—I should, certainly.

1180. We have had some evidence as to the relations which exist between the War Office and the India Office. It is the custom, in theory, for the War Office to consult the India Office, is it not, upon all alterations which would involve increased expenditure?—I think I may say that it is in theory, but not always in practice.

1181. Can you give any instances where the India Office has not been consulted?—Well, I gave instances the other day, I think, of the increase of pay to the army, and that particular case of the substitution of the regimental rank of major for that of captain. In most of these cases there are two reasons probably why the India Office are not consulted. First of all, it is supposed, and indeed it has been argued, that whatever may be the orders issued by the War Department, the India Office, in matters of finance, can do what they like; that their hands are not bound by anything that the War Office do. That is one argument; and the other is, that many of these measures are absolutely necessary, whether the India Office like them or not.

Lord *G. Hamilton*—continued.

1182. As regards the first argument, do you consider that India is not bound, as regards her European army, by what alterations are suggested by the War Office?—It is quite true that, literally, the Indian Government have the power to do exactly what they like in regard to the pay of the officers and soldiers in India; but we know very well that certain measures may be taken which cause a pressure to be brought on the Government of India that could not be resisted; and it was from the apprehension of that that when an increase of pay to the soldier took place here the same increase was given in India.

1183. In fact, it would have been impossible almost for the Indian Government to refuse that?—In very many cases it is impossible; the only cases in which we can refuse an addition of pay, or other emoluments which are granted to members of the service here, is when we can show that they are still, without such addition, better off a good deal in India than they are here.

1184. Then, as regards the second argument, that the changes are necessary, there would be always a disposition on the part of the India Office, would there not, to yield to the wishes of the War Office, if it was pointed out that the changes were absolutely necessary?—I think so, certainly.

1185. Allowance would be made for the fact that after all the European army in India is but a portion of the whole of the British army, and that even although the alterations might not be absolutely necessary in India, yet that the smaller portion of the army must yield for the benefit of the larger?—Yes.

1186. Then you would merely suggest that the custom which is supposed to exist in theory should always be put in practice, namely, that of consulting the India Office upon any proposals which involved increased expenditure?—Yes; I think I observed that in the evidence given before the Committee it has been stated that these things are always known, because all matters of importance are discussed in the Cabinet; but if I may speak of things a little outside my province, I should say that it is not sufficient merely for the head of the department to hear of these things in the Cabinet; he cannot be supposed to know all their bearings in detail, unless they are brought before him in his own office and department; therefore I think that all measures of whatever kind that appear likely, directly or indirectly, to concern India, should, before being finally adopted by the War Office, be communicated, it might be in a demi-official form, to the India Office for any remark that they may have to make upon them.

1187. There are not any other questions, are there, upon which there have been serious disagreements between the India Office and the War Office, or rather there are not any at the present moment?—No, I am not aware of any.

1188. And you think that if some principle could be laid down regulating the payment which India has to make for recruits, it would not be difficult to apply that principle to other questions which might arise?—Well, we might have a principle which would apply to the recruits which might not be sufficiently comprehensive to apply to all other branches of the army; but what is to be desired is, that there should be some general principle which would apply to the whole of these military charges.

1189. Following

Mr. *Stanley*.

1189. Following up that last question, do I understand you rightly that in substance, by that answer, you refer to an answer which you gave in your earlier evidence, in which you said that most men interested in India would repudiate the principle of partnership, and that the very assertion of such a principle shows that the real principle remains to be considered and determined, and that it was very desirable that some principle should be arrived at; it was merely following that up, I suppose?—Yes.

1190. First of all, let me ask you with respect to some of your evidence to-day as regards the re-engaged men; I understood that you demurred to men of some considerable service being sent out with the drafts, and I think, to use your own expression, charged as recruits?—Yes.

1191. But those re-engaged men are in many respects of more value than mere recruits, are they not?—Very likely.

1192. I think we have heard, if not from you, at least in some of the evidence given before this Committee, that some exception has been taken to men being sent out with less service than the normal service than seven months, which is held to be necessary for recruits?—Yes.

1193. Is it not rather hard to be complaining of men being sent out with less service, and at the same time to demur to being supplied with an article which, so to speak, is rather in excess of the requirements?—No; I think I can satisfactorily explain that the sending of young men under two or three months' service is objected to because the very condition upon which the charge has been arrived at is that they should be fully trained on an average of seven months, and therefore it is assumed that that condition has not been fulfilled on the part of the War Office. But with regard to the older re-engaged men, it is obvious that many of these men may have been paid for as recruits on a former occasion by the Government of India, and many I have no doubt have come home, some of them invalided, been re-engaged, sent to the depôts, and then sent out among the drafts, and paid for a second time; and even if that is not the case, their training was originally on account of the War Office; they have served the War Department several years, and then it is not fair when they are sent out to India, having done that service to the War Department, that the India Office should pay for the original training of them.

1194. But taking it from another point of view, if you say that they have been trained on account of the War Office, to use your own expression, these men, having more training than the recruits, are really a better article which is supplied to you than the recruits with the mere seven months' training?—I am not sure of that; but assuming they were, they are in the position of the old soldiers who go out with the regiments. Now there is an admitted rule as regards old soldiers, in fact all soldiers going out with the regiments, that we pay a certain and a lower sum for them than for recruits, and then that sum is repaid to us for every man that lands in England again, provided that when he so lands he has got a certain period of service before him.

1195. Then you contend that the same principle should be applied to these men sent out with the drafts?—Precisely so.

1196. When a regiment goes out, at what rate are the men paid for; are they paid at the lower

Mr. *Stanley*—continued.

or at the higher rate, or some at the one and some at the other?—They are paid all of them at a uniform rate, which is lower considerably than that of a recruit; but at this moment I have not the means of saying what that is.

1197. In some cases recruits would go out with those regiments, and therefore you would be really paying for some of those men at the lower rate, would you not?—It may be so.

Sir *H. Havelock*.

1198. Seeing that of every regiment that embarks at least a fifth or sixth are recruits, you get the benefit of all those men at a reduced rate?—It is not my duty to look into those accounts. I presume that would be the principle on which they would be charged.

Mr. *Stanley*.

1199. So far as you are aware, I think you have stated that you have no reason to complain generally of any attempt being made by the War Office, of course allowing for difference of opinion, to force any charges upon the Indian Government which are believed or which can be proved to be unfair; I think that has been stated by you, if not now, in your former evidence?—Yes.

1200. If it is proved that the cost of the recruits represents a certain sum to the War Office, do you consider that the Indian Government would have reason to complain if the same sum is charged to them?—I think they might.

1201. Then, in other words, instead of requiring the article to be supplied for the cost price, do I rightly understand your contention to go so far as this, that you would actually have it supplied for less than the cost price?—There are two questions involved in that: the one question is, I take it, one of policy, whether India should be compelled to bear the whole cost of the whole force made use of to retain our dominion there; the other question is, whether, assuming that she is to bear the whole cost, she is to bear that cost whatever have been the arrangements, however imperfect, however extravagant the arrangements made for the manufacture of the article.

1202. But is not the first question, that on the policy, decided by the very fact of Mr. Seccombe's Committee sitting to investigate the actual charges?—I think so, at least so far as the two Secretaries of State are concerned.

1203. With regard to changes in organisation at home, which may cause greater expense to the Indian Government, I think I have understood you, in answer to Lord George Hamilton, to say that there would be a disposition to yield, if the changes at home were absolutely necessary?—I think so.

1204. But you would consider that in all those changes India should have a voice?—I think so.

1205. Would you carry that so far as to say that in all matters of organisation at home in which India would be affected in the slightest degree the Indian Government should have a voice, or would you limit that control by expediency?—I do not mean to go so far as that; I have said before, I think, that the question of army organisation must rest primarily with the War Department, but that I think, considering the large interests that India has at stake, it is obviously desirable that the head of the War Department should communicate freely with the Secretary of

Major Gen. Sir *T. T. Pears*, K.C.B.

12 June 1874.

Mr. *Stanley*—continued.

State for India on all proposals of re-organisation that are likely to affect the finances of India.

1206. I think I understood you to be rather in favour of a principle by which these claims might be adjusted for certain periods?—Yes.

1207. Supposing they were adjusted upon the existing basis, should you be prepared to say that if reductions were made at home, by which it was clear that the Home Government gained materially in the bargain with India, no claim would be made on the part of the India Office for a corresponding remission of the charge?—I do not think such a thing is likely to happen; and if the rate were fixed for a certain period the question of adjustment or re-adjustment on any great organic changes being made would be one for fair consideration between the two departments at the time.

1208. I will take an instance: supposing that four or five years ago a fixed rate had been arrived at to run for 10 years, and that the large organic changes which have since taken place in the administration of the army are attended with all the financial advantages which are claimed for them; supposing that owing to those changes the Home Government were really producing the article, say of recruits, for a less sum than originally had been agreed upon in the rate fixed with the India Office, should you in that case be disposed to say that India would make no claim for a reduction?—I do not know, but they might; but it would depend very much like any other contracts on the circumstances under which the agreement was originally entered into, and the circumstances that transpired to change the position of one of the contracting parties; perhaps I may illustrate what I mean by a case which took place between us and the Admiralty; some time ago we had an agreement with them regarding troop ships, which was to last for 21 years, and the opening of the Suez Canal rendered it necessary that that agreement should be cancelled, and if we had left the agreement on its original footing, which was made on the understanding that it would last for about 21 years, we should have had to pay the Admiralty much more than was really their due, on the supposition that it only existed for three or four years. The Admiralty insisted that we ought to pay as if the contract remained for the whole time; we thought there should be a re-adjustment, in consideration of its having been cancelled after the first three or four years; and it was submitted to arbitration, and it was given entirely in our favour.

1209. Then, in pursuance of that principle, if a rate had been agreed upon, and a large increase, owing to any unavoidable circumstances, arose at home, would you be prepared to admit that the rate should be revised for the benefit of the home Government?—I do not think it would be safe or prudent to lay down any general rule for a thing of that kind; the case should be decided, and would be decided no doubt, on its own merits at the time.

1210. But then I would ask you whether that last answer does not raise a rather formidable difficulty to the principle of any fixed rates for any period?—I do not think so; I do not think that any man contemplates any great radical changes in the organisation of the army here which would lead to serious economy in the expense of recruits, for instance, so that any arrangement come to now would appear to be unequal and unjust in a number of years hence. For instance, I observe Lord Sandhurst has proposed that all home expenses of the recruit, all the general expenses of the recruit, should be borne by the War Office, and only the detailed expenses of his maintenance, and clothing, and feeding for a certain time should be borne by India. If such a principle as that were admitted, it is not likely that any changes made in the organisation at home would seriously affect the charge that would be so made against India.

Mr. *Stanley*—continued.

Sir *G. Balfour*.

1211. The important questions now asked you with regard to agreeing to a rate for those recruits would be more easily settled if we excluded from that rate all charges which were susceptible of settlement as actual *bonâ fide* charges upon a clear and distinct voucher of a payment made for a specific purpose; for instance, the pay of officers at home from India was formerly covered by the capitation rate of 10*l.*; the pay actually of these officers is easily susceptible of audit, and therefore capable of being paid by India if India is considered liable upon an actual voucher for the pay of that particular officer who is at home?—But they are actually so paid now.

1212. I am now speaking with reference to the old capitation rate, which covered every charge of every kind, excepting stores and transports?—Yes.

1213. And that, therefore, the 10*l.* was a very large rate to pay, seeing that it covered many charges which are now paid for upon vouchers as an actual charge?—But I understand that the capitation rate was arrived at as a fair payment of all these charges at home of whatever kind, including the furlough pay of British officers and the depôts, and other such charges; and, therefore, the question I understood to have been asked me some time ago was, whether I thought it more convenient that we should revert to something like the capitation rate again, or that we should take in hand, as we are doing now, the detailed payments for all these things. I think the payment of a capitation rate or a lump sum would be more convenient, and save a good deal of trouble.

1214. I quite agree with you; but I am now raising the question that it is not desirable to include in that capitation rate any payment capable of being settled between the two departments upon the actual vouchers?—I think it is desirable to include them all. I think it will save a great deal of departmental work, of trouble, and, perhaps, of dispute occasionally.

1215. You mentioned, with regard to men going out, that there was a lower rate paid for those men than for recruits; as the Committee have not had that charge stated, do you happen to remember the particular rate?—I do not remember, but they are found in the proceedings of Mr. Seccombe's Committee.

1216. It is about 27*l.* for the infantry soldier, is it not?—More than that, I think; it is certainly in one of the Reports.

1217. Would you kindly look at that (*handing a report to the Witness*); that is Mr. Seccombe's Report; will you say what the rates are which they paid for men going up on passage to and from India, and coming home in the form of relief?

Major Gen. Sir *T. T. Pears*, K.C.B.

12 June 1874.

Sir *G. Balfour*—continued.

relief?—This is previously; I doubt very much if this is the actual charge now, but it may be. "Estimating the charge for difference of men on passage to and from India, according to the minimum period of training prescribed by the letter from the Deputy Adjutant General to the Under Secretary of State for War, already referred to, the charges will be as follows: Cavalry, 45*l.* 16*s.* 10*d.*, add for forage, 10*l.* 0*s.* 5*d.*, total, 55*l.* 17*s.* 3*d.*; Infantry, 27*l.* 7*s.* 11*d.*; Royal Horse Artillery, 47*l.* 10*s.* 7*d.*; Royal Artillery, 40*l.* 11*s.* 5*d.*"

1218. Is it not the case that from the same report which you are reading India is precluded from receiving any payment for men on returning home from India who have not two years' more service?—Yes.

1219. But is it not the case that India pays for every man that embarks?—No; there is a certain limit as to the number of years he has to serve, and no man is to be embarked unless he has more than that period to serve.

1220. But all men who are embarked are charged for according to those rates?—Yes.

1221. Then the War Office are supposed to be paid fully for the men that they do send to India in the form of batteries and regiments?—I presume so.

Sir *G. Balfour*—continued.

1222. Then is it upon that footing you would propose that the capitation rate for recruits should be fixed, that an extra sum should be paid simply for the recruits embarked separately?—I propose that the charge for recruits should be fixed by an impartial committee, upon fair and equitable principles.

1223. Then, seeing that the old soldiers are paid for by that separate rate, would it not be convenient to add on such a sum as may be agreed upon, and to consider it the recruit payment?—It would be very convenient, but I do not know how the charge for the old soldier has been arrived at. I know how the charge for the recruit has been arrived at, and that involves certain principles which are open to question; but I think it might be quite possible, and that it would be much simpler, to arrive at one common charge for all classes of soldiers going to India, whether old soldiers or recruits.

1224. Does that apply to all arms, varying, of course, the rates for the different arms of the service?—Yes.

The Right Hon. EDWARD VISCOUNT CARDWELL (attending by special permission of the House of Lords), Examined.

Right Hon. Viscount *Cardwell.*

Chairman.

1225. YOU were Secretary of State for War for a considerable time?—Yes.

1226. Have you read the correspondence between the War Office and the India Office, and the letters from the India Office and the Government of India, laid before Parliament on the motion of Lord George Hamilton?—Yes.

1227. The chief point of that correspondence is, I think, the amount which ought to be charged by the United Kingdom to India for recruits?—So I understand.

1228. What is your opinion upon that point; on what principles should that charge be made?—My opinion is, that the amount charged to India should be as closely as possible the amount which is actually paid for the raising and training. The question, therefore, now, I consider, is, how that cost ought to be ascertained. I may say that I am of opinion that the controversy in this Parliamentary Paper has rather enlarged itself as it has gone on; and that, rightly understood, its dimensions may be expected to be rather narrowed.

1229. When the East India Company governed India their own army was a very small one?—Very small.

1230. And the principal army in India was a portion of the Imperial army?—It was so.

1231. Where were the depôts of the regiments of the Imperial army serving in India at that time?—They were in England; they were paid for by India; and I am informed that they were not less costly than those which have been now the subject of complaint; and at any rate the arrangement of 10*l.*, with which the Committee is familiar, was, I believe, based upon the actual expenditure upon the Imperial portion of the 45,000 men, or thereabouts, who were in India at the time of which you are speaking.

1232. When it was found necessary largely to increase the European force in India, and the two armies were amalgamated, and new arrangements were made, what fresh organisation of the depôts took place?—The depôts of all the regiments, including the depôts of those serving in India and the colonies, were organised into depôt battalions, which were at that time supposed to be a considerable addition to the defensive force of this kingdom; and it was at that time that the arrangement of 10*l.* for effective service, and 3*l.* 10*s.* for non-effective service, which was arranged under the direction of a committee, of which Sir Alexander Tulloch was the president, was arrived at.

Chairman—continued.

1233. Will you confine yourself first to the 10*l.* for effectives; what was the question raised by Sir Alexander Tulloch and that committee of which you speak?—When that arrangement of the 10*l.* was made, as the Committee are aware, Sir Alexander Tulloch raised the question whether the "expense of the general, medical, and commissariat staffs, essential for the command, medical superintendence, and subsistence of this largely increased force," ought to be taken in as an element in constituting the charge of the 10*l.*; and in the Capitation Rate Return of 1862, which is before the Committee, on page 15, it is said that "the increase in the general and medical staff since 1853 will show that this charge is founded, not on any hypothetical expenditure, but on a cost actually incurred by the increased duties and responsibilities thrown upon the general and medical officers at home since the mutiny." Then a correspondence took place with the War Office, and it was proposed by the War Office to the Treasury, that those items should be omitted from the calculation of the 10*l.*, and, on the 22nd of February 1861, the Treasury wrote, "Their Lordships concur with Lord Herbert in opinion that the advantages derived by this country from the presence here of the depôts of regiments serving in India, may be fairly taken into ac-

Right Hon. Viscount *Cardwell.*

12 June 1874.

Chairman—continued.

count as a set-off against charges which, apart from that consideration, ought to be borne by the Indian Government;" then upon that arrangement the 10 *l.* was fixed, and the calculation of those particular charges was omitted from the 10 *l.*, in consideration of the service which those depôts at the depôt battalions were supposed to render to the defence of this country. What was in operation, therefore, five years ago, was the system of depôt battalions, composed of the depôts of regiments serving in India and the colonies, and the system of 10 *l.*, with which you are familiar, and which might perhaps, for convenience, be called the Tulloch system of repayment.

1234. Then that 10 *l.* would have been a larger sum if the consideration of these charges had not been waived by the War Office?—Certainly.

1235. I think your Lordship found the accounts in arrear, and that in consequence the War Office was not in a position to send in an actual account?—What I found was, that the accounts were two years in arrear, because while the War Office was in a position to send in at once an actual account of expenses incurred on behalf of India, it had not been able to get the statistical table on which to found the account for the Tulloch repayment. I found that the Indian depôts had, until quite recently, an establishment of 100 rank and file, but that my predecessor had just increased them to 120 on the urgent representation of the Commander in Chief. The reason of this was that all the men who were invalided from India, or were reported unfit to go to India, or had not two years' service left, were at the depôt. Before this increase was made, and while the depôts were still only 100, the United Kingdom was paying on behalf of the Indian depôts much more than was repaid to the Treasury by the 10 *l.*; and if I had permitted the system to continue I must, of course, have raised a question with India on that subject.

1236. Then I would ask, was the system then in operation costly for India and for the United Kingdom as well?—I am informed by the Accountant General of the Army that the excess paid from the Imperial Treasury in 1867-68 on behalf of the Indian depôts of cavalry and infantry was 184,000 *l.*, and yet that if India had paid for those depôts from 1861 to 1868, not as as she actually did upon the Tulloch system, but upon the system which has been in force since, she would have saved in round numbers 100,000 *l.* a year.

1237. Is the system of which complaint is made a temporary or permanent system?—The course which was taken upon this state of affairs was to put an end to the depôt battalions altogether, to affiliate the Indian depôts to regiments serving in this country, and to appoint Mr. Seccombe's Committee for the purpose of ascertaining year by year what was the actual cost to the United Kingdom of that system so long as it should continue; but it was not intended to be a permanent system; and, as the Committee are aware another system is now partly in operation, and rapidly growing into complete operation, which will be much more economical on the whole, and therefore, of course, ought to be more economical, both to the United Kingdom and to India.

1238. Then your position is that the intermediate system of which you have just spoken was

Chairman—continued.

cheaper than the old one, but more expensive than the one which is now coming gradually into operation?—Certainly; I have seen in some of the statements which have been laid before the Committee that 170 *l.* has been the cost of a recruit under the old system; only 63 *l.* is stated to be charged to India under the Seccombe arrangement; and when the double battalion system comes into operation I have no doubt whatever that the sum charged to India on this account will be very considerably reduced.

1239. Under any circumstances, you consider that the position of the War Office is, that it only charges India what has been actually expended for her?—Under the present system (that is, the system of the Seccombe Committee), the instruction is only to charge that which can be shown to have been actually expended; but under the former system I think the staff charges of the depôt battalion were included in the calculation of the 10 *l.* As the Committee are aware, I thought it not right to charge anything to India for the staff charges of the battalion to which the depôt was affiliated, because, as that was not a new expenditure, but was already upon the estimate, and as it was only a temporary arrangement, I did not think it desirable to raise against India a question of that kind.

1240. How long, under the system now coming into operation, will the recruit be trained at the depôt?—Under the new system there will be in the brigade two battalions, and the recruiting at the depôt will be for the brigade, and not for the separate battalion. The recruit will be trained at the depôt in the ordinary course for three months; he will then join the home battalion, in which he will complete his training, because, although he learns a portion of his military duty at the brigade depôt in three months, you will not hear, I think, from any soldier who may be called before you that the training of the soldier is completed in the three months. But I shall not, with your permission, enter upon military topics, because I believe that His Royal Highness intends to offer some observations to the Committee; and you will of course learn everything of a military nature much more advantageously from those who are high authorities on the subject.

1241. Then from what source will the men be sent to India to furnish drafts for the battalion in India?—They will, as a rule, I presume, be sent rather from the home battalion than from the depôt at which they have only imperfectly been trained.

1242. I presume that the rule with regard to the 20 years of age would also bring about that result of itself?—The rule with reference to 20 years of age must be taken with the modification which the Committee, I suppose, are well acquainted with, and which goes rather upon length of service than upon age. That is founded upon medical opinions, and I believe you have the report before you, and I do not think that it is necessary for me to go at length into the subject.

1243. What will happen to men returning from India invalided?—They will be discharged from Netley if they are unfit for home service; but if, though invalided from India, they shall be fit for home service, they will serve out their time in the home battalion, and will not be chargeable to the revenues of India.

1244. What time will the charge cease upon the

Chairman—continued.

the revenues of India on a man invalided from India?—On his discharge from Netley.

1245. A comparison, as you know, has been made between the different systems of recruiting, and considerable preference has been shown by some for the Warley system; what is your opinion upon the Warley system, in comparison with the other systems?—The Warley system, as you know, has never come under my own observation, and I must be considered as speaking from general information in speaking about Warley. Warley was a place where about 1,000 recruits were obtained in the course of the year; the number varied sometimes from 1,000 to 1,500; but I believe if I were to take a number to describe it upon the average, I could not do better than say about; 1,000. It was for an army of about 12,000 men; it might rather be called a brigade than an army; it did not constitute, as I have already told you, the real recruiting for the army of India, which amounted to about 45,000 men, and the principal part of the recruiting was done at depôts, which were single company depôts, no doubt, but which had four officers attached to them though single company depôts, the difference being, I believe, that instead of two captains and two subalterns there was one captain and three subalterns, and the average number of men was rather more numerous than the depôts that are contemplated under the new arrangement. The drilling at Warley, I believe, was only for three months. In calculating, therefore, a pecuniary statement of the cost of drilling at Warley, a very small sum would appear; but those who are acquainted with the history of the Indian army will probably confirm my impression that the Warley system of training men for three months in this country, and sending them out to finish their training in India, was a very wasteful system as regarded human life; that you are not to take the number of recruits who joined a battalion in India, and became effective in it, by the number that were drilled at Warley; but that if 27 *l.* was the cost of a recruit drilled at Warley, you must add considerably to that 27 *l.* for the consideration that within the first year of their training in India a considerable number of them ceased to add to the strength of the Indian army. I consider also that Warley is inapplicable for another reason, and that is, that I believe (but this is not of great importance) that a number of men were attracted to Warley, perhaps, also at rather a later age, because those who went into the small Indian army from Warley had great facilities, which were well known, in obtaining civil employment in India. No doubt there are great facilities now for obtaining civil employment in India offered to soldiers; but they are too widely dispersed, and there is too little certainty of any recruit obtaining his share of them for it to be considered, I presume, any great inducement to recruiting in this country; at least, I have not observed that General Taylor in his recent Paper offering to the population of this country the advantages of the army, has included in those advantages the prospect of civil employment in India.

1246. Lord Sandhurst stated that almost as many men left the ranks now for civil employments as in former times; he stated that in his evidence the other day; were you aware of that fact?—I did not hear Lord Sandhurst examined; but my observation upon that is this: even if it be so the uncertainty with which it is now surrounded makes it, I think, a less inducement than it was in the days of Warley; but this is an unimportant observation either way, and I do not wish to be understood as attaching any particular importance to it.

Chairman—continue

1247. If the Seccombe systems of account had been applied to the arrangements in force between 1861 and 1868, would it have been more economical for India than the system then in force?—I have already stated that I am told by the Accountant General of the Army that if India had been charged for her recruits for the cavalry and infantry from 1861 to 1868 upon the principle now in force, instead of upon the system of the 10 *l.*, that is, upon the Seccombe system instead of upon the Tulloch system, she would have saved, in round numbers, 100,000 *l.* a year. Applied to the intermediate system, it is still more economical.

1248. And if you apply it to the new method, what is your opinion on that point?—I have already stated that inasmuch as under the linked or double-battalion system, a man who has been invalided from India, but is fit for home service, will be chargeable upon the home battalion and not upon the Indian depôt, the arrangement will, in my opinion, be much more economical for India.

1249. You stated, I think, that under the temporary system no charge was raised against India for the superior staff of the battalion?—I did so.

1250. In the case of the brigade depôt system, has that question been raised?—No, I think it has not yet been raised; it is premature, I think, to raise that yet.

1251. And under the new arrangement of brigade depôts and linked battalions, which you have stated will be still more economical for India, will that be so also (I need hardly ask) for the United Kingdom?—Certainly; that is to say, that the 184,000 *l.* which we paid in the year 1867-68, over and above what India repaid, would not have been paid from the War Office Votes, and the 100,000 *l.* a year which India appears to have paid would not have been paid.

1252. Then we come to this, that the system just coming into operation is, according to your Lordship's account, the most economical of the three; and what is your opinion as to the amount of that reduced charge that India should pay?—Since I came into the room I have heard a suggestion from Sir Thomas Pears that the whole expense of India ought not to be paid by India; and in the Parliamentary Paper of 1862 about the capitation rate, that principle has been very strongly put forward on the part of India, and comparisons are made with the expenditure, which at that time the United Kingdom incurred on behalf of the colonies, which it was urged was not incurred for India. I am of opinion that as far as possible the accounts ought to be kept perfectly clear between the colonies and between India on the one side, and the United Kingdom on the other; there are, of course, some colonies which are manifest exceptions, and with which I need not lengthen my answer; but speaking generally, I would say that the accounts should be kept perfectly clear, and that each should pay its own share.

Right Hon. Viscount *Cardwell.*

12 June 1874.

Chairman—continued.

1253. Then taking that as the principle to guide us, what amount of the army does India employ?—You must now, I think, bear this consideration in mind; it is an economical and a wise principle to have a small army in time of peace susceptible of expansion when necessity arises; but though that is both wise and economical, an army so constituted cannot be so cheap in time of peace as an army which in time of peace is working up to its full strength: 100,000 men upon a war footing will cost less than 100,000 men upon the peace footing, of which I have been speaking. Now India employs in round numbers always about one-third of the British army; I do not think that India would have reason to complain if she were charged upon that one-third according to the proportion of the additional expense which I have mentioned of an expansive army. I think if England paid that larger proportion upon her two-thirds and India upon her one-third, it would be a more strictly equitable arrangement than if the United Kingdom paid upon its two-thirds and paid also the whole or a portion of the excess upon the one-third which is permanently employed by India; but as matters stand at present, India does not pay for a number of cadres equivalent to her share of the army. I believe at the present moment the United Kingdom is maintaining 91 cadres for 52,620 men; while India, which employs 41,000 men, is only charged for 50 cadres; but the War Office has made as yet no proposal to alter the present arrangement, by which, while on the Army Estimates of the United Kingdom, the majority of cadres are 520 strong, and the cadres on foreign service are some 600, and only a very few 820; the whole force in India is at 820.

1254. Then India escapes payment for staff, and other general charges, on the cadres of regiments, and pays simply, or at least to a great extent, for the actual men whom she employs?—India pays for the infantry in the proportion which I have stated; and, for the reason I have given, it does not appear to me to be a proportion of which India has a right to complain as compared with the United Kingdom; and if India were relieved of a portion of it, it is quite manifest that that portion must be thrown upon the taxpayer of the United Kingdom.

1255. How is that with regard to the troops in the colonies; what strength are the cadres in the colonies?—I think there are seven regiments in the colonies at 820, and the remainder, I think, are at 600.

1256. Then, in a comparison between the colonies and India, India does not seem to suffer by the comparison?—I think not.

Mr. *Fawcett.*

1257. On what terms are the troops for the colonies paid for?—The general rule is that we do not employ troops in the self-governing colonies at all; they, if they maintain a force, maintain their own force at their own expense. In the colonies in which principally we do maintain troops, they are for purposes of our own, such as Malta, Gibraltar, Halifax, and so forth; and in some few exceptional colonies we maintain troops for which we make no charge, or only a small charge in some of them. The colony in which the question of repayment has been most strongly tested is Ceylon, and there the payment was

Mr. *Fawcett*—continued.

calculated to be a full payment for the service rendered.

Chairman.

1258. Taking out of consideration those colonies which are really military garrisons, India, as I understand you, has not been worse treated than the colonies which repay the War Office for the troops sent out?—I would rather say that in my understanding the principle applied is the same principle, than go into details with which I am not so familiar, to say how the precise figures may compare in one case or the other; but my belief is that Ceylon pays quite as largely as India pays.

Mr. *Fawcett.*

1259. This is a very important point, and we probably shall not finish your examination today; could you kindly furnish us with those details the next time we examine you; I should very much like to have them, so that we might compare the two systems?—I will take care that they are furnished to the Committee.

1260. Perhaps you would not object to be examined on them, because it seems to me to raise a very important point, the principle on which we charge Ceylon for troops and India; because your evidence has gone to show that India is as favourably treated as the colonies; and in one sense your evidence would seem to go to show that India was more favourably treated, because you quoted the colonies to show that India had a greater number of troops, in proportion to the cadres, than the colonies?—I am glad that you have put the question, because I think you misunderstood the purport of my answer. My own intention in giving the answer was entirely limited to the question between the United Kingdom and India. I said that the United Kingdom maintained about two-thirds of the army as against one-third in India; those two-thirds are employed part of them abroad and part of them at home. With respect to those that we employ abroad, seven battalions, I think, are at the Indian strength of 820; the greater number are at 600; and with respect to the battalions that we have at home, the greater number are at the strength of 520. Now these three classes, so far as my original answer was concerned, I intended to include as the troops employed by the United Kingdom, and to compare them with India; but at that point some one (I forget whether it was yourself) asked me a question about the colonies, and of course I gave the best answer that I could; but I wish it to be understood, as from myself, that I am comparing at the present moment the United Kingdom and India.

Chairman.

1261. Then on that ground, would you admit that the cadres are maintained chiefly for the benefit of the United Kingdom?—As a matter of fact, I believe that when the 25 second battalions were created, it was chiefly on account of a sudden emergency which had arisen in India.

1262. How is the Indian staff corps filled?—It is filled by young officers who are trained for the British army; they pass into the Indian service, leaving the United Kingdom to fill up the vacancies which are created.

1263. Is the cost of any part of their training defrayed by India?—No doubt there is a contribution

Chairman—continued.

bution from India to Woolwich, and so forth, but I have not the least doubt that the arrangement is in the main a most advantageous arrangement for India.

1264. Some opinion has been given as to the advantage economically of a separate army for India, if it were possible for India to maintain a separate army. What is your opinion as to the economical side of that question?—My belief is that it would be more costly for India to maintain an army of 60,000 men, and a great deal more costly, than it is for her to draw upon the British army in the way that she does now. But it was on reasons of more importance than financial reasons that the separate army was put an end to, and that the armies of the two countries were amalgamated.

1265. But supposing India had to pay for 10 companies to recruit, and maintain in the field eight companies of 820 men as the United Kingdom does?—What I have already stated is this; that I think under the present arrangement, where all the cadres in India are at 820, and the majority of ours are at 520, and a few only at 820 and 600, India has not upon the balance any reason to complain.

1266. What is your opinion as to the value of the risk that we run in defending India in the case of a European war?—I believe that under the present arrangement the Indian depôts are reduced at the time when the drafts have gone out to about 2,500 men. I do not undervalue the advantage of having a force of that kind in this country, nor do I think that it is necessary to exclude from a balanced account some consideration for India on that account; but if you ask me whether I think that as we are at all times subject to a risk of having to defend India, in the event of a European war, that consideration is of far greater importance than the presence of a force going down at one period of the year to a minimum of 2,500 men, I think there is no comparison between the two considerations.

1267. Then you think that if the question was revived at the request of the Chancellor of the Exchequer the balance would be found to be against England under the present system?—What I have already stated is this, that when the Tulloch system was created certain charges were mentioned, which, in the opinion of the War Department and of the Treasury ought to have been raised against India in forming that calculation, but that those charges were waived in consideration of the value of the Indian depôts to this country as a defensive force. I have now shown you that the number of men at those depôts is considerably reduced, and I understand that the present contention is that a consideration shall be allowed to India in account for the depôts as they remain. It appears to me to follow that the Chancellor of the Exchequer will say that the consideration upon which he waived certain charges in the year 1861 is now gone, and that it is open to him (and I think he would expect the War Department to call his attention to the subject) to revive the consideration of those charges, which at that time were waived.

1268. Is there anything that you would like to add on this particular subject?—No.

1269. You have seen a letter to the Duke of Argyll from the Government of India, dated the 15th of May 1873?—Yes.

Chairman—continued.

Right Hon. Viscount *Cardwell.*

12 June 1874.

1270. That letter is as follows: "Simla, 15th May 1873. My Lord Duke—We have had under consideration the three Reports, dated 11th March 1869, 24th November 1869, 28th February 1870, of the joint committees appointed by the India and War Offices to 'make arrangements for adjusting the charges for effective services of Her Majesty's regiments on the East Indian Establishment on the principle of actual charges,' the first two of which formed an enclosure to your Grace's Despatch, Financial, No. 14, of 20th January 1870. 2. The charges made by the Secretary of State for War against this country for recruits, viz., 136 *l.* 13 *s.* 11 *d.* for Cavalry; 63 *l.* 8 *s.* 5 *d.* for Infantry; 78 *l.* 14 *s.* 8 *d.* for Royal Horse Artillery; 59 *l.* 2 *s.* 10 *d.* for Royal Artillery, mounted; 58 *l.* 9 *s.* 3 *d.* for Royal Artillery; are so out of proportion to the expense incurred under the East India Company, (the average for 10 years ending 1859 for all arms being 19 *l.* 14 *s.* 10 *d.*), that the difference is clearly not mainly attributable to the enhanced pay and allowances of the soldier, to his more perfect training, or to the increased cost of his equipment, but to the altered system under which regiments are recruited, and to the manner in which the cost of troops stationed in the United Kingdom is apportioned to India. 3. Before reviewing in detail the charges which are enumerated in the reports quoted it is necessary to consider the principle on which the 'actual charges' are assessed, with a view to ascertain how far it is equitable to make the whole cost of the home depôts of regiments serving in India chargeable to India, on the ground that some portion of their service is given to raising and training recruits for their battalions in India, while they actually form a part of the home garrison and perform duties of a local and imperial character. It is assumed that the sums reclaimed by the War Office from this country should only comprise the expenditure entailed on imperial funds for raising and equipping troops for India, and that the contributions levied on this account should not be based on the cost entailed by the distribution of troops at home, when that distribution is made for Imperial purposes, and is not necessarily involved in the provision of troops for India. 4. The system under which recruits were formerly procured at Warley, and that, much resembling it, under which the Guards are at present recruited, illustrate the minimum establishment requisite for the provision of recruits. In both cases the establishment was framed solely for the purposes to be achieved, and in deciding what is the necessary actual cost of a recruit a somewhat similar establishment should alone be included. When establishments are maintained not only for recruiting, but also for the fulfilment of other duties, it is evident that, if the whole expense be charged to recruiting, the cost of the recruit is unduly enhanced, while the cost of the other services is unduly diminished, and when the former charges fall on one Government and the latter on another, it is clear that the incidence of the charge is unequally divided. 5. Under the system of depôt battalions, and subsequently of affiliated depôts, which existed until the establishment of the depôt centre system, the depôts, though nominally maintained solely for recruiting purposes, were available for, and actually performed, other general duties. It

Right Hon. Viscount *Cardwell.*

12 June 1874.

Chairman—continued.

was the unanimous feeling of the committees, reiterated in each of their reports, that the expenditure incurred for recruiting, that is, for the depôts, was in excess of the amount which, if devoted solely to that one purpose, would have produced the same number of recruits. In para. 10 of the first report, after stating that the depôt and recruiting charges were then in excess of the capitation allowance of 10*l.*, it is added, 'but the committee have no hesitation in expressing their unanimous opinion that the charge for a recruit, as shown in the War Office Return, is susceptible of very great reduction, and that whatever loss has resulted to the Imperial Government must be attributed mainly to the excessive amount of the depôt charges.' Notwithstanding this expression of opinion the charge against Indian revenues was increased, thus throwing on this country, as the cost of a recruit, the expense of a system which the financial authorities of the War Office had declared to be unnecessarily expensive. In para. 29 of the second report the committee again refer to these excessive charges. They state, 'in concluding their report, the committee would again refer to the heavy expenses of the Indian depôts as at present constituted. They are unanimously of opinion that the present rate of expenditure is too large when compared with that incurred prior to the mutiny in India, and, as shown in their former report, excessive when compared with the charges incurred by the East India Company in the maintenance of the depôt at Warley. The committee are therefore of opinion that, without any sacrifice of efficiency, it is practicable to effect a very large reduction in these charges.' In the face of this reiterated opinion the charges against India were again increased. 6. Now that the whole depôt system of the army at home is undergoing revision, and the nature and extent of the various duties assigned to depôt centres have been clearly specified, it would seem a convenient time to reconsider the charges made against this country for the depôts retained in England of regiments serving in India, and to re-adjust charges which, in our opinion, are out of proportion to the service for which they are paid. 7. In order to arrive at the proportion of the total depôt charges which may be fairly ascribed to recruiting purposes, it is necessary to review the duties on which the officers and men of the various depôts are to be engaged. This is clearly laid down in the Report of the Committee, presided over by Major-General McDougall, on the 'Organisation of the various Military Land Forces of the Country,' and confirmed by the Secretary of State for War, in his speech on the introduction of the Army Estimates of 1873-74. 8. The duties to be performed at the depôt are thus stated,—(1.) Training of recruits both for the line and the militia; (2.) Training of infantry militia; (3.) Training of rifle volunteer corps; (4.) Registry, payment, and training of army reserve and enrolled pensioners; (5.) Recruiting; (6.) Care of arms and stores of regular and auxiliary forces; (7.) Military instruction to officers of auxiliary forces. 9. These duties, it will be observed, are of a very varied character, and chiefly for purposes foreign to Indian services, and we consider that only that portion of the establishment which is necessary for the raising and drilling of recruits for India should be charged to India. 10. It cannot now be maintained that the depôts of Indian regiments are retained exclusively for Indian purposes, or that the Imperial Government, deriving no advantage from their presence and duties at home, should bear no portion of their cost, and it seems very desirable that the question should be finally settled as to what portion of the expense of the depôt establishments under the new system may fairly be assigned to home service generally, and what portion to recruiting purposes alone. 11. It is impossible here, from the absence of detailed information as to the relative values of the different services assigned to the depôts, to state what amount should be apportioned to recruiting. This can be more easily determined at home in communication with the War Office, the calculation being based on the principle that the revenues of India can only be applied to services rendered to India, and that no portion of its revenues should be indirectly applied to the cost of the defences of Great Britain. 12. The details of the charges made for infantry recruits will now be considered and reported upon, as far as the information available in this country will permit. 13. Even assuming that the principle on which the depôt establishment charges have been assessed be correct, it appears to us that the details charged under that principle have been calculated adversely to the interests of India. The first item is for pay. It was determined, in a letter from the Deputy Adjutant General, Horse Guards, dated 2nd July 1869, published with the committee's second report, that the period of recruit training should be for cavalry, nine months; infantry, six months. But in fixing the schedule of prices in their third report, ten and seven months have been taken as the basis of calculation, on what authority is not stated. 14. It is true that a recruit is a better soldier after a long training, but on the same principle it might be argued that he is not a perfect soldier under one or two years' service, and the charges might on such grounds be indefinitely increased. In comparing the present with the former cost of recruits, it is admitted that 'those now sent to India are for the most part more perfectly trained, and consequently more valuable than the half-trained recruits formerly sent to this country, and that, other conditions remaining the same, India might justly be debited with an enhanced charge for their provision. 15. It must, however, be remembered, in dealing with this question, that the terms of enlistment have undergone an important change. Formerly, recruits were enlisted for long service, and India, when she incurred the expense of raising recruits, had the advantage of their services for many years. Now, while the cost of the recruit has been increased, the term of his service has been diminished. India, therefore, for a larger charge receives a less service; while Great Britain will receive from India, as recruits for the army reserve, young, thoroughly trained and seasoned soldiers, immediately available for service if required. It may be argued that the army reserve is equally valuable to the Indian and to the Imperial services, but we do not think that this argument will bear examination. The existence in Great Britain of the army reserve enables her to reduce the strength and cost of the battalions on the home establishment to a minimum, as she can at any moment recruit them from the reserve, while that reserve is too remote

to

Chairman—continued.

to have any such effect on the strength and cost of the Indian battalions. Again, if soldiers be re-recalled from the reserve to replenish a home battalion, its ranks are completed at a comparatively trifling outlay, whereas, if they are recalled for the purpose of reinforcing the Indian establishment, India will be called upon to bear the full charge for the increased strength. Soldiers discharged from Indian service will therefore be of no further value to India, but they will form a highly trained and valuable portion of the home reserves. If the whole cost of their recruitment and training be charged to India, while so valuable a portion of their service is devoted to Great Britain, the revenues of India will indirectly be made to contribute towards the military expenditure of Great Britain, a course which would be contrary to law and to the policy of the Imperial Government. 16. Under the new system, recruits will be trained at the depôt three months, when they will be passed into and become part of the home battalion. These recruits will not necessarily proceed to India. In the first report of General McDougall's committee, it is proposed that after their training, recruits shall be drafted from the depôt into, and form the lower stratum of, the home battalion, and the supplies of men required to feed the foreign battalion shall be drawn off from the upper stratum of the home battalion. 17. Under these circumstances, it is not evident why India should pay for the training of recruits beyond the period of three months when their depôt training ceases, and they join the home battalion. The arrangement under which recruits will swell the ranks of the home battalion, while older soldiers will be sent to India, will in itself be advantageous to the home exchequer and disadvantageous to India, inasmuch as India will bear the cost of training a man who has, say, five years and nine months to serve with the colours, and receive one who may have only four or five years to serve, and will thus bear the maximum charge for training a soldier, and get the minimum amount of service from him. Great Britain, on the other hand, for the cost of training one recruit, will obtain the full service of one man and a portion of the service of another, making in all more than the full period of service of one man, without incurring any extra expense for establishment to train the recruit who replaces the older soldier in the home battalion. 18. It is true that India has the advantage of getting a more highly trained recruit than she gives, but this, as stated in the preceding paragraph, entails no extra expense on the home Government, and is counterbalanced by the increased service obtained. We therefore cannot admit that India should bear a greater charge for its recruits than is incurred for the full period they are required to remain at the depôt, and the period of seven months should, in our opinion, be reduced to the period of actual training at the depôt. 19. The next item requiring remark is that for marching money and cost of conveyance of recruits, 16 per cent. on pay. 20. The average number of recruits annually raised from 1865 to 1870 would appear to have been about 15,000. The average amount voted for marching money and conveyance of recruits was 11,666 *l.*, being about 15 *s.* 6 *d.* per recruit, while the charges made against India for the service are,—For cavalry, 3 *l.* 8 *s.* 11 *d.*; infantry, 1 *l.* 19 *s.* 9 *d.* These charges would appear to be very excessive, but no detail is given by which it can be

Chairman—continued.

ascertained how they have been arrived at. 21. The item for recruiting staff charges, 2 *l.* 19 *s.* 1 *d.*, is not understood, as the whole expense of the recruiting agency, *i.e.*, the depôt, is separately charged. 22. The manner in which the barrack and hospital charges are arrived at is not stated. They appear excessive, and apparently require investigation and reduction. 23. In addition to these charges and to the whole cost of the depôt is added one-third, or 33 per cent., on the total charge, for recruits who desert, die, or are unable through ill-health to embark for India. 24. It is not stated how this proportion was arrived at, the Memorandum referred to in the Committee's Report not having accompanied it, but we believe, from a reference to army statistics, that this charge is out of proportion to the contingencies for which it is supposed to provide. 25. It must be remembered that the Committee were dealing with recruits, and therefore that the casualties amongst recruits should alone have been considered. From the Report of the Commissioners on Recruiting, it appears that the average loss on the whole army during the five years from 1861 to 1865, from death, desertion, and invaliding, was 5·29 per cent. This would, however, not be a fair average to take, as the desertions in the first year of service are in much larger proportion than in later years. 26. The average loss by desertion during the seven years ending in 1865 of men of one year's service and under was 12·16 per cent. (*See* Army Medical Report, 1870, page 36.) The average deaths of cavalry, infantry, and artillery soldiers under 20, ·18 per cent. The number of invalids discharged during the first year of service was, for the same arms, an average of 1·28 per cent., making in all 13·62 per cent. This average is not given as perfectly correct. It is probably approximately so, and sufficiently near the truth to show that the average of 33 per cent. charged to India is excessive. Even 13·62 per cent. would be excessive, as it includes, on the one hand, the desertions and invalidings of a whole year, instead of for seven and ten months already referred to, and deaths up to 20 years of age, an age exceeding that of most recruits; while, on the other hand, no credit appears to have been given to India for smart or discharge money paid by recruits. 27. The charge for agency should, in our opinion, be withdrawn, as it is believed that such a charge is no longer incurred, or has been greatly reduced, and is in course of extinction, and that no expense which could be charged to Indian revenues has been entailed in suppressing the system under which it was paid. 28. The proposal to charge a portion of the cost of the staff of the regiments to which depôts were affiliated requires no remark. It was not adopted at the time, and the system under which it was proposed is no longer in force. 29. The preceding remarks have reference principally to the charge for infantry recruits, as there is not before us sufficient information to enable us to discuss separately those made for the other arms of the service, but, with the necessary modifications, they will no doubt be found applicable to the charges made for all recruits sent to this country. 30. We would now beg to recommend:—1st. That the charge for the home depôts of regiments serving in India should be divided into two parts, the one representing the value of the presence of such troops at home, and of the general service rendered by them, the other representing the value

Right Hon. Viscount *Cardwell.*

12 June 1874.

Chairman—continued.

of the labour of raising and training recruits for the battalions in India. The latter may be fairly charged to this country, while the former should be borne by Imperial revenues. 2nd. That the charge for the cost of training the infantry recruit should be limited to three months, during which he remains at the depôt. 3rd. That the items of charges which are arrived at by general averages should be supported by detail statements showing how they are arrived at. 31. There now only remains to consider the question of the charges for the difference of the number of men on passage. 32. The remarks which have been made as to the charges for recruits will apply equally to the payment for the difference in the number of men on passage, but it is necessary in connection with this service to reconsider the drawback which should be paid to India for men landed in England with less than two years to serve. 33. Even under the old system of enlistment, the rule of giving no drawback for men landed with less than two years' service was often inequitable. The whole expense of recruiting such men and a large portion of their pension charges fell on India, while the home Government had the advantage of their services as enrolled pensioners. Such men were practically not discharged; they were simply transferred from one branch of the service to another, and their value in that other branch should have been credited to the Government which bore the expense of their enrolment, and a portion of the expense of their pensions. Under the new system of short service with the colours, and subsequent service in the army reserve, India should receive, on the disembarkation and discharge of soldiers for home service, such a drawback of enrolment charges as may be considered to represent their value as recruits to the army reserve, an amount which would vary in proportion to the period served in India, and to that remaining due to the Imperial Government for service with the colours or in the reserve. 34. The charges made for both effective and non-effective services have increased and are increasing so rapidly that it is very important these questions should be finally adjusted, and that every charge made by the War Office against the revenues of India should be fully substantiated, and shown to be fairly chargeable in principle, and to be just and reasonable in amount. We have, since 1869, reduced the military expenditure in this country to the extent of a million sterling, and hope to effect still further reductions, and to this end we trust that Her Majesty's Government will not fail to give that careful consideration to the questions in controversy between the India Office and the War Office as will relieve India from expenses which we cannot regard as properly chargeable. We have, &c., (Signed) *Northbrook, Napier of Magdala, R. Temple, B. H. Ellis, H. W. Norman, A. Hobhouse, E. C. Bayley*"?—Yes.

1271. Perhaps the best course would be to take this letter paragraph by paragraph, and for your Lordship to express your opinion upon it?—I have already stated, with regard to paragraph 2, why I think that the Warley system is entirely inapplicable, and that it only tends to confusion to refer to it as a basis of present account. The Tulloch calculation, as I understand it, was based upon the actual charge for the Imperial portion of the 45,000 men employed at that time in India, and I think I have

Chairman—continued.

shown that that was an arrangement less favourable to India than any which has prevailed since.

1272. On the 5th paragraph have you anything to say?—I have no doubt myself that the system is susceptible of great reduction; I have no doubt that under the system of depôt battalions the loss that resulted to the Imperial Government may be attributed to the amount of the depôt charges; it was with that view of economy, as I thought, to both countries that I took measures for the abolition of the depôt battalions.

1273. Have you anything to say on paragraph 6?—"Now that the whole depôt system of the army at home is undergoing revision, it would seem a convenient time to re-consider the charges made against this country." I have no objection whatever to that re-consideration. I should have thought that the most convenient time would have been when the new system had got entirely established, and there had been a little experience of what the actual expenditure was; but in principle I do not differ from that.

1274. Then on the next two paragraphs, have you any remark to make?—The next two paragraphs I think are accurate.

1275. On the 10th paragraph have you anything to say?—The 10th paragraph is not inaccurate. I have stated why I think that under any system the Indian Exchequer should bear its proportionate share of the expense which is caused by our maintaining the system of an army small in time of peace, and susceptible of expansion for those purposes for which in truth an army alone is maintained, namely, for defence when danger arises. With regard to paragraph 11, that the calculation should be "based on the principle that the revenues of India can only be applied to services rendered to India, and that no portion of its revenues should be indirectly applied to the cost of the defences of Great Britain," I entirely agree to that.

Mr. *Campbell-Bannerman.*

1276. There appears to be, at first sight at any rate, some confusion in this letter, the expression "depôts of Indian regiments" being taken as almost synonymous with "brigade depôts?"—Yes.

1277. Perhaps you would explain to the Committee that the brigade depôt is a much larger thing than anything that can be called a depôt of an Indian regiment?—I have assumed, and I should think correctly, that the Committee, who have had so much of this subject before them, were perfectly well aware that the brigade depôt which we speak of is not synonymous with the depôt of an Indian battalion; that it includes the depôt of the Indian battalion; that the depôt of the Indian battalion constitutes only two companies of the brigade depôt. We abolished the depôt battalions because we thought them costly; we have instituted the brigade depôts because we believe them to be economical; but I presume the War Office has no intention of charging to India any portion of a brigade depôt, except the two companies of the battalion which is in India, unless of course the question to which I have already adverted, and which Sir Alexander Tulloch raised in 1861, shall be raised when the

Mr. *Campbell-Bannerman*—continued.

Seccombe Committee come to consider the charges of the Indian recruits under the new system.

Chairman.

1278. On paragraph 13 what have you to say?—On paragraph 13 you come to the time for which the recruit training shall be charged. I have already stated, from my own imperfect knowledge of military matters, that I think that to limit it to three months is altogether out of the question; but I said before, that His Royal Highness I understood would give you his opinions, and I suppose you will form your judgment of what is necessary to make a soldier, whether for the cavalry or for the infantry, from military and not from civilian evidence. Then in paragraph 14, I am glad to see that "it is admitted that those now sent to India are for the most part more perfectly trained, and consequently more valuable than the half-trained recruits formerly sent to that country; and that other conditions remaining the same, India might justly be debited with an enhanced charge for their provision." I have not the slightest doubt that under the present arrangements, whether you get medical testimony or whether you get military testimony, you will find that the recruits sent to India are very different from those who used to be sent, either under the Warley system, or that which, for the first few years, followed the Warley system.

1279. Then paragraph 15 attempts to answer that, by stating that the service is shorter?—It appears to me rather a curious argument in paragraph 15; there is an argument about the Army Reserve, and it is contended, as I read it, that the whole value of the Army Reserve will redound to the United Kingdom. Now anybody can judge of the value of that argument for himself; we propose to pay 4 *d.* a day per man to about 60,000 men, who are to be available for any great Imperial emergency. Now if anybody supposes that India has no interest in that reserve (she is not asked to pay; she pays no fourpences; we pay them all), he takes a view which appears to me very difficult to sustain. The Reserve will be liable under the Act of Parliament, to come back to the colours.

Mr. *Campbell-Bannerman.*

1280. You mean liable to serve in India?—Yes.

Mr. *Fawcett.*

1281. And in the colonies too?—Yes; it is in the Act of 1870; the 14th section says, "Section 10 of the Reserve Force Act, 1867, shall be construed as if the words 'in case of imminent national danger, or of great emergency; the occasion being first communicated to Parliament, if Parliament be then sitting or declared by proclamation,' were inserted in the said section, in place of the words 'in case of actual invasion or imminent danger thereof, or in case a state of war exists between Her Majesty and any foreign power.'" If, therefore, the Queen declares that the case is one of imminent national danger, or of great emergency, the reserve man is liable to come back to the colours; but I do not wish to limit myself at all to what may be, perhaps, not a very probable case that the reserve man will go to India; I should like to know if there is a European war, and this country is in great distress and straights, what will, of all difficulties,

Mr. *Fawcett—continued.*

be perhaps the greatest that you will have to contend with; will it not be, how are you to defend your Indian possessions? The existence of 60,000 men of a reserve, paid entirely out of the Imperial treasury of this country, would be of incalculable value to India in such a moment of emergency; and there is no proposal as yet that India shall contribute a farthing to that.

Chairman.

1282. Enabling, you mean, a larger body of troops to be left in India?—Or sent to India.

Lord *G. Hamilton.*

1283. Before you read that paragraph, might I ask if you agree with the words in the third sentence: "Now, while the cost of the recruit has been increased, the term of his service has been diminished; India, therefore, for a larger charge receives a less service." By that I assume that Lord Northbrook means that in a given number of years a larger number of recruits will have to be sent out; do you agree with that?—That is a question that would require a good deal of detail, and which I should very much like that some such authority as the Director General of the Army Medical Department were examined upon. There has been, as you are well aware, a much greater amount of invaliding from India of late than there used to be, and a greater benefit to the soldier and to the service, and to the country, and to India, I do not suppose ever was introduced; the diminution of mortality in India has been exceedingly satisfactory; and I do not think that much weight or stress ought to be attached to the sentence that you have just read to me from paragraph 15. But I cannot dispute the fact stated, that the tendency at present is for the cost of recruits to increase, and for the duration of Indian service to be less.

Mr. *E. Smith.*

1284. Was it not the case that India got some credit for the unexpired service of men returned?—It was a balance of account, and India got no credit for those who had less than two years' service remaining.

1285. But I mean for those who had more than two years' service remaining India got some credit?—It was a balance of account. When a relief went out and a regiment came home the regiment that went out was more numerous than the one that came home, and India got credit for those who came home having fully two years' service left.

1286. Then with short service there will probably be a smaller number of men who will come home with more than two years to serve?—I think so; but there is no reason why that question should not be re-considered by Mr. Seccombe's Committee, if the charges hitherto made have not been on a basis which would be fair in its application to the state of things which will arise when the short service system comes into operation.

Mr. *Onslow.*

1287. The diminution of mortality to which you have referred has not cost the Imperial Government anything on account of charges in India; it is a sanitary arrangement, is it not?—I understood the question as pointed to this; is India likely to be a loser by the introduction of a system of short service, and I gave the best answer

Right Hon. Viscount *Cardwell.*

12 June 1874.

Mr. *Onslow*—continued.

that I could. I do not dispute the fact that if a man remained in perfect, vigorous health, and would serve India for 20 years, it would be better for India not to have the expense of moving him, and it would be cheaper than if he only serves her for two years; but my belief is, and I think I have very high authorities on my side, that frequent invalidings from India are not only humane and right on every higher ground of policy, but in the end will be found not to be uneconomical.

Mr. *Stanley.*

1288. There is one question I should like to ask you with reference to this paragraph; nothing is said in it about militia reserve; but in addition to those army men, of whom your Lordship has spoken, and who, although available for the service of India, are charged exclusively upon the revenues of this country, there are, are there not, about 30,000 militia reserve?—There are.

1289. For whom India does not pay a farthing?—Yes.

Chairman.

1290. Now, going to the 16th and 17th paragraphs, have you any observations to make on them?—I think I have said so much about the period of three months that at the present moment, perhaps, I need not say any more. "The arrangement under which recruits will swell the ranks of the home battalion, while older soldiers will be sent to India, will in itself be advantageous to the home exchequer, and disadvantageous to India." I, for my part, do not altogether agree with that, for reasons which I think I have already stated. I should think that if the Commander in chief were asked whether he would rather have the recruits in India and the older soldiers at home, or the older soldiers in India and all the recruits at home, he would give an answer at variance with the argument contained in this paragraph; and indeed I think that one of the points in which the double-battalion system will require the greatest care in bringing it into successful operation is to take care that you do not have too large a proportion of your recruits at home, and too large a proportion of your older soldiers sent to India. The same remarks, I think, apply to paragraph 18. The paragraphs from 19 to 29 inclusive I will, with your permission, pass over, because you have in the room the Accountant General of the Army, who is a member of the committee there referred to, and who will answer them at first hand, while any answer which I could give would only be of course at second hand. With regard to paragraph 30, we there come to the recommendations. Their recommendation is, "first, that the charge for the home depôts of regiments serving in India should be divided into two parts, the one representing the value of the presence of such troops at home, and of the general service rendered by them, the other representing the value of the labour of raising and training recruits for the battalions in India. The latter may be fairly charged to this country, while the former should be borne by Imperial revenues." I have no objection whatever to that; that, taken by itself, is indisputable. I think it will let in, as I have already stated, other considerations, which may probably make the balance of the account not more favourable to India than it is at present, but, taken by itself, I have nothing to say against it. "2nd. That the charge for the cost of training the infantry recruit should be limited to three months, during which he remains at the depôt." I have already stated that a large part of his training goes on after he has left the depôt, the whole of his musketry training and a great deal more; but that of course you will learn from His Royal Highness much better than you could learn from me. I should also observe that you must bear in mind that you cannot under any system limit your charges for recruits exactly to the day of the month that you like. You do not get recruits exactly when you want them; you have some time spent in obtaining them, and everything of that sort; and these are considerations that, when the new inquiry comes to be made, and the new scale of charges comes to be arranged, will of course require to be gone into. The third recommendation, viz., "That the items of charges, which are arrived at by general averages, should be supported by detail statements, showing how they are arrived at," I accept in principle. The members of the committee will probably explain whether there has been any deficiency in this particular in respect of the charges which they have admitted.

Chairman—continued.

Mr. *Campbell-Bannerman.*

1291. The drafts, of course, always go out at one period of the year?—The drafts must go out at the healthy period of the year, and you cannot just arrange the whole thing so that a man shall be chargeable to you in his raising and training only the precise period that would be most convenient to yourself. With regard to paragraph 32, I do not know that that has been much the subject of consideration in this Committee. On paragraph 33 I notice this: "The rule of giving no drawback for men landed with less than two years' service was often inequitable." I have already said that that, of course, ought to be gone into when the mode of making charges between India and England is settled. But I wish to point out this, that before a battalion goes to India it has to be raised from a strength of 520 to a stregth of 820. That is done at present entirely at the expense of the British taxpayer, who is paying for an increased strength upon those regiments during the time they are preparing. No doubt they contribute their part to the strength of this country in the mean time, but all these considerations any such committee as we have been speaking of will have to bear in mind on one side and the other.

Sir *G. Balfour.*

1292. We have it from your Lordship that it is the bounden duty of this country to raise the battalion from that low strength to the Indian establishment before it embarks?—I mean it is the practice to do it.

1293. For the last three years the strength has been more equally maintained, I believe?—That is the period of which I am chiefly speaking.

Chairman.

1294. With regard to the points which your Lordship was just mentioning as to the necessity of bringing up the regiments previous to embarkation to the full amount of 820 men, if there was a deficit that would be supplied from the ranks of the general army, I presume, by volunteering?—

Chairman—continued.

teering?—Under the one battalion system you had no resource but volunteering; but under the double battalion system the battalion which is in India rests not only upon the depôt, but also upon the home battalion.

1295. And in consequence the soldiers who filled up the number would either be recruits or something better than recruits?—Yes.

Mr. *Fawcett.*

1296. Would you kindly explain that last answer?—The new system, as I stated in an earlier part of this examination, is that the recruit is enlisted not for the battalion but for the brigade; therefore he is liable to serve in either of the two battalions, and therefore the transfer can be made from the home battalion to the battalion serving in India, or from the battalion coming home from India to the other battalion relieving it, as the necessity may require; and, as I pointed out in an earlier part of the examination also, when the recruit comes home invalided from India, and is found at Netley, after going through medical treatment, to be fit for the home service, he will be borne upon the books of the home battalion and will not be chargeable to India.

Mr. *Onslow.*

1297. May I ask what you consider "better than a recruit," in reference to your answer to the Chairman?—A more experienced soldier. A man of two years' service I should consider of more value than a man of three months.

1298. More than a man of seven months?—I think so.

Chairman.

1299. With regard to paragraph 34, have you anything to say?—For the first time we have the word "non-effective" mentioned in this paragraph. I do not know that much has been said in this Committee about non-effective charges, and I do not wish to occupy you much with them, but I thought it desirable, perhaps, to mention that the 3*l.* 10*s.* of the Tulloch system did not appear to me a very satisfactory arrangement, and with the concurrence of the India Office we agreed to abolish it, and we have substituted for it a more accurate mode of calculating the non-effective services, and the result of that has been, I think, at least to prove that in times gone by India has certainly not paid more than her share; and the effect of the new arrangement has been that we have received in repayment much more than we should if we had gone upon the 3*l.* 10*s.* In summing up generally what I have to say on Lord Northbrook's letter, I consider that the true principle is, that the system under which recruits are obtained and sent to India shall be so arranged that the services required, both for the United Kingdom and for India, shall be performed as cheaply as possible in the aggregate; that the United Kingdom and India shall each bear its portion as closely as can be calculated upon the actual cost for each: that the additional cost which expansiveness involves (that, I believe, I have explained to the Committee sufficiently) shall be borne by each in the proportion in which it employs the British army; and that all expenditure which can be made the subject of actual calculation shall be calculated on both sides. There will, probably, remain questions to which arithmetical

Chairman—continued.

calculation cannot be applied; and to all such questions a reasonable spirit ought to be brought by impartial men; and I have only, in conclusion, to say that I have not the slightest wish to contend for any adjustment, the effect of which shall be to pay Imperial expenses out of Indian revenues.

1300. You are aware that on the 9th of August 1872 the following letter was sent from the India Office to the Under Secretary for War: "Sir,—Para. 1. I am directed to inform you that the Secretary of State for India in Council has had under his serious consideration Mr. Campbell's letter of the 24th April, being a reply to a letter from this office, of the 8th September 1871, upon the subject of the rates at which the cost of recruiting for the European regiments employed in India is charged to the revenues of that country. 2. In his letter of the 8th September 1871, the Secretary of State in Council pointed out that the cost of recruiting appeared to be swelled by needless expenditure on the organisation of depôts; that is to say, by expenditure which did not seem to be required for the efficient training of recruits. The Secretary of State for India in Council further thought it his duty to suggest a plan for recruiting by which much of this unnecessary expenditure might be saved, and which at the same time would tend to simplify the system by which the share of recruiting expenses due from India is annually ascertained. 3. Mr. Campbell's letter passes over these representations and suggestions altogether. It takes no other notice of them than to admit that all the facts are accurately stated. It does not defend the depôt organisation as necessary for the efficient training of recruits; nor does it state that there is any objection, so far as the efficiency of training is concerned, to the cheaper system which had been suggested from this office. The charges made against India for recruiting are indeed defended, but they are defended not upon the ground that they are required for the purpose for which they are nominally paid, but upon the ground that they are required for a totally different purpose; the purpose, namely, of making India contribute to what is called an army of reserve; that is to say, for the purpose of making India pay towards the home garrison of England, on the plea that some part of it, at some future time, may possibly be required in India. 4. Mr. Campbell's letter further intimates that the same principle on which this charge is defended would equally justify many other charges which are not now actually made, but which, it is distinctly said, Mr. Cardwell reserves his right to bring forward at any future time. Of these other charges Mr. Campbell's letter furnishes a list. 5. The Secretary of State for India in Council entirely concurs with Mr. Cardwell that the principle laid down in Mr. Campbell's letter would cover many other charges which have never hitherto been made or contemplated; and he doubts whether even the list of them which is indicated in that letter exhausts the contributions which, on the same principle, India might be called upon to make. But taking that list alone, it would appear that, in Mr. Cardwell's opinion, India may be justly called upon to pay a proportion (quite undetermined) of the total cost of the whole Military Staff and Head-quarters' Department of the army at home; a like proportion of the regimental staff of all the regiments which

Right Hon. Viscount *Cardwell.*

12 June 1874.

Chairman—continued.

have, though serving in England, a nominal connection with the recruiting depôts; a like proportion of all home educational establishments; of all experimental outlays at Woolwich and other arsenals, and of all rewards to inventors. 6. It is not easy to see why this list of heads under which India may be called to pay direct tribute to the Imperial Exchequer should stop here. A share of the cost of every home establishment, or institution of whatever kind, to which the Indian Government affords custom or employment, or which has any contact, direct or indirect, with the administration of that country, might be claimed upon the same principle, and under the same plea. If India, besides defraying the whole cost of the India Office, as it now does, is to be required to pay also largely to the cost of the establishment of the Horse Guards and of the War Office, the principle on which this claim is made would not stop with the demands of the particular department on behalf of which Mr. Campbell writes. In like manner the navy may possibly be required in the defence of India. Therefore the revenues of that country ought to defray part of the expenses of the Admiralty, of all the naval arsenals, of all the naval stations, and probably, also, of all the Mediterranean garrisons. 7. If such a scheme for exacting tribute from India towards the maintenance of Imperial establishments both at home and abroad is to be entered upon, it is better that it should be pushed at once to its logical results. It is only in the light of those results that its real character can be appreciated. The most injurious system which can possibly be adopted is the system of asserting the principle, but of leaving it to be applied gradually as successive Governments may from time to time find it convenient to apply it, to relieve their Parliamentary Estimates, and yet not so as to alarm too much the people of India, or shock too much the convenience of the public at home. 8. The problems of Indian finance are difficult enough already, but they will be rendered infinitely more difficult if the Indian Government is to be kept in complete uncertainty as to the extent to which 'indirect claims' are to be raised for Imperial subventions. 9. The Secretary of State for India in Council therefore cannot allow the principle of such claims to be laid down for the first time in an official letter from the War Office without entering against it his formal protest. The principle is certainly a new one. He believes it to be illegal, and he is satisfied that it is unjust. 10. As, however, the gravity of this question is apparent, and as Mr. Campbell's letter sets forth the arguments on which Mr. Cardwell relies for establishing the justice of such claims, the Secretary of State for India considers it his duty in like manner to explain the grounds on which he holds these arguments to be fallacious. 11. The argument of Mr. Cardwell begins with, and mainly rests upon, the assertion that it is the policy of the Government of India to maintain the smallest possible amount of European troops in that country, to rely habitually on reinforcements from the army at home, and thus practically to lean upon that army as an army of reserve. 12. The Secretary of State for India regards this assertion as not only incorrect, but as completely inverting the real facts of the case. 13. It would be much nearer the truth to affirm that the Imperial Government keeps in India and quarters upon the

Chairman—continued.

revenues of that country as large a portion of its army as it thinks can possibly be required to maintain its own dominion there; that it habitually treats that portion of the army as a reserve force available for Imperial purposes; that it has uniformly detached European regiments from the garrison of India to take part in Imperial wars whenever it has been found necessary or convenient to do so; and, more than this, that it has drawn not less freely upon the Native army of India, towards the maintenance of which it contributes nothing, to aid it in contests outside of India, and with which the Indian Government has had little or no concern. 14. The extraordinary case of the great Mutiny of 1857–58 is the only case which gives even plausibility to Mr. Campbell's representation of the facts upon this subject. 15. In that case, altogether unprecedented in the history of British India, the Imperial Government was compelled, under the imminent risk of losing its empire in the East, to make one of those great efforts which are at times inseparable from Imperial power and Imperial obligations. It must be remembered, however, that if similar exertions had been called for by war in any other part of Her Majesty's dominions, not only must the same effort have been made, but the burden of it must necessarily have been borne, in great part at least, by the Imperial Government. But in regard to the Indian Mutiny, no part of the cost of suppressing it was allowed to fall on the Imperial Exchequer. The whole of it was, or is now being, defrayed by the Indian taxpayer. 16. Since the period of the Mutiny, the Imperial Government has largely increased the portion of its army which it keeps in and at the expense of India; and both before and since that event it has been in the habit of drawing upon that portion of its army as an army of reserve for Imperial wars, whenever occasion required. The Secretary of State need not now refer to the celebrated case of the expedition to Egypt in 1801, further than to observe that, in any similar contest which may occur in future, it is more certain than ever that the Indian Army would be drawn upon as an army of reserve, and that the maintenance of a large force in that country, available for operations in the intervening regions, must always be one of the main elements to be considered by an enemy in estimating the danger and the difficulty of hostile operations against Great Britain in that direction. 17. The expeditions to Mauritius and Java, in 1810 and 1811, are further instances of aid derived from India during the great French War. 18. But without dwelling on these cases, and looking back no further than the history of the last 30 years, there have been only two occasions, besides the Mutiny, on which reinforcements were sent for Indian wars, whilst during the same period there have been no less than seven different occasions on which India has been called upon to supply either whole armies or considerable reinforcements for the Imperial purposes. 19. The two occasions referred to on which reinforcements to India were sent out from home were the Sutlej campaign of 1846, when one regiment of cavalry and three regiments of infantry were sent from England, and the Punjaub campaign of 1849, when five regiments of infantry were similarly supplied. 20. Against these occasions, when India has borrowed troops from England, are to be set the following occasions

Chairman—continued.

sions when England has borrowed troops from India:—In 1842, the China expeditionary force, consisting of two battalions of artillery, three companies of sappers, four regiments of European infantry, six regiments of Native infantry, and all the staff of the army; in 1855, two regiments of cavalry and two regiments of infantry were sent from India to reinforce the Crimean army; in 1856-57, the Persian Expedition was drawn from India, to the extent of—two troops, three battalions, and five companies of artillery; two companies sappers; one regiment European cavalry; three regiments European infantry; three regiments and three squadrons Native cavalry; eight regiments Native infantry; and commander and staff. In 1859-60, another China Expeditionary force was reinforced from India by four batteries of artillery, a company of engineers, a company of sappers, six regiments of European infantry, two regiments of Native cavalry, eleven regiments of Native infantry, and a considerable portion of the staff. In 1860, two regiments were sent from India to New Zealand. In 1861, another regiment was afforded to the same colony. In 1867, the army for the invasion of Abyssinia was (mainly) drawn from India, including—five batteries artillery; one company engineers; six companies sappers; one regiment European cavalry; four regiments Native cavalry; four regiments European infantry; eight regiments and one company Native infantry; Coolie Corps; Army Works Corps; and commander and staff. 21. As regards this list of occasions on which India has been drawn upon as affording an army of reserve for Imperial purposes, it may possibly be alleged that these wars were all Indian wars. In the House of Commons, in 1857, Mr. Gladstone did indeed denounce this plea, in respect to the Persian War, as one which 'could not be advanced by any fair or candid man'; but the Secretary of State is aware that, nevertheless, it is a plea which is sure to be put forward on behalf of the Imperial Exchequer. It is certain, however, that all these wars were dictated entirely by the Imperial Government, and that the interests of British commerce, the grievances of British merchants, or the honour of the British Crown were the determining considerations in them all. The policy of charging the Persian War in largest proportion to Indian revenues were severely commented on in Parliament, and led to a statutory enactment limiting such uses of Indian revenues for the future. 22. If it be argued only that India, as a part of the empire, has had its own share of interest in these wars, the plea may be admitted, but only in the proportion in which the same plea is admitted as against the Imperial Exchequer in respect to wars within the limits of India. Many of these have been wars dictated from home, and have been undertaken with reference to Imperial policy. In view of this fact, the Secretary of State in Council sees much force in the declaration of Sir R. Peel, quoted and adopted by Mr. Gladstone in the same speech, which has already been referred to, 'that there is a virtual connection between Indian expenditure and British liability.' Community of interests within certain limits may fairly be alleged; but it must not be alleged only when it tells in favour of the Imperial Exchequer, and repudiated when it tells in favour of the Indian taxpayer. 23. The fact of India having been so

Chairman—continued.

continually drawn upon as an army of reserve for Imperial wars is a conclusive answer to Mr. Campbell's letter on this part of the subject, whatever may have been the system of account by which the charges for that army have been adjusted. But in this matter also it is the duty of the Secretary of State in Council to remind Mr. Cardwell what that system has been. 24. In every instance in which reinforcements from home have been sent to India, the whole pay of the troops so sent has been charged to India from the moment of their departure from the shores of England. On the other hand, when India has been called on to provide troops for foreign expeditions, it has been the general practice to continue to charge the ordinary pay of the troops to the Indian Exchequer during their absence from India. In the very last case (the Abyssinian War) the ordinary pay of the troops, both European and native, furnished to that expedition was paid out of Indian revenues. 25. These facts are a sufficient comment on the fairness of an attempt to charge India for Imperial military establishments at home on the plea that they furnish to India an army of reserve, without any notice whatever being taken of the much more numerous cases in which India has been drawn upon as affording an army of reserve for the Imperial Government. 26. And here I am directed to observe that it would make no difference in the argument now maintained, even if it were true, that all this had been done with the consent of the Court of Directors or of the India Office. In so far as that consent may be supposed to represent, however roughly, the consent of the people of India, it only shows that the authorities specially charged with the interests of India have taken a higher and more generous view of the relations which ought to exist between the two Governments than prevails in Mr. Campbell's letter. On the other hand, in so far as these charges have been thrown on India by the power or influence of the Imperial Government, it shows that the Imperial Government has habitually assumed, not merely that India should furnish an army of reserve, but also that India should furnish the pay of that reserve even when serving out of India, and when, therefore, it was useless to the Government of that country. 27. In regard to another argument used in Mr. Campbell's letter, namely, that the Indian Empire, by increasing the total number of soldiers which require to be raised from the civil population at home, competes with the Indian Government in the recruiting market, and thus raises the total price of the recruit, I am instructed to point out to Mr. Cardwell that this is an incident of wide Imperial dominions, and that, even if India is to be considered in no other light than as the cause of an increase in the total cost of troops, India pays its full share of that total cost when it pays for those troops in the proportion in which it actually recruits and actually employs them. 28. But I have further to point out, that all arguments which imply that India is nothing but a burden, and a cause of embarrassment in military affairs, are arguments inconsistent with many notorious facts—with the anxiety of officers to secure Indian employment, and with the advantages which Indian exigences afford in the way of augmentations and promotions in the army. It is well known that India offers the best, if not the only, training

Right Hon. Viscount *Cardwell.* 12 June 1874.

Chairman—continued.

ground for the British army in time of European peace; that as Indian pay and allowances are much higher than those given to the army either at home or when employed elsewhere abroad, Indian service is highly popular in the army, and that in consequence of the liberal treatment which up to the present time the Government of that country has been enabled to bestow upon the officers and men, it has contributed one great inducement to numbers of both classes to enter the British army; and, moreover, that under the new army organisation, by which Her Majesty's Government hope to augment the military power of the country and to save the expense of pensions by the introduction of a short service system and the establishment of a reserve, a very large, and certainly not the least valuable, portion of that reserve will consist of men whose entire military training and experience will have been acquired at the expense of the people of India. 29. For these reasons the Secretary of State in Council is of opinion that the adoption of any new principle of charge founded on the pleas set forth in Mr. Campbell's letter would be unjust to the people of India. 30. I am instructed to add that, in the opinion of the Secretary of State in Council, the adoption of any such principle would require the sanction of an Act of Parliament, as being entirely novel and at variance with the principle laid down in the existing law. 31. That principle is laid down in the 2nd clause of the Act 21 & 22 Vict. c. 106, which directs that Indian revenues shall be expended 'for the purposes of the Government of India alone,' and also in the 52nd clause, which directs the auditor to report on the accounts, 'specially noting any case in which it shall appear to him that any money arising out of the revenues of India has been appropriated to other purposes than those of the Government of India, to which alone they are applicable.' 32. In the application of this principle to particular cases of charge there is room, no doubt, for a reasonable latitude of interpretation; and this latitude is largely made use of when, for example, such a position as that of Aden is maintained at the sole expense of the people of India. But, allowing for such latitude of interpretation, the general scope and import of the principle seem sufficiently apparent, namely, that India cannot be justly charged with any expenditure which would have to be maintained if the Indian Empire did not exist. The word 'alone' negatives the application of the revenues of India to any such mixed purposes, and it is deprived of all force and effect if the Indian revenues may be applied to such expenditure. It is not easy to conceive for what purpose a word so distinct and emphatic should have been introduced, if it was not to exclude the application of those revenues to such purposes. No expenditure in respect to which it cannot honestly be said that it is incurred on behalf of India can possibly come within the description of expenditure for Indian purposes alone. 33. As regards the novelty of the charges referred to in Mr. Campbell's letter, it is enough to say that the Imperial Government has supplied India with recruits and soldiers for nearly a century; but during the whole of that time, notwithstanding the comprehensive words used in the Acts of Parliament directing payment of the expenses incurred for 'raising, transporting, and maintaining such

Chairman—continued.

forces,' and 'raising and supplying recruits for the same,' and appropriating the revenues of India to defray 'all the charges and expenses of raising and maintaining the forces, as well European as native,' no attempt has ever been made until now to render the Indian finances liable to such charges (29 Geo. 3, c. 8, s. 1; 33 Geo. 3, c. 52, ss. 128. 149; 53 Geo. 3, c. 155, s. 55.) 34. In conclusion, I am instructed to say that this general question of reconstructing the whole system on which Indian charges have hitherto been regulated stands in no necessary or even natural connection with the immediate subject of the cost of recruiting. The Secretary of State for India does not contest the necessity of India paying for its recruits under whatever system is determined upon at home as necessary for the efficiency of military training. And if the present expenditure be defended on this ground, the Secretary of State for India can only represent his views on possible economies in the system, in order that these representations may be considered by the Secretary of State for War. But if the cost of recruiting be swollen by an artificial system of charge, so as to include outlays which have really nothing to do with the cost of training, but are connected entirely with the organisation of the home garrison of England, he must record, as he now does, his protest against the principal involved—namely, that of charging India with any outlay which cannot fairly be said to be occasioned by the service of India. I have, &c. (signed) *T. T. Pears*, Major General, Military Secretary."?—Yes.

1301. Is there any point there upon which you wish to express an opinion. With regard to recruits and the depôt organisation, I think the whole of that question you have stated your opinion upon quite fully. Now, with regard to paragraph 7, would you admit that this was "a scheme for exacting tribute from India towards the maintenance of Imperial establishments both at home and abroad"?—No; I think that would be a very great reproach, that we had endeavoured to exact any tribute from India, and I certainly should be the last person to do so knowingly. At the present moment the Inspector General of Recruiting and his staff are an exclusive charge upon the revenues of Great Britain, and it does not appear to me that it would be exacting tribute from India if she were asked, as she has a very large portion of our recruits, to pay a certain proportion of the expenses of the Inspector General of Recruiting. It might be right, or it might be wrong, but I do not think it deserves the phrase of an attempt to exact tribute from India.

1302. Then the arguments which follow are very much based upon the same principle, that certain indirect claims for Imperial purposes are to be pressed against India?—"Indirect claims" is not an agreeable expression; but the question really is whether the claim is just or unjust.

1303. But I think from what you have already stated that your idea is that there should be no uncertainty whatever in regard to the charges made upon the India revenue for these purposes?—My opinion is that every charge that is capable of being reduced to arithmetical calculation should be so reduced, and that whatever other considerations on either the one side or the other

may

Chairman—continued.

may be capable of being stated with plausibility even, should be equitably considered by impartial persons.

Mr. *Fawcett.*

1304. This charge of the Duke of Argyll about exacting tribute from India did not apply simply to recruits, did it; it covers a much wider field than that?—I only give the Inspector General of Recruiting as an instance. The charges of that kind are originally contained in the correspondence, to which I have already referred, of Sir Alexander Tulloch and the War Office and the Treasury, in the year 1861. I think, and I have already stated, that those charges were waived by the Treasury in consideration of the services rendered to the United Kingdom by the Indian depôts. I now understand that India wishes that those charges should have a pecuniary claim against the United Kingdom attached to them, and I say that if the consideration on which the Treasury waived certain charges is removed, then those charges themselves of course revive.

1305. But my point is this, that it is only a part of the statement which refers to the recruits. Sir Alexander Tulloch's proposal, to which the Duke of Argyll referred, was to put a part of the cost of the Secretary of State for War, the Commander in Chief, and the general expenses of the War Office on India; that is what the words refer to?—Then I ought to be regarded as more moderate than, perhaps, the Chancellor of the Exchequer may approve; but in the letter of Mr. Campbell-Bannerman there are other things stated besides that. He says, "Of these indirect charges the following may be instanced"; and then comes a long list of them.

Chairman.

1306. The succeeding paragraphs go into the question of whether the Indian army is a reserve for England, or the English army a reserve for India. That I think you have given your opinion upon already; but then there is the case of the forces which have been drawn from India for expeditions outside of India?—I should suppose that every expedition will differ entirely in its circumstances from every other expedition, and I cannot imagine that this Committee will be successful in laying down any rule that shall guide all future wars.

1307. Then would you consider that the principle upon which India has been charged for the expenses of these wars was because India was considered to be primarily interested in them?—If it is not disrespectful to the Committee, I should very much prefer not giving my individual opinion upon each of these wars, and the expenses, without a great deal more study than I have given to this letter. Take, for instance, the much disputed question which is mentioned here, of whether the ordinary pay of the troops, both European and native, in the Abyssinian war ought to have been paid out of Indian revenues. I really did not suppose that it would be necessary to give an opinion upon that subject. I am quite sure of this, that the true principle in every war ought to be to consider whether it was for the behoof of India, or whether it was not for the behoof of India; and I have no doubt that the United Kingdom, as the stronger party, would, in adjusting any such controversy as that,

Chairman—continued.

be inclined, generally speaking, rather to avoid making claims upon India than to press them unduly; at any rate, I think they ought to be; I understood that I was to give evidence about the home charges of the Indian army, and not at all to express to the Committee what may happen to be my individual sentiments about the arrangements that were made with respect to the Abyssinian War.

Sir *G. Balfour.*

1308. As a mere fact, do you remember that in the first Chinese War the Court of Directors appealed over and over again about the non-performance of the promise, that England would pay the pay and allowances of the troops employed in that war?—I remember something about it; but, as I have already said, I did not intend to give my individual sentiments upon those political controversies.

Mr. *Fawcett.*

1309. This question of the Abyssinian War seems to have grown out of your evidence, as I understand it, because, in going over certain charges of the army in India, you have more than once referred to the great advantages India derives from having a large army of reserve in England; therefore, those who represent India at all may fairly put on the other side, may they not, the advantages which England derives from having in her wars troops from India to draw upon, and making India pay a portion of the expense?—Yes; but I think there is a very wide distinction between laying down a principle which is to guide us for our future conduct, and asking me as a witness before this Committee to give my individual opinions upon certain political controversies upon which I might have the opportunity of expressing my opinion, if I thought it desirable, elsewhere, but which I do not think bear upon the home charges of the Indian army.

1310. It is with regard to the future; it is not simply inquiring into the past; the past is an indication of what may happen in the future and therefore, if a similar war to the Abyssinian war should break out, it may fairly be considered that India would render the same pecuniary assistance to England?—It would not be a home charge. However, I should say upon that if there were a war like the Abyssinian war, the true plan would be for those who are responsible to consider whether it concerned India or not, and if it concerned India very much, and England very little, then I think India might be expected to bear a certain share, and a greater share, than if it concerned England very much and India very little.

Mr. *Eustace Smith.*

1311. Who decided this apportionment of charge in the Abyssinian war?—I had not the honour of being in office at that time.

Mr. *Campbell-Bannerman.*

1312. The Committee have before them a Blue Book of 1871 on East India Military Expenditure, containing the correspondence which passed between the authorities in India and the Home Government in reference to proposals for the reduction of military expenditure in India in 1869. You of course are aware of what occurred with

Right Hon. Viscount *Cardwell.*

12 June 1874.

Right Hon. Viscount *Cardwell.*

12 June 1874.

Mr. *Campbell-Bannerman*—continued.

reference to that?—In 1869 there was a strong demand for a reduced expenditure in India, and it was proposed to send home at once seven regiments of infantry and four of cavalry, besides a considerable reduction in artillery, thus relieving the Indian establishment at the expense of the British establishment. Large reductions were also proposed to be made in the native Indian army. The answer of the War Office was, that although Parliament expected a diminution of British expenditure, yet the War Office arrangements would be so made as to reduce the Indian expenditure at the same time.

1313. Accordingly certain reductions were made?—The head-quarters of two regiments of cavalry and two of infantry were brought home, and each infantry regiment was reduced by two companies, with an increased number of privates in each company remaining in India; and each cavalry regiment was reduced by one troop. The pressure being very considerable for Indian reduction, the War Office at first reluctantly proposed to reduce one regiment of cavalry altogether; but that regiment would have been one of those regiments which had recently been added to the British establishment from India; it would have caused great mortification and dissatisfaction, and in the ultimate correspondence it was not carried into effect, I believe greatly to the satisfaction of the Indian Office, as well certainly as to mine. You have before you, on page 337 of this Blue Book of 1871, the sentiments of the India Office. They say in paragraphs 7 and 8:—"With regard to the cavalry, it is understood that the War Office propose to leave nine regiments in India, dispensing with the second major in each regiment, and reducing the establishment of each regiment from seven troops to six, and from the present strength of 566 officers and men of all ranks and 440 horses, to 480 men and 436 horses. The Duke of Argyll fully recognises the importance of sparing, as far as practicable, officers and non-commissioned officers the injurious effects that would result from the disbanding of regiments; and he is glad to perceive that the scheme now proposed by Mr. Cardwell, including the absolute withdrawal of two regiments of cavalry and two of infantry, will, without having recourse to such a measure, meet, to a very great extent, the views of the Government of India."

1314. Are you aware of the financial effect of the War Office reductions?—The ultimate effect, I believe, was pretty nearly the same as the proposal originally made; the maintaining the cadres of the regiments threw, I think, a temporary expenditure upon India, because of course we did not choose to take the expense so created upon the army estimates of this country.

1315. There were some proposals also with regard to the reduction of artillery?—Yes; the ultimate proposal was a reduction of five batteries of horse artillery from India, which were taken on the British establishment, and three batteries of garrison artillery, which were reduced, and the head-quarters of a brigade, which was reduced. When these reductions were suddenly made for the relief of India, we expected India to bear the intermediate charge until the officers could be absorbed; but, as an increase was then taking place in the artillery at home, a considerable absorption immediately took place; and I may

Mr. *Campbell-Bannerman*—continued.

refer you to the same Blue Book, at page 383, to see what that absorption was. I may observe here that, if I am correctly informed of the reductions proposed by India at that time, some affecting the European force, and requiring the co-operation of the War Office, and some affecting the native Indian army, and therefore within their own control, I believe the following to have been the result: namely, that those which affected the European cavalry and infantry were amended at the War Office in a manner which obtained the approval of the India Office, and carried into effect at once, so as to enter into the Indian Estimates then in course of preparation. Those which affected the European artillery were modified, as shown at page 382, and in the subsequent and amended shape were adopted by the War Office in time for the next year's Indian estimates. I am told (I should not like to say so if I am inaccurate) that those which affected the native Indian army have, with one or two small exceptions, not been carried into effect at all up to the present time.

1316. And, with regard to them, the War Office, of course, had nothing to do?—Nothing whatever to do.

1317. Did you not, in 1869, make a change in the terms of enlistment, with a view to relieving India?—In 1869 and 1870 we made two considerable changes, with a view especially to the relief of India. On the 8th of May 1869 a Royal Warrant was issued, enabling the Secretary of State to give permanent pensions, at a proportionate rate, to men who had completed less than 21 years' service, with a view of reducing the expenditure of the Indian depôts, by relieving them of the men unfit for foreign service. In the Enlistment Act of 1870 a clause was inserted enabling the Secretary of State to transfer a man of more than two years' service remaining in India to another corps of the same arm of the service. This was an unpopular measure, as was also the measure of general enlistment; it will not be necessary, under the new system of brigade enlistment and double battalions, to resort to either. But, in the meantime, both measures were adopted with especial reference to India.

1318. Sir Thomas Pears the other day spoke of the price that India pays for a gun; taking that as an instance, do you consider that there is any hardship in the system which at present is followed?—I understood that the complaint was that in charging India for stores; for a gun, for instance, she pays upon that balance-sheet, which includes charges on capital invested, and with which probably many Members of the Committee are familiar. Now, my observation is that I think it would be very strange if, in manufacturing largely for any part of the British Empire, we omitted to make the charge upon that basis. We charge to India for a gun what, I presume, it pays India extremely well to give, otherwise she would try whether Sir William Armstrong or anybody else would make it for her upon better terms. But I believe that she gets stores cheaper and better under the present system than she can get them anywhere else. And it probably is known to some Members of the Committee that, although we now are able to make very good guns and very cheap guns, we have not only had very large expenditure upon experiments in order to attain to that system, but we have had in former times very costly failures,

and

Mr. *Campbell-Bannerman*—continued.

and I see one Member of this Committee who can probably tell them how many acres of rejected guns are to be found, or were to be found, a few years ago at Woolwich, which have added enormously to the real cost with which the British army is armed, and of which not one single sixpence, as far as I know, has ever been contributed by India.

Sir *G. Balfour.*

1319. But the fact is that if these charges were examined no one who gives attention to them could possibly object to the rates that were charged against each gun?—That is my opinion; you, of course, know much more about the details of the matter than I do.

1320. And, in fact, Sir Thomas Pears has been mixing up two distinct per-centages; one set of per-centages consisting of per-centages upon *bonâ fide* charges upon the actual manufacture, and the other set of per-centages by the Admiralty, comprising a variety of charges similar, in some degree, to those referred to by Sir Alexander Tulloch?—That may be; I am not prepared to say exactly what Sir Thomas Pears's evidence has been, not having heard it. All I can say is, that it would be very pleasant to the Chancellor of the Exchequer if a change can be made, and if India would manage Woolwich, and allow us to buy at Woolwich on the terms on which India now buys there.

Mr. *Campbell-Bannerman.*

1321. While you were Secretary of State for War a good many changes were made with regard to the army, some of which affected the finances of India; and there is an impression in some quarters that those changes were made without the interests of India being considered, and without any consultation with the authorities of the India Office, who represented those interests. Perhaps you will state to the Committee whether that is your opinion?—I am quite sure that if anything of that kind has occurred, it must have been entirely *per incuriam:* for I have the pleasure of recollecting many long and interesting conversations; some with the Duke of Argyll and Sir Thomas Pears together, and some with Sir Thomas Pears when the Duke was not present. My agreement with the principle is perfect. I think that whenever we do anything which is likely to affect India we are bound to consult India, and to know, before we take the step, as well as we can, whether it will have any effect upon India or not, and to consider that effect. The Committee probably know that there is an Indian officer in the War Office, the Assistant Military Secretary, who is paid by India, who has great means of information as to everything that is going on, and who, as I believe, is in constant communication with Sir Thomas Pears; and I have always supposed that everything that we were meditating which was likely to be of interest to India was, in one way or another, communicated to the India Office, and that the India Office was consulted before we took that step. I understand that in this Committee it has been said that we did not consult the India Office before proclaiming to Parliament the intention to consolidate the stoppage with the pay; to pay a net pay, and thereby in many cases to improve the pay of the infantry soldier by 1½*d.* a day. Well, the Indian pay being a net pay already, and our warrants not having any operation in India, it certainly, I think, is pardonable, if the India Office were not supposed to be directly interested in the matter; but if it had been suggested by anybody that it was desirable to consult them first, no doubt it would have been done. But this I must say, the change was proposed to my colleagues, and it was stated to Parliament in the month of February; and it was not carried into effect until the month of October; and I do not know now that it has done any harm to India; I do not know now that it has in any way injured the finances of India. I am quite sure of this, that to all who are interested in obtaining recruits it was an economical measure, and as little of a concession to the growing demands for labour, and the difficulty, therefore, of obtaining recruits for the army, as anybody could have advised to be taken. That is the answer which I have to give with reference to that. If the India Office were not fully aware of it it is not, I acknowledge, an entirely conclusive answer, because if anybody had said to me, "India will be affected by this," I should have said at once, "Then let us communicate with India, and consult them." Before I leave this 1½*d.*, I ought to say that the principal portion of the benefit given to the recruit in the arrangement for consolidated pay was derived from a considerable sum which had formerly been paid for re-engagement; that it was thought unnecessary when we were only going to take a portion of the army upon long service to continue the re-engagement money, and that India got the benefit of that as well as ourselves; and it was always intended not to appropriate that benefit to a saving in the Exchequer, but to give it out again to the soldier in the form of this net consolidated pay. India, therefore, has derived in my opinion her share of the advantage, even if she does bear, which I am not aware that she does, her share of any increased payment. But I am told that other instances have been given; that it is contended, for instance, that what is called General Peel's twopence was added to the pay of the soldier without any communication with India. Of course, as that was before my time I can give no explanation of what actually took place; but I know this, that at that time there was great difficulty in obtaining recruits, that the army was much below its strength, and that India was very much in want of recruits; and I should think it highly improbable that India would have opposed the additional pay which was then given even if she had been consulted. However, as I said before, I can give no definite answer with regard to what happened before my time. Then, as to the arrangements with regard to short service, I am under the impression, from what I have been told, that the Committee think that there was not sufficient communication with India upon that subject. Now, I beg to say that in preparing the arrangements for short service the chief consideration was how it would affect India. We felt that to be the difficulty, and the question how it would affect India was the subject of repeated considerations and deliberation at the War Office between us and the officers of the Indian Department. The various reasons which would tend to make it no additional charge to India were very carefully gone into. The law was

Right Hon. Viscount *Cardwell.*

12 June 1874.

Right Hon. Viscount *Cardwell.*

12 June 1874.

Mr. *Campbell-Bannerman*—continued.

altered, in order to enable us to facilitate the arrangement with regard to India. I think Sir Thomas Pears told the Committee himself that he had suggested seven years instead of six. Well, the difference between us is not very great, because, in the Act of Parliament will be found a section, the 11th section (the service being usually for six years), which says, that "Any soldier whose period of army service, or whose whole period of enlistment, as the case may be, expires while a state of war exists between Her Majesty and any foreign power, or he is serving on foreign service, or on any colonial or Indian station, may be detained, and his service may be prolonged for such further period, not exceeding 12 months, as the Secretary of State or the commanding officer at the station may direct"; therefore, between the six years' service, with that clause, and the seven years' service, the difference is not very great. But you have had so much evidence already upon the operation of short service in India, and I hope you are going to hear Sir William Muir, or some of the most competent medical men upon the subject, that I will not, unless asked further upon the subject, trouble you upon it any more at present. Then another question which has been raised is, that two years ago we thought it necessary to introduce the rank of major into the Royal Artillery and the Royal Engineers; on the principle that, in modern warfare, few things are more important than the command of a battery of artillery, and that the commanding officer of a battery of artillery ought to be a field officer. That also had a great bearing upon the question, which had been a very difficult one, of the promotion and retirement of the officers of Royal Artillery and Engineers, which had long occupied the attention both of Government and of Parliament. Now, not only did we repeatedly communicate with the India Office, but we considered an alternative proposal from them; and, although we did not adopt it, we obtained, as I understood, the entire consent of the India Office to the arrangement which we made, and certainly we altered the clause of the Royal Warrant for the express purpose of preventing its being an additional charge upon India. I cannot enter into the subject of contract allowances in India, though they are probably familiar to many gentlemen whom I have the pleasure to address; but I certainly was given to understand that in the form in which the Warrant was ultimately passed it would be in the power of India to protect herself against any increase in the charge on that account, or, at all events, against any considerable increase in the charge on that account. Therefore, it is a mistake to suppose that the arrangement (though it was a very necessary arrangement) by which the command of a battery was given to a field officer was made without the fullest consultation with the India Office.

Sir *G. Balfour.*

1322. I may ask your Lordship whether it is not the case that it was fully understood that the contingent gun allowance which existed should be withdrawn from the battery, and that the money thus saved should be appropriated in meeting the extra charge in the difference of pay between captain and major?—I should go too far if I said I thoroughly understood the Indian

Sir *G. Balfour*—continued.

arrangement, because I did not; but I understood that there was an allowance made in India, called a contract allowance, which, as far as we understood it at the War Office, we were not only not disposed to insist upon, but we thought it a rather questionable sort of arrangement; and I understood that the discontinuance of that afforded to the India Office a means of recouping themselves for the additional charge involved.

1323. Am I not right in supposing that there was some delay in carrying out your intended promotion until such time as the question was fully understood?—I think so; I certainly, as I have said, altered the clause in the Royal Warrant for the express purpose of meeting the views of India on the subject.

Lord *G. Hamilton.*

1324. That has resulted in a charge of 40,000*l.* a year additional, has it not?—It did not do so in my time; I cannot tell the reasons.

Mr. *Onslow.*

1325. You are not aware whether the India Office consulted the Viceroy about all these things?—That, of course, would be no affair of mine.

Mr. *Campbell-Bannerman.*

1326. You probably are of opinion that informal communications, conversations through Sir Thomas Pears or any other officer of the India Office, are quite as conducive to the public service, and quite as business-like a way of conducting the relations between two offices as writing minutes and formal letters, which would result in a great deal of circumlocution?—The best mode of conducting public business probably is that when a thing has been well hammered out in friendly conversation between the two parties, it should be reduced to writing; but if you are to dispense with either, I am quite certain that you could better dispense with what might be considered a little red tape than with friendly conversation, which might lead to a better understanding of the subject. I wish to say, in conclusion, that I have always found the gentlemen of the India Office perfectly fair and perfectly agreeable to act with, and I am very sorry if there is, with regard to any part of what we have done, the smallest impression that we have ever passed them by. I do not think that, in substance, the thing has been so done; I believe that they have had ample justice at our hands, but no doubt I do hold this, and it is admitted I believe by everybody, at any rate I hold it, that we cannot suspend measures which are necessary for the improved organisation of the British army, even though we do not succeed in carrying the India Office along with us.

Mr. *Fawcett.*

1327. But, with regard to the communication made to the India Office with reference to the short service system, what I understand your Lordship to say is this, that you think the best way of conducting business is, first of all, friendly converse between the two offices without any formal writing; as you very aptly described it, to hammer the thing out, and after it is hammered out, and the scheme has assumed a definite form, then to put it down in writing, that it might be carefully considered in a definite form. Now,

as

Mr. *Fawcett*—continued.

as far as I understand your evidence, the first step in this process was taken in regard to the short service system; but was the second step taken; did you formally communicate to the India Office, the financial effect of the short service system on India, and did you communicate it in such a form to the Secretary of State for India that he could lay it before his Council, and, if necessary, forward it to the Government of India. If so, have you any objection to move for the Paper in Parliament?—There would not be the slightest objection to moving for it if it exists. I cannot undertake to tell you whether it does exist or not; but I can undertake to tell you that the utmost pains were taken to carry that change into effect in the way most desirable for India.

1328. I have not been able to find from any witness whether this very important change, which would undoubtedly produce a serious financial effect, on India, was, by the authorities of the War Office, ever communicated in a definite form to the India Office, so that they might have sent it in as a formal document to the Government of India?—I do not think, as we had a Bill before Parliament on the subject, that there can have been any secrecy in the matter on the part of anybody; but I certainly should not have thought it right to wait to know the result of deliberations in India before going on with the Bill, by which means I should have lost the Session.

1329. Then it comes to this (I am not questioning your action in the least, but I take this simply as an illustration of the way in which the affairs of India are managed): you want to introduce a Bill; that Bill affects the finances of India; because you want to pass that Bill, the Government of India, in Calcutta, are never consulted, the Government of India being responsible for the finances of India?—I think you are putting it in a way which I am not quite prepared to accept. It looks as if we made charges against India, by the action of Parliament, without consulting India. Now, the person with whom I have to hold consultation (I am speaking now as Secretary for War) is the Secretary for India. We cannot annihilate time and space; and if we must either be content with what we must learn at the India Office, or submit to lose a Bill by the efflux of time, it may very well happen that the latter may be the worse alternative.

1330. But as an illustration of the method of conducting business, I still understand you to say that no formal document containing the views of the War Office was communicated to the India Office, so that it might be communicated by them to the Government of India; and I further understood you to give as a reason why that was not done, that you did not want to lose a Bill in Parliament?—No, I did not say anything of the sort. What I said was, that what I will undertake to say was done in respect of short service is that there were the most repeated and diligent consultations with the India Office. What special documents passed I do not happen to know, but I went on with my Bill and carried it; and I hold that it would not be right so to subject the action of the British War Office to the Government of India as to hold that we can make no necessary organic change, and submit to Parliament no necessary Bill, until we have received permission from Calcutta.

Mr. *Fawcett*—continued.

1331. Then you cannot say whether there was or whether there was not any official communication between the War Office and the India Office?—I have not the means of referring now to the archives of the War Office, but I have no doubt that the Financial Secretary, who is a member of this Committee, will tell you.

Sir *G. Balfour.*

1332. But is there not too much importance attached to this question of short service; your Lordship never meant that the short service should preclude the men from volunteering in India for longer service if they should see fit?—Quite the contrary. I always hoped that those particular men whose constitutions were found to endure the climate of India would volunteer to remain, and would extend their service. But what I maintain is that with the average of mankind the long service in India is neither desirable on any other ground nor economical.

1333. Is it not the fact that in the case of every regiment ordered home, as many men almost as are fit for service in India are willing to volunteer to remain, and that they do volunteer to remain upon the payment of a small bounty?—I dare say that is the case, but the point of your question is whether we desired in instituting short service to encourage by every means in our power such a system continuing in India. That was our object, and I am not aware that we neglected any means for attaining it.

Lord *G. Hamilton.*

1334. To return to the question of recruits; what you contend, as I understand, is, that of the three systems which have been in force since the year 1860, namely, the first system which resulted from Major Tulloch's Committee, the second which followed in consequence of the appointment of Mr. Seccombe's Committee, and the present system, which is not quite elaborate, the present system is the most economical?—I believe so.

1335. You would not deny that the previous system, which was the result of Major Tulloch's Committee, was very extravagant?—I discontinued the depôt battalions of the Tulloch system from an impression that it was not a desirable system, either for India or for the United Kingdom.

1336. But the Committee which you, I believe, were instrumental in appointing, Mr. Seccombe's Committee, expressed their opinion that the system was susceptible of very great reduction?—You mean the system that *they* were administering? Yes.

1337. Therefore I think we may assume that it was an extravagant system?—The word "extravagant" is rather a word of censure. It was a more costly system than I thought ought to be maintained, and it was only adopted as an intermediate system until the new one could be erected.

1338. There is a certain Return which Mr. Milton has handed in, and that Return shows that India paid within a very few thousand pounds the actual recorded expenditure for home charges during the period 1861 to 1869. I do not know whether you have seen that Return?—No. I stated, on the authority of Mr. Milton, who gave me the information, that the India Office would have saved 100,000*l.* a year if they had

Right Hon. Viscount *Cardwell.*

12 June 1874.

Right Hon. Viscount *Cardwell.*

12 June 1874.

Lord *G. Hamilton*—continued.

paid upon what I call the Seccombe system, instead of the Tulloch system, from 1861 to 1868.

1339. My reason for asking you whether the system originated by Major Tulloch was not extravagant was to show that if that system be extravagant it is no use comparing it with the system which now is in force?—Whether there is any use in comparing it I do not know; but if an impression is created or exists that the War Office has been desirous of increasing the Indian charges, it appears to me rather important to show that for some years they have been engaged in endeavouring to do just the reverse.

1340. But to prove that the present system is one which is advantageous and economical to India we must investigate it, must we not, upon its own merits, and not compare it with previous systems, which it may be maintained were extravagant?—Certainly.

1341. Therefore, to return to the essence of the controversy, which is, what should be the actual cost (I mean actual in the ordinary sense) of a recruit, as I understand the difference between the India Office and the War Office on this point, it is that the India Office do not object to pay the actual cost of the training of a recruit, but they protest against paying outlays which they consider have nothing to do with the cost of that training?—They are quite right.

1342. But in the present actual charges are included certain brigade depôt charges which Lord Northbrook, in his despatch, and the India Office maintain are not connected with the training of recruits?—I have said already, if it can be shown that that consideration ought to prevail to diminish the charges against India in future, by all means let that consideration have its fair weight given to it. But I have shown you that when the Chancellor of the Exchequer waived certain other charges, he did it expressly on the ground of the benefit received by this country from the Indian depôts, and that therefore, if you make a charge against the War Office on that account, of course you have taken away the consideration on which the Chancellor of the Exchequer waived the other charges; and he will consider his colleague the Secretary for War very wanting in his duty if he does not raise the question.

Lord *G. Hamilton*—continued.

1343. Still, however, the fact remains, that in these actual charges are included charges which are entirely connected with the brigade depots?—The object of the new system is to do as much work at as little unnecessary expense as possible. These officers will, I have no doubt, be rendering very valuable service to the United Kingdom and to the British army at the brigade depôts; and I have not the smallest objection to a full consideration of that being made by Mr. Seccombe's Committee, when it comes to examine the charges which ought to be repaid by India to the British Exchequer.

1344. But do you think that Mr. Seccombe's Committee will ever arive at any conclusion on this point, because that is exactly the point which is in controversy between the two offices; and out of the four previous reports of the Committee the India Office have dissented in three instances?—In my opinion there is a confusion there. The Committee hitherto have not, in my opinion, been entitled to consider what would be the best and the most economical arrangement. During the transition period India has paid less than she would have paid if the old arrangement of 10*l.* had been continued; but she has not paid so little as I hope she will in future for recruits; and for this reason, that the transition system was of necessity more expensive than the new system, and India must either pay it herself, or throw the burden upon the British taxpayer, which in my opinion would be extremely unjust.

Tuesday, 16th June 1874.

MEMBERS PRESENT:

Mr. Stephen Cave.
Sir George Balfour.
Mr. Balfour.
Sir Thomas Bazley.
Mr. Campbell-Bannerman.
Mr. Dalrymple.
Mr. Grant Duff.
Mr. Dunbar.
Mr. Fawcett.
Lord Edmond Fitzmaurice.
Lord George Hamilton.
Sir Henry Havelock.
Mr. Sampson Lloyd.
Mr. Eustace Smith.
Mr. Stanley.

THE RIGHT HONOURABLE STEPHEN CAVE, IN THE CHAIR.

Sir WILLIAM MUIR, K.C.B., M.D., called in; and Examined.

Sir *W. Muir*, K.C.B., M.D.
16 June 1874.

Chairman.

1345. I THINK you were the principal medical officer in India in the British army?—I was.

1346. How many years were you in India in that capacity?—Four years consecutively.

1347. And I think you had previously knowledge of India?—I was some years before in India, during the Mutiny.

1348. And you have given a great deal of attention to the health of the troops, I think?—Yes.

1349. Now, you are aware that at present the rule is that recruits do not go out to India till they are 20, and that therefore their drilling takes place at home, ordinarily, between the ages of 18 and 20?—Yes.

1350. Have you any proposal to make as an alternative to that system?—My proposal is that the hill stations should be utilised to a much greater extent than at present; and I think that if that were the case there is no reason why these lads should not be drilled in the hills; go out at 18, and remain there for two years under drill.

1351. Is it your opinion that any advantage would arise in point of health from men going out at 18 instead of 20, and passing two years in a good climate in India, rather than in England?—I think there is very little difference between the two, so far as health goes.

1352. You do not think that they would become more acclimatised by living in the hills in India, than if they remained here?—They would become more acclimatised, certainly.

1353. So far, then, it would be an advantage?—So far it would be an advantage.

1354. But I presume that they would not become acclimatised if they were too high up in the hills?—No, not to the same extent.

1355. Do those hill stations exist to any extent in India at present?—Yes, they are Dugshai, Chukata, Rhanekhet, Murree, and a good many more.

1356. And I suppose that within easy reach, either by railway or otherwise, of every presidency there are places which might be utilised as hill stations, but at present are not?—Certainly.

Chairman—continued.

1357. How far does that system of keeping troops in the hills exist now?—There is no regular rotation.

1358. How many men are there in the hill stations?—During the hot weather there were about 7,000 men last year.

1359. Is that a costly system, should you say?—Well, it has been costly, from the building of what they call the palatial barracks; it has been costly on that account, but there is no necessity for so doing.

1360. Do you think that that cost would be well repaid by keeping the men healthy and strong?—I think so; and there is no reason why the men should not hut themselves, and do everything for themselves there.

1361. Then you propose this as an alternative to keeping the recruit in the depôts at home for the years between the time that he enlists and the time that he is able to go out to India?—Twenty is the minimum, the limit.

1362. Is it your opinion that that minimum of 20 is too old or too young?—It is too young, if anything.

1362. I think you propose the hill station system as an alternative also as to invaliding?—Yes.

1364. How far in recent years has the system of invaliding to England been carried out?—Of late years the invaliding has been very large, owing, I believe, to the army being very young, and the medical officers taking advantage of the facilities of the troop ships to give men a change, especially young soldiers.

1365. And they go home through the canal, I suppose?—They go through the canal.

1366. And the facilities that you mention consist in the transports being otherwise obliged to go home empty?—They would go home empty but for that, in a great measure.

1367. So that the expense is not very much more than the rationing of the soldier?—Well, I could hardly go into that question of expense, but I should say so. Up to two years before I left India, the great bulk of the invalids were sent round the Cape, and it was necessary to

Sir *W. Muir*, K.C.B., M.D.

16 June 1874.

Chairman—continued.

take up a separate tonnage for them; that was a great expense to India.

1368. And therefore, of course, the invaliding was very much less than it is now?—Very much less.

1369. What per-centage of the force in India is invalided every year?—I think by returns given by the Indian Government, Dr. Bryden's statistics, the standard is about 49 per 1,000 of the force.

1370. Who are sent to Netley?—Who are sent to Netley.

1371. What proportion of those men are finally discharged invalided?—About one-third; and the others are returned to the depôts.

1372. Is that a smaller proportion than there used to be under the old system?—I think so; the mortality and invaliding was very large 30 or 40 years ago.

1373. In those days men were kept as long as anything could be got out of them, I suppose?—Especially the Indian European force.

1374. This very frequent invaliding which you mention amounts really to a short service, does it not?—Well, to a certain extent; a fifth of the force.

1375. But there is a difference between the two, in your opinion, in principle?—Well, I should like to counteract the immense invaliding by utilising these hill stations to a larger extent. I propose that the men should go there for the first two years, have four years in the plains, and then return to the hills for two years, and so forth, a system of rotation by which means I think the invaliding and mortality would be very much reduced.

1376. You mean during the hot seasons?—Yes; and they might be all brought down during the winter to the camps of instruction, and so forth.

1377. You would keep, during the hot season, the army in the plains as little as possible?—I think it ought to be reduced to the minimum that the military necessity would admit of.

1378. I suppose there are many parts of India where, even if the mortality is small, the men deteriorate rapidly in physique?—Yes.

1379. Peshawur, for instance?—The service in Peshawur has been the means of sapping the Bengal army altogether.

1380. You do not think that there would be any risk in men coming straight down from a healthy station for service in the plains, or in such a place as the Valley of Peshawur?—No, I do not think so. I do not think the Mutiny can be taken as a criterion in that respect, because the men in the regiments suffered there owing to the fact that they got into a cholera belt chiefly, and that is always an exceptional case.

1381. Do you think that the system of short service takes away the fittest men remaining in the regiments?—I think short service is hardly applicable to India; I think the more politic plan is what I propose, the hill stations.

Mr. *Fawcett.*

1382. But that short service system is the system which applies there now, is it not?—What I mean by short service is six years.

1383. That is the system, is it not?—Men now enlist for 12 years for India.

1384. Under the present system?—Yes, under the present system.

Chairman.

1385. That is, the regiment goes out for 12 years?—Yes.

1386. But the men come home at earlier dates?—I do not know how the last modification of the recruiting affects India.

Mr. *Fawcett.*

1387. You say enlistment for six years is unsuitable to India, and that is the system, if I understand, that has been lately applied to India; for instance, a great many of the men who go out now stay a very much shorter time, and no man is bound by his terms of enlistment to stay longer than that period?—Not to stay longer than six years.

1388. Then your evidence means that the system now in vogue, even supposing all the men stay for six years, is a system unsuitable to India?—Well, I am not certain on that point; I thought that men serving in India served for 12 years, but since I left India it may be modified.

1389. You, starting on the supposition that they do stop 12 years, think that is the proper system, and that the system of six years' service is unsuitable to India?—I think that if men start at the age of 18, and leave at 24, you have taken them away when there is very good service in them.

Mr. *Stanley.*

1390. You would qualify that, would you not, by the fact of there being a chance of re-engagement; a man has the option of re-engaging?—Yes.

1391. And as a matter of fact, he does very frequently so re-engage?—Yes, he does very frequently re-engage.

Sir *Henry Havelock.*

1392. When you say that the system of short service is inapplicable or unsuitable to India, you are not giving that opinion from a medical point of view, but from the financial bearings of the question?—I think financially speaking that is the case.

1393. That, of course, is an opinion that you would give with a certain amount of reservation; your opinion, of course, practically bearing principally upon the medical part of the question?—Yes, upon the medical phases of the question.

Mr. *Fawcett.*

1394. As I understand, your opinion on the system in vogue is chiefly a medical opinion; and your opinion, as far as I understand your evidence, even medically, leaving out of consideration the financial bearing of the question, is unfavourable to men being enlisted for only six years to serve in India?—Yes, I think so.

1395. Then when re-engagement is spoken of, can you tell us, although re-engagement exists, what proportion of the men do re-engage; the system has not been in operation long enough to enable you to say that?—No; I cannot answer that question.

Sir *George Balfour.*

1396. But you are aware, from your own great experience, that whenever regiments are ordered home, a very large number of men volunteer to remain in India?—Yes.

1397. And that the medical officers are the means of preventing many from remaining?—Yes, those not fit for the service.

1398. Otherwise

Sir *G. Balfour*—continued.

1398. Otherwise a large proportion of each regiment would volunteer to remain for service in India?—Yes, that is my system.

1399. And you are aware that the payment of the bounty increases or decreases the number of men who volunteer?—Yes.

1400. So that practically you can get any number of men to remain in India from regiments ordered home totally irrespective of the length of service?—Yes, I think so.

Chairman.

1401. Then the advantage is bounded in your mind by there being hill stations to keep up their strength in?—Yes.

1402. Otherwise, I presume, the longer the service is, the worse for the men who remain in the plains?—Yes, there is a general deterioration of health by residence in India.

1403. And taking the plains as the place in which the soldier is, the short service would be better for him than the long one; that he had better come home too early than remain in the plains?—Certainly.

Sir *Henry Havelock.*

1404. I think you were speaking with regard to the advantages that a certain term of service in the hills gives; I suppose you would be decidedly of opinion that if a soldier could arrive in India and go to a hill station at 20 years of age, and then spend two years there, it would be likely to be more beneficial to him than if he arrived at 18 years of age and spent two years there, would you not?—Yes, certainly.

1405. Then the opinion you gave before is to be taken with that modification?—Yes.

1406. You think that the main point with regard to selection of soldiers for Indian service, is that they should be allowed to have their constitutions formed in this country before they are exposed to the Indian climate, is it not?—Yes, certainly.

1407. And from that point of view you would give preference to a soldier of 20 years of age arriving in India over one of 18?—Yes, certainly; and I think those men ought to be carefully selected for the regiments for India. I think it would be a very good plan if men of short service were invited to join those men, I mean men who would pass into the reserve otherwise and take service.

1408. That is to say, in selecting soldiers for India, you would, as far as possible, give preference to the older, well-formed men?—I do not mean that; I mean the man who is three years with the colours and goes into the reserve; you should tempt that man to India.

Mr. *Stanley.*

1409. Do I rightly understand the purport of your answer to be this, that after a man has left the army and gone into the reserve, you would offer an inducement to that man to come back to the colours and join an Indian regiment?—Yes, to join the Indian army.

1410. So as to get a man of fairly mature age?—Yes.

Sir *Henry Havelock.*

1411. Does not your very great experience tend to show that though there may be a smaller amount of actual mortality in the early years of the service of soldiers going to India very young, that is to say, under 20 years of age, eventually, in the long run, they break down and become inefficient soldiers very much sooner?—There is no doubt of that, they are non-efficient to a great extent; the mortality among these men, however, is less.

1412. In fact, that is a matter which cannot be tested by the mortality, but by the breaking down?—The efficiency; what we look to in India is the efficiency.

1413. I do not know whether it may be in your recollection that there was the case of the 52nd Light Infantry, which went out to India in the year 1852, and were immediately taken to a hill station without any intermediate service in the plains, and there was a great mortality and sickness; do you recollect that?—No, I do not recollect the instance; the two first years are the trying years for a regiment going out and recently arrived in India, and that runs through the whole line; the mortality is very largely increased.

1414. Then as regards the comparison between the advantages of invaliding a man home when he breaks down and taking him to a hill station for the restoration of his health, setting aside the question of expense, I suppose you would give the decided preference to invaliding at home, would you not?—Yes, as a rule.

1415. You are aware there is a large class of diseases to which the hills are almost as fatal as anything can be?—Yes, dysentery and cases of that sort; but my grand object in pressing the hill station system is saving invaliding. I think the men's health would be maintained so much more efficiently by this hill station system, that there would be very little necessity for invaliding if it were adopted.

1416. That is to say it is your opinion that if men were taken to the hills by rotation, all those men whose health had not begun in any degree to break down would be likely to serve efficiently for many years longer?—Yes.

1417. At the same time when men's health has begun to break down, you are aware that a very large mortality ensues from their being sent to the hills?—Yes, in a certain class of cases.

1418. All bowel complaints; dysentery and diarrhœa, and so forth?—Yes.

Mr. *Stanley.*

1419. With reference to the last question which Sir Henry Havelock has just asked you, those men if sent to the hill stations would still be immediately available for service on the spot, in the event of any emergency occurring in India?—Yes.

1420. So that they would practically, instead of being on passage or at home, be left on the Indian strength?—Yes.

1421. In the event of any great emergency arising, they would be immediately available?—Yes, and would get down very readily from the improved means of locomotion now.

1422. The statistics which you gave us just now as to the number of men invalided and finally discharged, were I think as follows: 49 per thousand were invalided to Netley, you stated?—That is the standard now for the last 10 years as given by Doctor Bryden, 49 to 50 per thousand.

1423. And of those about one-third are finally discharged?—Yes, finally discharged as unfit for the service.

Sir *W. Muir*, K.C.B., M.D.

16 June 1874.

Mr. *Stanley*—continued.

1424. That amounts to 16·3 per thousand, does it not?—Yes.

1425. Would that compare favourably with the rate of invaliding which was formerly obtained?—Most decidedly.

1426. I suppose you have no figures of that former state of things?—I have no figures, but I think, as far as my impression goes (and I was at that discharge depôt myself for some time), the present rate compares very favourably.

1427. You have been a good many years in India; are there not a certain class of diseases to which men become more liable in India?—Yes, certainly; there are a certain class of diseases to which the young are subject, and a certain class to which the older soldiers are subject; and formerly the great bulk of invaliding was made up from the older soldiers.

1428. If you had to choose the period of service which would be most advantageous, and in which there would be least waste of life for a man to serve in India, what years would you select?—I would take from 22 to 28 or 30.

1429. That would be on the assumption that a man was 20 when he went out?—Yes, that he was 20 when he went out.

1430. And that he spent two years in being acclimatised?—We will say two years in the hills.

1431. And from the age of 22 to 28 in active service?—You would get the most work out of him in that period.

1432. After that time a man begins to develope a tendency to disease?—Yes, chronic disease especially; diseases of the liver and spleen, and those things come out then, the effect of malarious poisoning.

1433. It was stated in some former evidence given by the Accountant General that although regiments remained some time in India the men within them changed to a very great extent, and that the number of years' service would be found to average very little more than five or six years individually. Would that be borne out by your experience, speaking generally?—Well, I can hardly answer that question without going into particulars.

1434. An opinion has been expressed also that advantages might attend the removal or relief of the men *en masse*, instead of reliefs by drafts or by individual changes. Would that meet the medical view?—No; I think by drafts would be the more likely way to do it.

1435. You would look more to the individual's state of health?—Yes, to the state of the individuals.

1436. When these men come back to Netley, of those who remain in the army, and who are not finally discharged, a considerable proportion are really not available for Imperial services for some time after they return, are they?—They go to the depôts; they are discharged to the depôts and remain there, and they are drafted off to India again in a year or two, if necessary.

1437. But many of those men are not duty men for some time afterwards, are they?—Yes, as a rule. Men who have suffered from bowel complaints are not fit to go back to India for two years, if not more.

1438. Would you say they are available for home duty?—For garrison duty at home I should say so, all the men who are discharged from Netley.

Mr. *Stanley*—continued.

1439. Could you give the Committee any information as to the average time that those invalided home remain at Netley?—A great proportion of the men are discharged at once; they seem to recover so much on the way home that they are sent to the depôts very quickly; and a good deal of that may depend also upon the want of accommodation for the men at Netley, from the men all coming home at the same time of late years.

1440. May the Committee understand from you that a large proportion are really fit for duty when they are sent to the depôts?—Certainly.

1441. There are particular months of the year, are there not, which are unhealthy in India?—The hot months, from May till October, you may say.

1442. Could you tell the Committee, speaking generally, how far those months, and the casualties which occur in them, influence the strength of regiments in India?—The young soldiers suffer very much during the hot weather.

1443. In fact, you have casualties occurring then; that is the season of the year when you do not like to send men to the plains?—Yes.

1444. Therefore, at a certain time of the year, regiments must be much below their strength?—Yes, especially newly arrived regiments.

1445. But the invaliding season would be the time when they are lowest?—Yes.

1446. When the men who are invalided have gone home, and the drafts are not arrived?—The men come home in April, and the drafts go out in October or November.

1447. Would there be any particular month of the year when you think the regiments would be more than usual below their strength?—No, I think not. Formerly the invalids used to come at all seasons, and therefore as the men went out the others came back; but latterly, on account of the sufferings of these men from the cold of winter, they have all now been brought home at the end of the season. The last troop ships are reserved for invalids, so that virtually the new men are replacing these men before the others come back.

1448. I suppose that now many cases are sent home which are of a much lighter description than those formerly invalided home?—Yes, the facilities given to the medical officers now are taken every advantage of. If a man is drooping they send him home for change of air.

1449. And in many cases that is done with a view to his ultimate return to India?—Yes.

1450. Should you say that there was any specific time that a man requires to remain in England to recover from the effect of the Indian climate?—I think as a rule a couple of years. If a man has been sent home he ought to be two years before he goes back. I had to call the attention of the Government of India to men being sent out after a year and breaking down again from being sent out too early, when I was principal medical officer in Bengal.

1451. One question with reference to your observations about short service; when you used the expression that shortness of service does not apply to India, you would qualify that, of course, by your previous answer, that a number of these men are allowed to re-engage; I suppose your answer would really mean, that if short service were strictly applied, and without any allowance for men re-engaging, or being allowed optionally

to

Mr. *Stanley*—continued.

to re-engage for longer service; in that case only it would not be applicable?—Certainly; I would give every facility for men to re-engage, and even men who have been 10 years out; there are always a certain number of men whose constitutions suit India admirably, and these men I would keep on, give them the option, and pension them, and so forth, extending the principle as far as medical reasons would admit.

1452. Subject to those conditions, you would see no objection to the short service system, speaking generally, in a medical point of view?—No, certainly not.

Mr. *Eustace Smith.*

1453. You assented to a question put by the Chairman, in which the word "acclimatised" was used; do you believe that there is such a process as acclimatisation?—That is a point on which doctors differ very much; but whatever you call it, for the first two years in India there is a certain process necessary to be gone through before men are in the best state to stand the climate of India, which is the adaptation of the organs, and the skin, and everything to the climate and the heat.

1454. Then you consider that there is a process of acclimatisation?—I think there is a process, and the proof of it is, that for the first years the mortality is very great, not only among the young, but all through a regiment. The average mortality now is from 18 to 20 per 1,000, without taking cholera into account, and for the first year the average mortality is 32 per 1,000.

Sir *Henry Havelock.*

1455. That is the first year after the regiment's arriving in India?—Yes.

Mr. *Eustace Smith.*

1456. You mentioned a certain class of complaints to which old soldiers were more subject than young soldiers?—Yes.

1457. Could you mention the class of complaints to which this process of acclimatisation of the young soldier especially applies?—Well, heat fevers, and so forth; dysentery is another, but chiefly heat fevers.

Sir *George Balfour.*

1458. Your reply to the honourable Member's question connected with the short service simply resolves itself into one of finance, does it not?—Yes; in that answer I went beyond my line of action; it was a matter that occurred to me on account of the expense.

1459. And if money is paid in India to induce men to extend their service to the 12 years which you have spoken of, that can be done simply by the payment of an additional bounty?—Certainly.

1460. And that entails upon the Government of India simply a sum of money varying from 10 to 20 rupees for each man re-engaged?—Yes.

1461. And it has been from the time that you went to India, and long before your time, the practice for India invariably to call upon regiments to volunteer to remain in India?—Yes.

1462. And they have got as many men as ever they have desired to retain from each regiment, compatibly with health and good conduct?—Yes.

1463. And, roughly speaking, the service in India is a favourite one?—I think so.

Sir *G. Balfour*—continued.

1464. So that we could get any number of men for service in India that were required?—I think so. Married people have such an advantage there; that is one great point.

1465. And from your experience at home here there would be no difficulty in obtaining from the regiments volunteers of the age and service requisite?—I think none. Men who have served a short time with the colours, if invited to join the army of India, would do so, I think.

1466. Practically speaking, as far as India is concerned, the question of depôts and training men, especially for service in India, might be dispensed with by simply calling on volunteers from regiments to go to India?—I think so.

1467. So that all the great paraphernalia that we have had, and special arrangements and special depôts for service in India, might be dispensed with by simply offering money for men to volunteer?—I think so; men of more than three years' service.

1468. You have been giving us some per-centages with regard to invaliding and mortality, but you have lately been preparing in your own office some statement ordered by the House of Commons?—Yes.

1469. Perhaps you would kindly let the Committee have a brief abstract of those per-centages for different years, so as to enable them to judge correctly of this question?—I can hardly give that without reference to my figures at the office. I have nothing here with me to enable me to give that.

1470. Perhaps you would kindly send to the Chairman a brief memorandum of those per-centages?—Yes.

1471. The mortality of regiments in India has very much decreased to what it was 12 years ago, has it not?—Very much, and more so compared with 30 years ago.

1472. When I first had the pleasure of meeting you, the mortality was very considerable?—Very considerable.

1473. And is much less now?—Much less now; it has gone down wonderfully.

1474. That is not so much due, is it, to the healthiness of India as to the invaliding?—And improved sanitation. The men are better housed now, and better looked after in every way.

1475. Do you lay any stress upon the fine large palatial barracks which have been built for the troops?—I think they are an advantage to the men; but I think barracks much less costly would have answered the purpose equally well. The only drawback is, that it ties us down to certain localities; plain positions.

1476. But even these fine barracks are not altogether free from defects and objections, are they?—They are not free from defects at all.

1477. So that the large sums of money which India has been spending in consequence of the outcry in this country, might have been somewhat diminished if there had been less costly barracks?—Less costly ones would have answered the purpose; but the absurdity of the thing is building those things in the hills. The intention of them was for the plains of Bengal, but they have begun those buildings on the same scale in some hill stations, which is a great waste of money.

1478. So that in that respect India has been put to a large unnecessary expense for building unnecessarily fine buildings?—I think so.

Sir *W. Muir*, K.C.B., M.D.

16 June 1874.

Sir *G. Balfour*—continued.

1479. Now with regard to the young soldiers, you do not find, from the experience of the statistical tables, that the young soldiers die in greater proportion than soldiers of greater age?—No, the young soldier does not die under the age of 20, for instance, in the proportion that he does older; but he is more non-effective; he is very often fit for very little, and he is very often invalided a year afterwards.

Sir *Henry Havelock.*

1480. It would affect his mortality at a later period of life, would it not?—It would.

Sir *George Balfour.*

1481. We have no proof of that fact, have we, that young soldiers sent to India have died in a larger proportion in after life?—I do not think that statistics have been traced out with regard to that. But with regard to statistics, I may observe that there is an immense difference between statistics and reality often; in this respect, for instance: a regiment has gone through an epidemic; there are so many men on the sick list, and judging from that you would say that there was a certain per-centage of sick to well; but that regiment is non-effective; the men have been so reduced and deteriorated by this epidemic that if you reckoned upon them for any active service the regiment would be found almost useless; and the efficiency or the non-efficiency of regiments is a thing which we cannot measure by statistics.

1482. Still you are under the conviction that by sending these young boys out to hill stations they would become useful and good soldiers?—Yes. In the last report that I have from India from the medical officer there he states that.

1483. Do you remember the case of the fourth battalion of the 60th Rifles being sent to Madras, composed mainly of boys, and sent to a hill station, and that the result of two years' residence in the hill station was that it made that battalion into a fine body of soldiers?—There is no question of it.

1484. You may probably have heard of that battalion being composed mainly of boys?—Yes; but the regiments that have gone out in the last few years have been very largely composed of boys.

1485. Have you any idea whether the regiments of late years have been composed of recruits of any length of service, or of short service?—I have only proof that there have been a lot of young men in them. I do not know the length of service of the remainder.

1486. But have you any conception of the length of service of these young men; have they been three months in the army before being sent out?—I cannot answer that; but in the regiments of 1870-71 more than one-third were under 20 years of age; that is taken from the official returns in Dr. Bryden's book.

1487. Practically speaking, India was getting soldiers such as were sent out to the Crimea, such as Lord Raglan characterised as not worth having, who were blown away by every gale of wind?—Yes; these men ought to have been put in the hills, as I recommended long ago.

1488. Therefore it would be well for India to go to any expense in order to get good stout soldiers?—Yes.

1489. If the arrangements have hitherto failed to give us that fit and stout man, it would be advisable to change those arrangements?—Yes; I believe under the old system at Warley they had very good men, but they were all picked men, and there they were only recruiting for a body of 7,000 or 8,000. I believe these were the finest men that ever went to India.

1490. Have you never heard that the three regiments from the three Presidencies meeting together in Rangoon were considered just as fine a body of men as the Guards?—You will never get those men again.

1491. Still, under the Warley system, India was able to get a body of fit men?—Yes, for a small force; but the circumstances have changed.

1492. Sir Henry Havelock has asked you with regard to the 62nd; do you remember the fact of six regiments meeting before Delhi, three of the Imperial service and three of the Indian service, and the remarkable manner in which the Indian men stood the climate in comparison with the three other regiments?—Yes.

1493. So that that shows that India could at one time obtain good men?—Yes.

1494. With regard to sending men to the hills, I suppose all the chief medical officers who have been in India have invariably advised that measure?—All the officers whom I know have been of one opinion, that it is much more expedient to send men to the hills than to bring them home; but that has never been adopted as a system. We have a certain number of men in the hills, but no regular rotation. I should like to see a regular rotation, bringing the men from the higher hills down to the lower, and then down to the plains. The grand thing is to get over the first two years, the seasoning, or whatever it may be called, and then I think you get good service out of the men.

1495. Do you think it is practically from not having a good system that this plan has not been adopted, or do you think it is from the difficulties which all civilians have felt, and in order not to denude the plains of Europeans soldiers?—Well, the military reasons have been always very strong for keeping a large number in the plains.

1496. The practical thing is that you have found out that these useful recommendations have been always opposed by other reasons, probably of a political character?—Military or political.

1497. And therefore a difficulty arises in carrying out this plan?—Yes.

1498. Supposing your proposal of sending the young men of 20 years of age to the hills were adopted, there is no difficulty in having hill stations?—Not at all; you can have hill stations anywhere; and the constructing of those stations would be very inexpensive if gone about in the right way; if the thing were done as at Chukata the thing could be done at very little expense; and it would give the men the occupation of building and making roads, and so on; and I would bring all the men down into the plains for the winter for camp instruction.

1499. Do you remember the huts in the rear of barracks for married men?—Yes.

1500. These huts were quite good enough for the purpose, were they not?—Yes.

1501. The men who occupied them were exceedingly healthy?—Yes.

1502. They cost a very small sum, they cost; 200 rupees a piece, whereas an average barrack costs

Sir *G. Balfour*—continued.

costs as much as 3,000 rupees upwards per man?—Yes.

1503. How many young men do you suppose there are in the army of 20 years and under in India; do you happen to remember from those tables?—I find that in 1871 out of a total of 49,909 there were 4,496 men under 20 years of age.

1504. Then you would consider that there would be no diffiulty in selecting those young boys and forming proper battalions, and sending them to hill stations to be acclimatised?—Yes, for the first two years.

1505. It would be just as well, would it not, to send them direct from England to the hill stations?—Yes; and there is another point which might be useful; if the rotation is for two years you might send no recruits during the time the regiments were in the plains, only whilst they were in the hills; that for the two years the regiments were in the plains no recruits should go out at all, but that they should go every two years and join the regiments in the hills.

1506. But you would spread those young recruits over the different hill stations in the three Presidencies?—Yes.

Chairman.

1507. Would you keep them in the depôts in England till then?—Well, you must keep them somewhere.

1508. So you would still have the necessity of the depôt in England at its full strength?—The reason I submit that proposal is that they should go out to the hills at once.

Sir *George Balfour:*

1509. In the old Warley depôt the man so soon as he was enlisted was sent out to India to be there trained?—I am quite satisfied that the training could be carried on in India in the hills without speaking on the military question.

1510. Reserving your opinion as to the military propriety of the measure, you think there would be no difficulty in shipping off the number recruited for a hill station?—None.

1511. When the railway is completed from Bombay they could be sent up to the hill stations of Upper Bengal?—Yes.

1512. So that every facility exists for carrying out this plan?—Yes, and I think it will be more economical in the end.

1513. Then disregarding the military question for the present, with regard to the question asked by the Chairman, the plan need not necessarily entail the keeping of men in depôts at home here, need it?—No, it does not necessarily at all; but the only point is to send them out during the two years that the regiments are in the hills, and not in the plains, because you would not know what to do with them then.

Chairman.

1514. But they must be somewhere from the time they are enlisted till the time they go out, and in some cases for nearly two years?—But you might arrange not to enlist those men until the time came, till the end of the year, that is.

Mr. *Campbell-Bannerman.*

1515. While the regiment is in the plain, how would you keep it up to its strength?—By recruiting every two years, not every year.

Mr. *Campbell-Bannerman*—continued.

1516. But during the second year it would fall very much below its establishment, would it not?—It would fall, but nothing very material, I should say.

Sir *George Balfour.*

1517. At the present moment the average number of recruits sent out every year for a regiment is 43?—Yes; you see there are a large portion of volunteers that fill up the vacant ranks.

1518. It is easy for the Government of India to arrange for a particular regiment to be recruited, because they can always direct that volunteers from regiments going home shall only be taken for particular regiments remaining in India?—Yes.

1519. In fact, they could always name the regiments to which volunteering would be allowed?—Yes.

1520. Therefore the Government of India can always direct what regiment shall be kept up to its full strength, and what below it?—Yes.

1521. So that, practically speaking, there would be no difficulty in carrying out your plan?—I think not.

1522. I think that you have lately had a good deal of correspondence connected with the British Medical Staff in India?—Well, nothing has come officially yet; you mean on the amalgamation question, I suppose.

1523. On the amalgamation question, and likewise the two separate medical establishments?—I have had nothing official yet on that subject.

1524. You are, however, aware of the existence of questions connected with the extent of the medical staff?—Yes.

1525. You are aware that the medical staff has largely increased since you were first in India?—Yes.

1526. And of course you consider it necessary for the extent of the force in India?—Yes.

1527. And therefore the question has come to this, that with this increasing force the medical staff has of late years been very considerably increased?—Yes, the British staff.

1528. And that has, of course, entailed upon India a very large expenditure?—Yes.

1529. At the same time we are keeping up a staff for the Indian service as well?—Yes; an administrative staff.

1530. So that we have, practically, two administrative medical staffs at the present moment in India?—Yes.

1531. Would you be surprised to find that the expense of the army and medical staff, British and Indian, amounts to upwards of 1,000,000 *l.* sterling?—I can understand its being very large.

1532. And that that is one-twelfth of the whole military expenditure of India?—I can understand that that amalgamation question will come up in due course as far as I know.

1533. Are you aware whether the men who have been discharged from Netley invalided from India have gone back to India?—They are drafted as they are wanted for the regiments, after they are pronounced to be well and fit to go back; but I cannot tell you in what proportions they go back; I can get that for you.

1534. You are aware that with regard to these men who come home, the expense of the troop ship is necessarily thrown upon the men coming home and going out?—Yes.

Sir *W. Muir*, K.C.B., M.D.

16 June 1874.

Sir *G. Balfour*—continued.

1535. And if you are aware that these troop ships cost upwards of a third of a million to India, it necessarily follows that the cost per head of men going backward and forward must be very considerable?—Yes.

1536. Then seeing that those men have been sent out to India at the expense of India, and that they go back again to India at the expense of India, would you consider it right and fair to India to look upon them when they go out a second time in the category of recruits, or as old soldiers belonging to India?—Well, I think that is hardly a medical question, if I may take the liberty of saying so; I think it is political rather than medical.

1537. As far as the comforts of troops in India is concerned, I think you are quite satisfied with all the arrangements?—They are very well fed and housed, and well taken care of in every way now.

1538. And the medical officers have full power?—Certainly; they are most liberally dealt with by the Government.

1539. And no arrangements could be more complete than those of your officers in India?—I think that is so.

1540. Your subordinate officers are in a most efficient condition?—I must qualify that by saying that they have been a little out of gear, but the sick do not want for anything.

1541. The medical attendants are supplied in large numbers?—Yes.

1542. And nothing could be more liberal than the supplies for the sick?—No.

1543. Whatever the medical officer orders is given, even to very expensive isinglass?—Yes.

Mr. *Sampson Lloyd.*

1544. I think you recommended, at the outset of your evidence, that hill stations should be utilised for sending out the troops at the age of 18, for the purpose of drilling them there, but I understood you to say, at a later period, that 20 was the minimum, and almost too young, if anything?—I meant, in saying 20, that no man ought to go out to India for service in the plains under 20.

1545. What is the precise advantage of taking a recruit out at 18 to a hill station over keeping him in the depôt here?—I see no advantage at all.

1546. Then on what was your recommendation based to send them out at 18?—If the military authorities consider it necessary, medically there is no objection to it; that the men could be drilled there as well as at home, as far as health goes, if the military authorities consider it necessary to send them.

Mr. *Fawcett.*

1547. I understand you to say that the recruits who were sent out from Warley were an extremely fine body of men, and made some of the finest soldiers in the world, and contrast very favourably with the very young soldiers who were sent out afterwards?—Yes; I speak from tradition in the service; I had never seen those men.

1548. But that is the opinion of the medical service?—I think there were never finer soldiers in India than these men.

1549. You are aware that the Warley recruits were extremely cheap, compared with the recruits who were sent out during those years with which you are personally acquainted, and when you speak so very strongly of their being young men quite unfit for service?—Yes; but the difficulties of getting recruits now are much greater than they were in those days.

Mr. *Fawcett*—continued.

1550. Therefore, admitting (I will inquire into that either from you or from some one else) that there is a difference in the circumstances of the country, we come to this, that the Warley system is about one-seventh as cheap as the system which succeeded it, and that it resulted in sending out a very much finer body of men, though it was so much cheaper; you say that it is owing to the change in the circumstances; but that which I have just stated is the fact, which your evidence proves?—We know nothing of the invaliding of Warley, of the men who came home and died; that is an element to be considered.

1551. But if they were such an extremely fine body of men, I might assume that they were healthier than the others, and therefore it would tell in favour of the Warley system, would it not?—Yes.

1552. You have no evidence that they were unhealthy?—I have no evidence; I do not know whether any evidence exists as to the invaliding, and the deaths of that body of men.

1553. But if they were such an extremely fine body of men, the tradition of whose form and strength even now excites admiration amongst the medical authorities in India, it would be rather fair to assume that men producing such a favourable impression could not have been unhealthy?—But with regard to the experience of the Zouave regiment, on making inquiries I was told by the officers that in the campaign in Algeria all the weakly men died off; it is only the old men that they get that come to the front, in the end, so that if you apply that principle to Warley, probably a lot of these men did die; and these men, I believe, hardly ever thought of coming home; they all died out there.

1554. Here you had an extremely cheap and an extremely efficient system; and before that system was changed into a very costly and a very inefficient system (because nothing could be stronger than your language, from a medical point of view, as to the inefficiency of the recruits sent out under the more expensive system), would it not have been prudent for the military authorities to have made some inquiry on those points, and found out whether the Warley system did lead to a great mortality?—I have no means of saying; but before coming to any opinion on the point one would require data.

1555. You have been at the War Office, have you not?—Only a very short time.

1556. But you never heard of any record of such an inquiry?—No; I never made inquiries on that point.

Sir *George Balfour.*

1557. You have no doubt that statistics do exist?—In the Indian records; not in our records.

Mr. *Fawcett.*

1558. You do not speak from your own personal knowledge; but the tradition in the medical service is that the army recruited from Warley formed a much finer and stronger body of men than the army recruited under the system that succeeded it?—Yes, that is the tradition.

1599. You

Mr. *Campbell-Bannerman.*

1559. You have no data showing that?—We have no data; it is merely a tradition among the medical men, that the men recruited at Warley were a finer body of men than we have had in India lately.

Mr. *Fawcett.*

1560. When you speak of tradition, you mean that when you have met men in your own service in India you have conversed with them about it, and you do not speak of individual opinion, but the general opinion of the service?—Yes.

1561. And a great number of those men who expressed that opinion to you have been in India long enough to compare the two systems?—Yes, not only medical but military men.

1562. And the opinion which you have described was very general amongst them?—Yes.

Mr. *Campbell-Bannerman.*

1563. You are aware, perhaps, that the Sanitary Commission appointed by Lord Derby some years ago condemned the Warley system upon medical grounds?—I am not aware of that.

1564. Are you aware whether the Warley system did not lead to great mortality when the recruits first arrived in India?—Well, that I know nothing of; that is what I suggested just now.

1565. You do not know how many of the Warley recruits, who were so cheap, ultimately developed into the fine body of men?—No; that is the remark which I made to Mr. Fawcett with regard to that.

Sir *Henry Havelock.*

1566. I suppose the Committee are not to understand you at all as giving an opinion that the men of the Warley system in regiments were a finer body of men than Her Majesty's soldiers serving in India at the same time; because you know, probably, that that would not be borne out by those who were there at the time; there are dozens of regiments one could enumerate, comprising, probably, as fine a body of men as any in the world; the 87th, the 86th, and others?—No doubt.

1567. Therefore, I understand you that you do not desire to draw any comparison unfavourable to the physique of our soldiers serving there at that time?—Not the least.

Chairman.

1568. You only, if I understand you rightly, are comparing the Warley recruits of a former day with the recruits that now go out?—Not the recruits. I have no means of knowing anything of the Warley recruits. They may have died in great numbers; but I was speaking of the men turned out, when actually in the field of battle.

Sir *Henry Havelock.*

1569. What you said about the Warley soldiers seemed rather to rest on popular tradition?—Yes.

Mr. *Fawcett.*

1570. You say that there was a certain recruiting system prevailing at Warley, and a certain recruiting system that succeeded it; it is not for you to enter into the relative cost of those two systems, but you say that the general opinion amongst the medical men and military men with whom you have conversed in India is this, that the Warley recruiting system ultimately tended to the men produced by it being a much finer system than the system that succeeded it; is that so?—I merely allude to the fact that the tradition among medical and military men in India is, not that the Warley recruits, but these men of the European Indian army were a very fine body indeed.

Sir *George Balfour.*

1571. Is it not the fact that India had the pick and choice from the whole of the population of England; the Indian service, in fact, was a favourite one?—Yes.

Mr. *Fawcett.*

1572. But if India were left alone, if the service in India is still popular, the same advantages would result to India now; she would have the pick of the whole recruiting army; I again put to you this: I understand you to say that it is the tradition amongst the medical men and the military men in India with whom you have conversed, that the men who belonged to the army which was recruited at Warley formed a finer body of men than those men who afterwards belonged to an army which was recruited under a different and more costly system?—Yes.

Chairman.

1573. Are you not aware that the difficulty of recruiting everywhere has very much increased since that Warley system came to an end?—The difficulty of recruiting has increased very much, and the body of men recruited at Warley was a very small body compared with what we want in India now; then it was only 7,000 or 8,000; but the only point I should like to explain is with reference to recruiting; I do not speak of recruiting at Warley, but of the results of it; Mr. Campbell-Bannerman has informed me that the Sanitary Commission has condemned the whole system; I am sorry to say that I am not conversant with that, but if I went into it I could give a more satisfactory opinion.

Mr. *Dunbar.*

1574. Are you comparing the Warley men with the men of the present day, the Queen's troops of the present day?—I mean the Queen's troops of the present day, as the army exists now. Sir Henry Havelock has said that there were just as good men in certain regiments in India under the one system as under the other.

Mr. *Fawcett.*

1575. You have spoken of the unnecessary expenditure on those palatial barracks; who was responsible for that expenditure?—I cannot answer that question.

1576. Did you occupy a medical position in India at the time the barracks were undertaken?—No, not at the time that the barracks were planned and authorised.

1577. You were not in any official position then?—No, it was before my time.

Sir *George Balfour.*

1578. I will call your attention to tables which were prepared in the War Office, and which you will find in the Indian Army Commission Report (in Parliamentary Paper, No. 330, of 1860, at pages 28 to 30), which show that first in Bengal the ratio of deaths to strength of Her

Sir *W. Muir*, K.C.B., M.D.

16 June 1874.

Sir *G. Balfour*—continued.

Majesty's forces was 67·2 per thousand, whereas the per-centage of the Company's European forces was 61·1 per thousand, and in Madras, whilst the deaths in Her Majesty's forces were 39 per thousand; in the Company's European forces they were 30·6 per thousand, and in Bombay the deaths per thousand of Her Majesty's forces were 45·9, and those of the Company's European forces 33·7. Again, that the ratio per thousand of the admissions into hospital of Her Majesty's forces, for a long period of years, was 1,794 per thousand, and the admissions into hospital of the Company's forces were 1,519; showing again a favourable per-centage for the latter; but again with regard to the invaliding, Her Majesty's forces were 32 per thousand invalided at home, whereas the Company's were only 30 per thousand; perhaps you will examine those figures?—Yes.

Mr. *Fawcett*.

1579. Those returns which have been put into your hands, so far as they go, show that in the average of years before the mutiny the local European force, whether estimated by the average rate, or whether estimated by the number of invalids, or by the number of people returned home, or by the number leaving the hospital, taking any one of those four standards, was a healthier force than the Queen's army?—So far as the statistics go.

1580. These returns of health it appears are for 13 years previous to 1865, and during six of those years they were not complete for the whole of India, because in part of India during those years the Queen's army and the local army were not kept distinct?—Those returns are more valuable than any opinion of mine, because my opinion on that is founded on mere hearsay.

1581. That being the case, if it has been hinted that the recruits of the local European army have died with great rapidity upon landing, that of course would have been shown on these mortality returns; if a man recruited at Warley died the very moment he landed, he would have been put down as a death of the local European army, would he not?—If the returns were properly kept; it all depends on that what value they are.

1582. Therefore if there were a great number of deaths amongst the recruits, these returns, if properly kept, would have expressed that mortality?—Yes.

1583. Therefore the deaths of recruits must be allowed for in those returns?—Yes, certainly.

1584. Have you any opinion to give upon the medical advantages of the short service system which has been lately introduced into India?—No.

1585. So far as I understand your evidence, you think that instead of having medical advantages it will rather have disadvantages?—Well, I have only gone on this question of hill stations with rotation.

1586. But you say there is no reason yet to suppose that that is going to be introduced; therefore, have you considered the medical effect on the army of the short service?—No, I have not considered it; I have not gone into the question as it will be.

1587. Unfortunately, I was not in the room when you were first examined. How long have you held your position at the War Office now?—I have held my present position only about two months; it is two years since I left India.

Mr. *Fawcett*—continued.

1588. You were in India until quite recently?—Until the beginning of 1872.

1589. And you held an important medical position in India at the time the short service system was being thought of and being prepared at the Horse Guards and the War Office?—Yes.

1590. Are you aware that any communication was made to you as one of the leading medical authorities as to the medical effects of the short service system?—No, I had none made to me at all.

1591. Then an important change is introduced into the English army which also is a change introduced into the Indian army, and that change is carried out as far as you know by the Horse Guards and the War Office, without the medical authorities in India being consulted as to the medical effects upon the army of that change?—Certainly, with regard to the medical authorities in India. It is possible that the Director General at home was consulted, but I was not.

1592. Not you, on the spot?—Not I, on the spot.

1593. And you are not aware that the Director General at home was consulted?—I am not.

1594. Whom do you refer to when you speak of the Director General?—Sir Galbraith Logan, who retired a few months ago, and whom I succeeded.

1595. Did he hold an Indian appointment at the War Office?—No.

1595* He was at the head of the whole department?—Yes.

1596. He was a War Office authority?—Yes.

1597. It does not necessarily follow that the Director General had been in India at all?—Not at all.

1598. Had he as a matter of fact?—He had been in India, and he may have been consulted by the authorities.

1599. But he had left India for a good many years?—He had left India for a good many years; and so far as I am concerned myself, as the head of the medical department, no reference was made to me on that point.

1600. Therefore, if we were told that one advantage of the short service system would be that it would lead to the army in India being healthy, that opinion would be expressed without ever having consulted the medical authorities in India?—It would, but the statistics might be fallen back upon to give the information as far as they were valuable.

1601. Statistics you said just now lead very often to conclusions which are not realities, and it would be impossible to conclude simply from tables of medical statistics what had been the effect of a new system till it had been tried, would it not?—Yes.

Sir *George Balfour*.

1602. But not to allow the Committee to go away with a misunderstanding, you have had large experience, have you not, in India?—Yes, pretty large, nearly all over India.

1603. We also know that you served in the Crimea?—Yes.

1604. And I think that you were one of the very few officers who never left the Crimea?—Yes; I have been over 30 years in service in all parts of the world.

1605. Besides being a medical officer in India, you had a staff appointment, I understand, and rose to be chief medical officer there?—Yes.

1606. You

Sir *G. Balfour*—continued.

1606. You had experience also in China in the campaign of Tientsin?—I was the principal medical officer.

1607. And besides all that you have also had experience in the Director General's Department as second to the Director General for the last two years?—I have; I have been the head of the sanitary branch for two years past.

1608. So that the evidence which you have given to-day, unprepared as you were for it, is the result of great experience, and if you had had more time to get up the facts you would have been able to give information far more complete than that which you have given, excellent as it is?—Certainly; I am sorry I have come here unprepared, but I have answered honestly everything I know.

Mr. *Dunbar.*

1609. You spoke of the reputation which the old East India Company's troops had in India, as to their size and physique; is not that comparing them with the men of the present day?—Yes, I think so.

1610. But is there any tradition or opinion that they were much better in point of physique than the men in the Queen's troops at the same time?—No, there is none. I think I answered that question to Sir Henry Havelock. There were good troops in both services; there were as good troops in the Queen's as in the Indian.

1611. It is impossible now, is it not, for any regiment either in India or at home to get the same class of men as they got 25 years ago?—So experience shows; you cannot get recruits now unless you take them younger; you must take them at 17 or 18. Whether it may be emigration, or what it may be I do not know, but you do not get the same class of men now as you used to get.

1612. I understand you to say that in your opinion a regiment ought to have six years' service in India?—I think you could get that, with advantage to the public and without detriment to the soldier.

1613. You mean if you carry out that system of rotation which you have described?—Ten years' service in India might be obtained then. If you would allow me, I will read a short paragraph of a letter which I wrote to the Government of India on the 31st of December 1869: "I propose that, so far as practicable, a regiment on arrival in India should be sent to a hill station at a high altitude for two years, where it should hut itself, have no regimental establishment allowed except sweepers, and should do everything for itself as in England. After two years' service in the hills, the regiment should be brought down to the plains, remain two years at the station of its appointed district, during which time the regular establishment of servants should be supplied to it. The next two years again should be passed in the hills, but at a lower altitude, and all servants, except sweepers, again withdrawn. The fourth period of two years should be spent on the plains; and the fifth period of two years (which should be the last in India) should be on the hills, but at a lower altitude; and from thence it might go direct to England at any season of the year."

Sir *George Balfour.*

1614. In the evidence that you have given, in speaking of the physique of the Company's recruits, you had no intention, and no desire in your mind in any way to detract from the noble European force of the Queen's army in India, or to dispute the statement that a finer force did not exist than that army?—No, I should be very sorry to do that.

Mr. *Campbell-Bannerman.*

1615. Did I rightly understand you to say, in answer to the honourable Member just now, that you thought a regiment ought to go out to India for six years, so that the head-quarters of a regiment should be brought home every six years?—Well, it does not follow; they might be kept up by recruits. There should be a 10 years' Indian service; four of these on the hills, and six in the plains.

1616. At present the regiment goes out for 12 years?—Yes.

Mr. *Stanley.*

1617. I think I understood you, in answer to a former question of mine, to say that you based your recommendation rather upon the individual cases, which might be met by drafts or sending men out, than upon the period which a regiment might remain out there?—Yes.

Mr. *Campbell-Bannerman.*

1618. As to your scheme of using the hill station service as a means of keeping the men in good health in India, you have said that you went solely upon medical grounds, and there might be military and political reasons against it?—Certainly.

1619. There might also be financial reasons against it, might there not?—There might, certainly.

1620. And I understand you to contemplate a man being kept in an efficient state for service for about 10 years in India; that is to say, from the age of 20 to the age of 30?—Yes.

1621. By that time he would be pretty well worked out, would he not?—Yes.

1622. And what do you suppose would be done with him then?—The man would come home.

1623. He would have to be discharged on pension?—He would be discharged on pension.

1624. So that his pension would commence at the age of 30?—He might have gone out when he had five years' service or three years' service; it would depend altogether upon that.

1625. The man whom you would contemplate keeping in India for the best period of his life would have to be pensioned at the early age of 30?—That is a financial question altogether.

1626. As a matter of fact, you would be done with him at the age of 30, and some provision would have to be made for him then?—It is possible that that man might do garrison duty at home for a year or two, if necessary.

1627. In the case of a short service man, you are aware that he passes into the reserve for the remainder of his service, and then he has no pension at all?—Yes.

1628. You stated, in reply to the honourable Member for Kincardineshire, that you thought a sufficient number of drafts for India could be got by volunteering from the regiments at home?—I think so; but that is merely an opinion. I have no doubt the inspecting officer of recruiting would be a much better man to advise on that point.

Sir *W. Muir*, K.C.B., M.D.

16 June 1874.

Mr. *Campbell-Bannerman*—continued.

1629. You mentioned that the mortality of a regiment in the first year of its service in India was 32 per 1,000?—Yes.

1630. Could you say what proportion of that mortality affects different ages?—Well, it runs through in a great measure; but it affects the young men least.

1631. Could you put in any tables giving that information?—Tables are to be had from Dr. Bryden's book; the young men would be the least affected, so far as mortality went, but it runs through the whole.

1632. Could you add to your evidence the distribution of the mortality according to ages?—Yes; because that is procurable, I know.

Lord *George Hamilton*.

1633. Under the old system of 10 years' service, did men often re-engage in India when their service was expired?—I think so.

1634. And do you know at all whether there was a greater mortality during the second period of their service than during the first?—I should say so, because we know from figures that there is a general deterioration of health in India; that the ratio of death, for instance, is in the ratio of length of residence; as a general principle the longer a man is in India his expectations of life are smaller.

1635. Therefore if a man did re-engage he would do so at some risk to himself?—Yes.

Sir *George Balfour*.

1636. You have no knowledge with regard to the relative facilities of recruiting for the army

Sir *G. Balfour*—continued.

for the war in the Crimea and the mutiny of India, have you?—No; I should require to study all that.

1637. Still your records will show you that your infantry never came up to within 22,000 men of the strength which your infantry came to on the mutiny breaking out?—The Crimea was an exceptional case altogether. In the first year in the Crimea, as you all know, the mortality was dreadful.

1638. But you are aware that the infantry never came up to within 50,000 of the strength at which the establishment was maintained?—Yes.

1639. Whereas the cadres were filled up to their full strength when the Indian mutiny broke out?—Yes.

1640. Thus showing that the service in India was in much greater favour than the war in the Crimea?—Yes.

Mr. *Eustace Smith*.

1641. I did not clearly understand one point; if two soldiers enlisted at 18, and one of them spent two years at the depôt in England, and the other spent two years at one of these hill stations, of which you suggest the establishment, which do you think would be the most satisfactory soldier to the Indian service at the age of 20?—Well, the man who had been two years in India would have a certain amount of seasoning, acclimatisation, which I should consider necessary. I should say the man who had been there the two years would sooner be an efficient soldier for Indian service than the other.

Friday, 19th June 1874

MEMBERS PRESENT:

Mr. Stephen Cave.
Sir George Balfour.
Mr. Balfour.
Mr. Birley.
Mr. Campbell-Bannerman.
Mr. Dalrymple.
Mr. Dunbar.
Mr. Fawcett.
Lord Edmond Fitzmaurice.
Lord George Hamilton.
Sir Henry Havelock.
Mr. Sampson Lloyd.
Mr. Onslow.
Mr. Eustace Smith.
Mr. Stanley.

THE RIGHT HONOURABLE STEPHEN CAVE, IN THE CHAIR.

The Right Honourable EDWARD, Viscount CARDWELL (attending by special permission of the House of Lords), further Examined.

Right Hon. Viscount *Cardwell.*
19 June 1874.

Lord *George Hamilton.*

1642. WE were discussing last time the actual charges made for recruits, and I had asked you if, under the present system, it was not possible to include certain charges which had no direct connection with the training of recruits, but which were connected with the depôt centre at which the recruit was trained, and you stated that the Chancellor of the Exchequer had remitted, some 10 years ago, certain charges which he thought might have been made against the Indian revenues, and that therefore if we press the point, that these charges ought not to be included, the Chancellor of the Exchequer might have something to say upon that subject?—That is my opinion.

1643. But was it not the case that Lord Herbert considered that the presence of the depôts at which the Indian recruits were trained in England was of a certain value to the Home Government, and therefore on that account he thought that these charges to which you alluded, and which then were brought before the Chancellor of the Exchequer, should not be pressed against India?—Certainly.

1644. But the depôts at which the Indian recruits are trained still remain, and England still has the value of those depôts?—And the charges which the Chancellor of the Exchequer waived are still waived.

1645. Therefore it comes to this, does it not, that if charges in connection with the new system of depôt centres be included in the actual charges for recruits, a fresh charge would be imposed upon India?—I doubt that. Under the Tulloch system the staff of the depôt battalion was, I think, estimated for, and India paid its share; while under the intermediate system, though the Accountant General of the Army advised me to include a share of that charge against India, I declined to do so, on the ground that as the battalion already existed, I thought it was desirable, during the operation of a temporary system, not to raise any question with India about that.

Lord *G. Hamilton*—continued.

1646. But still under the present system of actual charges it might be contended by the War Office that India should bear a certain proportion of the charges which are the result of this new system of depôt centres?—I am not at all prepared to say that the War Office would do anything very unreasonable if they did that, but they have not as yet.

1647. But the system at present is scarcely in force; but still it might be possible, under the present system of actual charges, for the War Office to make a claim on behalf of those charges?—As I have already told you, the Accountant General of the Army, who is a member of this departmental committee, thought it a reasonable thing to do that, even during the existence of the temporaty system; and I declined to do it, because I thought it expedient to put off a reconsideration of the whole question until the new, and, as I believe, more economical, system shall have come into operation.

1648. But when the system does come into operation, which was your own creation, do you think it right that the War Office should press for these charges, and that these charges should be included?—I have already stated that I think every charge against India which can be brought to an arithmetical test ought to be brought forward, and that all those charges which are not capable of being reduced to a strict arithmetical test ought to be equitably considered by impartial persons, and the account ultimately struck. I see no reason whatever why the head-quarters staff of the depôt battalion should not be considered in that future review, just as I believe them to have been considered when the Tulloch calculation was made.

1649. But these charges, I think (I speak, of course, with great diffidence in your presence), could be brought to an arithmetical test; and when they are brought to an arithmetical test the question then comes who ought to bear them, India or England?—I have already stated that I think

Right Hon. Viscount *Cardwell.*

19 June 1874.

Lord *G. Hamilton*—continued.

think India should bear a share of the general organisation in proportion to the share of the army which she habitually employs.

1650. And that being the principle upon which you think India ought to contribute, it follows that these charges in connection with the new depôt centre system could be made against India?—I see no difficulty about it.

1651. Does not that rather corroborate the view which the Duke of Argyll took. I will give his exact words; he says, in his letter of the 9th of August 1872, that he "does not contest the necessity of India paying for its recruits under whatever system is determined upon at home as necessary for the efficiency of military training"; and then the next sentence is not very relevant, but then he goes on to say, "But if the cost of recruiting be swollen by an artificial system of charge, so as to include outlays which have really nothing to do with the cost of training, but are connected entirely with the organisation of the home garrison of England, he must record, as he now does, his protest against the principle involved, namely, that of charging India with any outlay which cannot fairly be said to be occasioned by the service of India"; I think you hold a view rather the reverse of that, and you think that India ought to be charged with "outlays which have really nothing to do with the cost of training," but are connected with the organisation of the English army?—I stated the other day, I think, that in my opinion if India, instead of maintaining a separate army, indents upon our army for the force which she maintains in India, she must take it according to its organisation, and that she has no right to expect that the portion which she employs will be taken out of the general system, and that she shall have the cheaper part, and that the dearer part shall remain to the United Kingdom; but I also admitted that, in making calculations with respect to recruits, India should pay nothing that could not be shown to be a charge of recruiting, and that if there were Indian depôts maintained in this country which, in the case of emergency, would constitute a portion of the home garrison, it was perfectly right that, in making up the account, India should have a fair consideration for that circumstance.

1652. Then the difference of opinion between the India Office and the War Office on the subject of recruits is simply this; India does not object to pay for the actual cost of the training of the recruit, but she does object to pay outlays which are connected with the depôt centre, at which he is trained, but not with the training of the individual recruit?—I think there is a little fallacy in the mode of putting the question, because you insert "paying for recruits." India should pay for recruits nothing except what it can be shown has been incurred on her behalf in the raising of recruits; but if you ask me whether in adjusting the ultimate charges which ought to be repaid by India to the British Treasury, she is to have, as I showed the other day, all her cadres full, and the great majority of the cadres charged upon the British Treasury are to be at a very low scale, and consequently the proportionate charge upon the United Kingdom much greater than the proportionate charge upon India, I think an allowance will have to be made in producing the ultimate account of which the

Lord *G. Hamilton*—continued.

United Kingdom will get the benefit, and I expressed an opinion that the benefit of that, when it shall come to have been fairly calculated and justly stated, will more than compensate any saving which India may make upon this special charge for recruits.

1653. That is to say, that the system which you brought into force is more economical than that which was in force before, but in consequence of its being more economical, you think certain charges ought to be included which were not included before?—No, not in consequence of its being more economical. My opinion is that the new system will in the aggregate be more economical than the old, but that the India Office having raised the question which was settled by compromise in the year 1861, it is the interest of the British Treasury to accept the proposal of the India Office to allow the question to be reopened, and to take care that when it is settled it is settled upon a fairer basis than in my opinion it has been hitherto.

1654. It was you, I think, who appointed, or rather you were instrumental in appointing, the committee which goes by the name of Mr. Seccombe's Committee?—I united with the Duke of Argyll in appointing that committee.

1655. That committee was appointed in order to change the system which existed before of paying a capitation rate for recruits?—It was.

1656. Had you any objection to the system of paying a lump sum annually for recruits?—I have no objection to any system which shall both make the charge as really fair between the two treasuries as it can possibly be made, and also let the taxpayer in both countries know that such a fair arrangement has been arrived at. It seems to me that however fair any lump sum may be it will always be a little inferior in regard to the latter of those two considerations; it will not show to the taxpayer in the two countries so conclusively that he is paying his own fair proportion and no more.

1657. Yes; but if the capitation rate, or some other system of paying a lump sum was based upon the actual charges which have already been aarived at, the taxpayer, I think, would have full security that he was not paying more than he would under the system of actual charges?—It is stated in Lord Northbrook's letter that the charges are from year to year increasing. I believe the tendency in all expenditure, public and private, is to find that prices and cost increase year by year. The principle of the Seccombe Committee would allow any variation in price and cost, either in the way of increase or diminution to be taken into account, but a lump sum settled for a given period of time would not have that advantage.

1658. I was asking you these questions in reference to the capitation rate rather with a view of suggesting that if a lump sum was paid that would put an end to the disagreement which does exist, and I am afraid will annually exist between the two offices?—That is an important advantage, and I should be extremely glad to know that an harmonious understanding had been arrived at between the two offices with respect to the repayment from India to the United Kingdom; and I should not be very desirous for its early disturbance, care being always taken that if any serious circumstances arose which materially

Lord *G. Hamilton*—continued.

ally disturbed the system of the settlement, there would be the opportunity of re-considering it.

1659. Because under the present system the actual charges are only arrived at by including a very large number of small items, the natural tendency of one office is, perhaps, to include as many as possible, and of the other, to exclude as many as possible?—Of course, in regard to the detailed working of the committee you will get better information from the gentlemen who are members of it, whom you have in the room; but my experience has been that the gentlemen of the committee have had no difficulty at all in dealing harmoniously with the questions referred to them. The only question raised has been a question of principle, which has been very clearly stated by the officers on that committee representing the India Office on the one side, and has not been accepted by the gentlemen who represent the War Office; but, so far as I know, when they have come to detail they have been very harmonious. There is one remark to be made, namely, that the War Office can charge against India nothing that they cannot show; and if by any accident they omit something (as I think they once omitted the forage in taking the items for the cavalry), then of course India gains and the War Office loses.

1660. But the present system seems to me to be more open to this objection, that if any alteration in reference to recruiting is made by the War Office, that alteration may probably affect the actual cost of the training of the recruit, so that the charges may vary from year to year, and in consequence there may be dissensions between the two offices; whereas if a lump sum was paid on an equitable basis, for only a small number of years, the War Office would be able to estimate exactly what would be the cost of any alteration, knowing that they could depend upon India paying a certain sum?—It appears to me that what underlies that question is the assumption that something will occur which will prevent our getting recruits so economically as we got them before, and that we are obliged therefore to give a little more for them; but that during the pendency of this lump sum system India is not to contribute to that necessary increase of cost.

1661. But, subject to that provision, do you personally see any objection to the payment of a lump sum?—I have already stated that if a lump sum can be arrived at, in a manner satisfactory both to the War Office and to the India Office, I do not think that any very small consideration ought to interfere with its being allowed to last for a limited period of years; but if in the interval such a thing as the necessity that arose in General Peel's time, of giving 2 *d.* per head all round to the recruits, were to arise, I think the Chancellor of the Exchequer would not be satisfied that the British Treasury should pay that upon the third of the army which for the time being was employed in India.

1662. To go now to another part of the evidence, which you gave the other day, I think you stated that it was the habit of the War Office to consult the India Office upon all changes which would inflict fresh cost upon the Indian revenues, and that there was an Assistant Indian Secretary in the War Office; I believe, however, he is a Horse Guards official, is he not?—The Assistant Indian Secretary is an assistant to the Military Secretary, and the Military Secretary is under the Commander-in-Chief; but that does not prevent his knowing, I apprehend, generally speaking, what is going on, nor his being able to communicate to Sir Thomas Pears; he is, however, only one of the means of communication, and as I stated, it is the duty of the War Office to communicate with India upon anything which they believe will affect the finances of India; and notwithstanding what I have heard in this Committee, I think that in the main we have been in the habit of doing so.

Right Hon. Viscount *Cardwell.*

19 June 1874.

1663. I asked that question because it seemed to me that a subordinate in the Horse Guards might not always be aware of changes which it was proposed to make in the War Office?—That is very true.

1664. And I think I could illustrate that by reminding you of what took place when the War Office proposed to promote artillery captains to the rank of major; the first communication in that case came from the India Office, who had heard indirectly that some such change was proposed, and not from the War Office, who were proposing the change?—I believe I stated the other day that an alternative proposal from the India Office was considered by the War Office before any public declaration was made at all to Parliament, or the War Office was in the least degree committed on the subject.

1665. But further, did not the War Office consider that this alteration would not put any increased charge upon the revenues of India, and is it not the case that that was rather the reason why they did not communicate with the India Office?—No; I think that as far as my knowledge and memory go, that is not a correct version of what passed at all; the question of what addition would be made to the pay in India was considered; we were told that there was a system of contract allowances which it was no part of my duty to go into, and which I did not thoroughly go into, but which, so far as I understood it, did not appear to me a desirable system to maintain. I was told that the abolition of that system of contract allowances would be a considerable advantage to India; but so far as I remember what was ultimately decided was this, that the clause in the Royal Warrant was altered to give the major only a slight increase of pay beyond what he had received as captain, with a command pay; and this arrangement was accepted as enabling the India Office to meet what would otherwise have been a considerable increase of charge upon the revenues of India.

1666. But the consequence of that alteration has been that an additional charge of 40,000 *l.* a year has been placed upon the revenues of India; I do not suppose that would be within your cognizance, because the despatch was only received the other day?—I must leave your Lordship to explain that, for it appears to have taken place under your administration and not under mine, and I can offer no explanation about it.

1667. No; the Indian Government recommends the change, and they say that it is a necessary consequence of the promotion of captains to the rank of major, as it is felt that if a man is promoted to that rank he ought to have the pay?—Then I suppose that those economical views with respect to the contract allowances have in some way evaporated in the interval.

1668. But did the India Office ever intimate

Right Hon. Viscount *Cardwell.*

19 June 1874.

Lord *G. Hamilton*—continued.

that this alteration would not impose any additional charge upon India?—The intimation under which I acted was that the India Office were satisfied with the arrangement of the Royal Warrant being altered in the manner I have described; but as I stated the other day, even if the India Office had not been satisfied, I do not think that was any reason why in the present state of military affairs the command of a field battery should be left in the hands of an officer below the rank of field officer.

1669. And you think that the War Office do communicate upon all alterations which will involve increased expenditure to the India Office; those at least were the instructions which you gave to your subordinates at the War Office?—During the time that I have had the honour of being at the War Office I have never claimed anything like perfection or infallibility for the War Office, but most undoubtedly that was my intention and my wish; whether if it was in any case neglected, the blame may have rested in any degree upon any inferior officer or whether it may have rested solely upon me, that I cannot tell until I know the circumstances.

1670. But if there has at any time been a failure on the part of any officer of the War Office to communicate to the India Office, would it not probably be in consequence of the Indian Assistant Secretary being in the Horse Guards, and thus not acquainted with all the alterations which were proposed in the War Office?—I should have thought that the Indian Assistant Secretary being there was an advantage, and that it was desirable for India that he should remain; but if there is an objection on the part of the India Office to his being there, I have no doubt that objection would be very fully considered by the Secretary of State for War if it were brought before him.

1671. I think there is no objection, but the mere fact of his being in the Horse Guards no doubt would necessitate some officer in the War Office communicating to the India Office changes which had been suggested in the War Office, and thus the responsibility of communication would be divided between two persons?—No, I do not understand that at all; the responsibility rested entirely upon me, and I do not wish to share it with anybody so far as my period of office was concerned.

1672. Do you think that the systsm works well then; I mean the system of communicating to the India Office?—I stated the other day that when anything affecting India was brought forward I took great pains to communicate, more especially with Sir Thomas Pears, whom I always found a very agreeable person to communicate with, and that to my knowledge no important step was taken which affected India without such communication. An objection was indeed made the other day, that there had been no formal official letter written after the most repeated and careful considerations had been held with reference to a Bill that was before Parliament. Now, really an official letter to cover the copy of a Bill which was introduced into Parliament would have been a highly regular proceeding, but I cannot imagine that its omission can have been attended with any serious national inconvenience.

1673. Then, admitting that it is right that communication should be made to the India Office, you would not object, I suppose, to any

Lord *G. Hamilton*—continued.

alterations being effected in the War Office which would tend to make the channel of communication more perfect?—It would entirely depend upon what those alterations might be.

1674. The other day you stated that one of the advantages that India derived from the English army was that all Indian Staff Corps officers were officers who have been trained in the English army; now might I not with equal justice say, that as the pay and allowance of the Indian Staff Corps are considerably in excess of those of the British army, and as access to the Staff Corps can only be obtained through the British army, India confers considerable benefit upon England by thus forcing every man who enters her Staff Corps to pass through the English army?—My own opinion is, that the balance of account is not favourable to the British Treasury; but, as I have already stated, when the review of all the charges comes to be held, any charge that can even with plausibility be put forward on either side ought to be equitably considered. It seems to me that the circumstance of the cleverest young men being able to leave the British army to go into the Indian Staff Corps, after trial in India, is a very great advantage to India. That, of course, is a matter of opinion.

1675. Still, of course, India could get these clever young men by the mere inducement of higher pay, without forcing them to pass through the English army?—I do not think that the system is either specially favourable to the Imperial Treasury, or that it enters largely into the question which the Committee are considering; but I have stated my opinion about it, having been asked to do so.

Mr. *Stanley.*

1676. I suppose the real weight of my noble friend's last question would be substantiated only by the fact that a career in the Staff Corps formed an additional inducement to officers to enter the English army?—I understood it in that sense.

1677. On the other hand, I suppose, it might fairly be stated that whereas England pays these officers at a time when their services are of less value, they become available to India, and available mainly for Indian services at a time when they are becoming of more professional value, owing to having acquired greater military experience?—I so regard it. I may observe, that there has not been yet any dearth of candidates for the British army, and I do not imagine that if this privilege were withdrawn there would be.

1678. Without going into details, may I ask your Lordship whether I might not sum up much that you have said by dividing the adjustment of account, firstly, into charges which could strictly be brought into account, and, secondly, into others which are rather matters of policy, and which, in the balance between the two countries, really must be weighed the one against the other, without having strict regard to the actual pecuniary charges?—Yes.

1679. That, I think, appears to be the view which was also to a certain extent sustained by Sir Thomas Pears, in the evidence which, I think, your Lordship heard the other day?—I only heard a portion of his evidence; but Sir Thomas Pears is an exceedingly fair man, and I should have no doubt that he would agree in such an opinion.

1680. With

Mr. *Stanley*—continued.

1680. With regard to this capitation rate, may I ask whether you heard Sir Thomas Pears's answer to a question which I addressed to him the other day (No. 1207) to this effect, whether, supposing the claims were adjusted upon the existing basis for a period of years, and that reductions were made at home by which it was clear that the Home Government would gain over that period of years materially in the bargain with India, any claim would be made by the India Office for a corresponding remission of charge; to which his answer was that he did not think such a thing likely to happen, but that if a rate were fixed for a certain period the question of adjustment or re-adjustment on any great organic changes being made would be one for fair consideration between the two departments at the time; is not that virtually disposing of the principle of the capitation rate, or do you only read it as a very considerable modification of the acceptance of such a principle?—I do not wish to give an opinion upon Sir Thomas Pears's evidence. I think I heard those answers, but I entirely agreed with what Sir Thomas Pears said in that respect, for I think that if you do adopt the idea of a lump sum of that sort, the result will be that when changes are made which will throw a greater burden upon the British Treasury, you will find it very difficult to disturb the settlement; but when changes are made which throw a greater burden upon the Indian Treasury, you will find that those charges will be obtained on the part of India with very great facility.

1681. But would not that practically amount to merely changing the ground of difference between the two offices; would not you then be very likely to have questions arising as to what was or was not such a change as might legitimately affect the settlement, which should be made for a definite period?—I think the difference would be this, that whereas in the one case you have a committee composed of highly intelligent and extremely fair men who have really no difficulty in adjusting such questions, you would have it reduced in the other case to a difference which would find its way into the House of Commons, where the advocate of the British taxpayer would remonstrate against the unfairness of the settlement, and require that it should be altered.

1682. I think that on the previous occasion when you were examined you were not asked anything about non-effective charges?—I was asked very little about non-effective charges.

1683. There were considerable modifications made in the principle of those charges, were there not, after your accession to the War Office?—When I got to the War Office I found that we were receiving as re-payment from India I think about one-tenth of our non-effective vote, and it appeared to me that as India employed about one-third of the British army, and employed it in an unhealthy climate, it was desirable for the War Office to bring about a change in that mode of arrangement; and consequently the system of 3 *l.* 10 *s.* was given up, and the system was adopted of actual charge upon each pensioner; and that operated at a time when it was particularly beneficial, in consequence of recent reductions, to the War Office that it should be introduced, and in the first year a very large sum was paid in re-payment, I think it was more than 200,000 *l.*, beyond what would have been paid under the 3 *l.* 10 *s.*, or Tulloch arrangement; that would not be a fair representation of the annual average, but there is no doubt that the result of that change has been to make the contribution from India to the non-effective portion of the estimates much greater.

Mr. *Stanley*—continued.

Right Hon. Viscount *Cardwell*.

19 June 1874.

1684. I would only ask you in conclusion one question with regard to the point raised by my noble friend, about the information which might or might not be given in the War Office by the present channels of communication. As a matter of fact, did not the Assistant Military Secretary for Indian Affairs form during your experience an efficient channel for the ordinary communications which might pass with respect to Indian affairs?—I do not think it would be right to rely entirely upon communications from the Assistant Military Secretary; that is only an affair going on every day; but I think the Secretary of State would be wrong if he did not take means to inform the India Office, or see that the India Office was informed upon everything which he was dealing with, and which was likely to affect the revenues of India. And I beg to say that if there was any omission of that sort during my time I am very sorry for it, and am perfectly willing to take the blame of it; but I do not think there was any substantial omission of that sort, and I think nothing could be more full and complete than the communications which used to take place between us and the India Office.

1685. In fact, there are many channels from Cabinet communications down to those which are purely departmental?—Certainly. The tone and disposition of the gentlemen employed under me was to be frank and easy in all their communications with the India Office.

1686. If the principle that India was to have a voice in every small change which might occur at home, and which might ultimately affect Indian revenues were pressed to the extreme, would it not practically render the working of the War Office almost impossible?—The working of the War Office requires, in my opinion, a good deal of attention and labour to render it successful as it is; but I have already stated that in my opinion everything which is likely to affect India ought to be known to the India Office. The Secretary of State for India is one of the Government of the country, and if he thought any question which was pending was of sufficient importance to bring before his colleagues he might do so, and might have his objections considered.

1687. In fact, that principle would amount to saying that on all matters of organisation which would be likely to affect the finances of India, the India Office should be freely consulted, but that with regard to minor changes the India Office must be prepared to accept the legitimate consequences of small changes which might be made in the Home organisation of the British army?—We have heard a good deal which I do not agree with about dual government at the War Office; but if the India Office is to be introduced into the management of the British army in the way that I have heard it contended for, I think there will be a duality which will render the administration of the army impossible.

Sir *George Balfour*.

1688. Your Lordship has mentioned very strongly

Right Hon. Viscount *Cardwell.*

19 June 1874.

Sir *G. Balfour*—continued.

strongly your views with regard to the charges to which India should be liable, namely, that all those chaages for the general organisation of the home army should, if capable of being reduced to an arithmetical calculation, be paid in proportion by India, according to the force employed?—What I stated was I think that India should bear a share in which the fact that she regularly employs about one-third of the British army should not be overlooked, and that those charges which are mentioned in Mr. Campbell-Bannerman's letter as portions of the charges that are not now made against India will require to be reconsidered if the present contention of the India Office is admitted, which contention I, on the part of the War Office, am not at all desirous of disputing.

1689. But your Lordship is aware that the changes connected with the army were made by the Cabinet without consulting the Council of India, and that when they were consulted strong protests came from almost every one of the Council of India against the changes which were then made, by which the whole European force was to be supplied from home instead of maintaining a separate European force for India?—You are now going back to the time when the two armies were amalgamated, are you?

1690. Quite so?—I do not dispute the accuracy of the facts contained in your question, but I would rather that they were taken as your facts than as mine.

1691. But still assuming these facts to be correct, and that the Council then distinctly intimated that they feared in the future those very charges being thrown upon India which the late Secretary of State for India stated he considered would be levying a tribute upon India, what have you to say?—My opinion is that it would be more easy to make out a charge that India had exacted tribute from us than that we had exacted tribute from India; but I do not wish to retort these rhetorical phrases, and therefore I say nothing upon the subject.

1692. Your Lordship mentioned that the increase of twopence a day which General Peel made to the pay of the soldier was necessary and unavoidable with reference to the recruiting for the army at that period?—I stated that I did not undertake to explain what passed in General Peel's time, but that I did happen to be aware that there was a great difficulty at that time in obtaining recruits, as nobody knows better than yourself, for you were a member of the Recruiting Commission; and I said that I thought if India had been consulted she could scarcely have objected to the fact that it was necessary at that time to increase the pay of the soldier.

1693. When I mention to you that that increase occasioned India an expense which I have calculated at various times, as about 180,000*l.* a year, and when I also mention to you that in the course of that inquiry the President of that Commission, Lord Dalhousie, took particular pains to make such recommendations for the recruiting of the army as would increase the pay of the soldier without entailing upon India any additional expense, and that the change made by General Peel was different in form, and that this large charge fell upon India from the form in which General Peel carried out the recommendations, you will see that those are important facts?—Well, it would be very unjust to General Peel

Sir *G. Balfour*—continued.

that the defence of the War Office at that time should rest upon such information as I can give; but I should be inclined, on the spur of the moment, to say this, that either the increase of the pay in India was necessary, or it was not; if it was necessary, I do not see how India could have objected to it, and if it was not, seeing that the Royal Warrants of the War Office do not bind the Indian Government, I think the Indian Government should explain why it was granted.

1694. We have it in evidence that no reference was made to India on that occasion when the increase was given, and as the recommendations of the Committee pointed out a mode by which the increased benefit to the soldier might be given without increasing his pay directly, which would entail upon India a charge, General Peel, by changing the form in which he made the increase, did entail that heavy charge upon India without India having any voice in the matter?—I, of course, am not prepared to deny that; I was not in the counsels of General Peel, and I really cannot undertake to say why it was done in the way it was; I am quite aware that they did not follow the recommendations of the Royal Commission in the mode in which they increased the pay.

1695. I merely mention the circumstance that the increase was given in a form which did entail upon India a further charge; now, with regard to the artillery majors, I distinctly understood that you had seen, or been informed, that the arrangements connected with the contract allowance would be so made as to enable the artillery major to receive the extra pay without entailing upon India any increased expense?—No, I did not go so far as that; I stated the other day that I did not go to the bottom of the contract allowance question, which it was no part of my business to do; what I understood was, in the first place, that it was our purpose to give to the commanding officer of a battery of artillery the rank of field officer, and that there were modes known to the Government of India by which, if we framed the Royal Warrant in the way in which we actually framed it, namely, giving a very slight increase of pay, and giving the rest as command pay, India would be able to accommodate her arrangements so as to avoid any considerable increase of expense; and my understanding, so far as I did understand it, was that the advantage to India would be acquired by a saving in that system of contract allowances.

1696. But I am right in assuming that you did delay your arrangements whilst these discussions were going on between the authorities at the War Office and the India Office?—I actually altered the Warrant for the purpose of meeting their views.

1697. And, therefore, you desired, as far as your information went, to accommodate the arrangements to India's wants?—The alteration in our Royal Warrant was made for that special purpose.

1698. I understood from you that you consider the command of a field battery to belong essentially to an officer of the rank of major?—That is my opinion.

1699. When I mention to you that we have got 58 horse artillery and field batteries in India, would you say that the rank of major for each of them was a suitable rank for the command?—Yes.

1700. When

Sir *G. Balfour*—continued

1700. When I mention to you that there are 28 garrison batteries with five officers to each, and 70 gunners, and that the rank of major is given to each of the officers who command these batteries, you would not consider that rank suitable for such a small body of men, would you?—I did not suppose that we were going into general questions of military organisation; but I have always understood that there is in our artillery a great objection to drawing a distinction in that respect between a garrison battery and a field battery, and having the one state of things applicable to a garrison battery and another to a field battery.

1701. But still if you had that prominently brought to your notice, and also the fact that there are no contract allowances with these garrison batteries, if, in fact, you had had the information fully before you, then you would have adopted your organisation to meet that speciality?—I am afraid I cannot shelter myself at all under that, because my recollection is that the effect of these arrangements upon India was pretty fully brought under my notice at the time.

1702. You mentioned that you found that the War Office was losing by the payment on account of the capitation rate for non-effectives?—I stated the other day that the Accountant General of the Army informed me that the operation of the state of things which existed when I came into office was, that India was paying 100,000 *l.* a year more than she would have paid if the Seccombe system had been in operation, and yet that in the year 1867–68 we had paid out of the British revenue 184,000 *l.*, which had not been repaid; and that over and above that an arrangement had just been made by which the Indian depôts were to be raised from 100 to 120.

1703. When I mention to you that in that year the War Office would have been paying at the rate of 10 *l.* per head for 65,292 men, whereas the War Office has only paid upon 56,831 men, and that the War Office, instead of receiving 652,920 *l.*, only recived 568,310 *l.*, being a difference of 84,618 *l.*, have you any remark to make upon that?—It is exceedingly difficult to follow a set of figures which are proposed to me without my having had any opportunity of considering them, and which refer to a time with which I had nothing to do. I daresay that those figures are quite correct, but what I have to observe is, that the excess of expenditure arose from the excess of men at the Indian depôts; that, as I have already stated, under the system which prevailed down to 1868, 100 men at the depôts was not considered sufficient, and they had just been increased to 120. I mentioned the other day two measures which were taken in 1869 and 1870; the one which enabled us to pension men proportionately at an earlier period, and remove them from the depôts; and the other an enactment in the Act of 1870, which enabled us to transfer men when a regiment was leaving India, and they had two years' service left, to another regiment. The Seccombe system being introduced at that time, the waste in the regiment was calculated at 33 per cent., and the effect of that was considerably to reduce the expenditure of the Indian depôts. When the double battalion system comes into full operation, and the men who are not fit for Indian service, but are fit for home service, can be charged to the home battalion, and when on a battalion leaving India the men who have got a sufficient period of service can remain in India to serve in the relieving battalion, the charge will be again considerably diminished.

Sir *G. Balfour*—continued.

Right Hon. Viscount *Cardwell.*

19 June 1874.

1704. I quote the year 1867–68, because in that year you stated that the Accountant General had brought under your notice the fact that 184,000 *l.* had been lost to the War Office in consequence of the arrangement with India, and I mentioned the fact that the loss was in consequence of nearly 9,000 men being deficient in India below the establishment?—Yes.

1705. And it was, therefore, the bad working of the system at home here, which was entirely in the hands of the War Office, which caused the War Office to sustain that loss?—I have no desire to enter into a dispute upon your conclusion, but I am scarcely in a position to say whether the system was properly worked at that time or not. I had nothing to do with it. As you are well aware, there was a great difficulty at that time in obtaining recruits; and whether the degree to which the Indian army was at that time short of its numbers was due to the difficulty of obtaining recruits, or was due to any want of skilful administration at home, I really am not prepared to say.

1706. It was during the time of the war in Europe wherein the greatest deficiency took place, and the strength of the depôts apparently in that year was very considerable?—As I have already said, I was not administering the system at that time, and I should rather leave the defence of it to those who were.

1707. It is upon the depôt system that we are especially examining, and the fact is that the whole arrangements connected with that capitation rate were made mainly through the instrumentality of Sir Alexander Tulloch, and the calculation which he made was for a depôt establishment sufficient to supply for an infantry regiment 80 recruits per annum?—Yes.

1708. When I mention to you the fact that during the whole of that period the number of recruits which ought to have been supplied for the cavalry and infantry was 33,530, whereas the number actually supplied to India only came up to 18,154, and that therefore it was the short supply of recruits to India which threw upon the War Office that heavy charge which you mentioned as the extra expense in 1867–68, do you agree to that statement?—I do not dispute the facts contained in your question; but as I have said before, supposing those facts to be accurate, and supposing the deficiency to have been due, not to any difficulty of obtaining recruits, but to want of skill in the administration at home, I think it would be fair that those persons who were responsible for that administration should defend it, and not I who know nothing about it.

1709. You did me the honour to speak to me on the subject of the changes connected with the reduction of the military force in India?—Yes.

1710. At that time I am right in saying you gave every consideration to everything that could be urged in favour of India, and amongst the various changes which you considered, by reducing nearly 500 officers of the European infantry and 100 of the European cavalry which was the result of your changes, you have effected a great benefit for India?—We made in the year

Right Hon. Viscount *Cardwell.*

19 June 1874.

Sir *G. Balfour*—continued.

1869-70 a considerable reduction in the number of officers, and I think the whole number, as far as I have the means of stating it at the present moment, was 1,291, of which 825 were on the British establishment and 466 on the Indian.

1711. And I think in addition to these there were 100 cavalry officers reduced in India?—No; the number I have stated includes them all, I think.

1712. At the same time you considered that when you reduced the infantry from 520 to 400 companies you had effected a very great advantage to India?—No doubt.

1713. And that when you reduced the cavalry from 77 to 54 troops, you had also effected a great advantage to India?—No doubt; it is all contained in that Blue Book which is before the Committee, and from which I quoted the other day the assent of the Duke of Argyll to the changes that were made.

1714. But the number of officers, and the number of companies and troops, are not clearly stated in that?—I believe those are the numbers.

1715. And if you had seen any proposals from India connected with the changes in the organisation, you would have been glad to give your best attention to them, consistent with the claims of the British taxpayer?—I say more than that; I say that that Blue Book shows that we actually did.

1716. There was one part of your evidence, wherein you referred to the smallness of the Indian Warley Depôt; when I mentioned to you that the number of recruits turned out from that depôt was very considerably more upon the average of a given number of years than the depôts of the Imperial army supplied to India, you would not consider the Warley Depôt so inefficient, would you?—My knowledge about the Warley Depôt of course is not at first hand; I never had to administer it. I stated the reasons the other day why I thought the Warley Depôt was entirely inapplicable to such a question as we are considering here to-day.

1717. And you spoke of the European force then in India as a very small force in comparison?—I did.

1718. But you are aware that it was nearly equal latterly to the whole force that had been in India for several years prior to the mutiny?—I have understood the questions put to me as involving a comparison between the army of the East India Company, whose strength under ordinary circumstances was about 12,000 men, and the army which is now maintained in India, whose strength under ordinary circumstances is about 60,000 men; and I gave reasons which appeared to me to show that an argument drawn from the one to the other would be confusing and not enlightening.

1719. Still, the Indian European force required from 1850 to 1859 no fewer than 24,703 recruits, and the Imperial army from 1861-2 to 1867-8, a period of seven years, only required 15,376 recruits?—I am not in a condition to affirm or dispute those figures; but all I say is, that in my opinion an argument drawn from the recruiting at Warley for an army whose normal amount was 12,000, or thereabouts, does not throw any useful light upon the question which we are considering when we are dealing with the recruiting of an army of 180,000 men, 120,000 of which in round numbers are employed by the United Kingdom, and 60,000 by India.

Sir *G. Balfour*—continued.

1720. You also mentioned that you understood that the Indian Committee, the Seccombe Committee, as far as the Indian members were concerned, did give their assent to the data which were put before them from the War Office; but your Lordship is aware that that committee raised a very strong objection to the data; it is in a minute signed by the two Indian members?—I have that before me.

1721. You will observe that the Indian members of the committee did not consider the charges just; but "that they consider that the proposed arrangement is in one respect not just towards India"?—I believe that I answered that same question quite accurately before. I stated, or meant to state, that the gentlemen of the committee had no dispute between themselves, except upon that point of principle which is now raised before this Committee. That point of principle was viewed in one light by the gentlemen who represented the India Office, and in the other light by the gentlemen who represented the War Office. There is appended to that Report the objection of the gentlemen of the India Office to which you are now referring; and I have already stated over and over again, in the course of my evidence, that I do not think it is for the interest of the War Office, when the new system comes to be introduced, to dispute that proposition; I should advise them to assent to it.

1722. Still, considering that there are claims against the India Office at the present moment based upon the data which are contained in these reports, it is of great importance that we should distinctly understand that the Indian officers of that committee have both, in 1869 and again in 1870, raised their voices against the mode in which the calculations were made of these charges?—There is no possibility of disputing that fact; nobody can dispute it.

1723. Then I will ask you to look at page 16, where you will find that India is saddled with charges for recruits increased by all the deaths, desertions, or inability of recruits to proceed to India, by which they have raised up the charge to India by exactly one-third, the one-third to which you previously referred?—Yes.

1724. Do you consider that the deaths and desertions of all the recruits for the whole army should fall proportionably upon India, in proportion to the number of recruits raised?—If it can be shown that India contributes less in proportion to the number of deaths and desertions than the other two-thirds of the army, I think that would be a very fair consideration to take in on the side of India, but of course that must be shown. I was asked a little while ago about the non-effective charges. I believe that in the mode in which the non-effective charges are now calculated, the time a man has served in India is only allowed for equally with the time which he has served in the healthiest climate of the world. When these charges come to be all reviewed, and a final calculation made, it is possible that the War Office may think that a man who has served in India has been more rapidly invalided, and that the charge of his pension ought to be more heavily charged to India in consequence. These charges ought all to be as carefully reviewed as possible, and I hope that whenever that review takes place it will

Sir *G. Balfour*—continued.

will be not entirely by War Office and India Office gentlemen, but that the Treasury will be heard upon the subject, and that the Committee or Commission who may settle that question will be a very strong and very impartial one.

1725. But does your Lordship think it just and fair upon India that the pensions of soldiers who serve in India should be charged to India proportionably to the total service which each soldier gives to India?—I think so; I should have thought that that was evident.

1726. But taking the case of a soldier who goes out and only serves in India two and a half years, say, of his total service of 21 years, do you think it is just to India that India should pay for the passage out and home of that man, and at the same time contribute a portion of his pension in proportion to his 21 years?—I think that the two things, the passage out and home and the pension, are entirely separate. It is the good fortune of India to have been brought much nearer to this country than she formerly was, but whether she was nearer or more distant, I think if a force is to be supplied to India, the British taxpayer will think that the expense of taking it to India should be paid by India.

1727. But looking at the cost of the soldier's pension at the time of his entering the service as about 18 *l.* per head, does your Lordship think it just and fair that India should be dependent upon the home army, so that only two and a half or three years' service is obtained from a man after all the expense of going out and coming home?—What I think is, that the duration of service in India should rather be arrived at upon medical considerations than upon financial. If it be proposed to send a young man out at 20 years of age to India, and so to use him up that he is to come back at 30 years of age fit for nothing but idleness and the enjoyment of a pension, I think that is an extremely mischievous system, and ought not to be tolerated, whether it is economical or not; and I am happy to say that I do not believe it would be economical.

1728. That is taking the extreme view of the case; we are now considering how India could get the service of European soldiers and not be overcharged for that service; but looking now at the infantry soldier, that on his going out to India as a regularly formed soldier, India forthwith pays the sum of 27 *l.* 7 *s.* 11 *d.*, and further that India is at the expense of sending that man out on his passage, which is said to cost about 19 *l.* more, that makes 46 *l.* and upwards paid by India direct for the service of that man; and after three years' service that man comes home, and again costs India 19 *l.* for coming home; and then he is pensioned, and India pays for that pension in proportion to the number of years which he has been in India, after having paid all that considerable expenditure on account of that man?—I do not see what the expenditure which India has previously incurred has to do with it. The man has to be pensioned, and the pension ought to be paid in due proportion by those to whom his service has been rendered; and it appears to me that if Indian service is only counted as equivalent to service in the healthiest parts of the world, India has nothing to complain of.

Mr. *Onslow*.

1729. Would it not be the case that a great number of the reserve in England would be paid for wholly by India, considering that the cost of the recruit and the cost of his passage out there, and of course the cost of his existence in India, would be paid for by India; when he chooses to retire and comes home to England and is put on the reserve, the whole of the training of that man has been chargeable to India; and he might be, and probably would be, some day of great use to England, England not having paid one sixpence for the training of that man?—You put the case of a man whose raising and training has been entirely paid for by India, and who comes home and goes to the reserve here?

Mr. *Onslow*—continued.

1730. Especially now with the short service system?—I believe, in point of fact, it will turn out that there are very few whose raising and training have been entirely paid for by India, because you have got in operation a system under which a man is not sent to India until he has been already a considerable time in the service at home, and that will be in the home battalion, and he will have been charged to the British taxpayer. It may, however, happen in some cases, as you have suggested, that a large part of his training while with the colours has been in India. You have before you a Parliamentary Paper, No. 230, of 1872, in which the Committee appointed to consider the age of recruits sent to India, "recommend that till the new organisation has come fully into play the decision of the fitness for foreign service shall rest not upon declared age, but the knowledge of the physical constitution of each man acquired by not less than a period of 12 months' effective service, which can be fully ascertained by the commanding officer and surgeon in medical charge of the regiment or depôt;" therefore I think the extreme case which you have put will seldom or never happen; but, of course, it is to be contemplated that there will be cases in which the larger portion of the training while with the colours has been in India, and that the man will go into the reserve, and he will then be paid as a reserve man from the British Treasury; and if I understand your question, it suggests that under those circumstances some allowance should be made to India for the expense which she has been put to upon that man; I do not dispute that, if there were exceptional cases which make it worth while to raise such questions; but if you ask me whether, looking at the reserve altogether, I think it prudent on the part of India to put forward claims of that kind, as I have observed they have been put forward in some of the correspondence, I think not; I think India is very largely interested in the maintenance of the British reserve, and that her contribution on the present hypothesis will not exceed what may fairly be expected from her.

1731. Surely there will be a great number of those men who come back to England, who perhaps do not like India, or whose health, perhaps, may have broken down, and who will retire as soon as they possibly can?—If it can be shown upon the balance that India is paying more through this means to the reserve than can fairly be expected from her, I should be the first to say, let India have the benefit of that consideration in making up the account.

1732. In your last examination you spoke of the heavy expenditure as regards experiments being made in England on account of military purposes, and I gathered from what you said that you

Right Hon. Viscount *Cardwell*.

19 June 1874.

Right Hon. Viscount *Cardwell.*

19 June 1874

Mr. *Onslow*—continued.

you thought perhaps India might justly be asked to pay something towards those experiments; but there is a per contra, and that is that India also has a heavy outlay every year on account of experiments; for instance, with regard to the field guns and mule batteries, every year experiments have been made, and in the hill warfare; and those experiments which have been made in India will be very beneficial indeed to England?—I do not wish to exclude the consideration of anything which can tell in favour of India in making up the account; if it shall turn out that India has expended anything in proportion to what England has expended in arriving at the present results with regard to the arming of the Imperial army and the Indian army, I shall be very much astonished; but whatever can be shown to be a fair consideration on the side of India should be brought into the account. I may, however, remark that I merely gave that answer in reply to what I had been told Sir Thomas Pears had said, namely, that India was unduly charged in respect of guns. I am of opinion that if a strict account could have been drawn up it would have turned out that India had contributed very much less than her share; but I never made any proposal that we should go back upon former years, and establish any debit against India by reason of our former experiments.

Mr. *Fawcett.*

1733. With reference to this correspondence which has been often referred to, between the India Office and the Horse Guards, or the War Office, I understand that a letter was written by the Duke of Argyll in September 1871, and that an answer was sent to it from the War Office in April 1872; was not that the case?—I dare say it was.

1734. Then that the Duke of Argyll replied again in August 1872, and no answer, as far as I can discover, has been returned to the second communication; and that fact is commented on in another letter from the present Under Secretary for India, which was written in the present year?—You mean that there was some neglect in not making a reply?

1735. Well, I would not say it was neglect, of course, because I do not know the reason; I should say that the reply had not been made; I was rather anxious to know the reasons?—My reason for not making any reply was, I think, stated to the Committee by the Accountant General in his examination. If we are to speak in the palace of truth, I thought that rather a rhetorical production, and I have objections to correspondence of that kind going on between the offices; and I thought that the time had not arrived when the ultimate consideration could be taken; I thought that in the course of last Session this inquiry that is now going on in this room would have taken place, and that it would be better to adjourn sending our reply until that inquiry should be made; my impression is that those were my reasons; but the Accountant General having referred to the Minutes, probably is more likely to be strictly accurate than I am; and if there is any difference between his recollection and mine, I should be disposed to defer to his.

1736. But up to the time that you left the War Office no reply had been made to the views of the

Mr. *Fawcett*—continued.

Government of India, which they had expressed in regard to these army charges; as far as I can discover, no answer whatever has been made, not simply to the second Despatch of the Duke of Argyll, but to the Despatch of the Government of India; Lord Northbrook at the present moment does not know what is the opinion of the War Office upon the opinions which he had expressed as representing India?—The letter from India, though dated the 15th of May 1873, does not seem to have reached, as far as I know, the War Office in my time. It is enclosed in a letter from the India Office, dated the 14th of April 1874.

1737. I understand that this charge of 67*l.* for the infantry recruit is made up of three items: the first, the pay of the men, amounting to about 30*l.* during the seven months; secondly, certain other charges, and then those two are added together; a third of them is taken, and that is added in order to represent the expense arising from deaths, desertions, and invaliding. That is a correct description, is it not, of the way in which the charge is made up?—Thirty-three per cent. is intended to represent the waste at the depôt, that is to say, the depôt being charged for a larger number of men than are sent to India; 33 per cent. is taken to represent that all round. Under the new system that waste will not have to be allowed at any rate to the same extent, inasmuch as those who are not serving upon the Indian battalion will be chargeable to the British Treasury on the home battalion.

1738. But it is distinctly stated that that addition of one-third has been added as a compensation for deaths, invaliding, and desertions?—It is a compensation generally for the fact that you cannot send out to India all the recruits that you are obliged to raise and train, with a view of sending them to India; and instead of being charged *per capita* upon the actual deficiency an allowance is made for that of 33 per cent.

1739. But, adding all those causes of waste together, are there any figures which show that it amounts to 33 per cent.?—It is shown, I apprehend, that under the former system it amounted to much more than 33 per cent., because it has been shown to you that if India had paid the expenses of the depôts from 1861 to 1868 upon the basis of the Seccombe committee she would have paid 100,000*l.* a year less than she has actually paid.

1740. But what I understand is this: it is said that India ought to pay for the maintenance of these men while they are trained, and she ought to pay a certain portion of the depôt charges; those two items we will assume there is no dispute about; then, it is said, after that a certain number of these men will desert, a certain number of them will be invalided, and one-third of the two former amounts is added to make up the whole charge for the recruit?—Yes.

1741. All that I want to know is (I cannot discover it myself), are there any figures in existence which will show that, taking the loss from deaths, invaliding, and desertions, it would represent a charge of 33 per cent. upon those two items?—If your assumption were to be admitted, then I should admit the 33 per cent. not to be a reasonable charge; but as you have got in the room the two War Office members of the committee, the Accountant General of the Army, and

Mr. *Fawcett*—continued.

and the principal Estimate Clerk, I would beg you to have the kindness to put these questions to them, because they will tell you on what grounds they have admitted the charges.

1742. I will not interrupt your evidence by doing that now, but I will do it afterwards. Now you have referred to the Warley recruits, and as far as I understand what has been said about that system, it is said that it supplied a small army, and that the recruits were sent out imperfectly trained and young, and that therefore it is unfair to make any comparison of those recruits with the recruits that were sent out under a different system?—Yes.

1743. But if we have to consider what arrangement is most economical with regard to India, it is after all a question of what is the best system to adopt, not whether all that could be done has been done under the existing system (which I do not dispute), but whether the system which now exists is the best one for India; and therefore allusions to Warley from that point of view become very important and instructive, do they not?—I consider that if India is to maintain a separate army, then she may maintain that separate army upon her own basis, and in the most economical method that she can. But I do not understand that question to be seriously raised here. If she is to take a portion of our army, she must take it according to its own organisation; and I hold that India could not have raised recruits to fill up an army of 60,000 men upon the Warley system. The Warley system, as I have repeatedly stated, whether it was good or bad, was a system applied to a very small army; what I think I said was rather a brigade than an army; and I think it affords no basis for an argument with respect to an army either of 180,000 or of 60,000.

1744. But when you say it was more a brigade than an army, that rather rests upon a general impression, because so far as I can discover for several years, quite as many men were recruited for the local European army as were afterwards for the Imperial army under a very much more costly system; and therefore it is hardly right to describe the state of things to say that these Warley recruits were recruits for a brigade?—I must venture entirely to differ from the opinion suggested in that question. I heard just now some statistics read which I suppose applied to the time of the Indian mutiny when 18,000 men were on the one side and 22,000 on the other; but I speak of the normal state of the Indian army for which recruiting went on at Warley, and upon which recruiting the evidence with respect to the Warley system must have been, speaking generally, founded; and I contend that evidence with respect to a small force such as the local Indian force was, would in itself, however satisfactory, not be a sufficient ground on which to base conclusions with respect to an army serving in India of 60,000 men, part of an army which in the whole may be taken at 170,000 or 180,000 men. Moreover, I say that the recruiting at Warley itself was not, so far as I know and believe, satisfactory.

1745. If that is your opinion, of course it would be extremely unbecoming on my part to argue with you, and nothing is further from my intention; but I want, as far as possible, to get actual facts. There is nothing whatever to lead us to suppose that India could not have recruited

Mr. *Fawcett*—continued.

on the Warley system for a larger army; there is no fact to show that; it may be an opinion that she could not, but suppose one person says that she could and another says that she could not, that is a theoretical opinion, and not based on experience?—As India never did recruit for an army of 60,000, there can of course be no evidence one way or the other which amounts to fact, and I do not presume to put my opinion above that of anybody else; I only give that as my answer to the question.

1746. It is not like a case where she tried; she never tried and failed?—Certainly not.

1747. But was not this the case, that so far as she carried this system of recruiting for herself for an army whose regular number was 15,000, and which rose occasionally to 18,000, she got those recruits at about one-seventh of the cost that the recruits were obtained for under the new system which was afterwards introduced, and that the result to her was that her local army was more healthy, estimated by any health statistics, than the more costly army supplied to her in another way; and it is admitted, I believe generally, that a finer body of men than those existing in the local European army never served in India?—I have already stated that I do not think the system under which India has been supplied with recruits since the year 1861 ought to be maintained. It was because I had that opinion that I took part in putting an end to the depôt battalions, and to the Tulloch system, and introduced the intermediate system which has been much more economical, and also that system of double battalions, which, when it comes into full operation, will, I have no doubt, be again far more economical, both for the United Kingdom and for India; but with regard to the portion of the question which you have put to me which refers to the satisfactory part of the Warley system of recruiting, I will, with your permission, read to you a portion of the Report of the Royal Commission which was appointed to inquire into the sanitary state of the army in India. It was, as you probably know, appointed at first by the present Lord Derby, who was then Secretary for India, and Mr. Sidney Herbert was at the head of it; a change of Government took place, and Lord Derby went out, and Mr. Sidney Herbert came in, and Lord Derby was good enough to undertake the chairmanship of the Committee; and the passage which I am going to read to you, and which refers to Warley, and by the knowledge of which I was a great deal influenced in my impressions about Warley, is signed by these names, and I will leave you to judge whether better names, carrying more authority, could have been signed to any such document. The first name is Stanley; then it is followed by these names: Proby T. Cautley, J. R. Martin, J. B. Gibson, E. H. Greathead, W. Farr, John Sutherland; and I will read to you this extract from what they say about Warley: "All the evidence derived from the stations is to the effect that none but fully drilled soldiers should be sent to India." (The Warley system being, I believe, from three to four months). "The only question on which any difference exists is the place where the troops should be drilled. It has been proposed that the drill should take place at some intermediate station, as *e. g.*, at the Cape, for the purpose of accustoming the recruit by degrees to change of climate. But

Right Hon. Viscount *Cardwell.*

19 June 1874.

Right Hon. Viscount *Cardwell.*

19 June 1874.

Mr. *Fawcett*—continued.

the great preponderance of the evidence is in favour of completing the drill at home, and sending the soldier fully formed, both as to age and habits, direct to his destination." That, you will observe, is the principle which we have now adopted. "From want of attention to these primary conditions, growing lads, who are very susceptible to disease when weakened by fatigue, have been sent out to India to learn their drill; their unformed constitutions are exceptionally liable to injury, and the over-zeal of an injudicious commanding officer or adjutant may lead to loss of health and efficiency, if not of life. We have here then a well-known preventible cause of disease, or rather of predisposition to disease, which can be put a stop to. It is true that under the altered circumstances of the army since the amalgamation of the two services, these evils will be less likely to occur; but any way, the past experience is sufficient to prove that they should be avoided in future." Now, I think that that negatives any notion that the Warley system was, in the judgment of that Royal Commission, a desirable system to continue; and I observed with pleasure in this printed correspondence the admission of the Indian Government that "a recruit is a better soldier after a long training," and that "in comparing the present with the former cost of recruits, it is admitted that those now sent to India are for the most part more perfectly trained, and consequently more valuable than the half-trained recruits formerly sent to this country, and that, other conditions remaining the same, India might justly be debited with an enhanced charge for their provision."

1748. But that which you have read is a very influential opinion of the advantage of sending out men to India properly trained and not too young; every word of that I should endorse from the evidence that has been given; but in the first place I should like to ask you whether there is any statistical evidence whatever that before the amalgamation was carried out, when India had her own army, and when a portion of her army belonged to the Queen's army, the men who were sent out to that local European army were less perfectly trained than those sent out to the Imperial European army; that they were of a younger age, or that as a consequence their sanitary condition was less satisfactory than the sanitary condition of the men in the Queen's army?—I do not think that the question which ought to be put to me, or which I should answer, is what was the relative condition of the two services at a byegone time, with which I had nothing to do. What I think is the question for me is this, whether there is the highest authority for showing that under the Warley system there is a well-known preventible cause of disease, or rather a predisposition to disease, which could be put a stop to, and whether, under the altered circumstances of the army now, these evils are less likely to occur.

1749. But then comes this important question, so far as India is concerned; the armies were amalgamated, a system far more costly for her was introduced, and one of the great questions to consider for India is this, did she get value in return for the money spent? Now, I will not ask you to express an opinion upon the two systems when they were contemporaneously in existence; but after the local European army was abolished, is there any reason to suppose or any evidence to convince us that the men who were sent out when the amalgamation system was introduced were of an older age than the Warley recruits; that they were better trained, or that they were a healthier set of men. You are probably aware that long after the amalgamation scheme had been in existence Lord Sandhurst, who now holds one of the most important military commands, used far stronger language about these recruits sent to India under the amalgamation scheme than anything contained in that passage which you have read with reference to the Warley recruits?—Two blacks do not make a white, and however bad any portion of the system may have been since, I hold that it would not be wise to have a return to the Warley system, which was reported upon by these authorities in the manner in which I have shown you it was.

1750. If Lord Sandhurst has said before this Committee that the Warley recruits were not so efficient as they might have been, it must be borne in mind that India obtained them at a very cheap rate; she only paid 27 *l.* for them; and that he expressed with reference to recruits for whom she paid 170 *l.* an opinion, in far stronger language of condemnation, in a despatch which he himself said he wrote in 1867 or 1868?—I have already said that because there were bad recruits, if there were bad recruits, sent out under the system which prevailed after the Warley system was put an end to, that is no reason whatever, in my opinion, for having recourse again to the Warley system: and I have read to you a paragraph from Lord Northbrook's letter, in which he admits that the recruits now are very different from those who used formerly to be sent; and I have also read to you a paragraph from the report of a Committee at the War Office, of which the Director General of the Army Medical Department and another eminent member of that department were members, under which the present system of not sending men out until they have been 12 months in effective service in this country was adopted; and I am not prepared, therefore, to base any argument whatever in favour of any other system of recruiting upon evidence derived from Warley.

1751. But if India has to pay for a perfectly trained recruit, it is important that the recruits she has should be perfectly trained; I am not referring now to things which took place some years ago, but I am referring to things which have taken place even during the present year, as recently as January; it is a fact that 170 men were sent out in one battery of Royal Artillery, that India paid for those men as if they had been trained for nine months, that being the period of training for a recruit in the artillery; that more than half of those men had not been trained for three months; that a considerable number of them had not been trained two months; and some of them had not been trained one month?—You will understand me as not disputing the facts stated in the question, though I am not personally cognizant of them. If you had stated that India, upon the average, had received recruits of less than nine months, it would have been a stronger point; but I expect that under the new system, towards which we are rapidly converging, India will receive only men who have been in the service in this country more than nine months.

1752. That

Mr. *Fawcett*—continued.

1752. That is your expectation, which of course I should be the last to dispute, as to what is likely to occur in the future?—I have read to you that that is the rule laid down with respect to the future.

1753. But now reviewing the past since the armies have been amalgamated, as I understand (we do not know what will take place in the future, because rules may be altered, or they are not always regarded), what has happened is this, that after the amalgamation scheme first came into operation India had to pay 170 *l.* for each recruit, instead of paying less than 30 *l.*, as she did for recruits for her own army; that those recruits were admitted by Lord Sandhurst to be extremely ineffective; that then the system was changed, and a new system was introduced, the charges were revised and were considerably reduced, but that points are in dispute still between the War Office and the India Office, so that with regard to the last two years India does not know what she will ultimately have to pay for her recruits?—With great submission, I do not think that that is a very accurate version of the case. I am not at all called upon to defend the system against the operation of which you have quoted Lord Sandhurst's authority, inasmuch as not only did it not take place under my administration, but the moment I came into office, I so much disapproved of it that I put an end to it. With regard to the present state of the case, I think India may very well know what she has to pay, inasmuch as the charges are not disputed in detail at all, as I believe between the officers of Mr. Seccombe's Committee, the dispute that they raise is this, that the Indian officers think that the charge for recruits ought to be diminished, on account of the service which those depôts render to England, in forming part of the home garrison. The answer to that for the present is, that as those depôts were considered, when the Tulloch arrangement was made, a set-off against certain charges which the Treasury thought ought to be pressed, and which from that time to this have not been pressed, that advantage cannot be allowed to India until that compromise is put an end to, and the consideration of those other charges is revived; and as the depôts have been considerably diminished since the time of Sir Alexander Tulloch, it necessarily follows that the argument is stronger now than it was in his time on the side of the War Office. But with regard to the future, I have repeatedly said that I agree entirely with the argument of Lord Northbrook's letter on the subject of recruits; that I should recommend, if I were in a position to do so, the War Office to accede to every proposal in that letter, and that I entertain a very confident opinion that when that has been done, and the whole subject has been impartially reviewed, the proportion paid by India will not be diminished.

1754. But leaving out of consideration for the moment the future, which is always uncertain, because, of course, the regulations connected with the army may again change (the regulations now in existence are not absolutely fixed and may again change), am I not correct in saying that the amount which India has had to pay for recruits during the last two years is at the present moment unsettled; I am not going to enter into the contention between the War Office and the India Office; but India does not know what she will have to pay; it may be a question which will ultimately have to be decided by the Cabinet, may it not?—I found it unsettled for two years when I came into office, what India was to pay under the Tulloch system; I do not think it ought to be unsettled for an hour what India ought to pay under the present system; because, as I have repeatedly said, so long as the compromise made in Sir Alexander Tulloch's time remains with respect to the depôts on one side and certain charges on the other, I do not think for the current year the question ought to be raised, or that we ought to tolerate its being raised; it is a very proper thing for the India Office to bring forward, and for the representatives of the India Office on the Committee to bring forward, but they must bring it forward with a view to the future. Then on the question whether it is of any use to consider with reference to the future, my opinion is that it is only useful to consider such a question on account of its reference to the future; it is crying over spilt milk, to debate the operation of a system under which both the India Office and the United Kingdom paid too much, unless you are debating it for the purpose of establishing a better system for the future.

1755. I am referring to that entirely as an illustration of the system under which the finances of India are administered; of course, nothing is further from my intention than to be so presumptuous as to attempt to apportion blame; I simply want to get your corroboration of what I believe to be the fact that whether the India Office is to blame, or whether the War Office is to blame, or whether neither of them is to blame, but it is the natural and inevitable result of the system that has been in operation, the charge that India has to pay for recruits during the last two years is at the present moment unsettled, and no one can tell whether India will have to pay 60 *l.*, 65 *l.*, 70 *l.*, 75 *l.*, or 80 *l.* for the recruits which the War Office or the Horse Guards have provided to India in the last two years?—It is a matter of fact which does not need my corroboration that the Seccombe Committee have not reported since the date of the last report which has been laid before you; but I cannot in the least degree admit the inferences you have drawn; I think there is not the smallest probability of any such charges as you have referred to being brought forward by the gentlemen who represent the War Office.

1756. But suppose this Committee (I take this as an illustration of the system) cannot ultimately agree; suppose the two representatives of the India Office, who have been a long time trying to agree without success, say that the proportion is unfair to India, and the War Office representatives say, "It is unfair to England if you do not pay this," the dispute must ultimately be decided by the Cabinet, must it not?—Yes; but if I read the reports aright, the gentlemen who represent India on the Committee, and who I believe are exceedingly fair men, do not dispute any of the facts stated by the gentlemen who represent the War Office. What they say is, that a system which imposes so large a charge upon India ought to be altered. I answer to that, that it not only ought to be altered, but it is being altered as fast as it can be; and I have already said, that I see no objection to the principle for which these gentlemen representing

Right Hon. Viscount *Cardwell.*

19 June 1874.

Right Hon. Viscount *Cardwell.*

19 June 1874.

Mr. *Fawcett*—continued.

India contend being admitted as soon as the new system comes into operation.

1757. With regard to the short service system, of course it would have an effect upon the finances of India, and it would also have an effect, some people may think a good effect, some may think a bad effect, upon the health of the men; some people would say it was better to have a longer-seasoned man in India; but Sir William Muir, who holds a high medical position, has stated that the short service system was introduced into England, and consequently into India, without the medical authorities in India ever having been consulted as to the effect it was likely to have upon the health of the army?—I think, with the report of Lord Derby's Commission before us, we should have been very much wanting in discernment and knowledge, if we had not arrived at the conclusion that a short service is for the average of mankind desirable in India; and even if it could have been shown to be desirable, upon economical principles, to maintain a long service, I think it would have been extremely wrong to do it. I have already stated that in my opinion to use a man up in India and bring him home here at 30 years of age to ill-health, to idleness, and a pension, is very uneconomical; but even if it were economical, I should object to it altogether.

1758. I am not arguing at all against the short service system; I do not presume to express an opinion upon it; but I simply want to show how these changes affecting India are carried out. The medical authorities, as I understand, were not consulted in India, and so far as I understand Sir William Muir's evidence, if they had been consulted, he holding the leading medical position in India, he would have brought forward some very weighty reasons which would have shown, if I understand his evidence rightly, that the short service system would not ultimately improve the health of the army?—I hope I shall not be considered as saying anything disrespectful to Sir William Muir, who, I believe, is one of the ablest men, and one of the highest authorities upon such subjects in the kingdom, but having the Report of the Commissioners before me, neither Sir William Muir nor all the other medical testimony in the world would convince me as an individual that long service in India is a good thing for the average of mankind. I read you the names of the persons who signed that Report, and you must have distinguished among them the names of some of the highest authorities upon this subject.

1759. The men who are in England at the Indian depôts, and being trained as recruits for India, constitute a portion of the effective strength of the English army, do they not?—Yes.

1760. What, then, it really comes to is this, that a portion of the men who constitute the strength of the English army in England is wholly paid for by India?—That certainly is the case; if a man is being trained in this country for India, and a sudden emergency arises, he will be an addition to the British army available for any other purpose; but you must bear in mind that if any such emergency arises, the necessity of defending India will be one of the most difficult considerations that you will have to take into account.

1761. Therefore, if I understand your position rightly, it is this, that you say that although

Mr. *Fawcett*—continued.

India does support a certain number of men who constitute a portion of the effective strength of the English army, and although she supplies to the army of reserve a number of men of whose training she has paid the entire expenses, yet in return for that she gets at least an equivalent compensation, because the English army is kept up, and if India was in difficulty England would be obliged at any moment to come to her rescue?—I am inclined to hold that opinion.

1762. But that same reasoning would cause the colonies, would it not, to pay for a portion of the army in England, and to contribute to England's army of reserve; because those who are not prepared to surrender our colonial empire would maintain that England was just as much bound to go and defend Canada if attacked as she would be to defend India?—Yes, but Canada does not enjoy the advantage of an army of 60,000 men in time of peace, maintained upon principles which, as I believe, are very advantageous to India.

1763. But of course India, on the other hand, would say that this amalgamation of the two armies was forced upon her, that she would much sooner obtain her army for herself; but leaving that question out of consideration, what we all desire is that India should pay a fair sum for the soldiers whom England supplies to her just in the same way as we desire that the colonies should pay a fair sum for the soldiers supplied to them; but all kinds of charges after India has paid this sum are imposed upon her which would never be thought of being imposed upon the colonies; I will give you an illustration, supposing there is a mutiny in India, or India is attacked, with regard to every soldier sent to India, India would have to pay the passage money of that soldier there and back; that has always been the case; but when soldiers have been sent to the Cape or to Canada, the Cape or Canada has not paid the passage money of those soldiers?—In former times arrangements were made with regard to the colonies, which are no longer considered equitable to the British taxpayer, and are no longer in force; there is no army of the United Kingdom maintained in Canada, and that question cannot possibly arise; but if, unhappily, a war were to arise in which we had to go to very great Imperial expenditure for the benefit of a colony, I am not prepared to foreclose the question, so far as any evidence of mine is concerned, whether that colony should contribute anything towards that war.

1764. But so far as the past is concerned, the system of charging the colonies and the system of charging India have been entirely different; we have not only made India pay her recruits, whereas in most of the colonies they have been paid for by England; but whereas in a case of extraordinary emergency, if her soldiers have been sent to the Cape, for instance, their passage money has been paid by England (I am not saying now whether that is just or not), on the contrary India has paid everything?—I am not prepared to dispute the facts which you have stated, but I do dispute any arguments which can be raised upon them, inasmuch as I myself have been very active in altering the system by which, if we are to adopt the phrases of the India Office letter, tribute, in my opinion, was exacted from the United Kingdom for the benefit of the colonies.

1765. But

Mr. *Fawcett*—continued.

1765. But I understand it has been argued by some people, and I think it is an opinion rather favoured by you, that if you went on a question of strict justice, India should pay a portion of the expenses of the Commander in Chief and the expenses of the War Office in England, because she derives an advantage from the existence of the English army; but according to that doctrine it would lead us to throw a portion of those expenses again on the colonies, would it not?—I am not prepared to say that the present system is not, in a pecuniary sense, very favourable to the colonies; but I am dealing as a matter of justice between the United Kingdom and India, and these considerations which were raised, and I think very properly raised, by Sir Alexander Tulloch in the year 1861, in my opinion revived the moment you have declared that they shall not be set off against the value of the Indian depôts, but that on the contrary a direct pecuniary reduction shall be made from the payment made by India on account of those depôts.

1766. But from your great official experience I should like, if you would not object to express an opinion on this question, to ask you, do you understand (as illustrating the principle on which India is charged) why, for instance, India should pay the entire expenses of the India Office, and England should pay the entire expenses of the Colonial Office, just as an illustration of the two different systems?—No, I am of opinion that if strict justice were done the colonies ought to contribute something to the expenses to which England is put on their behalf; but considering the great number of our colonies, and the small expense which really the Colonial Office shows upon the Estimates, I should say that *de minimis non curamus* was rather the answer to give to that question.

1767. You were kind enough to say, when last examined, that you would furnish me with some particulars of the charges which were made for the army with which England supplied Ceylon, so that we might compare what Ceylon as a colony gets a soldier at with what India gets a soldier at?—I requested that information might be in the room furnished from the War Office, and I believe it is in the room, and you can have it from the principal Estimate clerk of the War Office if you like in detail; but I was myself at the Colonial Office some years ago when a detailed calculation which had been instituted by the Duke of Newcastle came to its close, and a sum was charged, and I believe from the information now before me that the present posture of affairs is this, that Ceylon is raising a question that she is rather charged too much, because in her opinion a portion of the force is maintained for Imperial purposes to guard the British establishment at Trincomalee. I hold to the doctrine that Ceylon was intended to be charged the full amount of the British force maintained for colonial purposes in Ceylon.

1768. You prefer my asking some one of the officials of the War Office the details in order to make the comparison?—On this ground, that they know it at first hand, and all I could do would be to put in before you a paper prepared by them.

Mr. *Sampson Lloyd.*

1769. It seems to have been assumed from

Mr. *S. Lloyd*—continued.

Right Hon. Viscount *Cardwell.*

19 June 1874.

some questions put to your Lordship by the honourable Member for Hackney that when recruits for the Indian service were trained at Warley the total cost of such recruits to the Indian taxpayer was very much less than the cost to India of similar recruits trained and sent out to India since the Warley system was discontinued. May I ask your Lordship whether the figures given as the cost of the recruits at Warley ought not to be supplemented by such a considerable amount expended on those recruits after they got out to India as renders a comparison between the stated cost of the Warley recruit and the cost of the recruit under the system subsequently adopted entirely delusive?—In my opinion as the training at Warley was limited to three or four months, the recruit when he left Warley must be considered as still rather raw material than manufactured article; training in India must have taken place, and that training must have been costly, more costly I should imagine than training in England, inasmuch as the difference of climate must render it much more difficult to train recruits there than to train them here. Therefore, as I have repeatedly said, 27 *l.* as representing the cost of a recruit trained through Warley is, in my opinion, thoroughly inapplicable. With regard to the recruits trained since, I am not in a condition to say how they were trained until more recently, and I have read you the report of the committee recommending the mode in which they should be trained now, and I have read you the passage of Lord Northbrook's letter, in which he admits that better recruits do now go to India, and I have told you that under the new system, in my opinion, the charge for the recruit would be much less than that which it necessarily has been under the Seccombe system of account during the pendency of the intermediate system.

Mr. *Dalrymple.*

1770. I wish to ask one question of a general nature. You referred incidentally to a Committee consisting, as I understood, of gentlemen connected with the War Office and the India Office; was that Committee appointed in consequence of a recommendation of Mr. Seccombe's Committee?—No; there was a question raised in the House of Commons about the age at which recruits should be sent to India, and the Government agreed that as far as practicable the recruits should not be sent under 20 years of age; but it was considered that a more expedient course would be to go upon length of service rather than upon declared age. Consequently, a committee, consisting of the Inspector General of Recruiting, the Director General of the Army Medical Department, and other authorities, was appointed to consider the best way of doing it; and they recommended in the terms that I read earlier in my examination to the Committee.

1771. I observe that in the second report of the Seccombe Committee they recommended a standing committee, composed of members representing both the India Office and the War Office, to adjust the accounts, "and that the proceedings be recorded in a minute book, to be kept by a gentleman on the establishment of the War Office, who should act as secretary, copies of such proceedings being submitted periodically to the Secretaries of State for War and for India." Was anything of that kind ever adopted?—No;

Right Hon. Viscount *Cardwell.*

19 June 1874.

Mr. *Dalrymple*—continued.

I think the time for adopting that will be when the new system has come into complete operation, and then its progress will require to be watched; but the problem at the present moment is not what is the cheapest and best system, but what is the actual cost of the existing system.

1772. Is there any organised review of accounts in which gentlemen connected with those two offices take part together?—There is no other review of accounts in which they take part together than is contained in the Seccombe Committee.

Mr. *Campbell-Bannerman.*

1773. With regard to the Warley recruits, there is a passage on the previous page to that from which you quoted out of the Report of the Sanitary Commissioners, which I think is worth calling your attention to. It says, speaking, of the recruits at Warley, "Notwithstanding every care in selection, men were sometimes sent back from India as unfit for service. The average time spent in depôt before the Mutiny in 1857 was four months. At the time of the Mutiny it was about six weeks; and it happened occasionally that men were embarked for India on the day of their arrival at Warley." That is an authoritative statement of the time the recruits usually spent at Warley?—You have correctly read the passage from the Report.

Sir *George Balfour.*

1774. But do you think that under the present system the recruits sent out in the last four years have been exempt from any of these defects?—No, I will not undertake to say that; I would rather stand upon the admission in Lord Northbrook's letter, of the difference of the recruits now sent out from those formerly sent out.

1775. Do not you think that we could substantiate the same objections to recruits as were expressed in former years?—I will not undertake to say what you might substantiate; you will hear that from the authorities who manage the system in detail, probably.

Mr. *Campbell-Bannerman.*

1776. With regard to the short service system in India, you do not think that it would be a proper arrangement if men were returned from India unfit for any kind of service?—I have already stated that the object ought to be that men should return from India fit for any kind of service; and that on much higher grounds than financial grounds. But, as a mere matter of economy, I have already shown you that the India Office contribute largely to the Pension List; now, when the short service system is introduced, the Pension List will be very considerably diminished, and the contribution of India to the Pension List will, of course, be diminished also. Then with regard to the abolition of the re-engagement penny, which is connected with short service, I made inquiry since the last meeting of the Committee, and I am told by a gentleman now in the room that the abolition of the re-engagement penny will save India above 40,000*l.* a year. Then she will gain by the diminution of invaliding; she will gain by the diminution of the number of women and children for whom she has to pay; and I have repeatedly shown, till I am afraid you are tired of it, that under the new system of the double battalions she will gain upon the proportion to be paid for the depôts. She will also gain by the existence of a reserve in this country; a circumstance, I should think, of immense comfort to those who are concerned for the safety of India.

1777. With reference to the re-engagement penny, it must not be assumed, must it, that because the re-engagement penny is abolished, therefore re-engagement is abolished; every inducement will be given to short service men to re-engage at the close of their service?—Yes; the object is, that that portion of the men whose constitutions qualify them to be of value to India shall be encouraged to go on to long service. That, in my opinion, judging by the medical statistics, will not be the larger portion; but any men who are qualified to continue in longer service in India will be encouraged to do it.

1778. You are probably not aware how far a separate Indian army was attended with great expense for pensions, invalids, widows, and so on?—No.

1779. At any rate the separate army cannot be gone back upon now?—I should think that is quite out of the question.

1780. You said just now that you acquiesced in the three recommendations of Lord Northbrook's letter of the 15th of May 1873?—I did.

1781. Qualifying, I presume, your adherence to the second of those recommendations to this extent, that you do not admit that a man's training is completed in the three months at the depôt?—Quite the contrary; I have said over and over again that I consider a man who has been only three months at the depôt, has only been through the rudiments of his training in the army.

1782. But with that qualification you acquiesce in those three recommendations?—Yes.

1783. And do you agree with the officers of Mr. Seccombe's committee who represent India in their view, that the expense of two companies is not necessarily incurred for the sole purpose of supplying the recruits who are actually sent out to India?—I am disposed to agree in that; but whether necessary or not, if they can show that besides recruiting for India those companies render a service to the United Kingdom for which a consideration is due, I am quite ready to admit that that consideration should be taken into the account.

1784. But then that opens in your opinion the compromise of 1861?—It entirely throws open much wider questions.

1785. I think you have expressed an opinion that in future, under the new organisation, the whole system both for India and for the United Kingdom will be cheaper in the aggregate and more efficient than it has been hitherto, and also that the proportion in which India ought to contribute to this cheaper system will be greater than it has been?—That is my opinion.

1786. You do not think it desirable that this country, as the stronger party of the two, should press points unduly upon India?—That is my opinion; I think that when you come to those general views which are not capable of any actual arithmetical statement, the high probability is that India, as the weaker party, will be the more favourably considered.

1787. And

Mr. *Campbell-Bannerman*—continued.

1787. And when the new system comes completely into operation, that will be the time for a review of the whole question of the charges between the two countries?—I do not think that you can have those elements in the problem which turn upon the actual arithmetical calculation thoroughly before you until such a brief experience of the new system as shows exactly what its working is.

1788. The following letter, signed by myself, and dated 24th of April 1872, and addressed to the Under Secretary for India, has been included in the correspondence before us:—"Sir,—I am directed to inform you that Mr. Secretary Cardwell has had under his most careful consideration the subject of the payments which may properly be demanded by the Imperial Government from Indian revenues on account of the British military forces supplied to the Indian Government for service in India, especially as regards the cost of raising and training recruits for India with reference to the letter of the late Mr. Pattison Thom, dated the 8th September 1871. In that letter the views entertained by the Secretary of State for India in Council relative to the cost of raising and training recruits for India are stated in detail, founded on the most correct and precise data of the organisation and numbers of the recruiting establishment in this country. But Mr. Cardwell regrets that he is unable to concur in the conclusions arrived at by his Grace the Duke of Argyll, as Mr. Cardwell is clearly of opinion that the cost to this country of supplying British soldiers to maintain the establishment of European troops in India is by no means represented by the disbursements made on the several individual soldiers or recruits drafted to India. It is the policy of the Indian Government to keep the numbers of the European troops serving in that country at the lowest strength consistent with the safety of the Indian Empire in time of peace; while the troops in Great Britain, or in her colonies, serve as reserves, to which the Government of India looks for reinforcements of troops in the case of any emergency, and it is only through the existence of these available reserves that Indian revenues are spared the vast expense that would arise were the troops in India always maintained at their maximum instead of their minimum requirements. The maintenance, therefore, of these available reserves forms, in Mr. Cardwell's opinion, an important item in the actual disbursements out of British revenues, for repayment of which Indian revenues are directly liable; and whatever may be the strength or organisation of the British army, as determined by Her Majesty's Government to be most conducive to the maintenance of the constant efficiency of the troops, the Government of India is directly interested in the keeping up of that strength, and that organisation, as involving the question, so important to that Government, whether the reserves on which it depends for the immediate conversion of the peace establishment in India to a war establishment in case of emergency, are at all times available to be drawn upon at any, the shortest, notice. Moreover, Mr. Cardwell is unable to overlook the fact that, in providing British troops for service in India, the civil population of this country is called upon to give to the army a number of men, which represents a very considerable

Mr. *Campbell-Bannerman*—continued.

portion of the numbers available for military service, and to that extent India competes at all times with this country in obtaining from the civil population the numbers of recruits required for the military forces of the Crown, adding to the difficulty, and consequently to the cost, of raising each individual recruit. Mr. Cardwell is, therefore, of opinion that Indian revenues are justly liable to bear, in the widest sense of the term, their full proportion of the cost of the reserves of effective soldiers maintained in this country, as well as their proportion of the cost of the whole machinery for drawing recruits from the civil population, and of training them for efficient service abroad, by whatever organisation or system may be adopted by Her Majesty's Government as being most conducive to the strength and efficiency of the British army. That the organisation and system so adopted shall be at all times carried out with the utmost possible regard to economy, so far as is compatible with real efficiency, is the anxious care and constant object of Her Majesty's Ministers in the discharge of their duties in the government of this country, while at the same time the Secretary of State for War has always acted on the principle that Indian financial considerations ought not to be overlooked in dealing with questions of military expenditure. Mr. Cardwell is, therefore, unable to concede the position apparently assumed in the letter from the India Office, that the charges for British recruits sent to India are extravagant or unfair in their demand upon Indian revenues. The expenses disbursed on recruits for India are subjected to the same minute and unvarying control as are those incurred for the recruits for home or colonial service, and in no way could Mr. Cardwell consent to a diminution of the charges, founded as they are on ascertained expenditure, without unfairly throwing upon British revenues expenses incurred solely for Indian purposes. In the foregoing remarks I have, by the Secretary of State's direction, confined myself mainly to the matter of the charges for recruits, being the subject matter of the India Office letter, but Mr. Cardwell desires me to take this occasion to state that, in his opinion, there still remains a considerable amount of expenditure on the army in this country by which Indian revenues are relieved, and for the reimbursement of which no provision is made in the terms by which the Indian Government is able to draw on the British army at home in case of emergency. Of these indirect charges the following may be instanced:—The cost of the military staff and head-quarters departments at home; the regimental staff of the corps to which the Indian depôts are attached or affiliated; the full assessed cost of raising and training the soldiers who proceed, not as drafts or recruits, but as relieving corps, allowing to India for such efficient men as return with relieved corps; the full cost of the educational establishments for officers and for men; the cost of experiments in arms and ammunition; the cost of rewards to inventors of military weapons or machines; and, in every case in which India calls for an augmentation of the number of what may be termed the professional branches or departments, such as artillery, engineers, and medical officers, such sums as may be determined on as representing the cost that has been incurred by British revenues to prepare

Right Hon. Viscount *Cardwell.*

19 June 1874.

Right Hon. Viscount *Cardwell.*

19 June 1874.

Mr. *Campbell-Bannerman*—continued.

such professional officers for the efficient discharge of their duties. The object which Mr. Cardwell has in view in this letter is not to take any action, or to propose any change in the subsisting arrangements which, however, he reserves to himself the full liberty of proposing at any time, but merely to point out to the Secretary of State for India in Council that the pecuniary advantages at present derived by India from those arrangements are much greater than appears to be contemplated in the letter now under reply. I have, &c. (signed) *H. Campbell.*" On the general question, do you adhere to what is stated in that letter?—I see no reason to depart from any sentence of that.

Chairman.

1789. I will only ask you one question upon this point; I do not know whether one ought to inquire about what is done in the Cabinet; but do you think that the proportion in which India is represented in the Cabinet, namely, only 1 to 12, or 15 or 16, as the case may be, causes any disadvantage to India?—I think that either the present or the late Secretary for India is quite capable of taking good care that the claims of India are properly considered.

Sir *Henry Havelock.*

1790. Your Lordship is aware that there has been an Army Circular issued in the last month publishing some new conditions of recruiting, practically putting the service for the future at periods of 3, and 6, and 12 years, so giving the soldier the option, as it were, of choosing his own terms?—Yes.

1791. That circular has been issued, of course, since the present Secretary of State came into office, but I understand that the arrangements were matured before your Lordship left the War Office; I wish to ask one question simply with reference to that matter. Sir Thomas Pears the other day expressed great apprehension that that might prevent the system of a soldier continuing his service in India, that is to say, volunteering to remain in India; there was no such intention in that circular, was there?—The issue of the circular, and the circumstances of the issue, I am not responsible for, for it took place some weeks, or perhaps a month or two, after I had left office; but I am quite ready to take the responsibility of having had a great share in the preparation of it, and of entirely concurring in every word of it. I should say that not only was India not overlooked in the matter, but one of the objects which we had in view when considering that circular was that when upon the roster a regiment was at

Sir *H. Havelock*—continued.

a certain period of distance from its turn to go to India it might be very desirable indeed to put men only for three years into that regiment, in order that, at the expiration of the three years, when the battalion was more nearly approaching to the time to go to India other men might be enlisted in it who might have a longer period of service left.

Sir *George Balfour.*

1792. But as a fact the War Office have never interfered with the power of India in India to call upon regiments to volunteer to any extent; they have left the Indian Government in India perfectly free to offer such guarantees as they saw fit to induce men to remain in India?—I believe that to have been the case.

1793. Therefore you know the fact that if regiments have come home with half their strength, it is simply because the rest of the men volunteered before it came to England?—All that must have been done by volunteering under the old system, but under the new system when the linked battalion is relieved by the other battalion which is linked with it, the process will go on more effectively and without the necessity of paying any bounty.

1794. And the short service men can be made to join the second battalion on its arrival in India?—If they have a sufficient term of service left.

1795. But your Lordship is aware that the expense to India for re-engaging those men has not been a burden on the finances of India?—I understand that the arrangement upon the whole is a beneficial one to India, inasmuch as the great expense of sending the men home has been spared. I think that, rightly understood, it will be beneficial to India for the reason that I have stated.

Lord *George Hamilton.*

1796. Do I rightly understand that you assent with one reservation to Lord Northbrook's suggestions, or is it merely that you assent to the principles laid down in his letter?—What I stated was that the three recommendations with which Lord Northbrook's letter closes, if I were in a position to give advice to the War Office I should advise them to accept. I demur altogether, as I have repeatedly stated, to the notion that a recruit has become a completely manufactured article in three months; but with that exception I think it would be quite right for the War Office, with the sanction of course of the Treasury, to accept those recommendations; and I have stated that in my judgment it will let in other considerations, and that upon the balance the India Office will not be the gainer.

Tuesday, 25th June 1874.

MEMBERS PRESENT:

Mr. Stephen Cave.	Lord Edmond Fitzmaurice.
Sir George Balfour.	Lord George Hamilton.
Mr. Balfour.	Sir Henry Havelock.
Mr. Campbell-Bannerman.	Mr. Sampson Lloyd.
Mr. Dalrymple.	Mr. Onslow.
Mr. Dunbar.	Mr. Eustace Smith.
Mr. Fawcett.	Mr. Stanley.
Sir Seymour Fitzgerald.	

THE RIGHT HON. STEPHEN CAVE, IN THE CHAIR.

His Royal Highness the Duke of CAMBRIDGE, K.G., Examined.

H.R.H. The Duke of *Cambridge*, K.G.

23 June 1874.

Chairman.

1797. YOUR Royal Highness, we know, is Commander in Chief of the British Army, and I think that you have given considerable attention to the Indian branch of it?—Certainly.

1798. Would your Royal Highness state to the Committee the exact way in which the Indian army comes under your official cognizance?—Merely as part of the general army of the empire, because I consider that the whole army, including that of India, is an Imperial army, and as such, of course, its organisation is based upon what is thought best for the army in general, of course always taking into account the peculiarities and specialities of India, which are part of the interests of the empire.

1799. Does your Royal Highness have any communication with the India Office upon military questions?—I consider that if the Secretary of State for India wants any military opinion, which is merely a military opinion and not an Indian opinion, I should, of course, be called upon to give my opinion upon such points, just as I would to the Secretary of State for War; but of course, as regards Indian local questions, I should not think of giving any opinion at all.

1800. But there is no indisposition on the part of the Horse Guards to listen to any representations which may come from the Indian officials in regard to military matters?—None whatever; I never interfere in the slightest degree, unless any opinion is asked.

1801. Has the attention of your Royal Highness been directed to the present inquiry?—I have heard that there have been financial differences of opinion between the two offices; but beyond that fact I know nothing.

1802. Does the question of recruiting for India come under your cognizance?—The recruiting for India is conducted in exactly the same way as the recruiting for the empire in general, and therefore, of course, it is under me.

1803. Then is it your opinion, as has been stated here, that any reduction which may be made in the cost of training recruits would apply, of course, equally to India as to this country?—With the financial part of the question, as regards the two offices and as to the adjustment of the accounts, I have nothing to do; but as regards the mode of recruiting, I contend that it is impossible to alter it with advantage to the empire.

Chairman—continued.

1804. Is it, Sir, your opinion that the training is too long in the depôts?—I think it is too short. The great difficulty that we have is to get men trained and fit to go to India, as they ought to be; because I have the strongest opinion that a soldier ought not to go to India unless he is really a soldier. If he goes as a mere man just engaged he is not a soldier, and therefore really is a loss to India whilst in India in that untrained condition.

1805. If he goes out a half-trained man his training would have to be completed in India, or somewhere else, before he can be made available for India?—With great disadvantage, because a man trained in India or in any tropical climate must suffer, to a certain extent, from such training; whereas if he gets it before he goes he has had the training, he never loses it, and for the rest of his service is a qualified and good soldier.

1806. A suggestion has been thrown out that that training might take place in the hill stations of India, in which the climate is as good as in this country. Has your Royal Highness directed your attention to that part of the question?—That of course is a local question which I could give no opinion upon, because unfortunately I have never been in India; but I am satisfied in my own mind that the recruit had better be trained at once as a soldier, and that he is a dead loss to the State till he is a soldier, and therefore training early is better than later. On that principle alone, therefore, I should prefer his being trained in England, putting aside the question whether he could be trained in the mountains or not.

1807. Is it your opinion that the age of 20 is too old or too young for soldiers to go to India?—Well, that is one of the most difficult questions that we have to deal with, and I should like just to be allowed to say a few words upon it. I have no hesitation in saying that if you could get the best men at 20 it would be far better that none

H.R.H. The Duke of *Cambridge*, K.G.

23 June 1874.

Chairman—continued.

but men of 20 should go; but, as I have already stated in another place, you cannot get the best men at 20, and although we now attempt to do so, in consequence of the decision of the House of Commons (which is perfectly just, I admit), still I contend that you do not get as good an article at 20 as you would at 18 or 19; and if you can keep the 18 or 19 years man long enough to improve his physical strength, I believe he would be a better and stronger man if he went before 20 than after 20, comparing the description of the 20 years of age man which we probably should get with the description of the 18 or 19 years man which we do get.

1808. Then, what your Royal Highness points at is, I presume, that those younger men should remain in the home battalions and that the older men only should go out to India, supposing the case of linked battalions?—Well, of course, in that point of view that is correct. But, on the other hand, you must bear in mind that if you take these men enlisted for six years' actual service only, after a considerable period of that service has expired, you diminish the number of years which a man would be in India. I should greatly prefer an 18 years of age healthy lad, who is one year at the depôt, well fed, and then goes to India; and I believe that would be the best description of recruit that you could get for India.

1809. Then you do not think that the cost of the depôts is excessive, or could be reduced with advantage to the service?—I am perfectly persuaded that, keeping the cost down as much as you possibly can in every way, the present system of depôts is the very best you could possibly have, in a military point of view, and, of course, if in a military point of view then in an economic one, because I contend that what is the best economy is efficiency.

1810. I think your Royal Highness would intend that answer to include the staff on the depôts; you would not think that the staff in the depôts could be diminished with advantage?—The only staff to which I suppose reference is made is the colonel in charge of a depôt brigade. He has been appointed, no doubt, to a great extent for home purposes, but incidentally he takes charge of the Indian depôt, which is in his linked battalion and in his depôt district; and I do not think you could reduce that, certainly, because it would then militate against the organisation of the army for general purposes.

1811. Then we have heard a great deal of evidence about whether the cost of the depôts is more an Imperial or an Indian matter, and whether India ought to pay any part of the cost of the depôt staff to which your Royal Highness has alluded; what would you say on that?—My impression is that the army is intended for the empire; that India is a large element in that empire; that one-third of the European troops, I believe, or very nearly one-third, are kept up in order to garrison India, and that therefore India ought, to that extent, to share the general expenditure on army matters; and I further believe that the present organisation, which is with a view of expansion, would affect in time of war India's interest just as much as home interests, and that if an emergency arose in India you would be able to send reinforcements to India just in the same way as you would be able to find reinforcements for either home, colonial, or any other purposes.

Chairman—continued.

1812. And when it is stated that the troops in India are a reserve for England, I presume that the converse would be true, that England might denude herself of troops for the sake of sending them all to India?—Most assuredly; indeed, as to the troops in India being a reserve for England, I should say it was very decidedly the other way. The whole question is one of give and take as regards various portions of the empire, but I think that the chances are that the reserve at home would be more necessary for India than ever the army in India would be for purposes at home, because it is not likely that we should ever denude India to any extent of troops, and therefore I do not see how you could possibly expect the Indian army to be a reserve for the home army.

1813. Does your Royal Highness think that the militia and depôts will become more closely allied, and that the recruits will be trained for the militia more than they have been, and afterwards drafted into the battalions for foreign service?—I apprehend that you mean, if an emergency arose, whether you would draft militia recruits into the regiments in India as well as other portions of the army; I say, certainly, yes.

1814. Then in that case the barracks which are now being erected in various parts of the country would be an advantage to India, in consequence of their being used for the training and maintenance of the recruits?—As regards the barracks, of course, that is more of a local home question. I do not think that that has anything specially to do with India; I should not be disposed to think that they have anything to do with that kind of question, except to assist in the general organisation as adopted, and supposed and believed to be the best.

1815. We have had opinions given here that, according to the new localisation scheme, the recruits will really be trained in the militia, and that they will afterwards go into the line regiments, and one battalion probably being in India or on foreign service. In such a case as that India, of course, would share more than she has done in an interest in the local forces of this country?—Certainly. If you wanted to raise the regiments in India from, say, 820 as at present to 1,000 men, of course you would have to take extraordinary measures to effect such an arrangement; you would call on the militia to volunteer, as you would on any other portion of the line, for India or for foreign service.

Sir *Henry Havelock*.

1816. At the present moment the whole of the militia reserve are actually available for that purpose?—At the present moment the whole of the militia reserve are actually available. In the emergency of war you could take any number of that 30,000, and send them to India, so that in the case of the mutiny, if we could have had 30,000 men of the reserve, we might have sent those 30,000 bodily to India to increase the regiments serving there.

Chairman.

1817. Is not the soldier more expensive to England in consequence of the cadres being filled up with fewer men in England than in India?—No doubt. Of course, a weak cadre is comparatively more expensive than a larger regiment; but I think it is of great importance to have

Chairman—continued.

have cadres, because then you can expand, whereas if you have not cadres you cannot expand at all.

1818. If you were to have all the regiments filled up to their war strength, it would be more difficult to induce this country, I presume, to keep an army that would be sufficiently expansive for any emergency?—It would be impossible, because a battalion or a regiment is not formed in a day. The nucleus lasting, you can expand it to any extent, and you can raise a regiment from 400 or 500 or 600 men to 1,000 men with the greatest ease; but if you had to create these battalions of 1,000 men, they would not be fit to take the field for at least a year, and probably more.

1819. Then, to keep these regiments in India upon this war footing, and charge them, we will suppose this same cost per man as we pay in this country is of great advantage, financially, to India?—It might be an advantage to India for the moment, to have the regiments entirely upon a war footing; but I think that India would suffer with the rest of the empire, because the security of India would not be so great; because you would not have the means of expanding that you have at the present time.

1820. At present the regiments in India are about 800 strong, I think, which is 200 more than they are in this country?—Yes; and there is no question that regiments in India ought to be stronger than at home, but they ought to be on a peace establishment to a certain extent, and have the means of expansion; and I think it would be a great mistake if you had the Indian regiments on a war footing, and had not the means of expanding them as you have at home; expanding them I mean to a more limited extent, because a regiment is required to be stronger in India, owing to the various duties devolving on it.

1821. But in so far as the Indian regiments include a larger number of men than the English regiments, in so far India gains an advantage by the English establishment, as she only pays in the same proportion?—Most assuredly.

1822. Has your Royal Highness any opinion to offer with regard to the question of the artillery in India; we have had several opinions given here as to the head-quarters of artillery brigades going out to India?—I think it would be a great pity if you altered the present system; you have a very large regiment; you may say the unit is the battery, I admit it; but with so large a regiment, if you do not divide it into a certain number of brigades, so as to get them into a more pliable form, you destroy in my opinion all the *esprit de corps*, the very thing which I desire to preserve; the unit is the battery, but I still contend that the brigades are essential, in order to keep up the *esprit de corps*.

1823. Then is your Royal Highness of opinion that any change could be made with advantage to India or England in the present system?—I think it would be a great mistake if you did; and if you at all look at the organisation of continental nations, you will observe that in every continental nation there are a very large number of regiments of artillery. Now the brigade of artillery is the regiment, and we send the batteries according to the number required; but still we keep up the brigade system in order to keep up that *esprit de corps* which is found

Chairman—continued.

necessary in other armies, and which I do not think we can do without in ours.

1824. Has your Royal Highness considered the difference which short service will make with regard to this question of India; the point is the short time in which the men will ordinarily remain in India compared with what they used to do?—That is a very difficult question, and one which I hardly feel justified in giving an opinion upon; first of all, I have not the necessary local experience, and in the next place I think time alone can show what effect it will have; but certainly, in the abstract, to my mind it appears that the short service will be more expensive; but at the same time there are great authorities, such as Lord Sandhurst, who, in the House of Lords stated the other day distinctly that he did not think that it would have that effect, but the reverse; of course I should be sorry to give any opinion under these circumstances.

1825. Lord Sandhurst's idea was that there were so many deaths and so much invaliding in regiments formerly when they were out for 10 or 12 years, that under the short service system the difference will be very much less than appears at first?—There would be a very simple way of dealing with it; if it is found to be the case, you have only to prolong the service in India; let every man if he likes continue his service for any given number of years, not by force but by voluntary enlistment or re-engagement; and you would never have any difficulty in finding those men, I believe.

1826. And from your Royal Highness's experience you know, of course, that the Indian service is a popular service?—Extremely popular.

1827. And that there is not much difficulty in getting men to volunteer now for Indian service?—No difficulty at all as far as I am aware.

1828. And, in fact, the question of re-engaging in India is simply a question of bounty, but not of men?—Certainly.

1829. And of course there would be an advantage, would there not, in men coming back, and after a short time at Netley being available for the service, rather than coming back used up altogether?—No doubt; at the same time you know there is no doubt also that many men come home from India with impaired constitutions who go on serving, and those men stay at home, and then, *pro tanto*, the home service suffers by the men being sent back from India fit only for home service. We find that to be the case very much with the artillery.

1830. Is that the effect of lengthened service in India?—No, not of lengthened service; but men are sent home from having contracted disease in India; if they are not fit to go back to India they do not go back, but they go on serving, and those men have to be put into batteries or battalions at home, and, *pro tanto*, they are not as efficient men as the men who, not having been in India, and not having contracted that disease, would have been serving either in a colony or at home, and would have been efficient in every point of view.

1831. Not bad enough to be discharged?—Not bad enough to be discharged, but not sufficiently strong to bear the exceptionally hot climate of India.

1832. But I suppose in future those men will ordinarily

H.R.H. The Duke of *Cambridge*, K.G.

23 June 1874.

H.R.H. The Duke of *Cambridge*, K.G.

23 June 1874.

Chairman—continued.

ordinarily be placed upon the reserve, will they not, under the new arrangement?—That depends upon their period of service; if they have served their six years they would, but not if they have not.

1833. Then the average of the Indian service, if the men come home, I presume, will be now from two to three years instead of from five to six years?—It depends upon the time at which they were sent out. If a man goes out after one year's service, he will be five years in India, even under short service for six years; but if he goes out after two or three years' home service, of course his service in India will be only three years.

1834. I suppose a very large number of the men who go out as recruits become invalided or leave the service, have their discharge purchased, or leave from some cause or other, and then their places are filled up by drafts from England of men who have not their full time to run?—That depends upon whether they go out as newly enlisted men, or as men transferred from another battalion; and of course if they had been serving some time in the other battalion they would to that extent lessen the number of years that they would have to be in India.

1835. And that, I presume, is very much a matter of accident?—That is a matter of accident.

1836. Is there any other point which your Royal Highness would wish to give an opinion upon with regard to the general question?—I think it very desirable that I should state very decidedly that I think there has been a misconception upon the point of the officers. I think that four officers for the depôt, two captains and two subalterns, is a very small number indeed, because we have very largely reduced the number of officers in India. We have no reserve of officers in India whatever. The whole of the native army is now put upon what used to be called the irregular system, and which is now the adopted system of seven officers per regiment, and the result is that there is no reserve of officers in India. Consequently I contend that these four officers at the depôts at home form the only reserve which you have of officers for India; and I am greatly alarmed at the idea of the want of officers which we should be suffering from if any emergency arose in India, or anywhere else, because we are so reduced in the number of officers.

1837. Are you referring to the officers in the depôts in England?—The officers in the depôts in England form, I contend, the only reserve that we have of officers for the whole army of India, including the native army; and there is another consideration which ought to be taken into account; many officers suffer in health like the men; if they come home, and can get a turn at the depôt, they can do depôt work, and then return to India; if they could not get a turn at the depôt, they would have to be sent on sick furlough, and you would have to increase, I believe considerably, the number of officers in India, in order to enable a portion of them to be always on sick furlough in Europe; therefore, virtually these officers are actually doing Indian duty, though they are at home, in that point of view.

1838. It is your opinion that the officers of the depôts at home are practically the reserve of the officers in India?—Certainly.

Chairman—continued.

1839. And that since the native army has been reduced to the numbers of the irregular forces, there has been a very much less reserve of officers in India than there formerly was?—No reserve whatever.

1840. That, in fact, in India there are not more officers than enough to do the ordinary daily work, and that in case of emergency you must send from England a considerable number of officers, and that the only reserve from which they can be sent are the officers at the depôts?—Certainly.

1841. And, looking at it in that point of view, the expense of the depôts is very fairly apportioned between England and India, you think?—I think in every calculation of expense that ought to be taken very fairly and fully into account.

1842. And when you say that India should only pay for what she uses, that possibility should not be lost sight of?—Certainly.

1843. Is there any other point of which your Royal Highness thinks as one on which you would wish to express your opinion?—Not that I am aware of; there were some questions raised in the former Committee which I might answer; but I believe you do not go into them; you confine yourselves to other questions, as I understand.

1844. Our order of reference is, "To inquire into charges payable in this country for which the revenues of India are liable," and it was agreed by the Committee that the meaning of that, so far as military charges are concerned, is this: assuming that India requires such or such an army, whether that army has for Imperial purposes, under the direction of the department at home, been rendered unnecessarily expensive to India?—I have nothing more to say on that point.

1845. I have already asked a question which Lord George Hamilton has suggested, but I might ask it again in conclusion. In all those cases in which there is a difference of opinion as to how charges should be apportioned between India and England, I mean a difference of opinion between departments of State, your Royal Highness has already stated, that as far as the Horse Guards go, there is no indisposition to consider all these cases upon their own merits, and to give India every advantage that can be consistently given in the matter of charge?—Most assuredly.

Sir *Henry Havelock.*

1846. Your Royal Highness has answered almost every point which I desired to ask, but there is one thing which I should like to bring out a little clearer. A great deal of reference has been made in the correspondence from the India Office to the comparative merits of the former Warley system. As between such a system as that and the system now in force, I suppose your Royal Highness would have no hesitation at all in giving the preference to the present system?—Certainly; in my opinion the other was no system at all.

1847. It caused a large number of recruits to be congregated in depôts where they were under very few officers; whereas now, from the moment the recruit enters the depôt he comes under the supervision of his own company officers and non-commissioned officers?—Yes. I believe everything

Sir *Henry Haveloch*—continued.

thing which could be done was done at Warley, that the authorities did as much as they could. I have been down there, but I never had anything to do with it; but it was merely a question of getting the men, furnishing them, and sending them out as fast as they could; there was no organisation of any sort or kind.

1848. Your Royal Highness considers that the present reserve system, which keeps at home a reserve numbering now about 39,000 men, and which will increase every year, is, of course, of immense advantage to India, by enabling a reduced force to be kept there in ordinary times?—Most assuredly; and therefore I have always contended that the regiments in India should not be on a war footing in time of peace, though it should be on a considerably increased footing for ordinary peace purposes in India, as compared with what its strength would be at home.

1849. And it is also a fact that at the present time India does not contribute any portion of the expense of that home reserve; although she benefits by it, she does not contribute to it?—No.

Sir *George Balfour*.

1850. Your Royal Highness has declined expressing any opinion with regard to the influence of the short service system upon the finances of India; but it has been justly remarked that it is very easy to induce men to volunteer for service in India. Is your Royal Highness aware of any obstructions at the present moment to menvolunteering for service in India?—Not that I am aware of.

1851. Your Royal Highness remembers the recommendations of the Committee over which Lord Dalhousie presided?—Yes.

1852. That Committee went very carefully into that question, and it showed that the Indian Government had always the power to give bounty to men volunteering; but the power as regards men re-engaging was fixed by Royal Warrant?—Yes.

1853. Your Royal Highness would remove all obstructions to men volunteering to extend their service?—I am not aware that there has been any obstruction put in the way.

1854. But if any obstruction does exist with regard to the Royal Warrant, your Royal Highness would see no objection to modifications being made as regards India?—Most assuredly; I think it would be an advantage.

1855. Your Royal Highness is aware that men very freely volunteer from one regiment to another, on their own regiment being ordered home?—Yes.

1856. And that large supplies are obtained for regiments remaining in India by means of that system?—Very large, and the best.

1857. Then, practically speaking, the short service system is a question of expense to India, and nothing more?—I should have fancied so, I confess.

1858. Your Royal Highness mentioned that the present system is infinitely better than the system at Warley. Would you be good enough to state in what the superiority of the present system consists?—The present system is that the men are organised into soldiers as soon as you can possibly get them sufficiently advanced to be so; whereas at Warley they were merely taken as recruits; everything that could be done was done at Warley, but inasmuch as there were no

Sir *George Balfour*—continued.

officers, and no organisation whatever excepting that of keeping them in order, and cleaning and dressing them, and drilling them as far as you could; in fact, they were sent out merely as so many recruits to join their regiments, when of course they had to become soldiers.

1859. Then your Royal Highness assumes that the men who go out at the present moment, and for the last few years past, have been properly trained?—They ought to be; but I know that a great many are not, because we have not the means of keeping them long enough to train them; and it is one of the things which I have regretted, that we have not had authority from the India Office to train men sufficiently long. We do not get authority sufficiently early to raise men for the next year's draft. I contend that we ought to get it at least six months in advance, and nine months would be better, and then we could give efficient men.

1860. If I mention that out of 13,640 recruits to India in the last four years 3,930 were short trained, that number would not surprise your Royal Highness?—I cannot answer for the number, of course, but it is very possible, and for the reason which I have given; and I know that I have frequently expressed the strongest regret, as far as I could without, of course, interfering, that we had not authority to get these men for the Indian depôts in time for the next year's recruiting season.

1861. If your Royal Highness remembers the period, the period for training is 10 months for the cavalry soldier?—Nine months.

1862. There was one month which your Royal Highness added on, for some reason; then, when I mention to you that a very large number of cavalry soldiers during the last four years have gone out to India with exactly one half the period of training, would that surprise you?—I have no doubt it is true, and I very much regret it; but it is because we cannot get authority to raise the men earlier.

1863. Then your Royal Highness would not be surprised to find that some men have gone out with even less than a month's training at the depôt?—I have no doubt that may have been so, and I regret it most deeply, and should like to see it improved. If the authority comes to us at the proper time, we shall be prepared to send the men. There is a difference, it must be remembered, between a conscript army and an army which you are obliged to raise in the market. If you have a conscript army, you say all men of such an age are to come and serve for such a time, and you get them to the day. If you go into the market, you have to find out where you can get the men. Very often it is in summer time, the worst time for the purpose, that we have to raise the recruits for India for the next season; whereas, if we could raise them in the winter, we should have all the men properly trained; but we are not allowed to get them then.

1864. Your Royal Highness is prepared to hear that out of 2,273 infantry recruits whose rolls are available there were 1,345, or more than half of these, that went out to India with less than three months' training?—I could not answer for numbers, but I know there were many more men sent only partly trained than I could have wished, because I should not like a single man, if I could help it, to go out under those circumstances. Then I should like to state to the Committee another point with

H.R.H. The Duke of *Cambridge*, K.G.

23 June 1874.

H.R.H. The Duke of *Cambridge*, K.G.

23 June 1874.

Sir *George Balfour*—continued.

reference to this subject. We are very much pressed in this way. For instance, we are called upon for an estimate, I believe at this moment, as to what amount of transport we shall require for the number of men that we want to send out to India next winter. We give the estimate, as far as we can; and perhaps when the time comes we cannot get the recruits; the transport ship is consequently 40 or 50 men short. The India Office says, "We cannot allow this; you must fill the vessel up"; and we are actually obliged to telegraph down, at 24 hours' notice, and say, "Take every man you can lay your hand upon, and fill the ship," because otherwise a difficulty is made on financial grounds.

1865. I hope your Royal Highness will allow me to say that, in asking these questions, I fully concur that it is not desirable to live on the hand-to-mouth system, and that I hope that one of the results of this Committee may be to render the system more efficient; and, as your Royal Highness said, efficiency and economy are synonymous?—I wanted to explain how it is that, whilst I advocate sending out the men efficient soldiers, it has happened that men have been sent out who, in my opinion, ought not to have been sent out, for the reasons which I have given.

1866. Your Royal Highness has expressed a decided opinion connected with the strength of the present depôts; the depôts have varied very considerably during the last 16 years?—Yes.

1867. Will your Royal Highness let me recall to your recollection the depôt strength before the mutiny, which was only 16 in number for each depôt; it was one company if your Royal Highness remembers?—It was one company, one captain, and three subalterns; so that, virtually, there were no more officers then than there are now, only now there are two captains and two subalterns, whereas then there were one captain and three subalterns.

1868. At that time the regiments were close upon 1,000 rank and file strong in India, and yet upon the statements which have been published, I refer particularly to the War Office, it is quite clear that the regiments with that small depôt were kept far more complete than they have been with the larger depôt?—I cannot conceive how that can have been done. I think they must have had some other mode, by volunteering or otherwise; it is utterly impossible, it seems to me, that it could have been done in any other way, though I am not prepared to answer that question.

1869. I see that up to the war with Russia the regiments of cavalry had supernumeraries in India except for two years; in one year they were two deficient, and on the 1st of January 1854 they had 254 deficient; that was owing to the Crimean war?—I can only speak from my own experience, and I can only say recruiting must have been very different in those days from now. It is utterly impossible to do it now.

1870. Supposing my statement to be correct, the fact is that with that small depôt the regiments in those days were kept more complete than they have ever been of late years?—As I say, I cannot account for that, because my experience is exactly the reverse. If it is so I can say nothing against it beyond the fact that you cannot do it now.

1871. Then with regard to the last 10 years, your Royal Highness will be prepared to hear that the army in India has been upwards of

Sir *George Balfour*—continued.

4,000 men, upon the average of years, below its establishment?—I cannot answer for those returns at all; I do not know what those returns are.

1872. They are returns which were published in the War Office Estimates for a series of years, and ceased to be shown from the 1st of January 1854?—That only strengthens my argument, give me time to get the recruits and you will never be a man below the establishment.

1873. Under that system to which I have referred your Royal Highness will remember the practice was to disregard the fixed establishment, and to allow recruits to be obtained for the army in expectation of their being needed?—Exactly so.

1874. Then I understand your Royal Highness's views would extend in the same direction?—Certainly; I think that we ought to be allowed even to go beyond the establishment. If we cannot get recruits prepared in time for the recruiting season on the present system, I think we ought to be allowed to take men in excess in order to be prepared when the recruiting season comes to keep up the establishment in India to the full strength.

1875. Having the cadres for the depôts, and having the cadres for the regiments in India, your Royal Highness considers that the mere pay of the recruit is a very small addition to the expense in comparison with the great degree of efficiency which would result from having the regiments always complete with men?—I think it is essential that the Indian regiments should be to a certain extent on the cadre system, as are the regiments at home, but to a less extent, as I explained before, because I conceive that the duties in India are always considerable, and that, therefore, a very weak regiment would be very misplaced in India; but I say that to have a large regiment, merely because it is cheaper, in time of peace, would be very bad policy for India or any other portions of Her Majesty's empire.

1876. But whatever establishment may be fixed upon for actual service in India, your Royal Highness insists that that establishment ought to be maintained complete and effective?—I think it ought to be maintained complete and effective, if we are allowed to recruit men at the proper time in order to get them; but if we are not allowed to recruit men except in the summer months, I believe you will find it will be impossible ever to keep those regiments up to their strength. Summer is the very worst time for recruiting; the autumn, spring, and winter are the best, and we lose all that, and we are not allowed to take men till within six months of the time of their going abroad, which begins about the 1st of October.

1877. Your contention is that it would be in the interest of India and of economy to allow that extra number of men to be enlisted and prepared for service abroad?—Yes; and if you were to give every man all round, infantry and all, a year's training, I do not think it would be too much (though you can turn the infantry soldier out in six months), not necessarily for the purpose of making a soldier of him, but I think he would be a more efficient man, and you would then keep up the strength of the regiments.

1878. Your Royal Highness mentioned that you do not think that the present depôts could be improved. May I recall to your Royal Highness's

Sir *George Balfour*—continued.

Highness's recollection the alteration of the depôts, which you assented to in 1861, from 220 to 120, while the depôt was calculated to train 80 recruits per annum?—I think that was a good establishment, 120, and I think it is a great misfortune that we have gone off from that.

1879. When I mentioned to your Royal Highness that, instead of 80 recruits having been trained per annum at each of the depôts, the average of all the depôts has not come up to more than 40 recruits for each, that is a considerable difference?—I cannot tell you as to the numbers, for I have not got the statistics before me.

1880. Supposing that to be the fact, your Royal Highness will admit that the work done by the depôts has not been equal to that which was calculated upon?—No; but for the reason which I have given, because you have not given us time to do it properly. If we have time to do our work properly, we can do it; but if we are stinted in time, only beginning to recruit six months before embarkation, because you do not get the men in the six months recollect, you cannot carry out the object which you have in view in the period.

1881. When I mention to your Royal Highness also that, practically speaking, the average number of men turned out by the cavalry depôts has not exceeded 10 during the whole period, your Royal Highness will admit that either the recruits have been too few, or that the depôts have been too strong for the work done?—Certainly; at the same time, I am perfectly astonished to hear that, for I am in the habit of seeing the cavalry depôts for India every year, and I generally see 700 or 800 men there.

1882. The statement from which I have taken my figures is one which has been given to this Committee. In the seven years there were 753 cavalry recruits sent to India, which gives you upon the average 93 per annum, and during that period there were 11 regiments in India, which makes nine per regiment?—I cannot account for that. Of course, if I had been aware that these questions would have been put, I would have gone into the matter.

Mr. *Stanley*.

1883. I should like to ask your Royal Highness whether it is not the case that in some years there are no demands made at all for men to fill up?—That is so.

1884. And, therefore, an average taken over a term of years would hardly be fair as representing the producing power of the depôts; whereas in one year perhaps comparatively few men are required, in another year you would want to send out a very large number of men?—Certainly; it depends entirely upon local circumstances, first of all the climate; but even supposing that the climate, on the average, was much of a muchness, there is the question of volunteering; one regiment coming home may give a great many volunteers to the regiments going out; if they do, we do not want to send out so many recruits; and it is possible in those instances that very few have been sent from that cause.

1885. Therefore the number of men furnished only show what the Indian requirements of the moment are, and they do not show in any way what the total producing power of the depôts is?—No, I think they do not.

Sir *George Balfour*.

H.R.H. The Duke of *Cambridge*, K.G.

23 June 1874.

1886. But in the year 1862 the established strength was 60,041 men, the effective 58,438, and so on with every year for the whole series, until in 1867-8 the establishment was 65,292, and the effective strength was 56,831; so that we were in that year nearly 9,000 men below the establishment?—It is possible. I cannot answer for the Returns, of course, but it is very possible that it may be so. All I can say is, if it is so the only way to account for it is either that recruiting generally has been very bad, or that we have not had time to raise the men and to send them out at the proper period; and, as you know yourself, we are not allowed to send the men except at proper periods, when the climate as regarding the health of the men admits of it.

1887. I myself distinctly recommended that the establishment should be increased at home in order that the establishment in India should be maintained in that way?—Certainly; and if we could only have authority, as I said before, to raise the men at the proper time, I think you would find that there would be very little difficulty in keeping up the establishments; but we cannot do it unless we have full time to raise the men.

1888. I would ask your Royal Highness in reference to the question of the honourable Member the Financial Secretary; your reply might be understood to mean that no demand was made from India for recruits, and therefore they were not sent out?—I cannot answer how that has arisen, but it is possible that it may have arisen in that way, because, of course, there are years when fewer men are required than in others.

1889. The importance of the question is in this respect, that India pays England for all expenses at the rate of 13 *l.* 10 *s.* for every man effective in India; during the nine years the establishment was 547,389 men; and the effectives were 508,401; that is for the years from 1861 to 1868-9; so that your Royal Highness will see that during that period India could have been supplied with more men if your Royal Highness had been furnished with the means of supplying them?—As I said before, I cannot make myself responsible as to how that has arisen, because I know nothing about the circumstances; if I had had time I might have looked into it. If it is so, that we had not the men to send, no doubt that is the explanation, but I cannot answer for that being so. It entirely depends upon what was the cause of so few men being sent out; and it is possible, as has been suggested by one of the Members of the Committee, that there may have been a less demand for recruits in one year than there has been in another, which frequently happens, for the reasons which I have given.

1890. But your Royal Highness being thoroughly acquainted with the army would know that, if in every year the effectives have been far below the establishments, it would follow that the recruits might have been sent out if they had been actually available and ready for service in India?—If they were available and fit for service, I have not the slightest doubt that they would have been sent if they were there. Therefore if they were not there there must have been some specific reason why they were not; but I cannot answer for what the reason was.

1891. I will ask your Royal Highness's attention again to a return which Sir William Mansfield, now Lord Sandhurst, obtained and published to the

H.R.H. The Duke of *Cambridge*, K.G.

23 June 1874.

Sir *George Balfour*—continued.

the world in his speech in the Legislative Council at Calcutta; he obtained it in March 1870, and it was prepared with the usual care, and by that it appears that the establishment at that time was 61,634 men, and that the actual strength was only 55,333, being a deficiency of about 6,000 men in the strength of India?—It depends upon dates. It may have been before the trooping season, or for some reason of that sort. That statistical return may have been given in during the summer, when there had been a great drain, and the men would be preparing for going by October, and possibly at the end of the year all those may have been filled up; I cannot say how that was; but I certainly cannot understand that you should have been so short of men continuously in India.

1892. I have since verified that return, and I find that the strength was drawn up from returns dated February, so that the very time at which the returns were taken was the very time when it might be supposed that the strength in India was more complete than usual?—Drafts are sent till the month of March; and allow me to make the remark, that it frequently happens that drafts in India are a long time before joining their regiments. They are on the march up, and it takes a long time before they join. There may have been a discrepancy in that respect, though I cannot say that this was the cause.

1893. I was anxious to put these questions to your Royal Highness with a view to the future, and at the same time to beg your Royal Highness's consideration to the fact that a system was in force for 10 years called the capitation rate of payment, and that payment was to be made upon the effectives in India, and that in consequence of these effectives being kept so much below the establishment the War Office have lost 550,000 *l.* during the nine years that it lasted. It was with that view that I wanted your Royal Highness to say whether other arrangements, and better arrangements, could have been made by which that great loss might have been saved; therefore a small expenditure during that period to have enabled your Royal Highness to obtain men in time for recruiting would have enabled you to have swelled up the regiments to their full strength?—I am quite sure that if more latitude can be allowed to us as regards the period of recruiting up it would be a great advantage, and I believe in the long run it would be found an economy.

1894. I am not about now to praise the Warley system; it is a defunct system, and there is an an end of it; but still, as a mere matter of truth, I would mention to your Royal Highness that whilst the men apparently during the period that Warley was kept up were supplied to the East Indian Eropean force in India, after an average period of four months' training, it would appear from a casual statement that the time of the men at Warley was fully 90 days, or three months; therefore the discrepancy between the two systems, as far as detaining men at the depôts is concerned, was not very great?—I know nothing about the arrangements at Warley, though I have been there, because they were not under me.

1895. We have had a great deal of evidence given with regard to the comparative popularity of the Indian service. Your Royal Highness has already mentioned that that service is exceedingly popular?—I think it is very popular.

1896. Your Royal Highness will remember,

Sir *George Balfour*—continued.

that when the mutiny broke out the recruits came in, as your Royal Highness termed it, by shoals for service in India?—Yes.

1897. The infantry, especially, was raised up to a higher establishment than it ever attained during the Crimean war?—Yes.

1898. And you found great facility in obtaining recruits at that period?—We had no difficulty as far as it went; men had to be got in a great hurry because a large number were required, but a very large number were recruited.

1899. Your Royal Highness stated, did you not, that it would have been desirable to have militia recruits available to send out to India at the time of the Mutiny?—Militia reserve men I said, not the recruits. There is now a system of militia reserve, I said, that if you had those reserve men who are available for a time of emergency, you could have sent out any number which it was thought desirable, to increase the regiments in India, which you could not do then except by recruiting.

1900. Your Royal Highness would have been very glad to increase the Indian regiments early in 1857?—Yes.

1901. When I mention to your Royal Highness that with the two regiments of infantry withdrawn from India for the Crimean war, and with the numbers deficient in our Indian army, there were upwards of 6,000 men wanting to complete that establishment on the 1st of January 1857, your Royal Highness would have been glad to have raised up that strength to the full establishment?—It would have been much better if they had been there, of course. I think it is a great mistake ever to reduce the garrison in India to such an amount as to endanger the security of that country; and therefore when it is put forward that it might be considered possible that you would take European regiments in India as a reserve for Europe, I say that you might, to a certain extent, do so for general purposes; but I do not think that any Government would be justified in denuding, or would assume such a responsibility as to denude India of troops to any extent whatever; indeed, I should prefer never to see a man removed from India, from the ordinary Indian garrison of European troops.

1902. But your Royal Highness is aware that two regiments of cavalry and two of infantry were withdrawn from India in 1854, in spite of the earnest and urgent remonstrances of the Governor General?—That is a great question of policy, which I hope the Committee will not require me to give an opinion upon; but I may have my opinion on it, and I have said before that I would never denude India of troops at all, of European troops most assuredly not, nor of troops in general.

1903. At the very time when the mutiny was progressing 5,000 men were absent from India in Persia, which still more denuded India of European troops?—As I said before, that is a matter of policy which I do not think I am called upon to give an opinion upon; but I again repeat that I never would denude India of European troops.

1904. Having regard, therefore, to the interests of India, and bearing in mind that there were 6,000 wanting to complete the establishment, could you call to recollection how it was that the supernumerary men who came back from the Crimea

Sir *George Balfour*—continued.

H.R.H. The Duke of *Cambridge*, K.G.

23 June 1874.

Crimea were not called upon to volunteer for India?—I did not know that it was so; but I take for granted that the Indian establishment was up to its strength when they came home; but I should imagine that if they were not up to their strength at that time, they would have called upon them. There may have been some financial reasons, but I cannot tell what they were.

1905. The question which has been put with regard to the artillery organisation had reference to the great expense of the colonels and fixed officers of that corps, in consequence of the head-quarters of brigades being there?—I think that India ought to share in what is considered the organisation of artillery, as well as any other part of the service. You might as well say that a regiment should only go out by companies instead of by battalions. It might be cheaper to do that, but that would be no military organisation. In the same way as regards artillery, if it is thought advisable for organisation purposes that the artillery should be divided into brigades, and if a certain expense attaches to the head-quarters of those brigades, India should take its share as well as England.

1906. But looking at the large amount of pay and allowances to the officers of high rank in India, does your Royal Highness see any mode by which India, whilst sharing in the proper expenses connected with organisation, could yet be spared some portion of that vast expenditure now incurred in consequence of the large number of field officers?—No; I think that India ought to take its share. As to allowances, that is a local question. I presume they are not in excess of what is thought proper; and if they are large, of course India must bear the expense; but that is no reason for an alteration of organisation in India.

1907. The question was rather a financial question, whether you saw the means by which the number of colonels and field officers now employed in India could be reduced to the number actually necessary for the command of the artillery force there?—Certainly not, because if you do not pay them in India you would have to pay them at home, and the home Government would have to pay more than they required, because in that case the Indian Government would not pay their share. If the organisation is bad, change the organisation. I contend it is good, and therefore I say do not change the organisation; and therefore you must put upon India that portion of the expense due to her according to the amount of artillery she maintains; and you must bear in mind that the artillery in India is large, only relatively, because the European artillery is the only artillery in India, and supplies the requirements for the whole army; in war you take account of the whole bulk of men, and if you take that into account, you must take the native troops into account as well as the European troops.

1908. But I am not gainsaying the proportion of guns to the force in India, because I myself go fully with the higher proportion; neither is it for the purpose of India evading any portion of that expenditure which she ought to bear in proportion to the share which she has; but with reference to the detention of some of the colonels and field officers at home, and paid for by India, instead of being sent to India in greater numbers than the wants of the service require, and where they are receiving nearly double the pay which they would receive at home?—The only answer to that is, that you would have to reduce the superior ranks in the artillery in order to do it, and if you do that you upset the whole organisation, and you will get into a worse state as regards promotion. Now you know one of the difficulties is to get a flow of promotion in the artillery, and if you reduce the upper ranks of artillery for these purposes, you *pro tanto* diminish the chance of a flow of promotion throughout the corps, and I think on that ground alone I should say it was quite justifiable to leave India to pay her fair share of the expenses deemed necessary for the artillery at home or abroad.

1909. It is more a limitation of the number of colonels and field officers that I am now going on; we are anxious to know whether it is possible to locate some of the colonels and field officers belonging to brigades in India in England, instead of in India, still making India pay?—No; because that would be assuming that you do not want these officers, and I say that you do want them; then the next step would be, of course, that if you did not want the officers you would not maintain them; you would not maintain officers at home doing no duty at home; my own opinion is, that that would be a much more unreasonable proposal than mine, which is to send a full complement of officers to India, and make India pay her due share of such officers, rather than upset the organisation, by which you would upset the organisation, not only in India, but of the corps for all purposes at home and in India.

1910. Your Royal Highness has seen to the distribution of officers, and it is within your Royal Highness's knowledge that two or three field officers have often been at the same station with only one battery?—I think there has been great want of good arrangement in that way, but I do not think that the system was very much appreciated, and the result was that it never was carried out properly; but if I had had my way I confess that I should have placed them in a different position; but as I never interfere in those matters, leaving them to the local authorities, I only say that different arrangements might have been made, and that the *nuances* which have now come out in rather peculiar form would not have come out if the officers had been posted in accordance with other views.

1911. Does your Royal Highness remember that report drawn up by the present Lord Sandhurst, and into which your Royal Highness entered with great care and minuteness in your reply?—I was referring to that when I made my reply just now. I think if I had had the manipulation perhaps I might have placed the officers in a different position; but, at the same time, it is very delicate ground for me to give an opinion upon, because it is entirely a local question on which I do not like to give an opinion. As to locating the field officers in India it is not my province or my business.

1912. Still your Royal Highness's opinion, which is so valuable for the guidance of the Secretary of State, was called for on that occasion?—I gave my opinion, and I think I did say that I thought the officers might be somewhat differently located; but I am not quite certain whether I said that.

H.R.H. The Duke of *Cambridge*, K.G.

23 June 1874.

Sir *George Balfour*—continued.

1913. Still, under any circumstances, if your Royal Highness had had the supervision of the distribution of the army in India, changes would have been made? I think that it would be very easy to make an arrangement which would meet the difficulty. I have had to do it here, and have never had much difficulty in carrying it out, and I see no reason why it should not be done in India.

1914. We have also had before us a statement connected with the promotion of the first captains of artillery to the rank of major, and the Secretary of State, who made that change, expressed his opinion strongly that he considered the command of a field battery the proper command for a major. Does your Royal Highness concur in that?—Of course in modern times there is a great deal to say for it. I do not say it is absolutely necessary, but I would certainly not give any adverse opinion to it. No doubt the batteries have become much more important; they are stronger; there is a great deal more scientific knowledge required, and the position of an officer commanding a battery is a very important one, and I think we are justified in having a field officer to take that duty.

1915. Your Royal Highness may have heard that an increase of cost to India to the very large sum of about 40,000 *l.* has been occasioned by that change?—I understand so.

1916. Does your Royal Highness consider that the command of a garrison battery with 75 men is the proper command for a major?—There is the difficulty, and that is the reason why it is a question that may have two sides: but you cannot make a distinction between the two services, field and garrison artillery; every officer passes through the college, and they all start on an equality, and you try to get them to pass through the regiment on an equality, and if you do not you get discontent and heartburnings; and as you do not wish to sacrifice the garrison artillery to the field and horse artillery, it is essential that they should be kept on a footing of equality; if you say the garrison battery shall be only commanded by a captain and the field battery by a major, I am afraid that you would find that would lead to such intense dissatisfaction and ill-feeling, that it is better to make the sacrifice of a little expenditure, even if the necessity should not be quite clear.

1917. I agree that contentment is very necessary, but looking at the great expenditure borne by India, and the heavy burden on her, the Committee have in this and previous Sessions been considering in what manner these burdens could be lessened. Does your Royal Highness think that taking a garrison battery with five officers, one of them being a major, and having 75 men only, some economy could not be effected by doubling up these batteries?—I think you ought not to alter the organisation. I think the organisation that is proper for home service is also suitable in India.

1918. There is no virtue in 75 men for a garrison battery?—Seventy-five men is not the establishment at home; it is very much larger now, but it fluctuates according to our wants; but I presume that the wants of India generally require 75 men to a battery.

1919. But your Royal Highness has never given your special attention to the question as to what the proper complement of a garrison battery should be in India?—I conceive that it should be whatever the local requirements demand. In time of peace I think 75 men for a battery would be a very fair proportion; of course, in time of war that battery would at once be increased to 120 or 150 men if you required, with the same nucleus of officers and non-commissioned officers; whereas if you had to raise that battery, and form these officers and non-commissioned officers, it would take you years. I have just been reminded that the garrison battery in India is 87 men now.

1920. Is that all ranks?—Yes; with reference to that question about five officers in a battery, I can only tell the honourable Member that the complaints which we have from India of the want of officers for batteries are such that constantly we hear of batteries with only one officer, such is the drain upon officers.

1921. Then it would be advantageous to double up these garrison batteries, and by that means have more field officers with them?—I would not double up any batteries at all; that upsets all the organisation; the point which I dwell upon most is, adhere to your organisation; if the organisation is bad, amend it, but do not have a different one for home and for India.

1922. Your Royal Highness insisted, 12 years ago, that the organisation of the regiments at home and in India should be similar in all respects?—Yes.

1923. But your Royal Highness will bear in mind that, on looking over the Army Estimates for the last few years, you count 38 different establishments of infantry of the line during that period?—I am sorry to say it does fluctuate very much; but it is a very bad thing that it should do so; we have had a great many changes, but I hope we shall have no more, and if we can avoid it it will be a great advantage.

1924. Your Royal Highness will bear in mind that on the war with Russia breaking out it was distinctly intimated to the House of Commons (the first time that such an intimation was made) that an infantry company should be 125 rank and file, and that the regiments embarked for the Crimea were of that number?—But if you have that establishment in peace, you have no means of increasing it for war; and the great object is to have such an organisation that whilst in peace you keep up a very small nucleus, that nucleus is so arranged that at the moment of a war breaking out (and wars come very suddenly now-a-days) you can increase the establishment and be in security; whereas, if you have large establishments and no cadres, it is of course destructive of everything; and it is the principle on which every army in Europe is being formed; and if those conscript armies are so formed, surely it is much more necessary with ours, because we have to go into the market and bid for men. The only men we can really put our hands upon are these 30,000 militia, and the reserve, calculated to amount at present to 6,000 or 7,000.

1924*. Does your Royal Highness remember that in the war in the Crimea the infantry establishment was raised up to 160,000 rank and file, and that the whole expense was incurred by the country for that establishment; and yet the infantry never came up to within 40,000 men of that establishment?—That is exactly what I find fault with. But if you have such a system that you

Sir *George Balfour*—continued.

you have not the means of filling up cadres, you really have no security, whereas if you have cadres and the means of filling them up, you have a security; and it is on that ground, and that ground only, that I say, give me cadres during peace as low as you can have them, in order that you may fill them up when an emergency arises at a moment's notice. In the case of the war in the Crimea, we were not in that position, and consequently could not get up our numbers rapidly.

1925. Your Royal Highness remembers that we had 49 battalions in the Crimea, and these never mustered more than 33,000 rank and file. Those 49 regiments never came up to more than two-thirds of the whole strength?—I could not say as to the exact number, but I have no doubt they never did.

1926. Your Royal Highness has answered very decidedly that bounty for re-engaging and bounty for volunteering is quite an allowable measure by which men may be induced to give their services in India?—Yes.

1927. May I ask has your Royal Highness ever interfered with the volunteering of the artillery batteries; has your Royal Highness forbidden bounty being given to those men belonging to a battery ordered home who are willing to remain in India?—I could not answer this question offhand. They are the same regiment, and therefore it is quite possible that you do not give bounty. You give bounty when a man volunteers from one regiment to another, but as the artillery form one regiment, I think the men are transferred without bounty. I could not, however, answer the question offhand.

1928. But, in a military point of view, would you see any objection to bounty being given to those men?—I think it is objectionable, because in the artillery we have a very large regiment; we are obliged to make up batteries suddenly, and transfer men; and if you at one time transferred men, and at another time gave bounty, the men transferred would think that they had a grievance; so that it would amount to this, that every transferred man would expect a bounty.

1929. You think it would cause inconvenience?—I think it would cause great inconvenience in the corps; in fact, it would really do away with the power of transferring men. If you give bounties you cannot transfer, for no man would understand the difference between transferring and bounty; they see one man getting a pound and the other nothing; and they do not understand why that is.

1930. In the infantry, however, there is not that objection?—Because men volunteer from one regiment to another. If you take a man from the 10th into another regiment, you cannot force him to that; but you can in the other case of transferring men, as in the artillery.

1931. In the course of our inquiries at Aldershot, on the Recruiting Commission, we reported that it would be easy to induce nearly the whole service to volunteer for India with a bounty?—No doubt.

1932. And a small bounty has been occasionally paid for men to volunteer from regiments?—I have no doubt that you could get any number with a bounty. Bounty has been now more or less abolished, because men are transferred; but if now you were to take men from one regiment

Sir *George Balfour*—continued.

H.R.H. The Duke of *Cambridge*, K.G.

23 June 1874.

or from one brigade depôt to another, you would have to give them a bounty.

1933. Would your Royal Highness see an objection to a bounty for men volunteering for India from regiments in preference to allowing untrained lads to be sent out?—I am afraid it will happen, if we do not take care, that we shall have nothing but an inefficient army left in England. If you only draw in that sort of way, and send all the weeds home, you will have no army at home at all, and none but the efficient men in India; and that would be very dangerous, I believe, for the empire.

1934. Looking at the small number of recruits required for the infantry at home, about 1,800 or 2,000 every year, would that number, withdrawn from regiments by volunteering, be a serious objection?—I think it would be objectionable, and I think that India ought to take its share, and every regiment ought to have a certain proportion of older, and a certain proportion of younger, men; and provided those men go to India in an efficient state, they ought to take their due proportion of recruits.

1935. But, as a fact, the service of the men in India is much longer than the service of men in the battalion at home?—Yes, I think so.

Chairman.

1936. One question I wish to put to clear up a doubt. I think you said that you were not allowed to recruit except in summer?—It is not because it is summer, but we are not allowed to recruit for Indian purposes until six months before the period of the trooping season, which begins in the month of October. If we are only allowed to begin then it is the worst time of the year for recruiting, because it is the harvest time, and during that time we get very few men; and if we could recruit in the winter, no doubt we should get many more, and a better class of men.

1937. When your Royal Highness says that you are not allowed, I suppose it is because you are not allowed to keep them in the depôts more than a certain number of months?—That is the reason. We ask authority to get men for the recruiting season of the next year, and when we get it we begin to recruit. We have occasionally (I do not say it is so now) got the authority as late as the end of May, and that has been a most objectionable arrangement.

Mr. *Campbell-Bannerman.*

1938. That difficulty will not arise in future under the present system, by which a man is recruited for a brigade of two battalions?—To a certain extent it will not, but, as you are aware, you must treat that system very cautiously. I hope that by degrees it may come into operation, but at present the men have a very great objection to be transferred from one regiment to another; of course the transfer only affects the younger men. The older men you cannot deal with in this manner, because they are enlisted for a particular regiment, the younger men you can; but even in these cases I should be very tender as to how I applied the new system. You have the power and would exercise it, no doubt, should the necessity for it arise.

1939. A man is enlisted for a brigade; after he has completed his preliminary drill at the depôt, he will be transferred to the home battalion?—He goes to the home battalion.

H.R.H. The Duke of *Cambridge*, K.G.

23 June 1874.

Mr. *Campbell-Bannerman*—continued.

1940. So that when you come to make up the drafts for India, you can make them up from the home battalion generally?—You can; but still I am of opinion that you must not rely too much upon that; I still think you would take care that the great bulk of the men to be sent out would be men who were originally told off to the service battalion, and you would try if you could to take those very men, and send them to India, taking care, of course, that no objectionable recruits, such as men of one month's training, should go.

1941. In the earlier period of their service, at all events, they would not have become very closely identified with either of the battalions?—No.

1942. Of course your Royal Highness would not think it a safe or proper plan to take all the old soldiers from the home battalion, and send them to India, leaving nothing but recruits for that home battalion?—Nothing could be more objectionable.

1943. But, so far as it can be worked, that system will act in mitigation of the evils which you have alluded to?—Yes, certainly, and as a principle it is very sound; but, as we have not conscription, we are obliged to see how we can get men best, and if they will not come on one principle we must adapt ourselves to the principle on which we can get them.

1944. Even under the circumstances to which the honourable Member for Kincardineshire has alluded, when so many men with less than what is considered the proper amount of training have been sent to India, the report from India on the recruits has been favourable rather than otherwise?—Certainly, it has been favourable latterly.

1945. I do not know whether your Royal Highness has seen the letter which we have before us in the correspondence from the Indian Government, in which this passage occurs, "In comparing the present with the former cost of recruits, it is admitted that those now sent to India are, for the most part, more perfectly trained, and consequently more valuable than the half-trained recruits formerly sent to India"?—Certainly; that I believe is a perfectly sound view of the case, and it entirely bears out my view of the training of recruits before they go out.

1946. If I mistake not the medical reports on the health of the army in India have also latterly been more favourable than they were before?—Very much more favourable.

1947. Even with regard to recruits, the younger men?—Certainly.

1948. I think your Royal Highness stated your opinion that while rules have been laid down in accordance with the resolution of the House of Commons, as to 20 years of age being the limit for recruits to go to India, the same object is attained if a younger man is enlisted and kept in a regular life and on good food, and in a healthy mode of existence for about a year?—My own impression is (and I think I may say it is borne out by the medical view) that a man is a better man in that condition than a man whom you take at 20, because the generality of those men that you take at 20 are decrepit in some way; they are broken down men either morally or physically, and they are not the same description of men that you get at 18 or 19, when they are fresh and young and hale; and if those men get a certain amount of good food and keep, they are better men as early as 19, or even 18, than a man at 20; though I admit, on principle, that the resolution was a very prudent and judicious one, and that a 20 years man would be the right man; and if you had conscription and could make men go to India at 20, I would make men go to India at 20; but as you have not got it you must accept the other arrangement.

Mr. *Campbell-Bannerman*—continued.

1949. With regard to the force in India being below the establishment, there was one point to which I think no allusion was made; is it not the case that when a regiment is coming home your Royal Highness sends out no drafts for some time previously?—Yes.

1950. Even as long as two years before?—Two years I think it is.

1951. So that, if at the time alluded to there were five regiments a year brought home, that would be 10 regiments which were purposely kept below the establishment for that reason?—Certainly; and that would account for a considerable diminution in the aggregate number.

1952. And, in fact, under that state of things, which still continues, for the reduced number of regiments brought home now the nominal establishment in India will always be above the actual establishment on that account?—No doubt.

1953. That would account for some portion of the discrepancy?—No doubt that would account for some portion of that discrepancy.

1954. Some questions have been asked with regard to the organisation of the artillery; that question was raised, I think, in 1870, by the Government of India?—It was in 1869, I think.

1955. They made certain proposals with reference to the infantry and cavalry, and with reference to the artillery, and others with reference to the native forces?—Yes.

1956. Now, with reference to the infantry and cavalry, I think your Royal Highness advised the Secretary of State for War to object to certain parts of the Indian Government's proposals, but to substitute other proposals, which have been carried out, and which are, in your Royal Highness's opinion, more conducive to the efficiency of the army, and at the same time quite as economical for the Indian Government?—I did so. I gave advice which was rather adverse to one point that I have stated here, which is that the whole organisation of the army should be on the same principle; because I then advocated that there should be seven troops of cavalry only in India, instead of eight; but I did that on this ground, that we could not have reduced them without reducing one or more regiments, and it was considered so very objectionable (particularly as the regiment would have been one of the Indian regiments) to make that reduction, that rather than take so harsh a step (because it would have amounted to that, it would have ruined the officers), I suggested that we should reduce a troop of all cavalry regiments in India, which brough down the expenditure to the extent required by the Indian Government.

1957. And with reference to the infantry, what was done?—With regard to the infantry, every battalion was reduced by two companies.

1958. The artillery question was more complicated?—Yes.

1959. Is it not the case that with reference to the organisation of artillery there is very considerable

Mr. *Campbell-Bannerman*—continued.

considerable difference of opinion?—Very great difference of opinion.

1960. That, in fact, distinguished officers, well acquainted with the subject, differ?—Certainly. There are many officers who do not like the brigade system, and who wish merely to have the battery unit. My argument has been the other way, based on the opinion of many distinguished artillery officers, certainly very strongly confirming my own, that in a very large regiment, of between 20,000 and 30,000 men, it is a very great advantage to have some breaks, and you can only produce them in the way we have done it; whether you call it a battalion or a brigade makes very little difference, but it produces a break, and that is what is wanted.

1961. But although that diversity of opinion, and the consequent difficulty of arriving at a right conclusion on the subject, led to some delay, yet ultimately a modified proposal was submitted by your Royal Highness to the Indian Government, and that has been accepted by them?—Certainly. There was a reduction of 11 batteries, and the number of men per battery was increased, because Lord Sandhurst dwelt strongly on their being so weak that he could not bring more than four or five guns per battery into the field. Now the horse artillery are 157, non-commissioned officers and men, and there are 157 for the field batteries, and 87 for the garrison batteries. That is the new establishment consequent on the reduction of those 11 batteries, but retaining the full complement of men that were, represented by the aggregate, including the 11 batteries.

1962. So that as regards the two divisions of the subject on which your Royal Highness was immediately interested as looking after the interests of the British army, reductions have been made which have been accepted by the Indian Government as satisfactory?—I believe so; reductions have certainly been made, and I have every reason to believe that they were considered satisfactory by the Indian Government.

1963. And is your Royal Highness aware whether the reductions which were at the same time proposed in the native Indian army, with which this country has nothing directly to do, have yet been introduced?—I believe they have not, but of course that is not in my province.

Sir *George Balfour.*

1964. But reductions have been going on from year to year since 1861, which have reduced the number from 73,000 and upwards to 60,000 at the present moment?—I do not know what period you refer to; but I do not think those reductions to which Mr. Campbell-Bannerman refers were carried out then.

Mr. *Campbell-Bannerman.*

1965. Your Royal Highness is well acquainted with the relations between the War Office and the India Office, and the mode in which communications are kept up?—Certainly.

1966. There never has been any disposition, has there, on the part of the War Office to conceal anything from the India Office, or to take important steps without fully consulting their interests?—Certainly not, that I am aware of. I never heard of any such thing in any form or kind; in fact, I do not see how it is possible. I consider it is essential that there should be the most entire accord and mutual reciprocal interchange of thought when anything in the shape of a change is intended or proposed.

H.R.H. The Duke of *Cambridge*, K.G.

23 June 1874.

1967. Of course when an idea is entertained by the authorities of the War Office in an embryo form it is not possible at that very early stage to take the India Office into consultation; but the moment it approaches a more definite shape, it is the first duty and desire of the War Office to consult the India Office?—Certainly, that is my impression.

1968. And there are constant methods of doing that through your Royal Highness's assistant military secretary, or the estimate clerk, or some one acquainted with what is going on?—Anything military goes through the military secretary; of course in our portion of the department we have nothing to do with the actual finance, and of course those questions that are connected with finance would go from the financial branch of the War Office to the financial branch of the India Office, and how that is conducted of course I do not know; but the purely military portion is entirely carried on through the assistant military secretary.

1969. Does your Royal Highness happen to remember (to take an instance) what occurred with regard to the promotion of captains of artillery to be majors?—There was a great deal of personal intercourse between General Pears and the Secretary of State for War, and also I think with myself; but I am satisfied that there was also a great deal between the Secretary of State for War and General Pears; and I assume that all that was reported by the General to the Secretary of State for India, and that he got such directions and expressed such views on the part of the India Office as they thought advisable.

1970. Does your Royal Highness remember that he put forward a sort of alternative proposal?—He did.

1971. And that the actuaries employed at the War Office dissected that proposal?—Yes.

1972. And produced a paper for the information of your Royal Highness and the Secretary of State for War, before any announcement was made in the House of Commons upon the subject; that is to say, before the War Office was committed in any way?—Yes, certainly.

1973. With regard to the general question, I presume your Royal Highness is of opinion that India is a source of great difficulty to this country in regard to military organisation?—Of course it is a difficulty, because the service in India is very exceptional, and what might be very advantageous for European arrangements would not suit India. As I said before at the outset, I conceive that India is part and portion of the empire, and when we take into account how we are to organise the military forces of the empire, we never lose sight of the fact that we have India as a very large portion of the empire, that it must be defended, that it must have European troops, and that our organisation must be such as to be suited to it as well as to ourselves.

1974. It is not only that, as in the case of a colony such as Canada, we have to contemplate the duty of defending it in time of emergency, but there is the additional duty of maintaining a garrison of a very large strength in an unhealthy climate?—We have to garrison India

H.R.H. The Duke of *Cambridge*, K.G.

23 June 1874.

Mr. *Campbell-Bannerman*—continued.

quite as much and more than we have to garrison England, and therefore in that respect it is quite distinct from any colonial possessions. Of course we give garrisons to large places, such as Gibraltar, Malta, and so on; but there are other colonies that have no garrison at all, or a very reduced one; and therefore the questions of a garrison for a colony and a garrison for India are, in my opinion, quite distinct.

1975. And if the connection between this country and India were less close than it is, it is conceivable, is it not, that greater facility would exist for both raising recruits and maintaining an efficient army for the purpose of the defence of this country and the colonies in other parts of the world?—Certainly.

1976. We could in that case maintain the elastic army which we require without having so large a portion of it as we have at present at the full strength?—Most assuredly.

1977. And then, as we should require fewer recruits, we should have less difficulty in getting them?—Certainly.

Chairman.

1978. I am asked to put one question to your Royal Highness which is hardly within your experience perhaps, but it is as to whether the short service does not militate against re-engagement in India, inasmuch as the men would not be long enough in India to form Indian tastes and habits?—That is one of those points which experience alone can prove, and it is possible that it is so. All I can say is, that hitherto the service in India has been a very popular service, and we have every reason to think also that the long service is far more popular amongst the men than the short service. If that is so, then if you give a bounty no doubt the men would stay in India willingly; but of course that is a matter which can only be found out by experience, and that experience we have not yet arrived at.

Mr. *Fawcett.*

1979. Your Royal Highness is aware that a correspondence has been frequently referred to which has taken place between the authorities at the War Office and the Horse Guards and the India Office, in reference to military expenditure, and that a letter was written from the India Office in April last, containing one from the present Governor General of India, making certain comments on the charges which India had to bear. Is an answer being prepared to that letter?—It would be the Secretary of State for War who answers those letters, and it would be, of course, for the Secretary of State to give an answer to the question. I do not answer those letters. Any point that required a military reference would be referred to me for an opinion, and I should give that opinion if asked, and the Secretary of State for War would embody that in a letter to the Secretary of State for India.

1980. Has that letter from the Secretary of State for India and from Lord Northbrook been yet referred by the Secretary of State for War to your Royal Highness?—I think not; I do not remember that it has been; I should say not.

1981. I understood that you said that you felt yourself scarcely competent to express an opinion upon the financial effects on India of the short service system?—No, I do not, because I conceive that is a question which is with the Finance Department.

Mr. *Fawcett*—continued.

1982. Then when your opinion was asked of that system at the time when it was contemplated being introduced, you simply considered it in its military effects both upon England and upon India, and not at all with regard to its financial effects upon India?—Mainly on its military effect; but I understood that the question had been discussed between the Secretary of State for War and General Pears, or some of the Indian authorities, and that they were not indisposed to the arrangement being carried out as proposed by the Government at that time.

1983. Of course, one very important element in deciding whether that short service system ought to have been introduced or not was to consider what effect it would have upon the health of the men in India. Are you aware that Sir William Muir stated that, to the best of his knowledge, none of the medical authorities in India were consulted as to the short service system before it was introduced?—I daresay it was the case; I presume that they were not consulted; I do not believe they were; but it was a question as to military organisation which was deemed essential, and it was then, I believe, discussed with some authorities, with, I believe, General Pears and probably the Duke of Argyll himself, as regards the Indian view that might be taken, and I understood that they were not inimical to the change.

1984. But so far as the effect of this change on India was concerned, leaving out of consideration the financial aspects of it, on which you do not wish to express an opinion, it was very important as one element of the military efficiency of the change to consider what effect it would have upon the health of the army in India, and the natural persons to consult on that question would be the medical authorities in India, would they not?—Certainly; and I am perfectly aware that there are those who consider that the fact of men going young to India is a great disadvantage; on the other hand, there are others who say that too long service in India is a great drawback; so that probably the question is rather a balanced one between the two opinions, and if the men go for two or three years' service they are probably efficient men; they do not stay long enough to deteriorate in health, unless they volunteer for long service, when they fall into the habits of the long service soldier, who remained for the whole period of his service in India.

1985. But so far as the effect of this short service system on India is concerned, it must have been very important, before coming to a conclusion to adopt it, to have all the elements which affect the decision before the authorities, and would not one of those elements have been, what effect was the system likely to produce upon the health of the army in India?—Certainly, and I am not prepared to say that that was not done, because I do not know that it was; of course, if done it would have been done by the Secretary of State for War, and it may have been done by the Secretary of State, but I am not aware of that.

1986. When it was proposed to abolish the local European army in India, that proposal was most strongly objected to by all the members, I believe, of the Council of the Secretary of State for

Mr. *Fawcett*—continued.

H.R.H. The Duke of *Cambridge*, K.G.

23 June 1874.

for India, on the ground that it would increase the home charges, was it not?—I believe so.

1987. And, so far as their expectations that it would increase the home charges are concerned, it was very soon proved, after the amalgamation took place, that the home charges were increased, was it not?—The home charges may have been increased, but I am strongly impressed with the belief that the efficiency of the army has also been increased; and if so, probably the advantage in one respect has counterbalanced the loss in the other.

1988. But still, taking the years immediately after the amalgamation, and taking one item of expense, namely, that of recruits, that charge for recruits was increased something like sevenfold for several years after the amalgamation; what the recruits were obtained for for the local European army before it was abolished?—Yes; but I doubt very much whether you could have got the recruits in the old way for so large a body of men as you have now, because, when you got the recruits in the way that they were raised and sent to Warley, and passed on from there, the local army was very small compared with what the European army in India is now.

1989. But for several years, so far as I understand the Return, they recruited something like 60 or 70 per cent. at Warley of the number of men who were afterwards recruited under this more expensive system for the Indian army; therefore the fact you refer to could not have increased the cost in that proportion, could it?—I think that was a very exceptional recruiting, it was during the mutiny; and you will always find that during war the recruiting is very free, at the commencement particularly. I do not suppose many of those men stayed more than three or four weeks at the depôt. I doubt whether you would have found that great difference if it had been the ordinary recruiting which existed up to the period of the mutiny, or which would have gone on after the mutiny had been suppressed.

1990. But for these years after the amalgamation took place India had to pay a very greatly increased sum for recruits, namely, 170*l.* instead of 26*l.* 5*s.*, which is the figure given to us, but as that does not include a number of small items, we may say 28*l.* or 30*l.*, so that she paid 170*l.* where before she only paid 30*l.*; and yet, costly as was the system, your Royal Highness is probably aware that after that system had been in operation for a considerable number of years, Lord Sandhurst wrote a very strong remonstrance, to use his own language, against the extremely ineffective recruits, costly as they were, sent out to India?—Yes; but the reason of that was, that after the very heavy recruiting we had for the mutiny, the recruiting became difficult, and the consequence was that we did not get recruits at all at first, because, after a great effort, there is always a reaction, and, therefore, those years would be very unfavourable in comparison with the permanent normal condition of recruiting; and I think we ought, in considering this point, to look rather to normal than to the exceptional years, such as those that followed a great effort like the mutiny in India.

1991. But the time I am referring to is 10 years after the mutiny; I think the date of that despatch was in 1868?—If it was so, there may have been some exceptional reason why there was difficulty in getting recruits, but I am not aware what period was referred to; but I think at that time there was great difficulty in raising men in the time allowed for the purpose, and the consequence was that we were called upon to raise men in a very short time, to send them out for the trooping season; those men went out inefficient, and in such an unformed state as I should deplore to see them go in, whereas, if we had been authorised to take those men at the proper time, they would have been properly drilled and efficient men by the time they had to go out. Consequently it appears as if very heavy charges had been made for very inefficient men; but the real fact was that we might have had efficient men if we had only spent a little more money in raising the men, and done it in proper time. And that is what I contend, that it is very often real economy to spend a little more money; and I think if you were to raise the men in proper time, and give them really a fair time to be made into soldiers, you would economise in the long run.

1992. But still, as I understand what was done, the cost of these recruits was calculated, and India was charged what was supposed to be the cost. In charging her 170*l.* per head for them it is supposed that she is not charged quite enough, that they even cost England more than that; but still, so far as India is concerned, it seems to me to come to this, that you make India pay 170*l.* for a recruit, whereas before she paid 30*l.* for him, and because she did not pay more still than 170*l.* the recruits that went out were extremely inefficient men?—If I may use such an expression, and compare a man to a thing, the article sent out was not, in my opinion, a good article, whereas if the man is drilled it is a good article. I contend, that if a man is drilled, and you go to the expense of drilling him at home, you get more out of the man, and a better article, than by doing as formerly, when you sent him through Warley, and when he was merely taken, clothed, and sent out as soon as you could get rid of him.

1993. But, so far as the Indian taxpayers are concerned, whether the cause rested with the India Office or with the War Office, this fact is now forced upon our attention, that they paid 170*l.* for their recruits, and those recruits, for some cause or another, were extremely inefficient?—It is possible that it may have been so in many instances, but that I say was from a faulty arrangement; but I am sure that the principle which I enunciate is a sound one; that is all I contend for; I do not in the least deny the fact, because the fact as stated is probably correct; but I say if the principle which I contend for were carried out in its integrity you would get a more valuable article, and more advantageous for all Indian purposes than doing it in the other way, which is cheaper, but which, in my opinion, does not give you so valuable an article.

1994. When these views of yours, which I have no doubt been expressed to the India Office, have been stated to them, why do they object to carry out these suggestions of yours with regard to giving the military authorities in England a longer time to get those recruits?—I have always understood that it was on the ground of expense, that you would keep the man longer at home than

H.R.H. The Duke of *Cambridge*, K.G.

23 June 1874.

Mr. *Fawcett*—continued.

than they would wish you to keep him; and of course if you could prevent that it would be an advantage, but you cannot.

1995. So that, in the first instance, if these suggestions of yours were carried out, they would necessarily involve a greater cost, which you think would be compensated for by greater efficiency?—I think it is very likely that they would cause greater cost for the moment, but that they would produce so much better a result that in the long run it would be positive economy.

1996. But still the immediate effect, looking upon it immediately as a financial question, must necessarily be an increase of expense?—That is very likely.

1997. Before the amalgamation of the army took place, when the local European army was in existence, of course before the institution was abolished, the most careful inquiries were made as to the desirability of abolishing it. Now, are there any returns which show that that local European army was in any way less efficient; it is proved to have been cheaper, but is there any reason to suppose that it was less efficient than the army supplied to India by England at that time?—The reason for the change is obvious, because up to that period the East India Company had a local army of its own. When the East India Company was abolished the authority under which the local army served ceased to exist; it became an Imperial army, and the question then arose whether it was advisable to keep up two Imperial armies. There can be no two opinions that one army is more pliable, more available than two, and on that ground alone I should have said that it would have been undesirable to continue the local service. But, in addition to that, there were incidents which occurred that I would rather not refer to; but I may just refer to the difficulty about the artillery. That alone showed that there was a peculiar spirit manifested, which would probably disappear if it were one army, and I believe that even the men who were in favour of maintaining two distinctive armies from that time thought it more prudent to make the change; and I confess I think it would have been very deplorable if we had not made that change.

1998. With regard to artillery recruits, I understand that there is no Indian artillery depôt at the present time?—There is a general depôt; it is not Indian, but inasmuch as the great bulk of the artillery abroad are in India, you may assume that the great proportion of that depôt is for Indian purposes.

1999. Then there is not so much reason, as there is one general depôt, why artillery recruits should be sent out imperfectly trained as there is why infantry recruits should be sent out imperfectly trained, because your Royal Highness states that they do not give you sufficient notice as to when these infantry and cavalry recruits will be wanted?—No, there is not; but the fact is that we have had difficulty in recruiting for the artillery more than for other corps, and at that time we had very great difficulty, and we were obliged to send out drafts from every battery in England at the last moment, when great pressure was brought to bear to send these men out, and some men were sent that ought not to have gone.

2000. It is some years ago that this happened, I suppose?—No, this last year. That was a thing that I hope will not occur again. At the same time, as I explained before, it is impossible to tell how we may get through our difficulties in the labour market; but if we have great difficulty in raising men we must disorganise the whole force of the artillery at home in order to send thoroughly trained men out to India, and that is a very serious matter.

2001. Of course it is impossible for anyone to control the labour market; but again, looking at it as a financial question, this may happen; for all the artillery recruits which were sent to India, India has to pay the same as if they had been trained for nine months, and if the difficulties of the labour market increase, as they very possibly may, India has no security that for what she will pay for men supposed to have been trained for nine months, she will not actually get, as she got this year, a great many who have only been trained three, two, or one month?—I think it has been a great misfortune, as I said before, and one which I deplore more than any man, that men should have been sent under those conditions; but I hope that by degrees we shall get into such a good groove that it will not happen again, but it must take some time to bring about that result.

2002. I am not presuming, of course, to lay the smallest blame on the War Office or on the Horse Guards; I have no doubt, and we will assume, that everything has been done that can be done to send out the best recruits possible; but as you say recruiting depends upon causes which it is impossible for the military authorities to control, namely, upon the general state of the labour market and the demand for labour; but bearing that in mind, it is quite possible, is it not, that if the difficulties of the labour market are increased, however anxious the military authorities may be to send out properly trained recruits to India, India will have to pay for men who ought to have been trained nine months, and who have only been trained three, two, or one month?—As I say, it may occur, and I am afraid it has occurred; but if the recruiting is at all such as we hope and anticipate, I do not think with proper arrangements that ought to happen at all, and I cannot help hoping that it will not occur again. But I am sorry to say that the recruiting for the artillery has been very difficult. The difficulty has arisen from this fact, that all that class of men whom we require for artillery purposes, strong, tall, and powerful men, find such facility for employment in various ways that we do not get that description of men as easily as we used to do, and therefore with regard to the artillery we have great difficulty in getting the men. As a fact it is known that they are higher paid, but we cannot get the physique of the men, and that has been our difficulty.

2003. After all that has been said and all that is known about the great popularity of the Indian service, might it not be fair to conclude, that supposing it was possible for India to recruit for her own army, to have a separate European army, she would not find this difficulty about getting artillery recruits press so heavily upon her as it does upon England?—I do not think it would make the least difference; on the contrary, I think the competition in the market for recruits would

Mr. *Fawcett*—continued.

H.R.H. The Duke of *Cambridge*, K.G.

23 June 1874.

would be very objectionable; and one of the reasons why I for one always thought the double army was a very objectionable arrangement, was that there were two great armies contending in the market against one another.

2004. But the service in India, I think, is more popular than the service in England?—So it may be, and I am one of those who believe it to be particularly popular; still I think if you were to have two systems contending against one another in the labour market, it would make recruiting more difficult than having it under one organisation.

2005. In regard to the amount that India has, after the capitation system, been charged for recruits, I understand it to be made up in the following ways: take an infantry recruit, 30 *l.* is charged for his maintenance and pay for seven months; 17 *l.* is charged for the depôt charges; and then these two sums were added together, and one third of the aggregate amount was taken and added in order to represent the charge for deaths, desertions, and invaliding; that would represent about 33 per cent.?—Yes.

2006. Now, none of the army statistics show, do they, that the loss from deaths, desertions, and invaliding with the ordinary class of recruits amounts to 33 per cent.?—That is not a matter that comes within my province; that is a financial question, in the finance branch of the department, but I apprehend that nothing ought to be charged that is not reasonable with reference to the proportion of European troops for India; and I think that that is matter of adjustment which, of course, ought to take place between the two departments, so as to put no undue pressure of charge upon India more than she ought legitimately to bear.

2007. In speaking of some of the general charges which were borne by India I understand your Royal Highness justifies them on the ground that she has, in the case of emergency, the whole English army to draw upon?—Certainly.

2008. She has our reserve and our militia, you would say?—Certainly.

2009. But, then, reasoning of an exactly parallel kind would justify us, would it not, in obtaining some contribution from the colonies, because in a time of emergency they have our whole army of reserve and our militia reserve to draw upon?—Yes; but as I said before, I look upon India as positively garrisoned by European troops, just as Portsmouth, or Plymouth, or any portion of our country at home. Well, if that is so, that is a permanent charge. Now, with regard to the charge for the colonies, with the exception of such colonies as Gibraltar or Malta, which are also military, and are, of course, entirely on the same footing as the home stations, I look upon the colonies as having a very different connection with us; and whilst Canada is not having a single soldier except for Halifax, I do not think that you could charge Canada for anything on the ground that there is a reserve here when an emergency arises. India, on the other hand, being permanently and largely occupied with European troops, one-third of the army, I consider that she is in exactly the same position with reference to reserve as is the home country with the cadres and reserve; and therefore it was that I said that the home army was really a reserve quite as much for India as was the reserve army at home for the portions of the troops actually serving in the United Kingdom.

Mr. *Fawcett*—continued.

2010. But India has on many well-known occasions constituted a reserve for England, and she has more frequently done that than England has constituted a reserve for her; is not that so?—I think that all those questions must stand upon their merits; but if you allude to the wars in China and Abyssinia, I think nobody can deny that those questions were of as great importance to India as they were to the home country. For instance, the trade with China, no doubt, is very largely with England, but also it is largely mixed up with Indian interests, and therefore I say it is shared and shared alike by India and home. I contend that all our considerations should be Imperial, not at all home, and not at all Indian, but imperial; and that each should have its relative proportion according as you can make out that it is specially an Indian question, or specially a home question, as to charge I mean.

2011. The Abyssinian war and the Chinees war were wars which were essentially Imperial, were they not; India was not consulted about whether they should be waged or not?—India may or may not have been specially consulted, but that is a great Imperial question, which of course it is not my province to give an opinion upon; but at the same time I believe it must be admitted that the interests of the empire in those parts were so mixed up with the interests of India, that what was good and advantageous for one might be fairly considered as being advantageous for the other, and therefore I do not see why both should not take their share.

2012. In considering the financial relations between India and England with reference to military expenditure, have you taken into account at all that a portion of the effective strength of the English army in England is always being maintained at the depôts?—I think it is not so; you cannot rely upon the depôts for any real duty; of course if any emergency arises you must lay your hands upon every man, and then no doubt the depôts of the Indian regiments would come in; but, as a rule, I should say that the depôts for India are so young as regards the age of the men, and so inefficient that they really do no duty at all. I admit that when we had depôt battalions they did garrison some portion of the country; but that is done away with, and you merely form a body of recruits to be drilled and sent out, who are available for any sudden emergency, if you like, but so inefficient in respect of military training that you cannot look upon them as men to be relied on for any real duty.

2013. Still they are trained for three months, and under the present plan they will be passed on into the depôt battalions?—Yes, that is with a view of making them good soldiers; it is with a view really of making them useful when they go to India, because a man who has been three months in the ranks at home will be a much better soldier than a man who has come straight from the depôt.

2014. Still, as a matter of fact, suppose there are 4,000 or 5,000 men in the Indian depôts at the present time, or men who have been passed on to the battalions, for these four months whilst they are maintained by India, what really happens is this, that those men are classed in the Army Estimates as constituting a portion of the effective strength of the army in England?—Well, candidly speaking, I should never put them under that class at all; I should consider

H.R.H. The Duke of *Cambridge*, K.G.

23 June 1874.

Mr. *Fawcett*—continued.

them as recruits and as non-effectives, and so they are.

2015. But if the Secretary of State for War, or anyone, were asked how many soldiers there are in the United Kingdom at the present time, he would indubitably include those men?—He probably would; but I as a military man, I would certainly exclude them; and I think the country would really know its position better if they were excluded, because we often hear that there are 70,000 men in the country, whereas 10,000 of them may be perfectly useless; and yet you require to have them, because if you have not them you are not training them to become soldiers; but you cannot rely upon them as so many available men. I think all these statistics are apt to mislead when you take them *en bloc*. You ought to take them *en détail;* you ought to take effectives and non-effectives, and it would be astonishing to see how many are non-effectives out of those that are given as effectives. I look upon all those men for the purposes of India as non-effective men at home.

2016. So that you agree in the opinion that the strength of the army is not at the present time regarded as the strength in England, stated in such a way as is statistically correct?—I think it is very apt to lead those who do not understand the details to believe that we have a larger force at home than we have.

2017. But the opinion that Lord Sandhurst the other day distinctly expressed, as I understood, was that as Commander in Chief in Ireland, if he had not these Indian depôts he would feel that it was necessary to have more men to increase the strength of the army there?—Well, I should doubt his being anxious to rely very much upon the value of these men. They are so many men, no doubt, but they are not soldiers; and if you say that you want to have 150 men at, say, Templemore or Buttevant, there may be 20 of them who are recruits; they go for 150 men, but they are not soldiers; and therefore, really and truly, they are not what I should call available men; in fact, I look upon all those men at Indian depôts as essential as necessary, and yet as non-effectives.

2018. With regard to the improved health of the Indian army, the statistics have to be considered with this correction, that there is a great deal more invaliding now than formerly, is not that so?—I am afraid there is; because there is no doubt that we have of late years got younger men, there is no question about that. I do not think that the recruits have deteriorated, but I think they are younger, because I think the means of getting employment have so very much increased that a lad comes earlier to the point of making up his mind whether he will become a soldier or enter upon any other profession or calling; and the result is that you get younger men, and, *pro tanto*, less physically strong men; and if those men go to India, or even to any other tropical climate, you will find that the physique does not keep up to the mark; they are invalided, and they throw a great weight of expenditure upon us in having to send them back again; there is no doubt of that.

2019. They throw that weight of expenditure upon you and also upon India?—Well, I think upon both home and India. Of course, home suffers quite as much as India. It is owing to the fact that the men are taken too young in physique, and it is one of the most difficult things to deal with, because you ask for no baptismal certificate, and you must guess the man's age; and if a lad is a likely one, the officers are so anxious to get him that they will take him. Of course, he will say that he is 18, when very likely he is only 16.

Mr. *Fawcett*—continued.

2020. In reading therefore the statistics comparing the health of the Indian army now as compared with what it was some time since, we must remember that there is more invaliding now; that should be taken into account, in seeing the sanitary condition of the army?—Yes; but at the same time every regiment going to India is thoroughly inspected, and every man with the least screw loose is put back and does not go, and another is put in his place; so that, as I said before, my fear is not for the army in India; I think you will keep that army efficient, if we have the means of raising men at the proper time; but my fear is for the army at home; I think there is much more risk of having weedy men at home than of having such men in India; and I know that at this moment there are many men in the artillery who have been sent back from India who do for home service in peace, but if there were an emergency a great many of them would not be fit for active service, and the consequence would be that we should find ourselves in great difficulty; and I am much more anxious for the army at home, as far as physique goes, than for the army in India. I mean that as bearing upon the question as to the article sent out.

2021. Have you any records (I suppose they are at the War Office) of the amount of invaliding?—There is a record at Chelsea of all the invaliding, which goes afterwards, I believe, to the War Office.

2022. You have a general impression that that has been increased?—I have that impression.

2023. Your Royal Highness has pointed out that you think about 18 or 19 is the best age to send recruits to India if trained?—I do think so, if the man has been kept long enough to be sure that his physique is good, and if he has been well fed so as to insure his having had good keep.

2024. And a time comes when it is inexpedient, if it can be prevented, to send out men to India, I mean as they get on in middle life?—Just so. I think that those men who go out to India in middle life are probably broken down in some way, probably indifferent as to character, or somehow or other they have been unsuccessful in life, and they took to soldiering in preference to any other occupation they had commenced; whereas if you get a lad at 18 or 19, he is a lad, and has not started in life, and that is the sort of man that makes the better soldier; whereas a man who has been in some trade, and says, "I will go in for soldiering," though physically an older man, he is more set in his habits, and is not near so good an article as the lad of 18 who comes in fresh.

2025. Considering the nature of the Indian climate, it would be a more serious disadvantage to India; would it not, to have a very old recruit enlisted than it would be to England?—Decidedly; the young recruit is the best of the two, no doubt. At the same time, if I could positively ensure a good recruit at 20, I quite admit that that is the proper age.

2026. With regard to drafts, it now often happens, does it not (I am again simply speaking of

Mr. *Fawcett*—continued.

H.R.H. The Duke of *Cambridge*, K.G.

23 June 1874.

of it as a financial question, of course I have no opinion on military matters) that a man is sent out as a draft to India, when the Returns show that he is even as old as 40, 45, or 50, and when he is, according to your Royal Highness's opinion, far too old for the Indian service, and he is charged to India as a recruit?—I think nothing like that age ever is sent out as a draft. There may be men of a certain age as non-commissioned officers, who go out with regiments or drafts; the man would go out with his regiment to finish his time, but I should doubt any man being taken as a recruit up to 30; he has no business to be enlisted, and if he is there is some default. Any older man must have been one sent out again; I mean having been an invalid, and having recovered his health, and then sent out, and it is possible that those men would go out with the drafts; even in that view they would not be drafts, but they would go with the drafts, because it would be the only way of sending them. But that would be the only way, as far as I can understand, in which that could happen. If it has happened, I entirely concur in the opinion that anything above the age of 22 or 23 for a recruit is very objectionable, because when the recruit is above that age you cannot form him into a soldier at all.

2027. Except that the War Office and the Horse Guards will do all that they can to send out recruits of the proper age, India has no security, has she, that she will receive recruits at the right age?—She has just the same security that England has, that we get the best article to be obtained in the open market. As I have often said before, if we had got conscription we should only have to say, "We will take so many men of a certain age," and we should get them, because then the law compels them; but when you have to go into the market you must get the article at the easiest rate for yourself, and the best that you can get; and I believe there would be no particular difficulty in getting them, provided you do not take them too old; but I believe that the limit of 20 years is a disadvantage in getting the proper description of men, although I admit that 20 years of age is the proper age for a man to go to India.

2028. You stated, in your evidence, that India had no reserve of officers; but are there not a great number of officers in India, for instance, to refer to one class, colonels, who are waiting for a pension, and who are doing nothing?—I believe you must take the present state of things as very exceptional; we are still in the transition state from a local army to an Imperial army, and from a native army on the regular system to a native army on the irregular system, the one with many officers and the other with few. We have not arrived at the point of getting rid of all the superior officers who have arisen under the former state of things, which is a great disadvantage to India, because the sooner you could get rid of those officers the better for India, the better for the finances, and the better for every military organisation; and a large outlay, in my humble opinion, would be an advantage in order to accomplish that point; but once accomplish that point and you are very much under-officered, because you have no reserve whatever. So much is that the case, that when you had the Abyssinian war the Looshai expedition, and the expedition to China, the first thing they had to do was to cast about everywhere for officers, and they could not get officers for the native regiments; and you may depend upon it that when an emergency arises there will be a great want of officers for India. It is a most serious question, and I cannot press it too much upon this Committee; you have not got any reserve. Lord Sandhurst (I believe it will be found in some of his writings) regretted that the arrangement which existed before Lord Hardinge's time, of having a very much larger number of officers in European regiments had been changed. Formerly there were four officers with 10 companies, now you have eight companies only with three officers to a company, and they are so put to it that many companies are in the charge of sub-lieutenants at this moment, in time of peace; what will it be in time of war? it is a very serious matter.

2029. What is the under-officering of the Indian army at the present time due to; is it due to recent military changes?—Decidedly. First of all, the great reduction of officers which took place in Lord Hardinge's time, then the reduction of two companies which took place, I think Mr. Campbell-Bannerman said, in 1869; and then the system now adopted in India (to which I take no exception, I do not say it is not a good system) of having only seven officers for a regiment of infantry or cavalry. When you had a full complement of European officers for a native regiment you always had the proportion of officers you might require in reserve; whereas now the seven officers are all that you have got, and you have no reserve at all.

2030. In referring to these colonels, who you said were very costly to India, you seemed to hint that it would be advisable to do something to get rid of the system. Do you mean something financial?—I think that, in every point of view, it would be a great advantage, because, though I speak with great diffidence, having unluckily not been in India myself, I firmly believe that there is not that flow in the junior grades which enables the proper *esprit de corps* and feeling in the native army to be kept up. They are all superior officers; I consider that a great disadvantage; I think that there ought to be a certain number of captains, subalterns, and field officers; now they are almost all field officers, and I consider that a most serious and objectionable mode of dealing with the army which always ought to have a certain flow from below so as to keep up the spirit, the *esprit de corps* of the service. Therefore I say if you could get rid of the large number of senior officers that you allude to, I believe in the long run it would be a great advantage to India.

Mr. *Onslow*.

2031. Does your Royal Highness think that India is at the present moment getting full value, as regards the recruits, for the money which she pays?—Well, that, of course, is a very difficult question to answer; she ought to receive the full value, and I think, with good arrangements, she would receive the full value; but I think there have been some little difficulties thrown in the way of recruiting which perhaps have prevented her getting the full value; but I think the arrangements would enable us to give her full

H.R.H. The Duke of *Cambridge*, K.G.

23 June 1874.

Mr. *Onslow*—continued.

value if we could get over those little obstacles which from time to time have been thrown in our way.

2032. You hope that in a year or two those little difficulties may be overcome?—I do, and that it will come all right.

2033. Will not one of the effects of the short service be this, that a soldier will go out to India, and will be paid for wholly by India during the whole time of his service, and that he will then come home to England and be put on the reserve, and will be in the English Army Estimates as efficient; the whole cost of that man having been paid for by India, he will be in England practically employed for Imperial purposes? — Of course, if his services have been entirely in India, his actual services with the colours, then his actual soldiering service will have been entirely Indian; and then he will come back upon the reserve army, and become to that extent of Imperial value; but that, again, is modified, because I say the reserve which we are trying to create is just as much, in my opinion, a reserve for India as for England; supposing at the mutiny you had had 60,000 reserve men, or even these 30,000 militia reserves, the first thing the authorities would have done would have been to take the whole of those men and send them out bodily, and distribute them in the regiments there, or to send a proportion of them and other regiments in addition, with these reserve men to fill up; therefore, virtually, these reserve men are for the empire, and they come in for Indian as well as for home or Imperial purposes.

2034. Would not another effect of short service be this; say a regiment comes home from India 300 strong; this regiment has immediately to be recruited in England to a very large extent; it stops in England five years, and is again sent out to India with a large number of these men, having one year or less to serve; these men leave India as soon as they possibly can, not liking the climate or the country, and India will have to go to an enormous expense in having to fill up these gaps?—That is one of the things that I have suggested as showing the difficulty of giving an opinion as to what real effect the short service will have upon India. If that were the case which you point out, no doubt it would be very disadvantageous; but in the present arrangement the idea is that the regiment would remain at home much longer than it used to do; instead of five years it would be 10 years; 10 years abroad and 10 at home; and during that time these 300 men that had enlisted at one time would probably, from casualties and other causes, have much diminished, and others would have taken their place; and by that means you would have a greater dispersion of years than you would imagine, from the fact of bringing a regiment home, and getting all men of one age and one length of service; but if it were to go out again after five years, no doubt what you suggest might be the case.

2035. Is it possible under the present system to call for volunteers for India, well trained volunteers from other regiments?—There is no reason why you should not call for them now as you did before, paying the bounty, because of course if you take a man from one regiment to another, you pay the bounty. Now, you do not pay a bounty from one linked battalion to another, but you do from one regiment to another.

Mr. *Onslow*—continued.

2036. If, therefore, those volunteers were called for, India would have, in addition to the payment for the recruit, to pay for the bounty?—In that case she would pay for the bounty, certainly.

2037. As regards the number of recruits for which India applies, it is practically impossible, is it not, to know beforehand how many she may want; it depends a great deal upon whether the season is healthy or not?—Yes.

2038. And she only knows at the end of what is called the hot season how many men she has lost during that season?—Yes; and yet we are called upon now, at this time of year, to say what amount of transport we require for the recruits that are to go out during next winter; and if we make any mistake, I do not mean really a mistake, but I mean if there is anything different from what we anticipate in accordance with what you have just stated, we are suddenly called upon to fill up vacancies which we do not know how to fill up, because we assume certain things, and find that more men are required. That is just our difficulty.

2039. Do you think that, considering the large sum paid by India for her military establishment, the Viceroy in Council should be consulted on all important organic changes before effect is given to them?—No, I think that is out of the question. There is the Secretary of State for India in Council at home; he is a Member of the Cabinet, and no large organic change can be adopted at home without the Cabinet, in which there is a representative of India; and, of course, without knowing in the least what passed, I apprehend that this question of the short service was all discussed fully in the Cabinet, that the Duke of Argyll, then Secretary of State for India, was present, and that if he had had any objection to make he would have made it. Therefore I cannot see that Indian interests were not thoroughly guarded. As to details, that is another point; but the general principle of any great change must be accepted by the Cabinet, of which the Secretary of State for India is a member. Therefore nothing can take place of any consequence, financial or organic, that is not really known, or ought not to be known, to the proper authorities in India. Of course, in a case of that sort, if there is any point that the Secretary of State for India would not like to give an opinion upon himself, he must tell his colleagues that they must wait until he has consulted the authorities in India; he has the power to do that.

2040. But, practically, judging from what has happened, I believe there has been no time for the Secretary of State to apply to the Viceroy in Council, or get his opinion?—Of course, if the Cabinet think it essential to come to a decision on very short notice, I assume that the Secretary of State for India considers himself justified in taking the responsibility. If he does not, he will say, "No, I will not take the responsibility; I must confer with the Government of India."

2041. If it is a fact that there is now more invaliding than formerly, is not one reason of it that at the present time doctors are much more inclined to send invalids to England than formerly?—I think the facilities have caused a great number to be invalided, and that many more men are

Mr. *Onslow*—continued.

are sent home, not for discharge, but for change of air. Formerly they were never sent home for change of air, and I am not sure that it is not a good plan to send them home, just as officers frequently go to the depôts, who are not inefficient, but have temporarily become so for Indian purposes, and by the time they have had their turn at the depôt, they are quite efficient again for India.

2042. I think you said just now that you thought all persons would agree that the interests of India were mixed up with Abyssinia?—I did say that.

2043. I know that, in England it is what is called a popular idea; but, as a practical fact, are you aware that India has no more to do with Abyssinia than with Ashantee?—I think, if the prestige of our name had been injured in that part of the world, it would have been a great loss to our interests in India, and therefore I contend that India had a great interest in that war. I think, if there were any loss of prestige to the Imperial interests in that part of the world, it must be a serious loss to Indian interests.

2044. But, as a matter of fact, the natives of India no more knew where Abyssinia was than they knew where Ashantee was?—I was talking of English interests in India; I am assuming that English interests combine native and European too, and in that point of view I think you would find that it had a great bearing upon India.

Mr. *Dunbar*.

2045. Since the recent changes is it not the fact that a very large number of colonels in the army escape duty?—Yes.

2046. You do not consider them such a reserve of officers as you would like to fall back upon if a disturbance took place?—No; the reserve of officers I refer to was in the junior ranks, and I say that whilst we are very much over-stocked in India in the upper ranks, I believe we are very much under-officered in the junior ranks; and that any arrangement by which we could get a considerable supply of officers in the junior ranks would be a great advantage.

2047. Some of the witnesses have told us that one of the advantages to India of the present centralisation scheme is this, that if a draft is going out, and there are not a sufficient number of men properly trained, the number can be made up from the limited battalion. I understand your Royal Highness not to agree to that?—I do, and I do not; I agree on the principle that, theoretically, that is the case; but I say that, militarily we must see how the men take the new system of being transferred from one linked battalion to another. I dare say you are aware that there has been a great deal of feeling shown on that point; it may wear out, and if it does it will be a great advantage. We are in a tentative state, and I should not like to risk, militarily, an opinion which might not be borne out; but I hope it will be as I have said.

2048. I understood your Royal Highness to say just now that the mode of recruiting could not be altered with advantage to the empire. I suppose the present system your Royal Highness considers the most economical and efficient for providing recruits for the general service of the empire?—With regard to the system of recruiting as a system of going into the market, I do not see how you could apply any other system than the one you have now. I certainly did say that I thought it would be very detrimental to have two systems running side by side, bidding against one another for the same class of men for two services, which really are intended for one.

Mr. *Dunbar*—continued.

H.R.H. The Duke of *Cambridge*, K.G.

23 June 1874.

2049. I will direct your Royal Highness's attention to the subject of the organisation of the brigade depôts and linked battalions, and ask whether you consider that the most efficient and the most economical to provide for the whole wants of the empire?—That is a very large question, which time alone can prove; if the new system succeeds, I cannot help thinking that it will probably be the best that can be adopted, but it is very tentative. There is no reason at present to suppose that it will not answer, but I cannot say that I should be prepared to affirm that it would.

2050. I suppose, if your Royal Highness simply had to provide a certain number of recruits for India, you might do it for less per head than now?—No doubt if you took the men in bulk, without reference to their being trained, you could get the men as under the Warley system, clothe them, and send them out; but I think a man so raised is not a soldier, and I contend that we ought to send out from home soldiers to India; and I think that every one of those men, whatever the establishment is, ought to be fully efficient, and to do that you must have depôts, and you must have them, not on the system of having so many men only, but they must go out thoroughly trained.

Lord *George Hamilton*.

2051. Your Royal Highness has been asked a question concerning Warley, and perhaps I might just explain before I put the question which I purpose to put to your Royal Highness, what the contention of the India Office is. The representatives of the India Office have not contended that the recruit who was trained a month or perhaps two months at Warley was as efficient a soldier as the recruit who is now trained seven months, but their contention was that the great difference which they had to pay between the cost of the Warley recruit and the present cost was scarcely compensated by the increased efficiency. Now the question I should like to ask your Royal Highness is this: If we pay an additional sum for increased efficiency, and if there be a great difficulty in getting recruits at the right time of year so as to give them that more efficient training, would you think it fair, or would you think it unfair, that India should, in the case of those recruits not fully trained, pay the cost of their actual training, and not the cost of the training which they are supposed to have undergone, but have not undergone?—That is a very delicate question to answer; it depends upon how this has arisen. I have always understood that the reason why we were not allowed to recruit in proper time was that it would add to the expense; I have no doubt it would, but it would only add legitimately to the expense; and if an obstruction is put in our way I do not think it is fair to charge the Imperial Government with that. I think the Indian Government should give us authority to recruit the men in proper time, and in the long run I believe it would be found to be a cheaper arrangement.

2052. Sir Seymour Fitzgerald wishes me to ask whether it would be possible for the Indian

H.R.H. The Duke of *Cambridge*, K.G.

23 June 1874.

Lord *George Hamilton*—continued.

Government to intimate to you in time what their requirements would be for the ensuing year?—If we had an intimation of what the requirements would be in proper time, of course we should be able to give an approximate estimate of the length of time that we should be in raising the men, and of course you could judge by that means whether they would be long enough at the depôt to make them efficient.

Sir *Seymour Fitzgerald.*

2053. Does your Royal Highness think it would be possible for the Indian Government to let you know in proper time for your purposes; what their exact requirements would be?—No, for the reason stated by the honourable Member for Guildford, who said that it depended on the seasons; the hot season is the period, and that is just the time when we ought to have the men, and to be prepared to send them out for the ensuing autumn and winter; and the difficulty is to get that information which we require in time to raise the men. I think it would make an immense difference if we had a little more latitude given in this respect, and it would be real economy; I admit that it is susceptible of being more expensive, apparently; but I really think in the long run it would be found to be cheaper.

Lord *George Hamilton.*

2054. Your Royal Highness is aware that under the old system a lump sum was paid, called the capitation rate?—Yes.

2055. Under the present system India pays actual charges, which are arrived at by assuming that a recruit undergoes a certain amount of training, and in these charges any charge connected with the depôt which is capable of being reduced to an arithmetical test is included, and the result is that one office, the War Office, of course, includes as many items as possible; whereas the India Office tries to exclude as many as possible. Do you not think, Sir, that if some agreement could be arrived at by which a lump sum could be annually paid, your Royal Highness, as Commander in Chief, would be more free, inasmuch as you would then be able to take any course which you considered would secure better recruits, and you would know exactly the sum which you would get from India?—Of course it is all a matter of account how you value the services of a man to India, and how much of his services you value towards the force at home; but I cannot imagine that there would be any such great difficulty in giving a fair estimate of that account between two offices, and then putting a liberal average for both; if that were once adopted, of course it would have from time to time to be changed, because the cost of everything increases, and therefore the cost of a soldier increases; look at all the institutions you have now; you have got gymnasiums and musketry instruction, and every sort of advantage, all very essential, but all adding largely to the cost of the recruit; that which was a fair average 30 years ago is not a fair average now; it must fluctuate therefore to some extent; but I think if every ten years you could make a fair average as to what ought to be charged to India, and what to England, that would be a much better way of dealing with the question, and much better than any differences between the

Lord *George Hamilton*—continued.

two offices, which I deplore immensely, and think very unfortunate.

2056. I put that question with a view of suggesting a lump sum that should be paid even for a less number of years than 10, say five; because it seemed to me that you, Sir, as Commander in Chief, could then make any alterations which you might think expedient, and you would be able to know exactly the cost of these alterations, and would know exactly the sum which India then, under any circumstances, would have to pay?—Certainly; what I always say is, that though I quite think that we could not ask the India Office into council as to the original views that we might adopt as to organisation, there is no doubt that we ought not to make any great change in organisation, without taking full counsel with the Government of India; and I apprehend that no Government would ever dream of doing such a thing. It seems to me an impossible thing to do. If it has been done, I do not understand how it can have happened; certainly it never has been done by me.

2057. Your Royal Highness would not object to some system of lump payment, such as I have indicated, because you think it would, perhaps, give greater latitude to the War Office?—I think anything that would give greater latitude to the War Office, so as to adjust the charge fairly and liberally to both sides, is what I should adopt. What that should be I am not prepared at this moment to say; it is a very difficult question.

2058. But the present system does rather engender distrust between the two offices, does it not, inasmuch as an actual charge is arrived at by a large number of small items?—I think if you could get rid of small items, and get a lump sum, it would be an advantage. In making up the lump sum, you ought to be very cautious and go fully into detail about small items; but when once you get to the proper sum, I think then I would leave out all small items. Once arriving at that point, it would be far better to have a lump sum than go into all these small items.

2059. If there is no difficulty in arriving at the actual cost of the recruit, it seems to me there is no difficulty in arriving at the lump sum to be paid annually?—I cannot see what the difficulty is. I have always thought that it was a matter which might be adjusted; but, of course, I should not like to give an opinion offhand, because the financial part of the question does not rest with me.

Mr. *Stanley.*

2060. With regard to that last question, I think I understood your Royal Highness to say, that even if a capitation rate were agreed upon changes must be made from *time to time*?—Certainly, it must be so.

2061. I do not know whether your Royal Highness's attention has been directed to some evidence given by Sir Thomas Pears as one of the representatives of the India Office the other day, in which he stated, in answer to a question, that he considered that in the event of any reduction being made in the total expenses, India would probably claim a corresponding reduction in the capitation rate; whereas he did not so clearly admit that India would assent to a corresponding increase, if a total increase of expenditure were necessary. I should like to ask your Royal Highness whether, assuming that the

principle

Mr. *Stanley*—continued.

principle of readjustment was to take place from time to time, it would not be merely a transference of the burden from one kind to another, if you would have to consider whether a question became one of organic change, and therefore affecting the capitation rate, or merely one of detail, which did not affect the capitation rate?—That, no doubt, would be a delicate and difficult subject to deal with. For instance, take gymnasiums; the India Office may say, "Why should we have gymnasiums at all; have we been consulted; no, we have not been." I think in these cases we ought to take a liberal view, and assume that none of those improvements have been adopted for the army that are not essential for the portion of the army serving in India or elsewhere, and I think that should be taken as a necessary increase of expenditure just as meat may increase in price from year to year. The fact of the soldier having to be trained in gymnastics, or in musketry, no doubt causes an additional expense, but at the same time it gives a better article. Therefore you must assume that that is as essential for a soldier serving in India as for one serving at home. I think that would be the proper mode of viewing the case. A question of difficulty is where you have to raise the pay of a soldier, for instance; that is a great organic change. If you propose to pay 2 *d.* a day more at home, I think the Indian authorities ought to be made aware of it before that is done; but I apprehend that in those cases it always is so.

2062. I think your Royal Highness has already stated, that in the usual course communications may be made either in the Cabinet or through the financial branches, or with reference to the effect of minor details information may be got through the assistant military secretary?—Yes.

2063. I suppose your Royal Highness would be disposed, with reference to the assistant military secretary, to say that his functions would be limited to those of information as to administrative points, and would not extend in any respect to finance?—He has nothing on earth to do with finance, and, in fact, the Commander in Chief has nothing to do with the India Office directly whatever; but there is, and must be, so much dealing of a military character between the India Office and the War Office in consequence of the very large number of troops in India, that it is a great advantage to have a military man who interchanges thoughts between the two offices on every occasion; and the assistant military secretary for Indian purposes is employed on that duty. We have found it the greatest possible advantage; we have always had the most cordial feeling between the two offices, and I attribute it in a great degree to the fact of our having such an officer, and to the very satisfactory manner in which those duties have always been performed. We have had that now ever since the amalgamation took place. There is not a single thing that takes place, where India is affected in a military point of view, in regard to which the military secretary is not requested to go and tell the authorities at the India Office what we think about it and to learn their views, and if there is any difference of opinion, in nine cases out of ten it is arranged without further trouble; but if we think any reference is necessary then, of course, we should have to refer the point officially. Otherwise the arrangement made is communicated in the ordinary way.

Mr. *Stanley*—continued.

H.R.H. The Duke of *Cambridge*, K.G.

23 June 1874.

2064. Two opposite views, as perhaps your Royal Highness is aware, have been put before this Committee; the one is that every expense should be dealt with as a strict matter of account and charge, division being made in most minute detail; the other is that the policy of India paying the uttermost farthing should be abandoned, and that, in fact, the Indian Government should have the recruits supplied to them at no greater cost than the actual pay, and food, and clothing of a recruit. I suppose I should not be wrong in interpreting your Royal Highness's views to lie between those two extremes?—I am between the two; I do not go either one way or the other; I think there ought to be a fair and liberal adjustment between the two offices; I think no advantage should be taken either on one side or the other, but that what is fair and reasonable should be charged, whether for home purposes or for India.

2065. And I suppose that your Royal Highness would look at the question as one to be guided by questions of Imperial rather than of local policy?—Entirely Imperial; I do not know what Indian policy means unless it is Imperial, or what home policy means unless it is Indian in military questions. I consider it is the empire that we must look to.

2066. And it would be in that light that your Royal Highness would look at the financial questions which are connected with the army?—Certainly; the army is an Imperial question, and must be dealt with as such; and therefore I contend that it must be fairly and liberally arranged between the two departments.

2067. With regard to the officers at the depôts, I think your Royal Highness has stated that many of those officers now come back from India to do duty in England, being unfit for service in India, but perfectly capable of doing duty at home, and that in that way they recover their health?—It frequently happens.

2068. Then if instead of their being at the depôts they were on sick furlough would it not be the case that their pay would be wholly and directly paid by India?—They would be all paid by India; but what is more, you would be obliged to have additional officers in India to make up for the deficiency of men on sick furlough; whereas now you are not obliged to do that, but you have merely the ordinary complement of officers. I contend that if you had not this means of making many of these men who come home on sick leave available for India, you would require to have more officers in India in order to give leave to those who are in India.

2069. With regard to the question which your Royal Highness was asked about doubling up batteries of the artillery, would it not very greatly affect the question of relief?—Very largely, of course; in fact, it would affect everything; it would entirely upset the organisation as it at present exists; you would have to re-organise the whole force to that extent, reduce the number of batteries, and so on, therefore making the relief different from what it is at present.

2070. I suppose the matter of adjusting the roster for foreign service is one at all times of considerable difficulty, which would be very greatly complicated by changes in the establishment?—No doubt.

2071. With regard to the linked battalions, your Royal Highness has spoken of some diffi-

H.R.H. The Duke of *Cambridge*, K.G.

23 June 1874.

Mr. *Stanley*—continued.

culty which is believed to exist in getting men to transfer their services from the one battalion to the other; there is some difficulty in getting men to enlist who think that they may be so transferred?—There is such a feeling, as I understand, amongst the men; that is what I have gathered from what I have heard amongst the recruiting officers.

2072. It has been the common practice in past times, has it not, in the army, for a man to be transferred from one regiment to another, on the application of a brother?—Certainly.

2073. And I suppose that if such reasons are recognised as influencing a man's transfer from one battalion to another, awkward questions might arise if a man, having been transferred from one regiment to a linked battalion of another regiment in order to join a brother, was afterwards transferred from that linked battalion to the corresponding linked battalion?—Of course the man would not like it at all.

2074. In continental armies I think the organisation is almost always approaching to the brigade or the regimental system in artillery; I think no continental army is organised simply upon the unit of the battery?—None, that I am aware of.

2075. And all your Royal Highness's experience has proved that in all large armies the organisation has been so arranged either in regiments or in a larger unit, at all events, than the battery?—Always, as far as I am aware.

2076. With regard to the question which your Royal Highness was asked by the honourable Member for Guildford as to a reserve man who, having served wholly in India, would have been trained wholly at the cost of India, would not the fact be that India would pay for the service which she had taken from the man, and that England would pay for the reserve service which she had taken from the man; each would pay in their own proportion for the fair amount of work which the man had contributed?—So it appears to me.

2077. Has your Royal Highness's attention been directed to a paragraph in Lord Northbrook's letter, enclosed in a letter from the India Office to the War Office of the 14th of April last, in which, at paragraph 30, Lord Northbrook in Council recommends, "That the charge for the home depôts of regiments serving in India should be divided into two parts, the one representing the value of the presence of such troops at home, and of the general service rendered by them; the other, representing the value of the labour of raising and training recruits for the battalions in India. The latter may be fairly charged to this country, while the former should be borne by Imperial revenues." Might the Committee ask if your Royal Highness has any opinion to express upon that point?—I think that is a very fair way of putting it; I should not object to that.

2078. The second recommendation is, "That the charge for the cost of training the infantry recruit should be limited to three months, during which he remains at the depôt"?—That I take exception to, because I think that no man could really be considered a trained man unless he had been six months at the depôt.

2079. We have had it quoted as your Royal Highness's opinion, and as an accepted fact, that the recruit's training should occupy a certain number of months at the depôt according to the

Mr. *Stanley*—continued.

arm of the service in which he was placed; but we have not had any statement as to what that period of service is based upon. I presume that the period of service now occupied by the recruit's training is occupied by duties which were not in existence at the time when Warley was the Indian depôt?—No. There was no musketry instruction in those days, and no gymnasiums; all those are novelties since the days of Warley. I do not think the men were armed at all at Warley, or very few of them.

2080. Is not the period mentioned for the training of a recruit carefully considered, with reference to the various considerations which are necessary to make him effective?—Certainly; for instance, as to merely setting him up and making him supple in that way, and then the gymnasium, and then the drill with arms; I do not think you could say that a man is drilled with arms under three months. Then comes the shooting and then the battalion drill; so that six months is the very shortest time that you can consider sufficient to make a man a soldier; but if a man was to land in India with six months' training, he is fit to take his place in the ranks, and he ought to be able to take his share in the duties of the field, if necessary.

2081. And the same thing applies to the mounted service, I suppose?—The period of training for recruits for the mounted service is nine months; there are men who can get through their drill quicker, but that is rare.

2082. And there is a difference between them and the field batteries?—We allow a month for that. The gunners do not ride at all; they have other duties to learn. We allow eight months for the field batteries, and nine months for the horse artillery.

2083. If we assumed the cost of a recruit to be estimated at a certain sum for a certain training, and if we made a corresponding reduction for so many months' less training, would not your Royal Highness consider that we ought to make a considerable increase in the cost, if a man was kept over the normal time?—Of course. There is no doubt, as I said before, that it is likely to lead to an apparent temporary larger expenditure; but you get so much better an article, that I think it is quite worth it.

2084. And, finally, I think I understood your Royal Highness to express a very decided opinion in favour of a number of cadres as against the small number of large battalions fully up to the strength?—Quite so. I should think if you had not cadres you would not keep up an army at all, because, in that case, really to keep up an army such as you require would be to maintain it at such an enormous expense that the country would not stand it. I think India ought to bear its share of that expenditure. Of course, I admit that the Indian establishment in rank and file ought to be considerably larger than the home establishment, but it should be on the same organisation as regards battalions or regiments, with a larger number of men, because the ordinary daily duties and the requirements of soldiers in India are distinctly more important and greater than they would be in time of peace at home.

Mr. *Fawcett*.

2085. I understand your Royal Highness to express an opinion, that upon all questions affecting military organisation, it is certainly most expedient

Mr. *Fawcett*—continued.

expedient that the Indian authorities should be consulted?—I am of the strongest opinion that they ought to know thoroughly what is going on. I do not think it is wise to take too many into council when questions of this sort are first mooted, but when certain principles are deemed essential on military grounds, it is right, before any action is taken or any decision is actually come to, that the bearing of the question on Indian finance and Indian arrangements should be taken into account, and that opportunity should be given to the Indian authorities, and the India Office at home, in some shape to give their opinions freely; and then, of course, it is for the Government to hear both sides, if there is a difference, and decide the matter.

2086. Are you aware whether any consultation was had with the Indian authorities before the pay of the army was raised?—I apprehend that was a Cabinet question, and that, of course, the Secretary of State for India was present, and I conceive that he is an authority who is able to put in his views on those occasions should he be doubtful as to how it would affect India. Of course, if he says nothing, one must assume that there is nothing to be said against it.

2087. And you would say that he should, if necessary, obtain the opinions of the Government in India?—That of course must depend upon the policy of the Government at home, as to whether there is the power or not of putting off such a question. If you find that you cannot

Mr. *Fawcett*—continued.

H.R.H. The Duke of *Cambridge*, K.G.

23 June 1874.

get men in the market without raising the pay, it is just as important to have men to go to India as to have men for the army at home; and in that point of view probably the Government would say, "This is so palpably evident, that we will not consult India; common sense tells us it must be done." I have no doubt that on any question on which time might be given, consultation might and would take place with India; but I do not think that you would sacrifice great principles, and great interests, merely to get an opinion from the Indian Government, which probably you might obtain to a great extent at home.

Mr. *Onslow*.

2088. The noble Lord has put to you one or two questions about receiving a lump sum for recruits; now, if you received a lump sum, that must be a fluctuating charge, must it not?—Yes.

2089. And, therefore, it would be only an indirect way of calculating according to the price of each recruit; you must come to that in order to get at the lump sum?—What I thought of the lump sum was, that it had this advantage, you might fix it for a cycle of years, say five, or whatever the term might be, and then the financiers of India and at home would know what they had to calculate upon. If you had a cycle of five years, say, the give and take is such that I do not think it would make much difference; on that ground, I think the lump sum has its advantages.

Friday, 26*th June* 1874.

MEMBERS PRESENT:

Sir George Balfour.
Sir Thomas Bazley.
Mr. Birley.
Mr. Campbell-Bannerman.
Mr. Stephen Cave.
Mr. Dalrymple.
Mr. Beckett Denison.
Mr. Dunbar.
Mr. Fawcett.
Lord George Hamilton.
Sir Henry Havelock.
Mr. Sampson Lloyd.
Mr. Onslow.
Mr. Eustace Smith.
Mr. Stanley.

THE RIGHT HON. STEPHEN CAVE, IN THE CHAIR.

The Most Honourable ROBERT ARTHUR TALBOT, Marquess of Salisbury (attending by special permission of the House of Lords); Examined.

Marquess of *Salisbury*.
26 June 1874.

Chairman.

2090. WE know that you are Secretary of State for India, and you held the same office in the year 1866-67?—For eight months.*

2091. Our inquiry here is into charges payable in this country for which the revenues of India are liable; and two points seem to have been pressed upon us by different witnesses, the first being that the India Office is not sufficiently considered in this country; and, if you please, I will take that point first. It is stated that in consequence of the Secretary of State for India being one, and the other members of the Cabinet being several, India has not a fair chance of representing her interests in the Legislature of the country; do you agree with this?—I have never seen, in my short experience, anything to justify that view. In the present Cabinet of course there is the peculiarity that three of its members are, or have been, Secretaries of State for India, so that India has a considerable representation.

2092. You would say then that, generally speaking, there is no disposition in the Cabinet to take advantage of that superiority in numbers?—I have not seen the slightest trace of it; I am speaking of course only of what I have seen; I know nothing of what has taken place in other Cabinets.

2093. The point that arises out of that is a difference of opinion as to certain financial questions between the India Office and other departments of the State, such as the War Office and the Admiralty; perhaps your Lordship is aware that in the course of this inquiry a good deal has been said regarding the effect of measures of army organisation adopted by the War Office upon the finances of India; could you give any general opinion upon that point?—There is no doubt that the policy of this country has been adopted on military matters without any special reference to the interests of India; and it has occasionally happened that measures have been taken by the War Office which have largely affected the English army, and have necessarily at the same time affected the military service in India, and have consequently affected the Indian exchequer, and that those measures have been taken without any previous consultation with the authorities at the India Office; but I do not imagine that those cases happen very often, or that they are productive of any very large practical inconvenience.

Chairman—continued.

2094. Still those are questions, are they not, in which India suffers, if I may use the term, from the accident of her being part of a very large empire?—And also from the policy of amalgamation which was adopted in 1860. If the armies are under the same organisation, and are affected by the same measures, of course necessarily the interests of England and her vast empire must be considered in the first instance, and India may occasionally suffer by that necessity.

2095. Would you say, as a set-off against that answer, that India benefits very much by her connection with England, or the reverse?—On the general question do you mean?

2096. On the question of the amalgamation that you were mentioning just now?—Well, it is rather, perhaps, out of my province to express an opinion on what was done in 1860, but I should certainly decline to express myself in favour of that measure.

2097. But I imagine that, with regard to the general question, your Lordship has no difficulty about expressing an opinion as to the general benefit which India has received from her connection with this country?—India owes to England that which she has wanted for centuries, the inestimable benefit of order; and that appears to me to outweigh any accidental disadvantages, even were they tenfold greater than they are.

2098. Then the questions between the War Office and the India Office are chiefly minor questions arising out of Imperial policy?—I can give one or two instances. There was the case in 1866 of the raising of the pay of the soldier; General Peel raised the soldier's pay twopence, and that was done without any consent with the India Office, and of course it imposed a charge upon the revenues of India. I think this Committee

Chairman—continued.

mittee has already been informed of a question that is pending now, not a very large question, namely, the effect that the permission to retire into the reserve after three years' service has upon those soldiers who, at great cost, have been taken out to India. Of course, if they are allowed directly or very shortly after they have got out there to go back into the reserve, that imposes upon us two very heavy transport expenditures, with a very small corresponding return; but that matter is under discussion, and the War Office, I believe, is prepared to satisfy us entirely in that respect.

2099. We have had evidence upon that point that the probability will be that many of those soldiers will re-engage in India, and that the short service will not have the same effect that at first sight it would appear likely to have?—That is what we hope. I cannot imagine that the short service will be entirely without a disadvantageous effect on the Indian Exchequer; but there are many set-offs, and I trust that that effect may be reduced to a minimum.

2100. Is there any question between the India Office and the Admiralty of any consequence?—There has been one since I have been in office. The Admiralty have found it necessary, or thought it necessary, to keep our transport ships at the full complement of men during the dead season, and this, of course, involved a heavy expenditure upon us; we represented it to them. As long as the matter was discussed in the ordinary official way we made very little progress; but as soon as the chiefs of the departments met and discussed it, it was settled very briefly. The Admiralty have been quite reasonable, and an alteration has been made by which a saving of 20,000 *l.* a year will be secured to the Indian Exchequer. I do not think that now we have any reason whatever to complain.

2101. Then, is it your opinion that serious inconvenience has resulted, or may result, in the future for want of any better defined system of communication between the different offices, the India Office, the Admiralty, and the War Office, for example?—If such a system could be devised it certainly would be an advantage; but I do not see my way to securing it by any positive enactment or rule. In 1863 I think it was, at the instance of Sir Charles Wood, it was agreed that all Royal Warrants should be immediately communicated from the War Office, and that was acted upon for some time; but when great changes in the *personnel* of the War Office took place, two or three years ago, that rule was entirely forgotten, and I believe that they never send the Royal Warrants now. That shows how difficult it is to make a merely departmental rule permanent in its action; it is apt to depend upon the memory of the officials.

2102. And probably you would say, from experience, that the permanent officials of these offices are less inclined to frequent communications with each other than the Parliamentary heads of the offices would be?—It is the business of the heads to be friends; I do not know that the subordinates always look upon their duty in the same light.

2103. That was exactly what I meant; I wished to know whether your Lordship could guide the Committee in any recommendation to facilitate the communication between offices upon any other system?—I do not believe that any fixed rule would be attended with any advantage; a strong expression of opinion from a Committee of the House of Commons will always be of advantage, and would probably secure the attention of the officials for a considerable time; but beyond that I have no recommendation to offer.

2104. You know, of course, that Committees have been sitting, composed of the departmental officials of each department, for the purpose of considering these questions; do you think such a committee would be of advantage as a standing committee, provided it could have some head as an arbitrator between them, some one of consideration, I mean?—The proviso would be absolutely necessary, because a committee equally composed of permanent officers of two departments that were at issue would result in nothing but presenting the points of difference in a very clear light; they could hardly be expected to come to any very close agreement; but if you could find some arbitrator who was willing permanently to adjust such differences, and the arbitrator was competent for his task, and commanded general confidence, I have no doubt considerable improvement in the mutual action of the departments might result; but I am afraid that a man who had such distinguished qualities as those would look for employment in higher departments of the State, and that you would not retain his services very long.

2105. Such committee would be elastic, and adapt itself to changes which frequently take place in the policy, would it not?—Yes, I suppose it would; assuming that the head of it, the arbitrator, was not committed to any particular line of policy too strongly.

2106. For instance, taking the question between the War Office and the India Office, which depends so very much upon what is at present problematical, the success of the new army system, would it not be very difficult for a committee to lay down any hard and fast rule by which the relation between the offices should be fixed at the present moment?—Impossible.

2107. And probably two or three years must elapse before anything of the kind could be hoped for?—I suppose the whole of our military policy at the present moment is tentative, and the side of it that relates to India must necessarily be tentative too.

2108. And therefore if some committee could be formed, such as I have mentioned already, to carry us on till the future should be a little more certain would not that be a way, at any rate, of tiding over a great many difficulties which exist at present?—If you think that the difficulties are sufficiently pressing to require such a solution. One of our greatest difficulties is at present submitted to a committee of the character that you have sketched out; and I do not know that there is anything of a nature sufficiently important to require so elaborate a machinery between the offices at present.

2109. That, of course, is an extremely important answer when we consider the letters that have passed (and that have been laid before this Committee and the House) between the two Departments of State, the War Office and the India Office, from which it appeared that the difficulties were almost insurmountable?—Those are precisely the difficulties now submitted to such a committee as you have spoken of. I do not

Marquess of *Salisbury*.

26 June 1874.

Chairman—continued.

not know at present of any difficulty approaching in magnitude to the size of that one pending between the two offices.

2110. Such a difficulty, for instance, as the charge to be made upon India for the cost of recruits?—That is the point in question. We have difficulties with the Foreign Office, and difficulties with the Treasury, but they are matters that I think we shall settle by negotiation.

2111. This, perhaps, is a mere matter of detail that such a committee ought to decide upon rather than your Lordship; but have you formed any opinion whether it is of advantage to go into every department of expenditure, and make a debtor and creditor account on each side, or whether it would be better to make a rough estimate and charge a lump sum for these disputed charges?—That rather depends upon the matter you have already glanced at. The tendency of officers of two departments to be animated by an *esprit de corps*, and to fight out everything to the last, makes it very difficult to come to an agreement if you have too many items of detail to settle; and in the view of that tendency I should prefer to recommend the lump sum; but there is no doubt that the rigid abstract justice would be better satisfied by investigating each item in detail.

2112. Such a lump sum must be arrived at in the first instance in that way, must it not?—Yes.

2113. And the advantage would be that you would fix it for a certain number of years, and then when there were circumstances which made a change necessary you could have a fresh account?—That would probably be the most convenient mode of doing it.

2114. I do not like to ask your Lordship a great many questions which we have already asked other witnesses, though you are, of course, fully competent to answer them; but the other point on which we have had evidence is that while the India Office is not sufficiently considered by the other departments, India itself is not sufficiently considered in the India Office; and Sir William Muir gave evidence that with regard to the short term of service, which was a point bearing very much upon the health of the army, the medical authorities in India were not consulted. Now, of course, that is some time ago; but your Lordship might probably tell us generally whether in any important point a decision is taken in the India Office without consultation with the heads of the Government in India?—Almost universally, in all executive matters of the slightest importance, we refer to the Governments in India before coming to a decision. Of course we do not bind ourselves to adhere to their opinions if we see good reason for believing that those opinions are wrong; but with scarcely an exception we take their opinions before we act.

2115. In some cases, possibly, you might have authorities at home sufficiently capable of giving opinion upon these matters, which might give rise to an idea in India that people with Indian knowledge were not consulted?—That might be so, and especially in the case of special knowledge. It must be obvious, for instance, that medical knowledge might very possibly be obtained to greater advantage in this country than in India.

Chairman—continued.

2116. It is of great consequence, of course, that there should be no impression in India that she would be put entirely on one side, and that you would rely too much upon information which you get in this country, and too little upon local information?—I have never heard that suggested, and I do not believe that it can be said that on any matter on which local information is of importance the India Office neglects to obtain it.

2117. And of course in these days of telegrams time would be no element whatever in such a question?—I am not very favourable to obtaining opinions by telegraph, if it can be avoided, because the necessary brevity of telegrams is apt to cause them to be misunderstood.

2118. Then, as a sort of summary of your Lordship's evidence, I may say that you do not consider that the India Office suffers unduly in relation with other departments of the State in this country, nor that the India Office itself neglects to consult the authorities in India upon important matters?—I would rather put it that the India Office has in the long run generally succeeded in obtaining justice from the other departments in the State; but I should be sorry to leave the impression that there was not a danger which it requires constant vigilance to guard against of other departments in the State somewhat encroaching upon the rights of the Indian Exchequer. With regard to the second portion of your question, I do not believe that the India Office ever neglects to obtain local information when it is necessary.

2119. Then with regard to the first part, the remedy you appear to suggest is, first, that it is better that the heads of the departments should talk over these matters and settle them among themselves?—Yes; and the remedy which really will be the most potent of all is a knowledge on the part of the departments that there is a considerable sympathy for India in the House of Commons. As long as that knowledge exists I do not think there will be very much difficulty.

2120. And then as to matters of detail, you see no objection to a sort of standing committee, for the purpose of investigating matters of account, such committee being presided over by some one who can bring their labours to a practical conclusion, instead of leaving them merely, as your Lordship put it, simply with the question stated on each side?—Such a man would be an essential portion of any such tribunal; and no doubt when there are issues of sufficient magnitude demanding such an intervention, that form of the intervention would be the best.

2121. And it would be especially applicable in the present time, when there is so much doubtful and problematical with regard to the alteration of the military organisation of the Empire?—I daresay that may be so.

Mr. *Campbell-Bannerman*.

2122. I understood your Lordship to say that you thought there would be advantages in charging a lump sum for recruits. In what way would those advantages appear?—Only that the officers of the departments would have less opportunity of difference among themselves.

2123. The lump sum would be fixed by a calculation of details, would it not?—No doubt; and over those details there must be a conflict

Mr. *Campbell-Bannerman*—continued.

a conflict, but it would be a conflict once for all, instead of a conflict recurring every year.

2124. In what respect does that differ from the system pursued at present, by what is known as Mr. Seccombe's Committee; they calculate the actual charges, and on that calculation fix a price for the recruit which is laid down for a period of years, although hitherto that period has been a short one, owing to the changes that have been going on?—I was answering the abstract question with respect to any future settlement, whether it would be desirable to arrive at a treaty between the War Office and the India Office, in the shape of an agreement on a number of items, or an agreement on a lump sum, and I thought that there would be less opportunity for friction if a lump sum were taken; but I do not, of course, say that to a considerable extent that result may not be already arrived at.

2125. I do not exactly understand what is the constitution of the committee to which your Lordship said certain questions were referred at present?—Two gentlemen from the War Office, two gentlemen from the India Office, and Mr. Bouverie.

2126. Does that supersede Mr. Seccombe's Committee?—It is Mr. Seccombe's Committee, *plus* Mr. Bouverie.

2127. And that committee will consider all the questions that have hitherto come under the review of Mr. Seccombe's Committee?—Exactly so.

2128. Will they consider, also, other questions more involving matters of policy?—Any other questions that may be referred to them, but I think, at present, the reference is confined to the matters in the correspondence that has been published between Mr. Cardwell and the Duke of Argyll.

2129. You said that of late years Royal Warrants have not been sent to the India Office?—So I am informed.

2130. You do not state it unreservedly and without qualification, I suppose?—No; what I mean is that the uniform sending of them has been abandoned; I am, of course, speaking from the information of others, because this lies outside the range of my own experience; but up to within two or three years they were uniformly sent, and then, I think, the practice got more lax, and I believe it is not now looked upon as a necessary rule to send them to the India Office.

2131. They were sent in draft, of course, before being issued?—Before being issued.

2132. Not merely after issue, for the information of the India Office, but before issue, in order that the India Office might make any observations?—Yes.

2133. The Royal Warrants do not run in India, do they?—They affect the soldiers in India.

2134. A Royal Warrant, affecting the pay of the soldier in this country, does not apply to the soldiers in India, does it?—No; but of course we have to alter accordingly.

2135. It may be so?—Yes, of course it may be so; but it very often does happen so.

2136. Did I rightly understand your Lordship to say that there has been a want of proper communication between the two offices, an indisposition on the part of the War Office?—No, I said nothing of that kind; it is rather a matter of forgetfulness than any indisposition to communicate; for instance, this matter, which has been under discussion before the committee, of the three years' men joining the reserve, only reached the India Office because the military secretary happened to hear of it; it was not sent as a matter of course from the War Office.

2137. Does it necessarily affect India?—I am afraid so, until modified, which I believe it will be.

2138. It was a recruiting circular of a permissive kind, enabling commanding officers to transfer men, where they were willing to be transferred, to the reserve, after three years' service?—But a circular of that kind does practically set up a vested right in the soldiers, and unless there is some personal objection to granting him this privilege it creates a very sore feeling if the commander was to say, "Oh, no; I cannot grant it, because we are in India."

2139. Any such step as transferring a man from the line to the reserve can only be taken with the permission of the Adjutant General, and after reference to him; your Lordship is aware of that?—Yes.

2140. So that it would be quite possible for the Adjutant General, acting in concert with the military advisers of the India Office, to check that process, as far as he thought advisable?—Well, we may be wrong, but we are always a little nervous about anything that can give discontent to the European soldier in India, and such a plan might have an operation of that kind.

2141. But your Lordship does not imply that the India Office should have a potential voice in all matters of organisation relating to the British Army?—No; of course, it would be impossible; we can only have a consultative voice.

Chairman.

2142. This is one point which I omitted to ask your Lordship with reference to the Foreign Office. In case of a war in which this country is engaged, how is it settled whether India has sufficient interest in it or not that she should pay or not, or in what proportion she should pay?—I have never been actually engaged in such a conjuncture, and so I cannot tell you practically; but the theory is this, that the Secretary of State in Council is absolute on the point as to whether the revenues of India shall contribute or not, absolute, that is to say, failing an Act of Parliament.

2143. That, in fact, if he refuses against the whole of the Cabinet to admit that India is interested sufficiently in the war to make it just that she should pay, India would not pay?—India would not pay. But there is a stronger defence than that; because, perhaps, the Secretary of State could not resist the opinion of his colleagues. The Council can outvote him, and if the Council refuses to the Secretary of State and to the Cabinet the co-operation of India in a war, their decision is final.

2144. And England would have to pay the whole cost?—And England would have to pay the whole cost. I do not mean to say that I believe in practice it would ever come to that, for probably an Act of Parliament would dispose of the question.

Mr. *Onslow.*

2145. Cannot the Secretary of State veto the decision of a majority in the Council?—The India Office is a two-headed office. The Secretary of

Marquess of *Salisbury.*

26 June 1874.

Mr. *Onslow*—continued.

State has an absolute veto, and the Council has an absolute veto in all questions; but for the purpose of doing anything involving expenditure they must agree.

Lord *George Hamilton.*

2146. About two years ago, I think, Lord Cardwell issued what is termed free rations to the soldier in England?—Yes.

2147. Of course, that would not apply directly to the soldier in India, but I believe the Indian Government have considered it necessary, in consequence, to increase the pay of the Indian soldier?—That is so; the Indian Government must practically give to the Indian soldier a corresponding privilege to every privilege granted to him here, and usually a little more.

2148. You stated that you were somewhat in favour of a lump sum being paid for certain charges; would not one of the advantages of paying a lump sum be that it would give a greater latitude to the War Office, who would be able then to make any little alterations that would either increase or decrease the cost of recruits without consulting the India Office?—No doubt that would be more convenient. There are many little changes which from time to time the War Office would find it convenient to introduce, and to introduce without a preliminary discussion with the India Office.

2149. And which changes, if they were likely to increase the charges on the revenues of India, they would feel it necessary to consult the India Office upon, and which the India Office might object to on the ground of increased expense?—Yes.

Sir *Henry Havelock.*

2150. Your Lordship said it was the practice to submit the Royal Warrants in draft to the India Office before issue?—That has been so.

2151. That would be, in your opinion, probably the most convenient form for them to be submitted in, because it admits of an opinion being given from the India Office before they take final shape?—Yes.

2152. Then with reference to the Army Circular which has been issued lately, which may make some alteration in the terms of service in India, I think your Lordship said that no reference had been made to India before that was issued?—No.

2153. And that has been issued, I believe, since the present Administration came into power?—That is so.

2154. In that Circular there is nothing, as far as your Lordship is aware, to prevent soldiers renewing their service in India as heretofore, either by re-engagement or by volunteering, is there?—I think there is as the Circular at present stands; I have not got it in my mind, but I think that there is some hindrance to re-engagement.

2155. There is nothing in the terms of the Circular that gives that idea?—Well, that may be so; I have not got the Circular before me.

Lord *George Hamilton.*

2156. I think there was another Circular issued not very long ago from the War Office, by which men who had to complete 12 years' service were not allowed to complete their whole service with the colours, but an exception was only made in the case of those who were likely to prove good non-commissioned officers musicians?—Yes.

2157. And that Circular applied to India would no doubt have very much affected us, as it would have prevented the men from re-engaging to serve with other regiments with the colours?—Of course it is a great object to get all who are physically fit for any purpose.

Sir *Henry Havelock.*

2158. From what your Lordship said with regard to the action of the Indian Council, in any case in which the Indian finances may be concerned, I conclude that we may infer that in every case in which the finances of India have been made chargeable for imperial wars, as they may be called, that has been with the concurrence of the Indian Council?—Yes, necessarily; it could not have been done without.

Mr. *Beckett Denison.*

2159. Does that refer to the case of Abyssinia too?—It must be so; a sixpence cannot be imposed upon the revenues of India without the formal consent of the Indian Council.

Sir *Henry Havelock.*

2160. We may infer practically that the Indian Council has concurred in every such case?—Yes.

2161. As regards the committee of Mr. Bouverie's to which you have referred, is that a permanent committee?—No; it is appointed for this matter of the recruiting.

Mr. *Stanley.*

2162. I should like to ask your Lordship with regard to the lump sum about which there has been some discussion. If there was a capitation rate, which I imagine is meant by that lump sum, it could only be arrived at by a periodical adjustment of the charges which were to be made, and would have to be governed, would it not, by following up each man's effective services whilst in India; in other words, you would fix the charge for every man serving in India, but you would equally have to follow up each man's effective services whilst in India?—You would pay for him before he went there; so you could hardly adjust the sum to what he was intending to do.

2163. Am I to understand that the proposal would be to pay for a certain number of men whether they were there or not?—I understand the proposal would be to pay a certain amount for every man who was recruited and who went out. I do not suppose that the payment would be cancelled or given back because the man should happen to die.

2164. That is the point which I wished to ask about, because under the former capitation rate I believe it was necessary to follow up each man's effective services, and that was found in account to give a great deal of trouble?—I should not call that a lump sum; I should say it was one of the most objectionable forms of item paying.

2165. With regard to some questions that were addressed to Sir Thomas Pears when he gave his evidence before this Committee he was asked whether, in such proposal for the payment of a lump sum adjusted from time to time, if any change were made at home which caused the actual cost of the recruits furnished to India to be less than it was at the time of settlement India would be likely to claim a corresponding reduction

Mr. *Stanley*—continued.

tion in the capitation rate, and he answered that it was possible that such a claim would be made; but I did not understand him, on the other hand, to admit that a corresponding increase would be given if, through unavoidable causes, the cost of a recruit at home should have risen, whilst the period was still running. Would it, in your Lordship's opinion, be a fair arrangement that the diminution should be given in favour of India while no corresponding increase was allowed in favour of the Home Government?—My impression of a fair arrangement would be that there should be an agreement for a term of years, and that whatever happened to the prices both sides should abide by that while it lasted.

2166. Amongst the questions which have come to the notice of this Committee I believe some have had reference to charges for officers. Assuming the education of officers to be included amongst those charges, would your Lordship think it fair that India should be called upon to contribute to any general system of education, assuming that such were adopted for all officers before proceeding to join their regiments in India?—I am rather nervous of answering that question, for it may contain the germs of a larger financial concession than I may see my way to.

2167. At the present moment your Lordship is doubtless aware that officers who are gazetted to regiments on the Indian establishments, proceed to the depôts of their regiments at home, and are subsequently trained during the period of their sub-lieutenancy under garrison instruction in India; whilst it is now proposed that officers at home shall complete their training at Sandhurst before joining their regiments. Assuming that it was desirable on general grounds to place the education of officers upon a common footing, would there, in your Lordship's opinion, be any objection, as a matter of principle, that the Indian Government should be asked to share the expense of that by which they profit?—If the Indian Government asked for the change it would be fair that the Indian Government should pay; but if it is a change adopted from Horse Guards reasons, and not at the instance of the Indian Government, I think it is fair that the Imperial Government should pay.

2168. Assuming that the Indian Government received the services of an officer who was fit for duty instead of only partially trained, would not your Lordship admit that they received a better article, and an article for which therefore the Home Government might be entitled to consider they might charge a higher price?—Well, it depends whether they want the better article or not. My impression is that at present they are very well satisfied with the quality of the article they get; I have heard no complaints; and of course if you press upon them a better article than they want it is hard to press upon them to pay for it.

Mr. *Campbell-Bannerman*.

2169. They would be relieved of a considerable charge connected with the garrison instruction in India, would they not?—I am not acquainted with the plan to which Captain Stanley is referring, so that I am perhaps answering rather widely, but of course if it is a matter of financial adjustment between the two Governments if

Mr. *Campbell-Bannerman*—continued.

would be fair enough, but that must be a matter of negotiation in which everything depends upon details.

Mr. *Eustace Smith*.

2170. I believe it is very often the case that drafts of recruits going to India have to be supplemented by volunteers in order to make up the quantity of men at the proper age; that very often volunteers have been taken at different times from other regiments?—If you mean volunteers on the spot, yes, very often indeed. There is a large portion that volunteer.

2171. Then if it was generally understood in the army that there was some understanding between the Adjutant General at home and the commanding officer in India, that a man who went to India would at all forfeit any rights or privileges which he would enjoy by remaining in England, that would tend very much to check volunteers from going out to India, might it not?—It might be the case.

2172. I am speaking of such a case as the power of the man's retiring into the reserve at the end of three years; if it was understood that he forfeited that in practice by going to India it would be a check upon volunteering, would it not?—I am afraid I misunderstood you; I understood you to refer to volunteers of regiments already in India. I am not aware of a large number of volunteers from this country.

Sir *George Balfour*.

2173. From your Lordship's replies, I understand that the broad principle would be adhered to, that whatever the India Office had a voice in and considered right and proper for India to require, India is quite prepared to meet every charge that can be properly made against India?—Certainly.

2174. That would be the guiding principle of your Lordship's administration?—No doubt what India thought necessary for herself, what the Indian Government demanded, the Indian Government must be prepared to defray the expense of.

2175. Now, I will bring to your Lordship's notice this important fact; we had important evidence from His Royal Highness with regard to the necessity of Indian establishments being made uniform with the Imperial establishments; the consequence is, that instead of a few regiments, as in former years, existing in India, we have got many more regiments than what the old establishments would render necessary for the service in India; your Lordship is well aware that the mere pay and allowances of a regiment are in themselves only a portion of the great expenditure incurred for the European force?—Yes.

2176. Does your Lordship consider that India ought to have a voice in fixing the establishments of regiments?—That is a very difficult question. It is obvious that the Amalgamation Act has produced a certain amount of dependence of India upon the Imperial Government, and that India ought certainly to have a consultative voice. I am not prepared to say that in all matters her refusal must be final.

2177. When I mention to your Lordship that a cavalry regiment during the mutiny, and before the mutiny, consisted of 606 privates, and that it consists of 384 at the present day, your Lordship will at once see the great increase of expenditure which this multiplicity of regiments

Marquess of *Salisbury*.

26 June 1874.

Sir *George Balfour*—continued.

must cause, and that India therefore is keeping up many more cadres than what the actual strength in India would require. In that case does not your Lordship consider that India ought to have a voice in settling the number of cadres composing the force which India needs?—I should say that the Imperial Government ought to pay the greatest attention to any remonstrances which it may receive from India.

2178. Now a question was asked also with reference to the capitation rate. Your Lordship is aware that it was divided into two rates; the one being 3 *l.* 10 *s.* to cover non-effective charges, and the other 10 *l.* to cover effective charges, and that the conditions of these two kinds of expenditure were entirely separate and independent?—Yes.

2179. Seeing, therefore, the importance of getting rid of all disputes between the two offices, is it not possible to come to a conclusion different from that which formerly prevailed, that simply the charge for its recruits themselves should be agreed upon. Your Lordship is aware that 10 *l.* covered every description of charge, the pay of officers on leave, the colonels at home, and a variety of other expenses connected with the troops at home, and that the settlement of these items has been the real cause of the difficulties between the two offices?—And I understand your proposal to be, that one lump sum should be taken, without reference to the items it is composed of.

2180. That you should separate the two, and keep your attention closely to that one transaction, where any difference of opinion alone arises?—No doubt a lump sum would tend to the more easy co-operation of the departments.

2181. Now your Lordship is aware that it was the War Office who put an end to the capitation payment between India and the War Office?—I was not aware of that.

2182. It was on account of the losses sustained by the War Office. I will mention to your Lordship that the agreement upon which the capitation rate was made was that each regiment should receive 80 recruits every year from the depôt; but instead of receiving 80 recruits every year from the depôt they barely received 40 recruits; consequently the expense of that depôt having been calculated to supply 80 recruits, the increased cost for the 40 recruits is very considerably lessened?—Yes.

2183. Is it upon that basis now that, practically speaking, India is called upon to pay these expensive rates for recruits?—That agreement is no longer in force.

2184. It was upon that basis that India might proceed to fix precisely what the real cost of recruits should have been if the number of recruits agreed upon had been actually supplied?—I should be rather sorry to express on a matter pending before this Committee any definite opinion as to the precise mode in which these details are to be handled, because of course it might be to some extent embarrassing.

2185. Still, if an impartial body of men could be got together by which these details could be investigated, it could show that it is what has been the practical working of the past system, and not the defective nature of the capitation rate, which has led to all this difficulty?—I dare say that would be the case.

2186. I would remind your Lordship that the

Sir *George Balfour*—continued.

payment of 3 *l.* 10 *s.* upon the effectives in India, on account of the non-effective charges, was in substitution of the payment of 60,000 *l.* which was agreed upon in 1823 to be paid to the Imperial Treasury to cover these charges?—Yes.

2187. The Act of Parliament then provided, "that all items issued by the Paymaster General on account of the forces serving in India, or for raising and supplying the recruits for the same, shall be repaid by the said united company, and that the actual expenses only which are incurred for the support and maintenance of the said troops shall be borne and defrayed by the said united company." These were the conditions on which that 60,000 *l.* was given?—Yes.

2188. This was a compromise at that time in settlement of very heavy claims which were made by India against England, and, on condition that India then waived many of the claims, this compromise of a lump sum for the non-effective charges was actually made; seeing that India has since that been paying nearly 200,000 *l.* every year, is it not right that if the former agreement was made in settlement of former claims, India should be entitled to come upon England and say distinctly a compromise was made in 1823 in settlement of all claims, and that the two Governments should adhere to it?—I am afraid that I should be rather trenching upon the matter which is to be decided by this Committee, of which Mr. Bouverie is president, if I gave an answer to that question.

2189. As to the question which the honourable Member the Financial Secretary was asking you as to re-engaging, if it should be found that any Royal Warrant exists by which the re-engagements of men in India are limited, your Lordship would certainly claim on behalf of India a fair consideration, and to have that limitation removed if necessary?—We have already received from the War Office assurances that every facility will be given to us in that respect; it is not the intention of the War Office to interfere with re-engagements in India.

2190. I will mention to your Lordship that in the year 1863, by the evidence obtained by the Recruiting Commission of 1866, there were no fewer than 3,193 men re-engaged in India, and that, of course, the money which was paid to the soldier for re-engagement all came out of the finances of India. Now, in that case, India was put to some considerable expense by the change of conditions which had taken place in the former mode of enlisting soldiers?—The necessity of re-engagement involved some bonus to the soldier.

2191. Under these circumstances it becomes of great importance that India should be fully alive to the changes made in the conditions of service of the men?—Certainly it is a vital question.

2192. Now your Lordship is aware that the expense of sending men backwards and forwards is very considerable?—Very large; I think about 20 *l.* a man each way.

2193. And that with a variety of other charges it approaches nearly 100 *l.* altogether?—Yes.

2194. Considering the limited period for which men go out, surely India has a right to expect from the War Office that before soldiers are embarked for India they should be certain that the men will serve more than two years, which

Sir *George Balfour*—continued.

which is the present limitation?—It would be very desirable, indeed, if such an assurance could be obtained.

2195. But considering that service in India is very popular, that almost any number of men can be obtained to go to India, would it not be right for the India Office to be able to retain the service of those men by a small bounty even?—I regret to say that my information does not support the conditions of your question. I am told that though in old days the service in India was remarkably popular, it is not quite so popular now, and that there is some little difficulty in furnishing us with the recruits that we need.

2196. There has been no evidence obtained since the inquiry which was made by the Commission in 1866 to show that the service in India is not popular, is there?—No; and I should be sorry to make any statement so positive as that; but as far as the opinions of practised persons would lead me to judge, it certainly is not so popular as it used to be in the old days of the East India Company.

2197. But that was because men then knew distinctly that they were going to serve in India, and would not be liable to serve in England?—There is no doubt that the popularity was very great, and not very easily intelligible, considering the conditions of the service. I do not affect to give a reason for it; I have heard it said that there was a general idea in those days that everybody going to India made his fortune.

2198. But we have it in evidence from His Royal Highness that the service in India is still popular?—Then I withdraw the opinion which I gave; I only stated what has been stated to me.

2199. Your Lordship has said that any demands made upon the finances of India for any Imperial measures which might be deemed to affect India are now fully considered by the Secretary of State, and that no such demands could possibly be made without the distinct sanction of your Lordship in Council?—The auditor would refuse them; they could not be made.

2200. Does your Lordship consider that the conditions are now different from those which prevailed in the times of the East India Company?—In that respect? My impression of the theoretical working of the old system is, that the President of the Board of Control had the power of ordering much what expenditure he pleased, but that as a matter of practice he hardly interfered with the East India Company.

2201. But Sir John Hobhouse stated that he had sent out a Despatch to order the Affghan War to be undertaken?—Yes.

2202. And therefore that war, which led India into a heavy expense, was incurred by an order from the President of the Board of Control?—Yes.

2203. Your Lordship is aware that the pay and allowances of the troops in the first China War were agreed to be paid by the Imperial Treasury, but that after long discussion a positive refusal was given to pay that money?—I was not aware of that.

2204. Your Lordship does not consider that any such condition as that could arise at the present time?—It would be absolutely impossible; the Viceroy has the power of declaring war without anybody's consent if he shall judge it necessary for the immediate safety of India; but, as no doubt the Committee is aware, it must be brought to the notice of Parliament on the earliest opportunity.

Sir *George Balfour*—continued.

Marquess of *Salisbury*.

26 June 1874.

2205. To that extent, therefore, as far as any orders go emanating from the Imperial Government at home, no such demand could be made on the revenues of India without the distinct sanction of the Secretary of State for India in Council?—Certainly not.

2206. Take the Persian War, for instance; the agreement was that a moiety of the extra charges on account of that war should be paid by each Government?—Yes.

2207. That was a distinct agreement between the Governments, and adhered to?—Yes.

2208. Then, with regard to the Abyssinian War, it was agreed upon by the two Governments that the ordinary pay and allowances of the troops in Abyssinia should be borne by India, and the extra charges alone by the Imperial Government?—Yes.

2209. The condition being that any troops raised for the defence of India should be paid for by the Imperial Government?—Yes; raised during the currency of the Abyssinian War, that is to say.

2210. Your Lordship is aware that native troops were raised by the Government of India?—I was not aware of that.

2211. These troops would fall under that category of being paid by the Imperial Government?—Yes.

2212. A question was asked as to the free rations to the soldier in England; your Lordship is aware that the system now in force in this country is practically the one which has been in force since 1840 in India?—Yes.

2213. And that, therefore, India has now been obliged to increase the pay of the soldier in that country, on purpose to enable the Secretary of State for War to make that arrangement in England which has been in existence in India for 30 years and more?—We have had to increase the soldier's pay.

2214. To that extent, therefore, Imperial measures have entailed upon India an extra charge on that account?—That is so; there is a considerably extra charge in respect of military payments, which has recently been caused in the same way by an alteration of the rate of exchange in reference to Ceylon. Regiments going from Ceylon to India of course could not be treated differently; the Treasury chose to alter their rate of exchange and we had to follow suit.

2215. Therefore, in these ways extra expenditure is caused to India by measures which are adopted by this country?—Yes.

2216. And your Lordship would consider that India might object to these payments?—They may be necessary, but I think it better that India should always first be consulted; though I am not saying that the necessities of India could govern the policy of the Imperial Government, but only that India should be heard.

2217. Your Lordship is aware that a very important change was lately made in the army by which the first captains of artillery and engineers were made into majors?—Yes.

2218. And that whilst the increase in the cost to England on account of that promotion was very slight, the increased cost to India has been very considerable?—Yes, that is so; I do not know whether we can fairly charge that on the

Marquess of *Salisbury*.

26 June 1874.

Sir *George Balfour*—continued.

Imperial Government; it was an inevitable result.

2219. If your Lordship should approve of that extra charge, still your Lordship would consider that any changes made in India on that account, in order to lessen the drain upon the finances of India, should be met by the War Office, if possible?—At all events, it would be better that the War Office should consult us. I do not say that in those matters the War Office must bear the whole expense; that would be unfair.

2220. Still, if extra charges are now incurred on account of the organisation of the artillery, you consider that the War Office should meet the India Office, and enable them, if possible, to make changes in the organisation to diminish the expense?—Yes.

2221. Your Lordship is aware that the artillery is an expensive organisation at the present moment; a major is in command of a garrison battery of 70 men, whereas no such command as that devolves upon a major at home?—Yes.

2222. In that case your Lordship would consider it expedient that the War Office should, if possible, change the organisation?—That is a matter of too great detail for me to venture to offer an opinion upon.

Mr. *Sampson Lloyd*.

2223. Your Lordship has said that no direct charge is made or can be made on the Indian revenues without the consent of the India Office. The impression would appear to exist from certain questions that have been put in this inquiry to the witnesses, and from their answers, that the Indian revenues have suffered, or may possibly suffer, owing to some recent army reforms which the Imperial Government have thought fit to introduce, notably the system of enlisting for short periods of service; my question is, whether the India Office, in your Lordship's opinion, were sufficiently consulted before those changes were made?—It is outside my own experience, but my impression is that the India Office were not consulted. But perhaps I may supplement that answer by observing that the expense which falls upon India must always be the subject of the consent of the Indian Council, though by such changes a moral pressure may be put upon the Indian Council which it cannot possibly resist.

2224. Perhaps I may ask, if your Lordship would think it better, that the India Office should be consulted, where possible, when any important change of that kind is made?—In all changes that may possibly involve expense upon India I am certainly of opinion that the War Office should first take the opinion of the India Office.

Mr. *Fawcett*.

2225. You are not aware of any records to show that the India Office were consulted when the short service system was introduced?—I am not aware of any, but I have not examined them for this purpose; I should be sorry to make any definite assertion to the contrary.

2226. Your opinion is that the India Office should distinctly be consulted on every change that can affect their finances; although it does not follow that their opinion should prevail, it should be one element taken into consideration, you think?—I think the Secretary of State in Council ought to be heard, before any such change is made. But I wish to guard myself

Mr. *Fawcett*—continued.

from indicating that any final veto could be given to him, because that would obviously be inconsistent with Imperial policy.

2227. But if they do not consult him, and carry out a certain change, when the change has been carried out, although the Secretary of State has the power of refusing the expenditure, he is morally and virtually bound to accept the expenditure?—He is put in that position, that greater evils would result from his refusing than from his accepting.

2228. Frequent reference has been made to the correspondence that has taken place between the India Office and the War Office in reference to certain military charges. The last letter in that correspondence is signed by Sir Lewis Mallet, and is a document sent on in April this year, for which your Lordship is responsible?—Yes, no doubt.

2229. That letter encloses a document from Lord Northbrook on the same subject?—Yes, I see it does.

2230. And the whole tenour of that despatch is, in the first place, to show that you generally agree with Lord Northbrook's views on that particular subject?—Yes.

2231. You refer in that despatch (and Lord Northbrook does the same) to many charges which you think have been and are improperly borne by India?—Yes.

2232. But then, as many of these charges have been in operation for a good many years, and India has, according to your own showing, unjustly to bear them, it really comes to this, does it not, that if an unjust charge is pressed with sufficient pertinacity upon her she has no power in the matter except one of protest?—Well, "unjust" is perhaps rather a strong word. Some of these charges, undoubtedly, ought rather to be borne by the Imperial Government; but, of course, with succeeding administrations different opinions prevail; and I cannot answer for it that the Duke of Argyll, and Sir Stafford Northcote, and Lord Ripon, and Sir Charles Wood all held the same opinions.

2233. I should be sorry to use any expression which is too strong; but there are very much stronger expressions in that correspondence than simply "unjust;" "unjust" is, on more than one occasion, preceded by a very strong adverb?—I am afraid there is no doubt of that.

2234. Then it comes to this simply, without saying whether anyone is justified or not in doing it, that throughout the existence of an administration the Secretary of State for India is aware that India is being unjustly charged; that he protests and protests, again and again; that the thing goes on, and apparently no remedy can possibly be obtained for India unless the Secretary of State is prepared to take up this line, and say, "I will not submit to it any longer; I will resign"?—It is hardly so strong as that, because the Secretary of State, if his Council goes with him, can always pass a resolution that such and such a payment is not to be made; but, of course, any Minister shrinks from such a course, because it stops the machine.

2235. You have these alternatives; you must either stop the machine, or you must resign, or you must go on tacitly submitting to what you consider to be an injustice?—Well, I should accept that statement, barring the word "tacitly"; I should go on submitting with loud remonstrance.

2236. Taking

Mr. *Fawcett*—continued.

2236. Taking existing facts, what has occurred is, that the Secretary of State has gone on submitting with these loud remonstrances. It is difficult to conceive, I think, of stronger remonstrances written by one member of the Government to another member of the Government than are contained in that correspondence?—Well, I would not venture certainly to write any stronger myself.

2237. Then what I understand your Lordship to mean is this, that, after all, the great security for India to obtain financial justice is this, that India should have a Secretary of State who should do all in his power to secure her justice, and that he should out of doors be supported by the public opinion of the English people, and by the sympathy of the House of Commons; that that is his great strength after all?—That is undoubtedly his great strength; and if the House of Commons will keep a sufficiently sharp eye over these matters, I do not imagine that there is any serious danger of India being oppressed; but there is a constant tendency, of course, on the part of the departments at home, which have such enormous inducements to save, to get money where it may be had without resistance or difficulty.

2338. And of course the best security that India could possibly have is this, that English public opinion should be so improved that a Government would find that it rather lost than gained popularity by saving any money to the English taxpayer by making unjust charges to India?—Yes, I think that is undoubtedly the case. Of course you must bear in mind that there is always the collateral danger, that in trying to excite up to the point of integrity the English public opinion, you may excite to a higher point a more dangerous public opinion in India.

2239. But there is a great deal of room, is there not, for the instruction of English public opinion?—A great deal; at present, I think, there is not much harm to be done by irritating it on that point.

2240. Then, speaking as Minister for India, you attribute the greatest possible importance to the constant watchfulness of the House of Commons over the various English departments which affect Indian expenditure?—Undoubtedly it is the duty of the House of Commons, because it is the pressure of the House of Commons upon the Budget which creates this difficulty for India; and therefore the House of Commons is bound to make the corresponding pressure to see that India does not suffer from such a spirit of economy.

2241. As some one has expressed it, "One of the great dangers that India is constantly liable to is that she should be sacrificed to the exigencies of the English Estimates"?—That, no doubt, is a very great danger.

2242. Were you a member of the Government at the time of the Abyssinian War?—No, I was not; it was after my resignation.

2243. Your Lordship has said that you should not like to express a very positive opinion about the advantages or disadvantages which resulted from the amalgamation of the two armies, and therefore I will not press you upon that point; but do you think it would be possible, supposing it was proved that the amalgamation had been extremely costly, and supposing it was thought

Mr. *Fawcett*—continued.

desirable, to return in any way to the old system?—It would be an undertaking of enormous magnitude; and without considering it very carefully I should be sorry to give an opinion. There is no doubt that it would require the pressure of circumstances of great emergency to justify so important a retrogression.

2244. The amalgamation was carried out almost entirely against the wishes of those most interested in India, was it not?—I imagine against the opinion of almost every available Indian authority.

2245. But in a case like that, suppose the Council had stood firm, would it have been a case in which they could have prevented it?—The Council stood as firm as Council could stand; I think they nearly all voted against it, but they were overruled by Act of Parliament.

2246. Then although the Council have this power, as you have described it, of absolutely voting any expenditure which would fall on India, yet in a very important case like the amalgamation of the army their unanimous wish was overridden by the decision of Parliament?—Of course Parliament must be supreme; you cannot imagine any system in which it would not be so.

2247. Your Lordship was Secretary of State in 1866-67?—In 1866-67, for a few months.

2248. At that time there probably came under your notice the enormous difference that India was paying for her recruits compared with the sum which she paid for her recruits under the Warley system?—The question was not brought under my notice at that time. Of course I saw it directly I came into office this time, because it had been the subject of such very animated correspondence between the two offices. It may have been brought under my notice, and I may have forgotten it; but I do not remember at present to have paid any particular attention to it.

2249. Reverting to a question addressed to you by the Financial Secretary for War, I understand that you have laid down this very important principle of policy, that if any military change or any military reform, such, for instance, as educating the officers in England, is forced upon India against her wish and against her will, then India ought not to be charged for it?—That is what I should say, reserving always the supreme judgment of Parliament.

2250. Of course you would admit this very important consideration to be borne in mind, with regard to questions of expenditure affecting England and India, that England is a far wealthier country than India, and that the amount of extra revenue which could be at any moment raised in England is practically unlimited within several millions; whereas India is so very much poorer a country that a question of increased expenditure becomes very much more serious to her?—Very much. The difference between England and India in matters of finance is this, that in England you can raise a large increase of taxation without in the least degree risking the security of your institutions, but you cannot do so in India.

2551. Therefore, with regard to the army, you have two parties as it were in partnership, one of whom is very much wealthier than the other; an extra million, or two millions, or three millions to the one who is very wealthy is a matter of infinitely little consequence as compared with the

Marquess of *Salisbury.*

26 June 1874.

Mr. *Fowcett*—continued.

same amount of extra expenditure imposed on the poorer one?—That is undoubtedly true; but you must at the same time remember that the larger number of risks are incurred by the poorer partner, and not by the richer one.

2252. But considering simply the financial view of the question, increased expenditure is almost incalculably a more serious thing with regard to India than it is with regard to England?—That is so undoubtedly.

2253. Are there any disputes at the present time pending with the Treasury?—At the present moment we are raising the question whether it is right that we should continue to pay the contribution which we make to the consulships in China, and to support the charge of the establishments at Aden and at Zanzibar; and also whether it is right that we should pay so large a sum as we do without any share in the appointment to the Embassy at Teheran.

2254. And the answer that you gave with regard to the question in dispute with the War Office would, of course, apply to these matters, that it would greatly add to your strength to be supported by public opinion out of doors, and by sympathy in the House of Commons?—No doubt; but I should be sorry while the discussion is going on to prejudge the case in any way, because we have not got our answer from the Treasury yet; in fact, we have not completed the representation of our case to them.

Chairman.

2255. Would you consider that such questions as those could be referred to such a committee as the one already mentioned?—Well, they involve considerable questions of policy occasionally, because the question of payment must always be connected with the question of appointment; and whether we or the Foreign Office ought to have the appointment to the Embassy at Teheran, or some other diplomatic appointments, of course would involve some very important questions of policy.

2256. You would consider that they would be Cabinet questions rather than questions of detail to be settled by subordinate committees?—I should say so; and I wish especially to guard myself from prejudging any question which is practically now under discussion.

Mr. *Dunbar.*

2257. I do not know whether your Lordship has had your attention directed to the evidence of Sir Thomas Pears in regard to the recruiting Circular. In answer to Questions 770to 780 he states that that Circular would not work well in India; and he suggested that there should be an alteration with the sanction of the higher military authorities; have you had any communication with the War Office on that subject?—Our communication has been of a more general character, requesting them to remedy the evil which we pointed out; and the last communication which we received from them was a communication which manifested great willingness to meet our views in that respect. The matters of detail will be settled between Sir Thomas Pears and some official in the War Office, and when it is arranged it will come up for our sanction, but I have no doubt that in this matter the War Office desire to meet our views.

Mr. *Onslow.*

2258. I was going to ask your Lordship about Aden; but, as the question is now under consideration, perhaps I had better not do so. The fact of the matter is, is it not, that at the present moment the English Cabinet can, by action on their part, add to the expenditure in India?—They can do it in this way: that they can produce such a state of things that it would be highly detrimental to the public service if the India Office were to refuse to follow the lead of the Imperial Government; but there is no absolute power on the part of the Cabinet to impose the expenditure of a single farthing on India.

2259. But they did when they added 2*d.* a day to the pay of the British soldier; that was practically done by the Cabinet?—But if the Indian Council had stood upon its strict rights it might have said, "We will not pay that 2*d.* a day." Of course, as I said, that would stop the machine; but it had the strict legal power to do it.

2260. The Duke of Cambridge the other day, in answer to a question with regard to Abyssinia, stated this: "If the prestige of our name had been injured in that part of the world it would have been a great loss to our interests in India, and therefore I contend that India had a great interest in that war." That argument might apply almost to any Oriental war which England was engaged in, might it not?—No doubt it is a dangerous argument, liable to extension; but in itself it is a just argument; there is no doubt that any weakness on the Abyssinian question would have injured us in our relations with the Asiatic powers that border upon India.

2261. I presume that as Secretary of State you can of your own authority appoint officers to any appointment connected with India in England?—The patronage of the Secretary of State is very strictly limited by Act of Parliament; he has the seats in Council here, and the seats in Council in India, and the governors; and he has the appointments in the India Office itself.

2262. But I am talking of fresh appointments; are you aware that under the last administration fresh appointments were made in the India Office without any consultation with the Government of India?—Yes; we do not, for the purposes of the India Office, require to consult the Government of India; in fact, they have no power of judging whether we want additional staff or not; if an additional clerk is wanted in the India Office the Governor General in Council at Calcutta could not say whether the demand was just or not.

Mr. *Dunbar.*

2263. Has not your Lordship all the legal appointments in India also?—Yes; I have the legal appointments in India.

Sir *Thomas Bazley.*

2264. I am very glad to observe that it is reported that a great increase in the railway system has been sanctioned; and I wish to ask whether it will not be possible to diminish the army in India, in consequence of such increase of communication affording facilities for conveying troops?—There is no doubt that every increase in the railway system tends to diminish the number of men that are necessary for the purpose of garrisoning India; but of course, as the honourable gentleman is aware, there are other causes in progress and operation which may constantly tend

Sir *Thomas Bazley*—continued.

tend to increase that demand; therefore you never can be certain whether the effect of railway extension will be to diminish your military establishment in India or not.

2265. Perhaps you are aware that when Colonel Kennedy was initiating the railway system in India he did prophesy that there would be a great diminution of the necessity of keeping up a large force in India?—Yes.

2266. But such diminution did not come to pass?—Unfortunately the mutiny broke in on many dreams on that subject.

Mr. *Birley.*

2267. Reverting again to the question of a lump sum, or capitation rate, it seems to me that there ought to be no very great difficulty in arranging upon an equitable basis such a fixed sum, at least for a time, leaving the Imperial Government to have the advantage of economy, or to bear the charge of increased expenditure; but I wish to ask your Lordship whether there would not be great danger of considerable disturbance of that, either by some alteration in the period of training of the recruit, or the difficulty of obtaining recruits necessary for the Indian service, which would be left entirely in the hands of the Imperial Government, and over which the Government of India would have no power whatever?—I should not think it would be expedient to make any such arrangement for any long period of years, because the disturbing causes would always make any provision difficult.

2268. I mean with regard to the recruits?—There is the disturbing cause of the liability of all English policy to change.

2269. His Royal Highness gave evidence that recruits were sometimes sent out after a very few months' training; the calculation would be based on the assumption that they should have their full time; when that had to be altered it would be left in the hands of the Imperial Government, would it not?—I should think that any agreement between the two offices would involve, as one of its elements, a decision of the amount of preparation which each recruit should possess before going out.

2270. If it became necessary to diminish that amount of preparation, it would be in the hands of the War Office to decide, would it not?—I should think it ought to be done by agreement.

2271. Would there not be just the same difficulty in agreeing then as you now find?—We cannot avoid the necessity for discussion either at the beginning of such an agreement or during its course; but by diminishing the number of subjects on which such discussion is necessary we should diminish the friction which occasionally arises between the two offices.

2272. Your Lordship observes, in reference to a joint committee between the War Office and the India Office, that it would require very elaborate machinery; would it not be possible to have a standing committee without the elaborate machinery, consisting merely of gentlemen who were competent to arrange details?—That would be possible, no doubt, and practically it exists; the four gentlemen referred to here as forming Mr. Seccombe's Committee do meet frequently. But the difficulty in all those questions is the chairman or arbitrator; you must have a person who has no official connection, and no official prejudice, to perform that duty.

Mr. *Birley*—continued.

2273. Mr. Seccombe's is not a standing committee, not a permanent committee?—No, it is not permanent.

Mr. *Campbell-Bannerman.*

2274. The honourable Member for Hackney asked your Lordship a good many questions as to certain unjust charges, as they were called, against which the India Office had unavailingly protested. That injustice is, of course, a matter of opinion?—I ventured to say that the word was a little too strong on that account, because the ethics of the matter are not very definitely settled in the minds of moralists.

2275. The remission of those charges is resisted by the Home departments, because the Home Departments consider them fair charges. It is not as unjust charges that they wish to fasten them upon India, but because they consider them fair?—No doubt the Home Government is not consciously unjust in the matter. There are two theories on which you may adjust these charges. You may say, that the whole of the central expenses of the British Government, from the Civil List of the Queen downwards, ought to be rateably borne by all who share in the benefits that the British Government is able to extend to them; or, on the other hand, you may say that all the central expenses should be borne by the taxpayers of this country, and that only the local expenses should be borne by the various dependencies. The colonies have the benefit of the last theory entirely. India has a sort of compromise between the two theories.

2276. I merely wished to guard against the inference that might be drawn from the use of the word "unjust," which, notwithstanding your Lordship's protest at the time, crept into subsequent questions, and appeared to be accepted as if it were a correct general description of the charges?—I think nobody in India even suspects the Home Government of any conscious injustice towards the Indian taxpayer.

2277. There may be other charges, may there not, which the Home Government consider are unfairly imposed in the other direction, although they may not so loudly declaim against them?—No doubt that is the case.

Mr. *Fawcett.*

2278. But the drift of my questions, I think, would be this. I was putting a certain case. I was asking you what could be done supposing certain charges were thrown upon India which the Secretary of State for India at that time thought to be unjust, and I appeal to your evidence in corroboration of what I stated, and that evidence amply bears out, does it not, the statement that certain charges have been thrown on India which the Secretaries of State for India think were unjust?—No doubt the Duke of Argyll distinctly thought, and I thought, that those particular charges were, at all events, charges that should not be imposed.

2279. But I believe, far from my using stronger language, if your Lordship would refer to the correspondence, you would find that not only did the Duke of Argyll think they were unjust, but in one place he employed the expression that they were "scandalously unjust"?—That is so.

Marquess of *Salisbury.*

26 June 1874.

Marquess of *Salisbury*.

26 June 1674.

Chairman.

2280. Of course it is a difficult thing to draw a distinction between the way in which the colonies are treated and the way in which India is treated upon all points; but I suppose if soldiers were sent to any colony for the purpose, say, of putting down an insurrection in that colony, the colony would have to pay for the whole of them?—I wish that that had always been the case. My impression is that the Caffre War, which was in the nature of an insurrection in a colony, was borne entirely by England.

2281. The New Zealand War was a different one, was it not?—The New Zealand War was different; the colony had to bear a considerable portion, not the whole, of the expense.

2282. That would be the policy of England now?—It is the policy towards which we are tending; but a point often raised in India, on which Lord Northbrook himself has expressed an opinion, is that the colonies do not pay a farthing of the expense of the colonial establishment in England, whereas India pays the whole expense of the Indian establishment in England.

Mr. *Fawcett.*

2283. I should like to ask your Lordship whether you can justify that distinction which you have just mentioned with regard to the treatment of the colonies and India; for instance, India pays for her establishment and the Indian establishment in England, and the colonies do not contribute a shilling to the colonial establishment in this country?—I cannot justify the distinction; but I must confess that if I were forced to make an alteration it would be to make the colonies pay for the colonial establishment.

Sir *Henry Havelock.*

2284. In drawing a parallel between the position as to the military expenditure of India and such a colony as Canada, for instance, your Lordship is aware that Canada bears very large military expenses of her own; she trains a body of militia of some 40,000 annually, and a reserve of some 300,000 men, entirely at her own expense?—Yes.

Major General Sir GEORGE BALFOUR, R.A., K.C.B. (a Member of the Committee); Examined.

Major Gen. Sir *G. Balfour*, M.P., R.A., K.C.B.

Chairman.

2285. WE know that you are a Member of Parliament, and a Member of this Committee; what was your position in India before that?—I was the head of the Military Finance Department of India and President of the Military Finance Commission in the years 1860, 1861, and part of 1862.

2286. And what has been your official connection with this inquiry?—In the year 1860, when India was perfectly settled down, or in progress of being settled down, it was then considered to be of the utmost importance to bring the finances into a state of order; the military expenditure, then going on at a very heavy rate indeed, was the first and most prominent question which the Viceroy of India had in his mind; at that time the consideration of the garrison for India was under discussion; but the various opinions which had been expressed connected with the strength of that European garrison had left Lord Canning, the Viceroy of India, in great doubt as to the extent of force necessary to maintain. In the autumn of 1860, in consequence of a communication from Sir Charles Wood, forwarding the proceedings of a Committee, of which His Royal Highness the Commander in Chief, Sir Richard Airey, Lord Clive, and Sir Robert Vivian were members, the Viceroy desired me to take up this question, and consider in what respect the garrison should be settled. The question finally resolved itself into one of finance, and Sir Bartle Frere and Lord Canning, then in charge of the finances of India after the death of Mr. Wilson, decided that the military expenditure in India, should not exceed 12,500,000 *l.* for all the military forces, European and native; I was then directed to report to the Viceroy confidentially on the maximum extent of garrison which India could maintain with strict economy for that amount, and I did so in a confidential memorandum, which, of course, is no longer confidential; I pointed out, that amongst the most important questions the one most pressing was the extent of the European forces, and the heavy charges

Chairman—continued.

which India was then bearing in consequence of the state of those forces. The effective strengths in India were then, and had been from the mutiny, very considerably below the establishment. Consequently India was saddled with an expenditure for cadres, which swelled up the regimental charges to a heavy amount. I then received instructions to take in hand the whole of the military expenditure, with a view to its diminution, with an assurance from the Viceroy that he would give the fullest support to cutting down all unnecessary charges, and that I was quite at liberty, and indeed was ordered then, to report fully to him on all items of charge capable of being reduced.

2287. Are those home charges to which you were alluding?—These were mixed up, both with the charges at home and likewise the charges in India. A prominent feature in the question was that the home charges being reduced would necessarily bring about a very considerable reduction of the military charges in India. For instance, I see, amongst other reports made to the Viceroy, and which have been laid before Parliament, that so heavy were the military charges at home, I calculated then (and I believe upon good foundation), that the home charges for the recruits kept up in depôts in England amounted to fully a million and a half; and was satisfied that, if we had access to the accounts, we could show that the cost of maintaining the British infantry in India, on the 1st of October 1859, was going on at a rate exceeding 150 *l.* per recruit sent to India to keep up the Indian strength. Now it was in relation to these strong depôts that reduction of military expenditure in India was based. The information which had at that time been made public showed that fully 20,000 men were maintained at home in depôts, and the Commissioners for inquiring into the defence of the United Kingdom, in Appendix 10, page 89, of their Report laid before Parliament in 1860, calculated from a Return of the Adjutant General, dated 8 September

Chairman—continued.

tember 1859, that 20,959 men, cavalry and infantry alone, belonging to the Indian depôts were available for the defence of the kingdom, it was distinctly shown by other evidence (for instance, General Peel stated in Parliament about that time) that India was then bearing the charge for 25,000 troops in England.

2288. When you mention that India was bearing the charge for 25,000 troops in England, do you mean that those were trained troops, or merely recruits in the depôts?—It was impossible but what a large portion of that force must have been trained men. The recruits could not have been kept in England so long as they had been, and the regiments in India could not have been greatly deficient so long as they had been, without a considerable number of recruits being collected together and necessarily trained for some time. No doubt every casualty occurring in India necessarily led to the enlistment of a recruit, and all recruits at the depôts enlisted to replace the casualties within three or six months were necessarily more or less in an untrained state. Several communications had taken place, and I found that it was very difficult indeed to ensure a proper supply of recruits for regiments in India. The regiments, as I calculated, were, by the Adjutant General's Returns of Bengal, dated 1 October 1860, as many as 137 non-commissioned rank and file below their establishment, and the number wanting to complete each regiment were necessarily kept at home. (*Vide* paragraph 12, page 131, of Parliamentary Return No. 298 of 1862.) I then proposed to the Viceroy that the Home Government should be asked to accept the responsibility of supplying recruits for the European army in India, on the understanding that the Government of India should pay a rate per head for each man sent out. I was not aware at that time that there was any Committee sitting at home to investigate that very question, but I limited my recommendation solely and entirely to the payment for recruits free from all other charges.

2289. With regard to those 25,000, or whatever the number was, was that calculated at any particular time of the year, because we know that it must be very much larger just before the embarkation season than when the recruits have embarked?—The Report of the Commission on the Defence of the United Kingdom specifies the 8th of September 1859 as the date of the Adjutant General's Return on which that large force was at home. I would ask you to draw a distinction between the numbers which General Peel, in the House of Commons, stated, namely, 25,000, and the 20,000 stated by the Commissioners. From my own experience I should be inclined to state that the 20,000 men then at home were about the average number which had been kept at home during the mutiny; I see that the Commissioners include the cavalry and infantry in the Indian depôts among the whole number available for the defence of the kingdom as well as the embodied pensioners and the embodied militia in Great Britain and Ireland; so that I should be inclined to say that the 8th of September 1859, which is the date of the return, is by no means one which indicates that the depôts were more particularly full at that period than they usually were.

2290. That would be the time of the year, would it not, in which they would be pretty nearly full?—My own impression is that as all the recruits went out in sailing ships at that time, or mainly went out in sailing ships, they would have all embarked before the date of the Return, the 8th of September 1859.

Chairman—continued.

Sir *Henry Havelock.*

2291. You are aware that with regard to that particular time you speak of, that is to say, the beginning of September 1859, the Indian Mutiny had come to a close in about May 1859, and there were several regiments due at home; and on the average there were 300 or 400 recruits per regiment awaiting their arrival in this country?—The first reduction in European garrisons in India was the reduction occasioned by the expedition to the Peiho River; it was in the beginning of 1860.

2292. As a matter of fact, for instance, the five regiments sent to India in July 1842 had all come home to England in 1859, and there would be 400 recruits for each of those five regiments waiting; that would make 2,000?—The answer to that is, that to whatever extent the regiments came home, to that extent no doubt a reduction should be made; but if the returns available are looked into carefully, it will be found that from the time of the mutiny until 1861 the depôts were very full of men, indeed, so that the practice was to retain these men in England for a considerable period.

2293. That arose to a certain extent from the fact to which I drew your attention, that there were a large number of regiments in India which had been detained for the purposes of the mutiny, which would be coming home in the years 1859, 1860, and 1861 at the rate of about five and six regiments each year?—No doubt the expectations of regiments coming home were quite correct; but it was only on the 5th of May 1860 that Lord Canning, writing from the hills, strongly urged that a garrison for India should be maintained at the then high establishment, and the committee to which I have already referred, composed of His Royal Highness and others, had also recommended a garrison wholly equal to, if not greater than, the effective strength in India at that time. Indeed, in the autumn of 1860, so strongly impressed was I with the impossibility for India to maintain that enormous European force for the 12½ millions which Lord Canning had fixed, that I represented to him that it was useless to go on calculating the cost of an army which involved such a large force as that. I think 80,000 was the lowest number mentioned. When in November 1860 I pointed out that he had himself recommended, only six months previous, that enormous force, Lord Canning at once replied distinctly that no one could have expected that India would have settled down in the remarkable manner it had done within so few months, as from the 5th of May 1860 up to the autumn of that year. It was on that occasion that I was instructed to proceed with my labours, with a distinct understanding that, rather than maintain in India an enormous European force, requiring additional taxation, he would risk the safety of India, only keeping up such a force as India could bear the expense of, without additional taxes. The condition imposed upon me was simply that the largest possible European force should

Major Gen. Sir *G. Balfour*, M.P., R.A., K.C.B.

26 June 1874.

Sir *Henry Havelock*—continued.

be maintained which the 12½ millions expenditure could possibly pay. Therefore it is that the state of the depôts at home formed a very material item in considering that question.

Chairman.

2294. When you mention the capitation rates which you recommended, do you mean a capitation rate for every man sent out, or a capitation rate for all the effectives in India at the time?—My own view was then, as it is still, that a much simpler system could have been adopted than was adopted in order to free the War Office from all interference on the part of India with the supply of recruits; that a simple payment could easily have been settled by which the payment on account of soldiers sent out as recruits could have been made out of Indian revenues without the necessity of India interfering, and all that would have been necessary in India would have been that the Commander in Chief in India should have seen to the recruits coming out to India being thoroughly trained and drilled to the extent that might have been agreed upon.

2295. Then, how would you arrive at that price; I still do not understand whether you mean that each recruit should be paid for by a lump sum per head, or whether you are referring to the plan of paying the 10 *l.* for all the effective soldiers in India?—The time I am speaking of was the year 1860, and it was not till January 1861 that the recommendation of the committee which led to the capitation rate of 10 *l.* was agreed upon. The report of the committee is dated "War Office, 31st of January 1861," and my report was written in November 1860.

2296. Then what was your recommendation, that there should be a lump sum for every recruit sent out?—Yes; I recommended that an agreement should be come to; it was following a precedent which we had already in existence. India has all along, from time immemorial, invariably paid to the Imperial Treasury a lump sum for every soldier sent out with a regiment; it is now 27 *l.* 7 *s.* 11 *d.* for the infantry; that has been the rate which has been of late paid for the effective men of every infantry regiment that has gone to India; and India has in like manner been credited with that same amount for every man returned to England; I followed that precedent in recommending that, whatever the cost of a recruit might be, India should pay that cost and for that man alone; I said that by confining the payment to that single purpose it was easy then to prevent difficulties and disputes either as to the amount to be paid or as to the depôt organisation to be maintained in England, or as to the number of men to be kept up; the only thing that India had to care for was to see that the recruit was supplied in an efficient manner.

Sir *Thomas Bazley.*

2297. But are you not referring at the present moment to an exceptional state of things?—No, I am not referring to an exceptional state of things, for this reason, that from time immemorial recruits have always been sent out to India for what may be said to have been a lump sum; the remarkable thing is this, that with an infantry force of a much smaller strength than is at present maintained, that infantry force required, and did receive before the mutiny,

Sir *Thomas Bazley*—continued.

nearly as many recruits have been sent out between 1861 and 1867-8; so that there were no special exceptional circumstances in existence in India at the time that the recommendation was made.

Sir *Henry Havelock.*

2298. Did I rightly understand you to say that the force in India had previously received the same amount of recruits annually that it has received since 1861?—Yes; I was quite surprised myself to find it so, when I came to investigate it. The remarkable thing is that the average strength of infantry recruits sent out in each year between 1861-2 and 1867-8, by the statement laid before this Committee, amounted to 2,161 per annum. The statement shows an average of 2,196 for cavalry and infantry, and I have now stated the number for infantry alone.

Chairman.

2299. Was there any great invaliding or great mortality during that period which would account for a larger number of recruits being necessary?—I am speaking of the years 1852 and 1853 (*Vide* Parliamentary Return No. 217 of 1861, page 5), by a Report from the Military Secretary of the Horse Guards, dated November 1859, it appears that 3,478 recruits were sent out to India in those two years, being an average of 1,739 annually. Of course I need not say that there is always something going on in India; India is hardly ever quiet; and if you remember the second Burmese war had then taken place, but the European force in India was not very great, nor were the casualties by any means very considerable.

2300. These recruits were of course sent out in answer to the requisitions from India?—No; I am not aware that the habit has been to make requisitions. I think that the whole arrangement has been left to the Commander in Chief, namely, to keep up the force in India. He receives monthly returns from the regiments in India, and necessarily it is the duty of the Commander in Chief to attend to the strength of India, and from the evidence given by His Royal Highness I have no doubt he will give his attention to the subject.

2301. When he mentioned requisitions coming from India, you understand by that simply reports from the regiments that they were deficient in strength by so many men?—I am not aware that the regiments specially report on this particular head to the Horse Guards. There was always a communication between the headquarters of the regiment in India and the depôt of the regiment at home, and therefore every commanding officer in India was aware of the strength at the depôt, and I assume that if necessary he applied to the depôt for recruits to be sent out; but I am not aware of ever seeing, excepting on one occasion, any application for men to be sent out; indeed, the business of the Horse Guards at that time was exceedingly well arranged, and the authorities were able always to ascertain what strength of troops was deficient in India, and necessarily whenever the time came, they took care to see that the number of recruits required and actually available were sent out and the regiments kept supplied to the full establishment; I must confess that the regiments before the war with Russia had been kept up in a remarkable

Chairman—continued.

a remarkable manner to their established complement.

2302. The Commander in Chief stated in his evidence the other day that the difficulty was that they knew only a few months before how many men would be wanted for that season in India, and at the worst time in the year to get recruits?—That is one point which I hope the Committee will give their special attention to. I see by a Despatch which has been laid before Parliament, that the Secretary of State for India criticised some recomendations on this very subject which the Governor General desired me to submit in regard to the way of keeping up the strength in India by means of extra supplies of recruits. It is a matter which the Committee should look to. My own belief is that prior to the mutiny the Horse Guards did not, as regards the extra recruits for India at the depôt, care practically very much about the limitation of numbers in the Mutiny Act (I say this with great respect, without meaning thereby any intentional departure from the Act); men were maintained extra to the depôt establishment, the Horse Guards knowing that casualties would take place in India, in the regular order, to the extent of about 10 per cent. annually; for that reason the Horse Guards took care to have an extra number of recruits available. In those days the charges were very simple, and easily adjusted; there were very few criticisms made as to whether the numbers allowed by the Mutiny Act to be maintained in England were over or above the exact number, and returns were always difficult to obtain so as to show that any excess was maintained; the result was that the strengths of the infantry and cavalry before the war with Russia were maintained up to their established number in a remarkable degree, and by means of very small depôts indeed.

2303. Then what has been the effect of the changes in the establishments of regiments?—The variations in the establishments of regiments have been very great. Briefly, I may mention that the regiments in India, from a long time prior to the mutiny, had always been kept at 995 rank and file. During the mutiny they were kept at 1,000 rank and file; gradually they dwindled down as the European force was decreased in India, in order to reduce the military expenditure, and that decrease has been going on ever since 1863; the regiments gradually dwindled down from 1,000 rank and file to 790 rank and file; at present they stand at 820 rank and file, being a less strength than they have had for many years, except when they were down to 790. The cavalry regiments have likewise also dwindled down in a remarkable manner. Before the mutiny they stood at 606 privates; after the mutiny the strengths have also gradually fallen, until the number of privates fell to 378; now they stand at 384 privates; therefore, the strength of a cavalry regiment is hardly now more than half the strength that it was before the mutiny.

Mr. *Fawcett.*

2304. Has the number of officers decreased?—The number of officers has not decreased in anything like the proportion in which the number of men has decreased. But I must bear witness to the remarkable change made by the late Secretary of War in 1870 and 1871, by which the establishment of officers has been brought now to a far less proportion than has been maintained during the previous 10 years; but, in proportion to the men, the number of officers, and the number of head-quarters of regiments, are still greater than before the mutiny.

Mr. *Fawcett*—continued.

Chairman.

2305. The cadre of the regiments is the same?—The cadre of regiments is nearly the same, and it is in that respect that the expenditure in India swells up in so remarkable a degree. The mere cost of the men is, comparatively speaking, only a fraction of the total cost which a regiment entails upon India. A regiment in India is not like a regiment at home, because the native and other establishments in India are large, expensive, and vary very little with the variations in regimental strengths; therefore for every cadre that you can diminish by increasing the strength of regiments, in that way you save a large sum of money for India.

2306. Is there not this objection, in that you cannot, under that plan, augment rapidly the strength of a regiment in case of an emergency, whereas you can when the rank and file is below the ordinary strength and the cadre is the same?—We have full experience to show that our small cadre system is entirely useless, and will be useless, so long as we have not the conscription in force. If we had the conscription, as you have in Germany (which, of course, is entirely impossible in this country), then it would be easy for us to throw into a weak cadre the number of men which a Prussian regiment can take up; but in my questions to the Commander in Chief I endeavoured to show that so far from our cadres during the war with Russia having been kept up, the infantry cadres serving in the Crimea had, I should say, only about two-thirds of the established number, and in spite of all our efforts to get the militia to volunteer, and to raise recruits for the infantry, we were still obliged to have 49 cadres of line battalions of infantry in the Crimea which ought to have had 49,000 rank and file, whereas I believe the returns will show that we had not more than 33,000 or 35,000. So that the idea, so prevalent with regard to weak cadres being available for filling up with men, I have always held to be entirely a delusion.

2307. Do you agree with the Commander in Chief that there is a great deficiency of officers in India at present?—My own belief is that there is a great increase of officers in England on leave here; that it would be wise and well to see to what extent we have officers on leave; judging from the Appendix before this Committee, I should say that the payments on account of officers on leave in England show to a very considerable number to be now at home, or have been at home.

2308. You served on the Recruiting Commission of 1866, I think?—Yes, I had the honour to be on that Commission.

2309. What result did the Recruiting Commissions of 1859 and 1866 arrive at; what resolution did they come to about the recruits for India?—Lord Dalhousie presided over the Recruiting Commission of 1866, and I need not mention to you that his great experience as our former able War Minister entitles any opinion which he has expressed to great consideration on the part of all those connected with military affairs. He made special inquiries, and was very particular in

Major Gen. Sir *G. Balfour*, M.P., R.A., K.C.B.

26 June 1874.

Major Gen. Sir *G. Balfour*, M.P., R.A., K.C.B.

26 June 1874.

Chairman—continued.

ascertaining whether recruiting for India was difficult to carry out or easy; I find that in the report which was drawn up by his Lordship (to which, of course, I was a party), he distinctly stated, "That the previous idea of the great dislike to serve in India appears to have been unfounded, judging by the evidence obtained by the former Recruiting Commission, as well as by ourselves." I can distinctly state that the investigation which Lord Dalhousie made was very minute and very carefully made; that he was fully satisfied, not only that recruits could be obtained, but that volunteers for India could be obtained with the greatest possible ease from the regiments at home; indeed, it was said after our visits to Aldershot that nearly all the soldiers in that command would have volunteered, if called upon at once, for service in India.

2310. We have heard from Lord Salisbury that there was a difficulty with reference to re-engaging and volunteering in India itself?—My impression is strong (and Lord Dalhousie's Commission reported to that effect), that whilst India had a perfect right to give any bounty that that country pleased, to induce men whose period of enlistment was not completed to remain in India, and India had always exercised that right, still that a Royal Warrant was then in existence which required the bounty to be limited for the re-engaging of men in that country whose term of service had expired; Lord Dalhousie's Commission recommended that that limitation should be withdrawn, and that India should have the full right to give to men re-engaging such bounty as it might see fit to give. I see that the Returns appended to the Report of the Commission showed that upwards of one-half (namely, 9,431) of the soldiers whose first period of service had expired up to 1865 had volunteered to remain for service in India, and that 9,397 had been embarked for England. It was exactly one-half of the number of men of the regiments ordered to England who came home to England, I have no doubt, from my own experience, that the limitation in respect to the numbers embarking was caused by the medical officers, who always exercised a wise discretion to prevent men remaining in India whose state of health was not such as to justify their being kept.

2311. Do you think that the short service system, the consequence of which is that men are not accustomed to Indian life before their term of service has expired in India as they used to be, would militate against their re-engaging in India?—No; I think that very few instances of that kind would arise. I think the medical examinations to which all men are subjected in India before being allowed to volunteer to remain would ensure a very fair selection of men; if the system which the Commander in Chief indicated was followed out, of a sufficient number of men being attached to the depôt at home to be trained, His Royal Highness would be able then to send out in time fit men for service in India. With these two arrangements the regiments in India would be kept complete; the facilities which exist now for sending home men from India are so great, that we have had it in evidence that many men come home to this country who are almost immediately available for duty by being discharged from Netley a very short time after arrival. The men have

Chairman—continued.

now every facility for showing their liking for Indian service.

2312. What I meant was this, that in former days when men were seven or eight years or more in the country they became habituated to it, and formed connections with it which induced them when the regiment re-embarked for England to prefer remaining behind. That inducement would be weakened, would it not, by the system of short service?—I do not think, first of all, that that former condition would be borne out; that men liked India there is no question; but that connections were formed to any great extent to induce them to remain in India is, I think, doubtful. I had occasion to investigate that question of the connections of men in India, and I think we latterly have had some further information before us; so far from the proportion of married soldiers being very excessive, there were still a considerable number who could get married within the limitation laid down of 12 per 100; I think there is still a great opening for men to marry if they think fit. My belief is that the soldier volunteers with the utmost degree of readiness, and no regiment is ever sent home to England without nearly one-half of the men volunteering to remain in the country. No doubt the payment of a bounty which is given on that occasion is an inducement; but the bounty has never been very excessive; about 1 *l.* for every additional year of service to remain in India is the extent of the payment which is given, and that has always been sufficient to induce the men to remain.

Sir *Henry Havelock.*

2313. Are you aware from personal knowledge that there is any Warrant or any Order in force which limits the re-engagement for service in India?—I am quite certain that the Commission upon which I served in 1866 did distinctly ascertain, and did distinctly report, that the Royal Warrant limited the bounty to be paid to men whose period of service had expired on re-engaging for a second period, but that India had the right, and had always exercised that right, to pay such bounty as India thought fit to men whose period of service had not expired to volunteer from one regiment to another. The distinction, therefore, is simply whether the Royal Warrant is now in existence or not; of course we can very easily ascertain that by sending to the War Office and calling for information as to whether the restriction which it was then recommended should be removed, and which we advised Her Majesty then to remove, has or has not been removed.

2314. What was the date of that?—1866 was the date of our report.

Mr. *Campbell-Bannerman.*

2315. Did you ascertain that the limit you speak of as laid down by that Royal Warrant had had the effect of stopping or checking re-engagement?—That was the extent to which Lord Dalhousie's Commission's Report went. I see that I had made a note of the recommendation. The report pointed out that the amounts payable in India to soldiers re-engaging are fixed under Royal Warrant; whereas the amounts payable to soldiers volunteering from one regiment to another are entirely within the power of the Government of India to fix, so that they can vary the bounty for

Mr. *Campbell-Bannerman*—continued.

for volunteers according to circumstances. These are the words from the Report of the Commission of that day.

2316. What I wish to know is, had you any evidence before the Commission to show that the fact of a limitation being laid down of the sum to be offered to men for re-engagement had had an injurious effect upon re-engagement?—I have no doubt that we did ascertain it; and I have no doubt, if I referred again to the documents of the Commission, that we should ascertain that limitation had been made. I see by returns called for, that in 1865 a number of invalids and time-expired men came home; but the Horse Guards mixed up the invalids with the time-expired men, and therefore I am not able to fix with precision the fact that time-expired men did come home to England in greater numbers than the men who volunteered from one regiment to another; but I unhesitatingly say that Lord Dalhousie never would have allowed that advice to be given to Her Majesty without having satisfied himself that the fact was so.

2317. You are not aware whether the warrant to which allusion is made in the Report of the Commission has been cancelled or changed?—I am under the impression that I did satisfy myself when I was in the War Office that it did still exist, but it is just possible that by the recent changes which have since our report been made these warrants may have been abrogated, and that the limitation is no longer in force; and, therefore, in my questions to the Commander in Chief, I endeavoured to ascertain whether that limitation has been removed or not. If it has not been removed I would submit to the Committee whether it would not be desirable to suggest its removal.

2318. That would be a point of executive management, but you have heard it given in evidence, both by the late Secretary of State for War and by His Royal Highness the Field Marshal Commanding in Chief, that their desire is that no impediment should be thrown in the way of men re-engaging for India?—A portion of my object was to elicit that fact from the late Secretary of State and the Commander in Chief; I am quite satisfied that if the India Office and the War Office will give their attention to the question, that limitation, if still existing, will, at all events, be withdrawn, and the Secretary of State for India has this day distinctly stated that he would see to that question.

2319. But if they were satisfied, as they must have been satisfied after all these years, that there is no injurious limitation, that seems to involve that the warrant must have been cancelled, or in some other way it does not apply to the present state of things?—The question of soldiers, whose contracted period of service had expired re-engaging for a second period, was formerly a very serious question. I may mention a fact; the events have gone by now, but it was a matter for very grave consideration on the part of the Government of India in 1861; in that year, we had 18,000 European troops in India belonging to the Indian Government; the orders came for amalgamation, and Lord Canning gave particular attention to this question, how bring these troops over to the Imperial service, and private references were made home, and the Cabinet considered the question of the right of those men to come over to the Imperial service, and yet have the right to re-engage, as they had

Mr. *Campbell-Bannerman*—continued.

Major Gen. Sir *G. Balfour*, M.P., R.A., K.C.B.

26 June 1874.

the right, under Indian service, to be taken on for further service, in order to earn the pension to which they then had a right. The decision of the Cabinet was, of course, never recorded officially, as these matters are not recorded; but as the two Secretaries of State were concerned, the announcement came out to India that the men were not entitled to claim that privilege of re-engaging a second period as a right. As, during the last three years, there have been changes which I have not followed so carefully as before, I cannot say whether that limitation has been withdrawn or not; if it has not, I would suggest that it should be.

2320. The transaction which you speak of affected the old company's troops, who had been transferred to the Crown?—No; they had not been transferred to the Crown. I was upon the Amalgamation Commission in Calcutta, which drew up the regulations for the amalgamation, much to my sorrow; still I was obliged to obey orders; and we recommended—and the Government within an hour after the recommendation decided upon—the steps to induce these men to come over; it was no transferring. The right to transfer did not exist, the men having been distinctly told by Lord Palmerston in Parliament that they were perfectly free to serve the Queen's Government or not. But another white mutiny was a very serious matter; on that occasion the Amalgamation Commission recommended that a handsome bounty should be given to every man to transfer his services; and out of 18,000 men 17,400 men came over by that simple measure, so that all the previous disgrace of the white mutiny was saved by the payment of a sum not more than one-eighth of the whole cost which the white mutiny caused the Government, and far less than the cost of transport of the men sent home in 1859.

Sir *Henry Havelock.*

2321. You have used that term "white mutiny"; were you speaking of what happened in 1860?—No, in 1859.

2322. How many men did it refer to?—About 10,000 men took their discharge in 1859, on being refused a bounty to transfer their services from the East India Company to the Government of India. (*Vide* Parliamentary Return, No. 603 of 1868.).

2323. Those were all Warley recruits, were they not?—They were so far Warley recruits, but they were as fine disciplined soldiers as you could see.

2324. They were enlisted under the Warley system?—They were enlisted under the Warley system; enlisted for the East India Company and for India; for that special service, the same as every man was enlisted for the Queen's service, and the conditions which these men were serving under were said to be at an end, and, being refused the bounty to transfer their services, they returned home.

Chairman.

2325. Is there any other point which you wish to mention?—Since this Committee sat I have, with the permission of the noble Lord, the Under Secretary of State for India, endeavoured to ascertain what the real state of the case is with regard to these recruits; I think very much of the difficulty arises from the miscalculations which have been made connected with the depôts. The payment of the capitation rate was fixed at the rate of 10*l.* per head for the effective men serving in India (House of Lords Return No. 165 of 1862), and the Committee which

Major Gen. Sir *G. Balfour*, M.P., R.A., K.C.B.

26 June 1874.

Chairman—continued.

recommended that, and of which Sir Alexander Tulloch was the chairman, distinctly stated that that recommendation was a temporary one, pending the full investigation which it was still necessary to make before the Committee could come to any permanent agreement, the report speaks distinctly of that rate as a provisional arrangement; that arrangement, however, was continued for nine years without that inquiry being made which the Committee recommended; I think it is very much to be regretted that the statistics which have been kept of the whole of these transactions have not been investigated before this; my own impression is strong, that if the accounts which have been kept had been looked into more carefully, this dispute between the two offices need never have occurred. The simple condition upon which Sir Alexander Tulloch made his calculation was this, that every thousand men in India, which was then the established strength of a regiment, rank and file, would require 80 recruits, and that a depôt of a certain strength, which he named, should also be maintained for the purpose of supplying that strength Now the fact is this; first, the regiments have been diminished very considerably in strength, and each regiment has not required the number of recruits to keep it up; instead of 80 recruits being sent out to supply each regiment, upon an average only 40 recruits have been sent out; so that the whole expense of a depôt intended to supply the 80 recruits has been thrown upon the 40 recruits which have been supplied; in reality, not only have the strengths of regiments been diminished, but the depôts have been kept up to their full strength for supplying 80 recruits; practically speaking, for some reason or other, the number of recruits required to maintain the regiments have not been equal to the calculation which Sir Alexander Tulloch made, at the rate of 80 per 1,000 men; my belief is that the volunteering to remain in India has been much greater than he calculated upon; the regiments coming home have in that way supplied India with a far larger force than was at that time expected; in fact, experience has taught us that the wants of India were far less than what the calculation was upon which the 10 *l.* was arrived at; in the same way with regard to the cavalry, the committee recommended that a certain depôt should be kept up to supply 50 recruits per regiment to maintain 707 men in India belonging to a cavalry regiment. It appears by the statement put before the Committee, that so far from 50 recruits being required, the average number has been 10 per regiment; so that whilst the War Office has been receiving that capitation rate of 10 *l.* on each effective in India, it has been paying for a number of depôts nearly five times more numerous than needed to supply the recruits sent to India. I think it is in this direction that all the disputes might have been settled, by seeing whether the means taken to recruit for India were sufficient or insufficient, or more than sufficient.

Sir *Henry Havelock*.

2326. Of course this system is intended to meet extraordinary emergencies in the case of war as well as the ordinary emergencies in the time of peace?—I have always looked upon India to be in a state of war; hardly a year passes without some preparation being required; see the suddenness with which the mutiny broke out.

Sir *Henry Havelock*—continued.

The wise measure is to maintain India upon a war establishment, and that whatever force you require there should be kept up in the most complete and efficient manner, ready at all times to meet emergencies; you know yourself that emergencies have arisen of the most unexpected nature, and that nothing but the sacrifice of life by distinguished and able officers has prevented India on several occasions from suffering most seriously from the unexpected events which have taken place.

2327. I wished to guard the fact that these depôts and this organisation may at any time be called to meet very large requirements?—I quite agree that whatever the garrison is (and that should be fixed upon with great consideration) that garrison should be maintained efficient. I believe Cawnpore never would have fallen if India had not not been denuded of the troops which were taken away for the Crimean War, and especially if the effective establishments in India had not been let down far below their established strength; we were then 6,000 European non-commissioned rank and file below our complement; it was only three years before the mutiny that Cawnpore was deprived of its regiment in consequence of the inability of India to maintain a regiment at that important position. I hand in a statement showing the strengths, established and effective, of non-commissioned officers and men before the Mutiny, as far as I can make it out to have been.

Mr. *Campbell-Bannerman*.

2328. You said a short time ago that you did not think the system of small cadres to be filled up when required was one which was applicable to any country where conscription did not exist?—Yes.

2329. In what way does the existence of conscription affect the case?—I think that if you take up the military organisation of Prussia, which is the country that has carried out that system of universal liability for military service to the greatest possible extent, you will find that every man knows that he is to fall into a battalion, in time of peace only 500 strong, and within 24 hours (from the inquiries which I made) every battalion was, on war being decclared, made up to 1,000 strong; again, I would remind you (probably you are aware of it, as you had the reports in the War Office) that so careful was Prussia with regard to the battalions in the field during the late war, I believe all the battalions before Paris were kept supplied to the full strength which the battalions required; that is the remarkable distinction between the power which Prussia had to keep up the battalion strength, and the power we had in the Crimea, we were unnecessarily exposing cadres in the Crimea whilst England at that time had not more than 10 battalions at home; therefore, I say, it is far better to keep your field battalions well up to the established strength, and to bring home all cadres not necessary for that full establishment.

2330. You have not answered my question. Prussia is no doubt a country in which conscription exists, and Prussia has this elastic system, but you imply that an elastic system cannot exist without conscription, and that is the point where I do not understand your argument?—I believe that Prussia's conscription depends for its success upon the whole of the men that are available and fit for military service in the kingdom having been thoroughly

Mr. *Campbell-Bannerman*—continued.

thoroughly trained as soldiers, and having gone through their service in the battalion to which they belong, knowing the companies, and knowing the condition in which they enter the service, in every respect part and parcel of the battalion which they rejoin on war being declared, practically speaking, these men are only on leave until such time as their three years' service has expired; therefore, when an emergency comes, in 24 hours every man belonging to the army has to report himself to a military commander in his neighbourhood.

2331. The efficacy of an elastic system depends upon the existence of a reserve; but a reserve may be created in many ways, by voluntary enlistment or by conscription. I wish to ascertain from you in what way the existence of conscription affects it; you seem to think that any elastic system is impossible in a country where conscription does not exist. It seems to me not to depend upon conscription, but upon the existence of a reserve which we have not had at all until recent years, but are commencing to form?—I did not wish to make a reply to that, because until I know what kind of reserves they are, and what the men who have gone through the militia are, I am not in a position to answer the question.

2332. We are talking of the army reserve, not of the militia?—The condition upon which our reserve is formed is, I believe, entirely different from that of the reserve in Prussia. There you see reserves of young men of 24, 25, and 26 years of age; but here we have old soldiers formed into a reserve; my own experience is, that when once a man has left the army after having once served in it, he never shows any great liking whatever to come back to the army.

2333. Still, if an efficient reserve could be created without conscription, there is no reason, is there, why an elastic system of organisation should not be adopted here?—When I once see an efficient reserve formed, I shall then be able to give an answer to the question. At the present moment I do not believe in an efficient reserve.

Mr. *Fawcett.*

2334. Have you calculated what is the proportion of the officers to men, now the cadres have been so much reduced, compared to what it was formerly when the regiments were at their full strength?—Yes, I have it here; in consequence of the change made by the late Secretary of State, the proportion has been very much diminished of officers to men?—I see that the infantry establishment is now about 33 officers to 820 rank and file (which is the best way of taking it), and that the establishment in 1863–64 was about 40 officers to 850 men.

2335. But I mean at the time just previous to the mutiny, and at the time of the mutiny, when you said that the regiments were at their full strength; the earlier part of your evidence would seem to show this, that a great saving would result to India if the regiments were kept up as strong as they were when the real strength of an infantry regiment was 850, or whatever the number was, and a cavalry regiment 680 men; and in order to bring out the point more clearly, I want you to make a comparison of the number of officers compared with men in those days when the regiments were so strong, compared with what they are now?—I now furnish returns showing the proportions as far as relates to infantry and cavalry regiments; but I wish these to be received with care, for it is not easy to ascertain the numbers in prior years. (*Vide* Appendix.)

Mr. *Fawcett*—continued.

2336. You have spoken of an immense number of officers, at least a very large number of officers, that are on leave in England at the present time, who are supported by the Indian revenues, have you not?—Yes; rather, I have inferred that large numbers of officers are at home, judging by the statement of the cost given in this Return laid before the Committee of the payments made by India for officers on furlough.

2337. You think that the amount which India has to pay for officers on leave at home is too large?—It is not what India has to pay, because India is bound to pay whatever is right and just; but what I insist upon is that, with regard to every officer who comes home to England, the conditions of his leave should be carefully ascertained. Of course if officers require to come home from ill-health, nothing should induce the Government to prevent these officers on account of mere expense from coming home; but judging by the Return of the amounts paid for officers on furlough, I should distinctly state that the proportion of officers at home is far greater than was ever experienced under the old Indian system. The old Indian rules were exceedingly stringent in various ways; first of all, as to getting leave at all for 10 years; and next that the pension they were entitled to was dependent entirely upon the quantity of service they actually gave in India; that system of pensions was the great stronghold of India against abuses of leave. The officers came home, I believe, far too little in those days; but I believe now they come home far too much.

Sir *Henry Havelock.*

2338. Are you speaking with regard to the officers belonging to the Indian establishment?—No; I am speaking of the officers of the Imperial troops.

Mr. *Fawcett.*

2339. Who arranges the conditions under which an officer comes home on leave or furlough?—The Commander in Chief in India, strictly speaking, is the primary sanctioning officer; but no doubt the Government of India has also got a voice in it; but my belief is that there have been so many changes of late years, so many facilities given to staff corps officers to come home, and altogether such a loose system (if I may be permitted to say such a thing) that the same bad practice (if I may use that expression) has been followed with regard to the Imperial officers. They no doubt have a right to the same privileges, rights, and consideration as the staff corps officers.

2340. But I was trying to bring out on whom the responsibility is to rest of there being too many officers at home; you say that if an officer comes back when he ought not to, the Commander in Chief in India, or the Government in India, is responsible?—Strictly speaking they are the parties who gave the sanction for the officer to leave India; no officer can leave India without their sanction.

2341. When the officer is in England, suppose he stops here too long, who is responsible for that?—Well you know what the result is when one Government has undertaken to look after

Major Ge. Sir *G. Balfour*, M.P., R.A., K.C.B.

26 June 1874.

Mr. *Fawcett*—continued.

after these officers on furlough, and another Government has the duty of paying them. With a double system of administration you must necessarily expect a great laxity in the mode of doing it.

2342. That is what I wanted to come to. To put it shortly, when these officers are in England India pays them, and the English Government looks after them?—That is so.

2343. Then is this what you mean that the English Government, having to deal with other people's money, are not careful enough?—That is one of the great objections to amalgamation.

Sir *Henry Havelock.*

2344. But you are aware that with regard to the case which you are now discussing, taking the case of the individual officer on leave at home from India, if he requires a renewal of his leave, that question of the renewal of his leave has to be referred to the Commander in Chief in India, and therefore the renewal of leave is under the same check as the original leave?—No doubt the system if well put into operation is sufficient to insure greater strictness.

2345. You seem to cry out against the idea that leave is granted by one Government, and another has the responsibility of paying for it and continuing it; but, as I understand, you now admit that the extension of the leave comes from the same Government as that which originally gave the leave?—But if there is an original laxity in the mode of giving leave, and if the bad example of the staff corps which I admit fully has led to serious inconveniences, has been followed by the Imperial forces, I say nothing more than this, that there are defects in administration which need to be remedied.

Mr. *Campbell-Bannerman.*

2346. Then I think you would modify, would you not, what you said a little while ago when you stated that the Government at home had to do with the renewal of leave. As a fact, it is the India Government which grants to an officer the liberty of staying longer in this country?—Yes; but the fact is not changed by that. Supposing it to be true, as I believe it to be true (and which we could very easily ascertain by moving for returns), that great numbers of officers are at home on leave, and that they stay at home a very considerable time, and India is burdened with the payment for them, then I say if that laxity exists in the first instance there is no doubt that an equal laxity will exist with regard to extending the leave.

2347. Certainly; but the point brought out from you, I think by the honourable Member for Hackney, was that the Government of India originally regulated the granting of leave to officers, but that as to the period which they might stay in this country in excess of that leave, it was the Home authorities that had to control that, and that therefore there was not much inducement to look sharply after them. You do not agree to that, as I understand you now?—The result is invariably that which must always come from double administration of that kind.

2348. But there is no double administration in it?—I am afraid I shall never agree that the administration of the system is an effective one.

2349. You said that there were two people

Mr. *Campbell-Bannerman*—continued.

who have a hand in the matter; in reality there is only one?—You see, without giving offence, I cannot speak out more plainly than I have done. I believe the system is bad. I could speak out more plainly, but I do not think it is advisable that I should do so. I think the double system of providing troops for India from here and making India pay for these troops must lead to evil.

2350. That is a general theory which you state?—Yes.

Mr. *Fawcett.*

2351. And you illustrate your general theory by referring to this example of officers on leave?—Yes; we have had a Return moved for by the present Secretary of the Treasury; that Return will satisfy you that there are considerable numbers of officers on leave; at the same time I beg to be understood that I do not throw any blame on the parties who administer the system. It is the consequence of these unfortunate amalgamations done so hastily and without consideration; that is what has led to these things.

Mr. *Campbell-Bannerman.*

2352. It may be the consequence, may it not, of the large number of staff corps officers in India who have not very much to do who are sent home freely to this country, and that the contagion spreads?—I agree with you; nothing can be more injurious to India than the number of idle staff corps officers in India and at home doing nothing but grumbling and grievance-mongering all day long.

Mr. *Fawcett.*

2353. Your evidence shows not only that there are a great many officers in India who have nothing to do but get up grievances, but in addition to that it shows that there are a great many officers in England who ought to be in India, and whom India is paying for?—I have no doubt that if any member of the Committee were placed in a condition to go into the question of the number of officers on leave in England, on furlough and sick leave, a great number would soon be relegated to their regiments in India; but a bad example has been set them by the Indian officers, and therefore they claim the same rights and privileges.

Sir *Henry Havelock.*

2354. There are a large number of staff officers who are making up their time of service for the 1,200 *l.* a year, who are allowed by the Indian Government to remain at home?—A great many. I find from the Indian accounts that in one year alone, with regard to staff corps and other officers, that the increased payment at home on their account amounted to nearly 200,000 *l.* I have no doubt that on investigation you would find that the payments on account of officers belonging to the Indian service at home, are fully as great as the payments are on account of the officers of Her Majesty's service; but I simply wish to say that one bad example is no justification for another.

Mr. *Fawcett.*

2355. But if these large furloughs did not exist before you cannot say that the Indian Government is responsible for it, because you said when they had an army of their own there were

Mr. *Fawcett*—continued.

were very few on furlough, and these unemployed officers who once belonged to the local European army are unemployed because that army was abolished?—And another system was adopted.

2356. But the change of the system was in consequence of the amalgamation; the Government of India was not responsible for it?—I understand the question of the honourable Member now. I wish him to draw a clear distinction between two things that differ. The first is the amalgamation of the armies, which means no amalgamation at all, but means taking away from the Indian service the European forces, and putting them into Her Majesty's forces. But there is an entirely distinct question which is often lost sight of. There was a very important and serious change made, to which I have always been opposed, and that was the change of organisation of the native army of India; it is there where the staff corps comes into play, and it is to that branch that I trace most of the evils that I speak of.

Sir *Henry Havelock.*

2357. You speak of the "irregular" system?—Yes, of the irregular system, which means no system at all; and the evils which I am speaking of arise from that portion of the change called the amalgamation, which unfortunately took place at the same time as the Cabinet decided on ceasing to recruit for the European troops of the Indian army; and unfortunately that change, which is a question by itself, has been mixed up more or less with what is known as the amalgamation, that amalgamation having been, as it were, initiated by the Cabinet under the political authority of the Government of the day, instead of through the regular course of the Indian Council.

Mr. *Fawcett.*

2358. You having pointed out very forcibly certain disadvantages which you attribute as resulting from what was done some years ago, which you very much regret, namely, from this amalgamation scheme, as you have now explained it, of course the important practical question arises, can you do anything to repair the mischief that has been done, because after all it is not much use to say that great evils have resulted, if we simply have to stop there and cannot suggest a remedy. I will therefore ask you, admitting the evils, what is the best way in your opinion to repair them?—I have thought over that much. My own belief is that the evil has been going on for the last 13 years. It was partly checked in 1866, during Lord Salisbury's first administration; but I am very much afraid that the regulations necessary to prevent the evil going on have not been issued; I really am at a loss to know, except by the payment of enormous sums to the officers, how to get rid of the bad system. You must either take to that measure of paying an enormous sum, or you must undo the entire system; I am not sure but that if the Government resolved upon that great measure, boldly to cancel the whole of the arrangements connected with the staff corps (I am not speaking of amalgamation now, but confining myself to that one particular branch of the change), that would be the best plan. But with regard to the question how it is to be done, the best intellects of the day have failed ever to find a remedy.

Mr. *Fawcett*—continued.

Major Gen. Sir *G. Balfour*, M.P., R.A., K.C.B.

26 June 1874.

2359. Then you simply say that it is a great evil, so great that you cannot suggest a remedy. Supposing that anybody was to give you autocratic power, have you got any scheme which you think would remedy the evil?—I have no doubt that if there were anybody with ample power, and with a certainty that the Parliament of England would support him, a remedy would be found. It would lead to enormous complaints, and great cries. No doubt you might overcome some of these by paying money, and by paying liberally; you might by some means do it; at all events no statesman in high position, high in power, would fail to overcome the difficulty if duly supported. Temporary arrangements may be made by which from time to time the cries will be diminished, but those cries must come up until every man has got that enormous allowance of 1,100 *l.* odd a year after 38 years' service.

2360. But when every man has got this allowance of 1,100 *l.* a year, and when we know the maximum cost of the system that has been introduced, what is important to consider is, how to change a system so defective that in your opinion, unless altered, it will go on diminishing the efficiency of the army as you think it does at the present time?—I can only say in reply to that, what a statesman remarked to me when I came home in 1862, when I explained to him that every officer would rise up to the rank of colonel by simple length of service: "Do you mean that without any fixed number in the grades you will have an army of colonels, and lieutenant-colonels, and majors?" And his reply at the time to my assurance that that was the case, was, "Well, truly, we have been groping in the dark." But anyone who had any knowledge of military matters knew that this result would follow. Lord Canning was fully alive to the difficulty, and Mr. Laing deeply regretted it. Sir Bartle Frere also deeply regretted it. At the very time we were trying to get the finances of India in order, suddenly we found ourselves embarrassed by this change, which involved a great outlay.

Mr. *Campbell-Bannerman.*

2361. You are referring to changes in the native army and the constitution of the staff corps?—That is what I have been speaking of latterly. But I have also a strong opinion with regard to the European force. With regard to that force, I think Lord Ellenborough made a very wise suggestion, which was to have equal proportions in both armies of European forces, it would have been wise to have kept up a portion of the European force in India belonging to the Crown and a portion belonging to India.

Sir *Henry Havelock.*

2362. That is the proposition which His Royal Highness said would entail practically the existence of two armies?—At present, you have the marine forces, and you find no difficulty in carrying on the separate administration of that fine body of soldiers; and formerly you had the Ordnance Corps, which were almost as much distinct from the infantry and cavalry of the home army as the Indian forces were.

Mr. *Fawcett.*

2363. You would recommend then, that, after re-organising the native army we should have in India, two European armies, one under the sole

Major Gen. Sir *F. Balfour*, M.P., R.A., K.C.B.

26 June 1874.

Mr. *Fawcett*—continued.

and entire management of the Indian Government, a European army recruited on what terms they like, and another army which would be more immediately under the control of the military authorities in England?—Yes, I formerly did so view the question, and for another reason. I have served with native troops, and have been with them in the field, and in action; I consider it essentially necessary for the good discipline of the native troops that the example of the European officers, and the training which these officers get with European soldiers, and their knowledge how to deal with European troops,

Mr. *Fawcett*—continued.

should be always obtainable by the European officers of the native infantry. I have observed that an officer who had had any experience with European troops was never by any means disqualified for the command of native troops; on the contrary, I have found him the very best leader; I am sure that all those who have served in India will be alive to the importance of the example given to the European officers of the native troops by the European officers of the European troops of the same army, as that of the native infantry, in improving the discipline and stability of native troops.

Tuesday, 30*th June* 1874.

MEMBERS PRESENT:

Mr. Stephen Cave.	Mr. Dunbar.
Sir George Balfour.	Mr. Fawcett.
Mr. Balfour.	Lord Edmond Fitzmaurice.
Sir Thomas Bazley.	Lord George Hamilton.
Mr. Birley.	Sir Henry Havelock.
Mr. Campbell-Bannerman.	Mr. Sampson Lloyd.
Mr. Dalrymple.	Mr. Eustace Smith.

THE RIGHT HON. STEPHEN CAVE, IN THE CHAIR.

Major General Sir GEORGE BALFOUR, R.A., K.C.B. (a Member of the Committee); further Examined.

Major Gen. Sir *G. Balfour*, M.P., R.A., K.C.B.

30 June 1874.

Chairman.

2364. I WILL now ask you a few questions upon these accounts which have been brought here by Mr. Minifie, and which are the forms of account showing the apportionment that India is called upon to pay by the War Office, accounts which have never been settled or laid before Parliament, or certified in any way, but which we know have been partially under the consideration of what is called Mr. Seecombe's Committee. It would not do for us, of course, to go into the details of those charges which they will examine into. In the first place, this Committee never could form any useful opinion upon the details; and besides that, the inquiry is going on in a different way; but I think that you wish to express an opinion as to the convenience or otherwise of these accounts being stated at all in the way in which they have been. Perhaps you will give your opinion generally upon that point, whether this is the best way in which the charge can be made against India, or whether there is an inconvenience in making the charge in this way?—I have been induced, in consequence of what has taken place in the Committee, to look into the detailed accounts which have been sent in by the War Office to the India Office, on account of the troops serving in India for the years 1870–71 and 1871–72. These are the two first years in which the accounts have been rendered as actual charges since the capitation rate of payment of 10*l.* per head was discontinued. The last year of that payment was in the year 1869–70, and the amounts which are now charged show in some respect very considerable changes in the two years, the charges in 1870–71 being much higher than the charges in 1871–72. I hand in an abstract statement (*vide* Appendix) of the total charges for the two years 1870–71 and 1871–72, showing a total charge of 486,684*l.* 12*s.* 6*d.* for the former year, and 444,512*l.* 7*s.* 6*d.* for the latter year. I also hand in a more detailed statement of the charge for one item of those two years (*vide* Appendix); the other details I have not thought it necessary to extract from the accounts. Now, on looking into the details of these various charges, it certainly appears to me very advisable to avoid the necessity of rendering those details to the India Office for payment of the money said to have been actually expended. I see a variety of details of charges inserted in these accounts which I am satisfied must be exceedingly difficult for the India Office to verify, or at all events to exercise any check over; seeing also that the accounts have been very considerably delayed, and that the auditor of the India Office has not been able, in the accounts laid before Parliament, to certify to the Home Accounts by reason of these charges not having been audited and finally passed, it certainly is not wise to continue a system which causes such a delay in adjusting transactions between the India Office and the War Office; I am strengthened in my views that it would be easy, or comparatively easy, for a qualified committee to decide, if not from their own knowledge, at all events by the examination of parties interested in the question, either in the India Office or in the War Office, on some fixed amount to be agreed upon, to be paid by the India Office, in order to do away with the necessity of having these details sent in; for instance, for the charges for Netley Hospital, the depôt at Chichester, the hospital charges, extra prices for bread and meat, and other charges of a like nature; the amounts are not very great, but at the same time the accounts and vouchers, I have no doubt from their nature, must be very voluminous; I am convinced that the examination which ought before this to have been made of these accounts, and the expense of making that examination by suitable persons, involves a great waste, both of time and of money, in having to go through that ordeal every year in order to ascertain what liability falls upon India. I may also observe that the vouchers being themselves prepared by one department, it is almost impossible, from my knowledge of auditing, to enable another department, which has not the detailed experience, or the acquaintance with the arrangements by which the charges are made up in these vouchers, to ascertain how far they are correct; and necessarily, an officer employed by the India Office, to find out how far India is liable

Major Gen. Sir *G. Balfour*, M.P., R.A., K.C.B.

30 June 1874.

Chairman—continued.

liable for the amount, must take for granted a very considerable portion of the charges which appear in these vouchers. I may also point out that even as respects the largest amount of the charge, this has varied considerably, for instance, the charge for recruits, the whole sum for which is one-third of a million for one year, is less for the next year, there being a difference of 41,000 *l.* between the two charges of the two years; in order to verify these very charges (I should be prepared to give evidence on the point in reply to another question), it is actually necessary to go into the question, as to how far the men who have been charged for at great rates per head, making up these large amounts, have actually been drilled, and whether the men who have been sent out and charged as recruits are actually recruits or old soldiers. I shall be able to show by another answer that many old soldiers have been included amongst the recruits sent out and charged for as recruits.

2365. But now you are confining your evidence to the convenience or inconvenience of this form of account without going into questions of that sort?—On the form of accounts I would answer, that so long as you have the actual charges sent in you cannot possibly change the form of accounts in any way, neither can you prevent the accounts from being examined by the separate vouchers which are sent in.

2366. That being your opinion, have you any recommendation to give to the Committee as to the best way in which these charges should be made against India?—I would rather defer giving an opinion upon that, because I have never, of late years, turned my attention to the details of the mode of settlement. I have already before this Committee stated, with regard to the recruits, that I see no difficulty whatever in coming to an agreement for fixing a sum for the payment of the largest portion of the charges in these accounts; I think, from the experience we have gained, from the past working of the capitation rate, it is quite possible to fix one particular lump sum for that one item of charge, for recruits. In that way you would get rid of a very large portion of the total charges entered in the accounts from the War Office. Then, another portion of the charge which you could very easily agree upon for India to pay is the charge for the payment of colonels of cavalry and infantry. The charge for these colonels amounts to upwards of 50,000 *l.* in one year, and to upwards of 53,000 *l.* in another year. I think it should be understood between the two offices, how far India should bear the charge for colonels of these corps. My view of the pay of colonels has always been, that as the officer is not a regimental officer, and as he has ceased to be a contractor for the supply of clothing for his regiment, the colonels remuneration is strictly in the form of a reward for good service, and there is no reason why India should be charged for a particular number of colonels; on the contrary, I think that India should be fixed with a certain portion of that expense proportionate to the force which is maintained in India; or else, if you will attach the colonels of regiments to the regiments it is a fair question whether you ought not to consider how far service rendered by these colonels has been service for India or for England. That is the mode in which

Chairman—continued.

the pensions of all soldiers are now settled. The authorities ascertain the total length of service of each soldier, and how much of that has been spent in India, and charge India with the portion of the pension which is due to the proportion of service in India which that soldier has rendered. I am not expressing a decided opinion as to the pay of the colonels, but simply saying that, under any circumstances, that item could be settled with the utmost possible ease.

Sir *Henry Havelock.*

2367. These colonels form a part of the regimental establishments of the regiments in India, do they not?—They have never been employed in India, and you will in most of the Army Estimates very rarely find a colonel attached to a regiment; therefore, as the colonel does not now perform regimental service, we have simply continued the old practice which prevailed when the colonel was a contractor supplying clothing for his regiment, and when he was necessarily borne upon the rolls of that regiment; but the War Office has often thought that it would be very advisable if the pay of the colonel was shown as a distinct charge. It simply confounds all calculations to show it mixed up with regimental establishments.

2368. Surely you would not say that the colonels performed no regimental service. If you take them individually, half of their services have been rendered to India?—I repeat that I have no desire to see India spared one fraction. On the contrary, I think she ought to pay every fraction justly due; but I only throw out suggestions as to the mode in which this kind of claim is to be settled. I think that two or three experienced men might very easily come to an agreement as to how to charge the pay of colonels to the two services. Nor do I grudge the payment of these colonels, because it is a part of the rewards of past military service, and therefore should be respected.

Chairman.

2369. We do not want you to go into the merits of these charges against India, but into the form of stating them; and I understand you to say that you recommend a lump sum as a charge for the recruits; but do I rightly understand you that you recommend the lump sum to cover all these charges, which I believe it formerly did cover?—No; I objected to that charge from the very time it first came out to India; I then pointed out to the Viceroy (and he fully approved of my statements) that it was impossible, but that in paying a lump sum for a variety of charges, you must end in causing dissatisfaction to one or other of the offices; but what I did recommend, and do still urge is this, that taking up each one of these items which you have in the accounts here, you should see what arrangement you could come to for the settlement of each of those items by a separate lump sum; the recruits should be separately considered, the colonels separately considered, and the men coming home after leaving India should be separately considered; in that way I am satisfied, with the experience of the last 14 years, we should be able to get data to enable us to fix the amounts to be paid for each of those heads.

2370. There are eight heads in these accounts before

Chairman—continued.

before me. In what way would you fix a lump sum for such an item as this. I will take as merely an illustration, the smallest of all, the charge for the cost of bread and meat at the discharge depôt. I do not understand exactly how you charge the lump sum?—First of all we know perfectly well how many soldiers have left India during the last 14 years. We also know how many soldiers have been in these depôts, in Netley Hospital, and in the discharge depôt at Chichester; there is no difficulty in arriving at an agreement as to what the average number may be expected to be of soldiers so situated in future years. No doubt the past experience is difficult to use, because it is only in the last three or four years that we have had a discharge depôt at Chichester, and therefore the experience is little; but you heard the evidence of the Director General of the Medical Department to the effect that it was optional almost with the War Office at what time to discharge men from Netley Hospital and from Chichester, therefore if any delay takes place either in discharging the men as cured from Netley, or in discharging men from the Army altogether from Chichester, the War Office is forcing India to bear an expense which ought not to fall upon her revenues, and I think it desirable that these separate questions should be gone into, and that a rate should be struck from the past experience.

Mr. *Campbell-Bannerman.*

2371. When you say that the Director General of the Army Medical Department said it was optional on the part of the War Office authorities, you mean that they must necessarily exercise a discretion as to the state of the man's health?—Quite so, and also the Horse Guards will exercise a discretion at what time they will discharge men from the depôt at Chichester, no longer likely to be fit for active service. If they should delay, in the exercise of that discretion, to discharge these men, it naturally follows that India has a greater sum to pay in consequence.

Chairman.

2372. Then the principle upon which you would go, is a lump sum for each of these charges. In the case of the first charge, that of the pay of the officers, non-commissioned officers, and men, would you take an average number to charge a lump sum against, or how would you take it?—The question you have asked me involves a charge upon the India Office, for the year ending 31st March 1871, amounting to 109,246 *l.* 2 *s.* 1 *d.*, and in that sum there is an amount of 50,981 *l.* included for colonels of infantry and cavalry; and for the year ending 31st March, 1872, the total charge is only 99,803 *l.* 12 *s.* 7 *d.*, and in that sum is included a charge of 53,375 *l.* for colonels of cavalry and infantry, although the number of regiments in India in the two years was the same. That is one of the most easy charges that could be agreed upon. It is sufficient to look back upon the past to see how many colonels you have formerly employed in order to come to a final decision as to whether India is liable, for instance, to pay for a colonel for 384 privates of cavalry when formerly she only paid for a colonel for 606 privates of cavalry, or for a colonel of 750 privates of infantry, when formerly there was one colonel for 950 privates. That was the number

Chairman—continued.

of privates in a regiment of cavalry before the mutiny and during the mutiny, 606; now it is 384, and the infantry, instead of 950, has been as low as 750 privates, and at present 780.

Mr. *Campbell-Bannerman.*

2373. You state that the establishment of a regiment of cavalry in India is now 384?—Six hundred and six was the establishment of privates for a regiment of cavalry in India prior to the mutiny; the establishment of privates for a regiment of cavalry now in India is 384.

2374. Are you quite sure of that?—Yes; I will give it you (*showing a book to the honourable Member, which was the Army Estimates of India for the year* 1874-75).

2375. The reason I asked you was, that Sir Henry Havelock showed me just now a paper showing that it was over 400?—I am speaking of privates, which I hold to be the best rank that you can have to indicate the comparative strength of regiments; but I have got the statement of the number of privates or troopers of cavalry regiments in different years; I will read it out to you if you will allow me.

Mr. *Fawcett.*

2376. Are you giving this evidence now with the view of advocating that the strength of regiments should be increased, or to show that an unfair charge is made with their existing strength?—My object in mentioning it was to indicate the points to which attention should be directed as to this payment of colonels by India. The War Office has the means of varying the number of privates in regiments in India; it has the means of varying the number of colonels chargeable to India by varying the strength of the regiments; and as the account given in shows, of varying the charge for colonels without varying the number of regiments; I show that this can be done to a detrimental extent for India by this fact, that prior to the mutiny the number of cavalry privates intended to be effective in India was 606, and now 384. It was changed to 577; in 1861 to 496; in 1862 to 434; in 1866 to 378; and it was changed in 1870, when the late Secretary of State made that great change on the cavalry organisation to 384 privates, at which it continues. Therefore India now is paying for three or four cavalry colonels more than need have been paid for, if India had been supplied with regiments of a strength of 606 privates. But if you will take my data, subject to correction (I know perfectly well that I am not far incorrect), then I merely wish to indicate, in answer to the Chairman's question, how necessary it is that some agreement should be come to between the War Office and the India Office as to the number of colonels that should be paid for by the India Office.

Mr. *Campbell-Bannerman.*

2377. As to the number of colonels, the amount would be pretty constant over a number of years?—India only paid for five colonels before the mutiny, for a force in privates nearly equal to that for which India is now paying for nine colonels.

Mr. *Fawcett.*

2378. But all this evidence goes to show this: suppose the India Office and the War Office agree that it would be better to have a regiment of cavalry 384 strong than 606 strong, then, of course,

Major Gen. Sir *G. Balfour*, M.P., R.A., K.C.B.

30 June 1874.

Mr. *Fawcett*—continued.

course, it would be only fair that India should pay for the officers who officered that smaller regiment; but then there is another question, which is not a question of account but of military policy primarily, and secondarily a financial question, namely, what is the proper strength for an Indian regiment?—I would again earnestly beg of the Committee to believe that I do not desire to favour India, for I am sure that I have every reason to try and favour the War Office by which my services have been well regarded; I merely wanted to show that it is desirable to allow the exercise of discretion on the part of the War Office, and His Royal Highness the Commander in Chief, as to the establishment of regiments without leaving India to have charges imposed on her, which are open to be varied by changes in the strengths of regiments, in the remarkable manner I have now pointed out, namely, a colonel in one year for 606, and in another year for 384 privates.

Chairman.

2379. I do not desire to wander out of the course of the inquiry now, which is simply as to the best way of stating these accounts. I do not want to go into the question whether the charges are too great or too small, but into the question of how the accounts are stated. As far as I can judge, you have stated that with regard to this first item an arrangement must be come to between the War Office and the Indian Office?—Quite so.

2380. And then, after that, are you to take an average for a certain number of years?—I have indicated it in some detail, but I did not wish to enter into these details, because I would rather form an opinion after more careful inquiry; I merely wished to indicate that this charge was liable to vary, and being liable to vary, and that in the exercise of the discretion of the War Office, which office claims to have the right of exercising its own discretion, I say it is not desirable to allow that conflict of opinion between the War Office and the India Office to exist. I would sum up by saying that I see no difficulty in coming to an agreement upon this head.

2381. You come to an agreement, we will suppose for this year, and that agreement is to last for a certain number of years; is that your meaning?—I would certainly make it last for a certain number of years; the capitation rate lasted for nine years; I do not see why another arrangement should not, if more carefully conducted, also last for a number of years; but I wish the Committee to understand that I have formed a very poor opinion of the inquiry on which that former capitation rate was fixed in 1861. I am satisfied the data were not fully gone into; moreover, the Committee distinctly intimated, when that capitation rate was fixed, that a further inquiry should go on, and that the proposed capitation rate was only to last for one year. That inquiry was never made, though I think that there were data available to have enabled the Committee to make it.

2382. That is a matter of history; we want something with reference to the future. I understand you, with reference to the first of these charges, to say that you recommend that an understanding should be come to, once for all, between the India Office and the War Office by means, I presume, of that Committee that is

Chairman—continued.

sitting, and that, for a certain number of years, that charge should be paid by India without further question; is that so?—I do not say that the charge is to be adhered to once for all, but I certainly think it may last for a certain number of years by mutual agreement, conditional always upon the inquiry being much more satisfactorily conducted than the inquiry of 1859, 1860, and 1861 was.

2383. With regard to the charge for drafts embarked, would you make the same recommendation?—The charge for drafts embarked is an incorrect expression which is used here, and to which I strongly object in the statements placed before this Committee. The word "draft" does not mean, in the sense in which this indicates, that it is a charge simply for recruits; it ought to be stated that it is a charge for recruits and not for drafts. That one charge amounts to one-third of a million. The word "drafts," I now know, covers a number of men who have no right to be designated recruits; and seeing that the high rates which have been charged to India for recruits are intended to be paid for young soldiers, I submit that the word "drafts" should be changed into "recruits," and that we should ascertain distinctly whether the whole number of men put down here deserve to be called by that name. Upon that point I would say, distinctly, that the experience of the past years of the working of the capitation rate ought to enable the Committee to come to an agreement as to what that charge should be; that that charge may be reduced very considerably, I have now satisfied myself, as far as my own inquiries go.

2384. But, having come to that arrangement, then you would have a lump sum charged upon each recruit, or how?—Upon each recruit.

2385. Then the next point is the difference of the number of men on passage with regiments; would you treat that in the same manner?—This (*producing the form of account of the men on passage*) is a model of account which I recommend to the Committee to adopt. It is one which admits of no confusion whatever; it is comprised in one page, and exactly follows out the plan I recommend. It is simply a numerical return which comes into the Horse Guards from every regiment which is embarked for India from England, or from India for England, and shows the numbers who have so embarked. For instance, I see that during the years 1870 and 1871, 4,572 men were embarked for India, and the number disembarked 2,997 (both these numbers being for the infantry), and that the numbers in favour of the British establishment, therefore, and to be charged against India, amounted to 1,575 infantry, and paid for at the uniform rate of 27 *l.* 7 *s.* 11 *d.*; a simpler account than this you could not desire. If you would look at it, you would see at once (*handing it to the Chairman*) that that is a model account to follow.

2386. Then you would recommend that in this form the charge should be made for the numbers of the men on passage?—That is a very good model to follow for all accounts between the War Office and the India Office; upon that one head I do not think you have ever had a dispute of any kind between the two departments.

2387. In that case you would not charge the average but actual accounts?—Yes; for this reason, the returns of men embarked and disembarked

Chairman—continued.

barked are military returns, and follow the ordinary course; you can easily verify how many officers, non-commissioned officers, and soldiers, have been embarked or disembarked.

2388. Then with regard to the next five items, Nos. 4, 5, 6, 7, and 8, which all are charges having reference to the hospital at Netley and the depôt at Chichester; do I rightly understand you that with regard to them you would make a capitation charge upon an average number of men?—This account is also very simple; the charge for barrack accommodation at Netley is at the rate of 4 *d.* a day for each man detained there. Of course the verification of that rate of 4 *d.* is a question; its correctness is one which can be easily ascertained; it ought not to be difficult to agree to a rate, but then the numbers to be charged for will be difficult to settle; the 4 *d.*, or any other rate, can be settled, and permanently settled. But the question is again opened, that here you have got discretion allowed to the authorities of the War Office over which the India Office has no power whatever to exercise control; the question, therefore, is in what mode can you get rid of that interference between the India Office and the War Office as to the number of men in, and the time to be kept in, Netley; it is in these respects that the difficulty exists. But even there I see little difficulty in coming to an agreement between the two offices, so as to settle how long the men shall be upon an average considered to be detained in hospitals after they arrive from India. The medical reports at the present moment show the average number of days which each man is in hospital; therefore an agreement could be come to that on arriving in this country each man is supposed to go to Netley who requires medical treatment, and his detention there shall be supposed to be 10, 15, or 21 days, as the case may be; I believe 21 is very near the average.

2389. Then you would say that 4 *d.* a day for 21 days would represent, as I understand you, the cost of each man; but would you take an average of men, or the actual number of men in each year?—I would settle as to the number of days which each man is supposed to be in hospital after landing from India, and when you have settled the rate per day to be charged for each of those, you at once get rid of all questions with the War Office; you can easily check the number of men who arrive from India, by the military returns sent in to the Horse Guards; you can then calculate upon each of those men men being detained 5, 10, or 15 days in hospital, and having got the numbers, the average rate of detention in hospital, and the rate per day, you have got the three points under your own control, by which the auditors of the India Office can examine and pass the charges with the utmost possible expedition.

2390. Then I understand you to say that you would make a capitation charge, which should be agreed upon for all expenses upon the actual, and not an average number of men annually?—I will exemplify what I mean. I would again advert to the information which you already possess in the returns of the past 14 years. You do not require to take the average numbers of the men for any series of years, but you take the actual numbers who come home as invalided men; that number is certified to by the military re-

Chairman—continued.

Major Gen. Sir *G. Balfour*, M.P., R.A. K.C.B.

30 June 1874.

turns of the Horse Guards; therefore, having got that number of men, and having agreed that each of those men shall be taken to be in hospital, for say 5, or 10, or 15 days, you can calculate with that total number of days and the rate of 4 *d.*, what is the charge to be made against India; so that you have nothing hypothetical at all in the mode by which you would arrive at a settlement.

2391. That is what I said; you agree upon a capitation charge, and you would make that capitation charge upon the actual number of men in each year?—Quite so; and you have no difficulty in ascertaining the number of men that arrive from India as invalids, &c. Wherever you depend upon military returns, you may rely upon their being correct; you have no reason to anticipate difficulty in fixing precisely the actual number of invalids that come home.

Lord *George Hamilton.*

2392. From your great experience, probably, you are well acquainted with the system that is in force by which India is supplied with recruits; no requisition is annually served upon the War Office by India for recruits, is there?—I am not aware of any requisition, and when I heard it first mentioned I was rather surprised! With regard to that supply of recruits, my former experience led me to know that the Commander in Chief made the whole of the arrangements connected with the maintenance of the strength of regiments in India, and that it was the Horse Guards department of the War Office which looked into returns sent from India, and therefore, able to ascertain how many men were required and desired, and to arrange for the number being sent out, as far as the depôts would permit, to supply the deficiencies in the strengths in India.

2393. The fact is, is it not, that India entered into a bargain with the War Office to keep the European force up to a certain strength in India?—That was the agreement in 1861, and it is simply because it was not adhered to, that the whole of this money loss has fallen upon the War Office. If the War Office had maintained the numbers up to the full strength fixed for the garrison of India, then the War Office, instead of losing money, would have made a profit out of the capitation contributions. I may also say that I pointed out to the Viceroy this liability to keep the regiments in India below their fixed strengths at the time that the Capitation Papers came out to India from this country; in one of my reports I see I strongly urged that India should have the European force maintained to the full strength agreed upon; to this end I strongly advocated that for every man deficient in India, the War Office should be obliged to pay double the rate which the India Office paid for recruits sent out, so that you would have a strong inducement upon the War Office to keep the regiments up to the full establishment; I did so, for this reason, that the waste and extravagance of money in India is so exceedingly great when you are forced to multiply the number of regimental cadres, by keeping the number of men which the cadres should have, below the establishment, I am convinced, as I reported, that we should have saved almost half a million sterling in India if we had had all the regiments up to their full establishment; the bargain made with the War Office in 1861 went upon the supposition that each regiment of a thousand rank and file, which was then the

Major Gen. Sir *G. Balfour*, M.P., R.A., K.C.B.

30 June 1874.

Lord *George Hamilton*—continued.

strength of an infantry corps, should be supplied with 80 recruits every year; now that the time has passed, we know perfectly well that if that agreement had been adhered to, the establishment would never have fallen below the fixed strength as it has done, and therefore the War Office were themselves to blame entirely for having failed to receive from India that full amount of money which the arrangement of 1861 justified them in getting by the capitation contributions.

2394. If the War Office can keep the European army in India up to its establishment, it is immaterial to India, is it not, by what means it accomplishes that object?—Yes, so long as India is satisfied that the establishment is maintained, and that the soldiers also are sent out trained; but the experience of the last four years shows, that so far from the soldiers having been sent out fully trained, the average period of nearly one-fourth of the whole number falls very far below the average period which these men should have been trained. Therefore what India has to require is, that she shall get the full value of the money which she pays for those recruits in the form of efficiently trained recruits.

2395. Therefore, if a lump sum was annually paid to the War Office, the War Office might adopt any means that were thought fit and economical by the War Office authorities to keep the Indian European army up to its strength?—Quite so; and the inquiries which we made upon the Recruiting Commission satisfied me then, that so far from keeping up the system of depôts, the War Office might, if it pleased, obtain from regiments the number of volunteers that were needed, and the War Office might then have saved a very large sum out of the payments that were made, or might have been paid by India; but under any circumstances the War Office could supplement any depôt in case that depôt did not supply the number of men needed, by obtaining volunteers from regiments; to that extent therefore the War Office has had the means within itself to have kept up the force in India.

Sir *Henry Havelock.*

2396. But you are aware that at the present moment, on each regiment coming home from India it is asked to volunteer, as has been done any time for the last 40 years?—India has always had the right, and the Commander in Chief distinctly stated that she had always had the right to call upon regiments to volunteer, and regiments have volunteered ever since I went to India, and for sometime before.

2397. I understood you in your last answer to say that so many recruits would not have been needed if the authorities had taken the proper means to get the proper number of volunteers from regiments coming home from India?—No, I meant obtaining volunteers in this country. In answer to the noble Lord's question, I intended to imply that volunteers from regiments in England might have been called for; they have been called for, and will be again called for, in order to supply the regiments in India with the men required.

2398. Are you not aware that for years past every battalion that goes to India has been increased to 820 from 560 by volunteers from other regiments?—That has been so; and, therefore, I have always maintained that having an existing practice of thus filling up regiments to go to India, there was no earthly reason why you

Sir *Henry Havelock*—continued.

should not extend that practice, and call for volunteers from regiments in England to go out to other regiments then serving in India.

Mr. *Campbell-Bannerman.*

2399. It has been brought out in evidence that one reason why the forces in India are not up to their establishment is, that when a regiment is going to come home drafts are not sent out to it for two years previously?—I should not like to make statements, because I have not got the official documents now to prove my evidence; but I have no doubt that I could call for returns which would show distinctly that men have gone out one year, and come home the next with regiments. I know there was a very serious complaint when I was in India; I found both officers and men coming out to India one year, and going home the next; one of the great drawbacks to the present system is this, that as you insist upon relieving regiments periodically, you must either keep them below their strength for two or three years, or keep them filled up; then the passage of men going out one year will be charged for those men coming home next year.

2400. But His Royal Highness states that for two years previous to a regiment coming home, no drafts are sent out; you heard him state that?—I have not got the official documents, and, therefore, do not want to make a statement; but I have no hesitation in saying that that was not the case when I had official experience; men did go out and did come home; and I would mention particularly the artillery, upon which I had a very strong objection.

Sir *Henry Havelock.*

2401. It has been stated that the establishments in India are, as it were, habitually kept below their standard; is it not the case, as you know, that now, and for years past, it has been the custom to withdraw the annual drafts for one or two years before the time that a regiment came home from India?—You have got the Commander in Chief's own statement, in which I most fully agree, "I had not the men to send out; supply me with the men, and I will make the regiment complete." Therefore, the grievance that His Royal Highness the Commander in Chief had was that he was obliged to perform that which he had not the supplies necessary for; and I have no doubt that if we had the returns before us we could bring home the fact of some regiments having received supplies of recruits, certainly within two years of their coming home. That that was the case formerly I have no hesitation in asserting, because I have official evidence of it.

2402. The Commander in Chief has asserted it not to be so, and so far as my experience goes, I believe it not to be so; therefore, if you allege it is so, I think you should give us some data; have you any such to give us?—I called for returns by placing a motion for them on the Proceedings of the House; I have kept it in our Proceedings for some time in the hope that I might get them; but it is not very easy to get these returns from the War Office, and, therefore, as I cannot force them, I must abstain from pressing the returns; but the point which I think you should bear in mind, is this, that if we had a continuance of these returns

now

Sir *Henry Havelock*—continued.

now laid before us, you would find that, so far from the regiments in India being below their establishment to the extent that they were between 1861–62 and 1868–69, for the last two years the establishment in India has been kept much closer up to its fixed strength.

Chairman.

2403. You are giving your own experience of a system which has been altered since?—More than that; I have a return which has been prepared from the year 1860-61 down to the present day. The return is interesting, and it is one which the Committee, with the noble Lord's permission, can have; it shows that in the year 1863-64, the establishment being 70,017 men, the whole of that year shows a very considerable deficiency of strength; I see that instead of the 70,017 men, in one month the effectives were only 65,660; if the Committee desire it, I will now put this return in. (*Vide* Appendix). I believe it is nearly as correct as it can be made. Then it shows that for the last two years, namely, 1872–73 and 1873–74, the effective strength has been much nearer to the establishment than it was in any former year; I hold that, seeing the irregularities in the strengths, as shown in this return, the conclusion cannot be mistaken as to the way the effectives have fallen below the establishment, because, where you see a series of figures falling and rising, as you do in this return, you can only come to one conclusion, which is this, that the means existed for supplying the men, but that these means were not properly applied. This return can be put in, as I now do, and, as far as I can make out from the returns, it gives a fair idea of the state of the European force in India during the last 14 years; but since this caution, that I never yet met with any two persons who could agree to make out a return of numbers from the army returns, which would be uniform; so deficient are the returns, and so complicated are they in many ways, that if the Committee accept this return, I would beg them to bear in mind that any one calling for other returns will find different results from these that I have put down here; but this is taken from the returns in the India Office, and, as far as my experience goes, I am able to support the correctness of most of the figures by reference to actual returns. But again I will show you returns from the Horse Guards, wherein variations of 2,000 or 3,000 men have taken place; I pointed out these variations, thus showing how difficult it is to come to a right conclusion about returns of army strengths.

2404. But does not it show that during the last few years the army in India has been kept up more to its proper strength than in former years?—Yes, and I believe it to be entirely in consequence of my letters to the "Times."

2405. I want to show some cause for the discrepancy, and it seems to me that you and Sir Henry Havelock are talking of different times, and that according to your own returns the army has been kept up more to its proper strength of late years than formerly?—Yes, because I wrote to the "Times," and said it had been kept 5,000 below its establishment.

Sir *Henry Havelock.*

2406. There was a statement made by you the other day with regard to the immense number of

Sir *Henry Havelock*—continued.

men who had been accumulated at the home depôts in 1859 and 1860. I think you said that they numbered something like 20,000 men. I then asked you on that, whether it did not arise, to a certain extent, from there being some 12 to 15 battalions of infantry in India who were due at home, and for whom there were a large number of recruits in waiting. I have worked out the thing this morning, and I find that it is exactly as I stated then, that there were 15 battalions of infantry in India due at home in the years 1859, 1860, and 1861, and that that alone, taking their recruits at 300 each, would account for 4,500 men being retained at home?—I will answer that question by quoting (I produced the book on the last occasion) the Report of the Defence Commission; and I see, in one of my reports on the 15th of August 1860, which is to be found at page 123 of Parliamentary Paper No. 298, of 1862, I specially brought to the notice of the Government of India the fact that there were 20,905 men then at home, taken by the Defence Commission as available for the defence of the country, and paid for by India. And I promised to put in another statement (not to occupy the time of the Committee), which I have got here, showing very large deficiencies of the European force in India in those years, 1859 and 1860. Now the date on which the Defence Commission made this statement of those 20,000 men being at home available for the defence of the country was at a time when we had not begun to speak of any regiments coming home from India at all; that was the 8th of September 1859, and it was not till the 5th of May 1860 that the Viceroy, Lord Canning, reported upon the strength required for India.

2407. Excuse me; the first six battalions landed in England in July and August 1859; I can give you the dates?—Here is Lord Canning's statement with regard to the European force required in India. It is contained in a military letter to the Secretary of State of the 5th of May 1860, and at that time we had not the force in India then considered necessary for garrisoning India.

2408. These six battalions were at that time on their way home?—I undertake to produce proof with regard to the number of men at home and the number of men connected with the depôts. I have got plenty of proofs which, if I had time to collect, I would put in with the utmost possible ease; but I have got here a statement so late as the 1st of July 1870, and even on the 1st of July 1870, when every attention had been paid to recruiting, there were no less than 3,613 rank and file of cavalry and infantry wanting to complete the establishment in India; and I will undertake to produce proofs with regard to the deficiency in India in 1860, and to show distinctly the extent to which the establishments were deficient.

Mr. *Campbell-Bannerman.*

2409. But that is 10 years later than the time to which Sir Henry Havelock's question referred. Sir Henry Havelock's question is this: he does not dispute your statement as to the number of men at home or the deficiency in India, but he asks you whether you are aware that at the time in question a large number of regiments, 15 regiments, were under orders to come home, and were due at home, and whether that does not entirely account for the discrepancy, or at all events, go a great way to account for it?—No

Major-Gen. Sir *G. Balfour*, M.P., R.A., K.C.B.

30 June 1874.

Major Gen. Sir *G. Balfour*, M.P., R.A., K.C.B.

30 June 1874.

Mr. *Campbell-Bannerman*—continued.

doubt a number of regiments coming home were due; but I will undertake to produce statements to show the number of men which were in depôts at home about that period; and I have also the means of showing at what dates the regiments which had depôts at home came home; and I will put that in as a statement if the Committee will permit me, and that will enable you to see to what extent this large force of 20,000 men, which the Commissioners reported as being available for the defence of England, was affected by these changes.

Sir *Henry Havelock*.

2410. You say, I think, that on the 1st of July 1870, there were 3,613 rank and file wanting to complete the establishment of cavalry and infantry in India; then in the winter of that year would there not be coming home to England five battalions of infantry and one regiment of cavalry, which would just about cover that, if you take the average number of recruits waiting for them?—No, because that is entirely at variance with the condition upon which the garrison of India was to be maintained; the condition distinctly was, under the capitation rate agreement with the War Office, that whatever garrison you fixed on to be in India it was essentially necessary that you should keep that garrison complete; and it is a false economy to allow a few pounds to be saved by not keeping that garrison complete; it is in that way that our great dangers have fallen upon India, in allowing the establishment to fall below the strength which is needed.

2411. But then if you desire that at every period of every year the establishment in India shall be complete, would you have the kindness to tell me how you propose to do that, if you do not allow men to be brought backwards and forwards in this way; you desire that no men should be sent to India for the purpose of being sent back, and at the same time you know that there are certain invalids coming away every year; how then can you prevent the strength being at some time of each year 2,000 to 3,000 below the establishment?—The experience of the arrangements before the 1st of January 1854, distinctly showed that for a series of years the cavalry and infantry regiments were for several years, from the 1st of January 1847 to the 1st of January 1854, above their establishment on the 1st of January of each of the years within that period, and that was, practically speaking, at a date before the recruits of the year came out to India to join regiments, so that in that respect we had the regiments up to their full establishment, and sometimes above their full establishment; and the arrangements which were then so efficient for keeping up the garrison of India might have been maintained at the same economical rate at which the establishment was maintained prior to the Russian War.

2412. I think, in your answer to the examination the other day, you accounted for that, because you have said that it was the practice of the Horse Guards, previous to the Mutiny, to keep on their strength at home more men than they were entitled to, so that they might bring them down to the average; and now, according to His Royal Highness, they are not allowed to do that?—The answer which I gave to the noble Lord's question was to this effect; it was within the means of the War Office to maintain that establishment, they being amply paid for doing so; they did not do so; and they acted thus to their own loss; and, moreover, to the serious inconvenience of India in keeping the force nearly 4,000 men for a series of years below the proper establishment.

Sir *Henry Havelock*—continued.

2413. But we had it from His Royal Highness the Commander in Chief the other day, that he should be very happy to revert to that state of things if permitted, but that under the existing regulations he was not allowed to recruit the men till six months from the period of their being sent out?—The existing regulations being entirely dependent, so far as I am aware, upon the War Office, the India Office never interfered with the arrangements which the War Office made for maintaining of that establishment; and therefore if His Royal Highness had not the means to supply India with the recruits which were needed, it was simply because there was a want of agreement between the departments, and that is one of the consequences of letting one department supply recruits, and making another department pay for them.

2414. I do not know whether you formed the same impression that I did, but I understood His Royal Highness distinctly to say that he was debarred from doing that which he desired to do for the purpose of keeping up the establishment by some regulation or rule from the India Office?—My answer to the noble Lord's question was that I was not aware of any impediment on the part of the India Office to allow a few men to be added to the depôts; they would cost very little, and would add very much to the efficiency of the army in India, and I see no reason why that addition should not be given; it was given in former days, and it is simply a defect in administration that it is not given in the present day.

2415. Then would not that again lead to the evil that you have complained of several times, that there would be a larger number of men in England whom India would be paying for; in your evidence you have complained of that several times; if the suggestion that you have now made were adopted, would it not lead to that result, that your depôts at home would be very much larger, and that consequently India would be paying for a much larger number of men at home than now?—My answer is that India would not have paid a fraction more for the men at home during the time that the capitation rate was in existence; and therefore an agreement having been made with the War Office that they should keep up this number of men, it was a duty incumbent upon the home authorities to have kept that number of men up, and to have supplied India with the agreed number of recruits, namely, that each depôt should have turned out 80 recruits per annum; whereas, now we have got information, we find that each depôt only turned out 40 recruits.

Mr. *Fawcett*.

2416. May I ask, in order to elucidate this question, whether what you are now saying refers to the past or to the present; you are referring to the days when the capitation system was in operation, as I understand?—I urge that since the capitation rate ceased, as I show by returns, the force has been kept up to the fixed establishment more closely in India than during the time that the capitation rate was in existence. Then I am quite prepared to give evidence to say that if India was allowed to regulate the depôts according to the wants of India, India could, according to the system now in force of paying for actual numbers, easily

Mr. *Fawcett*—continued.

easily reduce the depôt to what it was prior to the Mutiny, and that India could add a few recruits to that depôt as in former days, in order to keep up the force in India to the full establishment. Therefore what I desire to show is this, that the experience of the past should be brought in operation to arrange for the future; I am convinced that arrangements could be made by which India need only pay a much more moderate sum than is now charged in the accounts still unsettled for the recruits which have been supplied.

Sir *Henry Havelock.*

2417. I understood you to say, in one of your earlier answers this morning, that a great many old soldiers have been included amongst recruits, inferring that a great many men who ought to be charged to India at the reduced rate of 27 *l.* have been charged to her at the increased rate of 63 *l.*; was that your meaning?—It is fully my meaning, and I now hand in statements which I have obtained from the India Office to prove my statements. These two statements I now hand in (*vide* Appendix) show that 13,640 men have been sent out within the last four years as recruits, and charged for as recruits, who enlisted in 1852, 1853, 1854, 1855, 1856, 1857, 1858, down to 1874. Then also I have a second statement, which I hand in (*vide* Appendix), being a tabulated statement of 13,592 men that have been sent out to India during the last four years, which shows that boys from the age of 14 up to men of the age of 56 have been sent out and charged for as recruits; I do not think that you and I will agree to consider these men as recruits.

2418. When you say that these men of all ages have been charged as recruits, you mean, of course, that according to the practice that has existed for very many years, men who have come from India invalided, and have recovered their health, have, on recovering their health, been returned to India as soldiers?—We are now speaking with reference to the capitation rate, which was distinctly agreed and settled upon. According to the statement at page 11 of the Return, No. 165, laid before the House of Lords in 1862, the understanding was, by paying this capitation rate, infantry recruits should be sent out who had been trained for 4½ months; not old soldiers, or anything else. There is not a word in the report which justifies the sending out of old men, and charging for them as recruits. If you turn up the papers, I am sure you will be convinced from Sir Alexander Tulloch's statement at page 11 of the House of Lords' Return, No. 165 of 1862, of the correctness of my assertion. He distinctly lays down the conditions upon which that capitation payment should be made: "That each infantry recruit will be at the depôt on pay for an average period of four months and a half from the date of his enlistment till he embarked; each cavalry recruit six months, and each artillery recruit 12 months. That the recruits will be sent out to India regularly twice a year, unless they have to be retained longer at the expense of the British Government." That is the famous Report of which we have heard so much from the committee of officers selected from the War Office and India Office who settled the payment of the capitation rate, which is laid down at page 71 of the same Return. That recommendation is dated the 31st of January 1861; and they then agreed to recommend the two Secretaries of State to

Sir *Henry Havelock*—continued.

adopt a lump sum as a contribution from India to the War Office to cover all these charges for supplying recruits. Now, the Return which you have now before you is of a different character. So long as the capitation rate was in existence, the India Office made no inquiries, as far as I can ascertain, as to the ages of the men sent out, or as to the period of training. They accepted the statements as to their fitness on the assumption that the Commander in Chief would look into the efficiency of regiments in India. But this Return which we now have is for the four years which have elapsed since the capitation rate ceased, and India has been charged for the actual results of the recruits; that Return shows that men of all ages, of all services, have been sent out and charged for as recruits; and the accounts which you have had before you to-day distinctly show that in the years 1870-71, for which the charges are made, instead of 2,580 men, which is shown in that Return, 4,646 men are charged for; the difference between 2,580, shown in that Return, and the number actually charged for as recruits is in consequence of not having the nominal rolls of the men sent out for 1870 and 1871 complete; but in the year 1871-2, for which these accounts are rendered, the numbers sent out, for which there are nominal rules at the India Office, were 3,935 men, and the numbers charged for in the accounts of the War Office are 3,981; there is a discrepancy of 46 men, which need not be taken into account. Therefore I prove that men of all ages are now charged for by the War Office as recruits, though they are old soldiers, and have probably been in the army before, and probably have been before sent out to India at the expense of India.

Major Gen. Sir *G. Balfour*, M.P., R.A., K.C.B.

30 June 1874.

2419. But then, if you object to that, in what other way will you have these men sent out, and in what other way will you have them charged for; because all this that has been done, has been done according to established rule?—The question of its being done according to established rule cannot be pleaded, because we had no established rule in existence from 1861-2 to 1869-70; because my reply to the noble Lord's question distinctly showed that India never interfered with the recruits sent out during those years, and that therefore India had nothing to guide her in judging of the last four years that have elapsed since the capitation rate ceased; but the result of the inquiries is, that they have prepared this table which I thought would be interesting to the Committee; and I now show you that the result of the practice in supplying India with recruits is to send out men of all ages and all services in that form, and to charge for them as if they had cost England the full sum of money which is stated to be the cost of recruits.

2420. But as a matter of fact, has it not been the practice ever since you can recollect for men who have come home from India for the recovery of their health, on the recovery of their health to be returned to India for further service in India?—My answer to that is this, that you have changed entirely the condition of service of regiments.

2421. I should like a specific answer to the question I have put to you?—If I answer you by saying that you have had a very loose system during the existence of the capitation rate, I put an end to your question.

2422. I should like a precise answer if the

Major Gen. Sir *G. Balfour*, M.P., R.A., K.C.B. 30 June 1874.

Sir *Henry Havelock*—continued.

Committee will allow me to press you for one?—I answer you by saying that for the last 13 years we have had a loose system, and that soldiers have been sent backwards and forwards in that time much more frequently than in the former practice; but the India Office has no experience of the nine years during which the capitation rates were in force. It has experience of the time previous to the nine years, and are now getting experience of the past four years. They can answer for that, and I am prepared to answer for that.

2423. This practice of which I speak is not one which applies only to the period from the capitation rate, but has been the practice in all time?—The answer is that India was never charged then for recruits at the enormous rates of the last four years, and therefore it was a matter of comparative indifference whether men went backwards and forwards; but now that India has to pay very dear for the article, naturally enough the India Office looks after the finances of India, and it supplies a table showing that instead of recruits, they have been supplied with many old soldiers.

Mr. *Campbell-Bannerman.*

2424. But does the India Office make that complaint?—I am not here to speak for the India Office; the noble Lord is here to speak for the India Office.

2425. You put in a Return from the India Office, I suppose, as the representative of the India Office?—I do not see it is necessary to view it so. Of course if the Committee think it is not proper for me to put in the Returns, it is very easy for the noble Lord to hand it in. I spoke to the noble Lord before I used it, and whether the Return comes from me or is put in by the noble Lord, I do not think signifies very much, the object of this Committee being to ascertain the truth of these charges.

Sir *Henry Havelock.*

2426. What has been the highest rate at which recruits have been charged to India?—About 27 *l.* 11 *s.* 7 *d.* in former years, and 63 *l.* 6 *s.* 4 *d.* in later years.

2427. You have been endeavouring to show that India suffers some disadvantage by a certain number of old soldiers being included amongst the recruits. Looking at the Return which you have put in, I find that in the whole term of years included here, out of these 13,000 men, upwards of 9,000, namely, 9,400, have been sent out in the year, or the succeeding year, to that in which they were enlisted; that is to say, that of these old soldiers there could not have been in any case more than 4,000 out of the whole number?—I had this statement prepared, which I have now in my hands. I find that allowing for differences of one or two here and there (for the Returns are not very easy to make out), and allowing for errors, not of any importance, the whole number charged for, is put down on this statement as to ages at 13,592. Now if you take all of the ages between 18 and 23 in that Return before you, you will find the number to be 9,141; therefore there is a number charged for to India as recruits; namely, 4,452, who are not of the ages of men who ought to be designated recruits. Of course I must guard myself distinctly by stating that you can vary these numbers to any extent you like by varying the ages. I have taken the numbers here of the ages between 18 and 23, and therefore if you change the ages, you necessarily change the numbers; but that is necessarily open to adjustment as to the ages at which they shall be designated recruits. I did ask the Accountant General that very question, because at that very time I was cognisant of the fact that the ages might be some criterion by which to judge of the number of recruits. Again, I have taken out of the same table the number of recruits according to the years of service. Again, I would ask you to bear in mind that that Return has some slight variations. In this one there are 13,640 charged for, and taking the men of two years service only, which I have given (which is a very great latitude), you ought only to have charged for 6,836 men as recruits, leaving 6,804 charged for as recruits, who do not by length of service fall within that category. I will put in those statements, and they can be verified and corrected if necessary.

Sir *Henry Havelock*—continued.

2428. Are you aware, on the other hand, that by Parliamentary Paper, No. 413, rendered to the House of Commons on the 5th of August 1873, which shows certain details connected with recruits who have been enlisted for the army in the last four years, it appears that from 31st July 1870 to the present time, 5,462 men have gone to India with the head-quarters of regiments who were recruits, and whom India has therefore got at the reduced rate of 27 *l.* a man, instead of the rate of 63 *l.* a man, making a difference in favour of India of over 196,000 *l.* in those four years?—I am aware from the Returns, which I have now before me, that in the year 1870-71, 4,572 men embarked, and 2,957 disembarked, and that India paid England, as the difference between the numbers sent away and coming home, the sum of 26,222 *l.*, and that India paid for these men the charges agreed upon, namely, for infantry at the rate of 27 *l.* 7 *s.* 11 *d.*, and for cavalry 55 *l.* 17 *s.* 3 *d.* If these rates are insufficient, then I say distinctly, revise them and make India pay more; but here is a distinct agreement made between India and England fairly adhered to on the part of India for a long number of years.

Mr. *Campbell-Bannerman.*

2429. But surely it affects the question between the two countries, when Sir Henry Havelock shows from this Parliamentary Return that within the same four years as those of which you spoke, 5,462 who were recruits, and who if they had gone out in drafts would have been charged at the higher rate, have gone out with the regiments as men on passage, and have been charged only at the lower rate, India thereby gaining nearly 200,000 *l.* in the four years; if you set that off against the grievance which you are bringing forward as applicable to the same four years, surely it is a matter which deserves to be, at all events, considered?—I have fully considered it, and I am perfectly ready to acknowledge the propriety of making changes, if they are necessary. All I insist upon is this, it is a matter of agreement, at the present moment, to charge for those men in the form which you have given, and if the agreement is a wrong one for England, I say distinctly England ought to change it; but it is a distinct agreement to charge for those men in that particular form.

2430. Then do you not think that it would be fair, supposing the charge to continue to be on the present

Mr. *Campbell-Bannerman*—continued.

present footing of so much per recruit, and so much per man on passage, that if men who are not *bonâ fide* recruits are charged at the higher rate, when they go out in drafts, per contra men who are *bonâ fide* recruits, and have been enlisted within one or two years, should be charged when they go out with reliefs, at the higher rate as recruits?—No; I insist that you should not go into this minutiæ at all; but, if you find the 27 *l.* 7 *s.* 11 *d.* paid for men embarking as embodied regiments to be insufficient to recoup England for the expenses which she has been at, then I say, distinctly, alter the rate; but it is an agreement, at the present moment, to charge in that form. I am not any grievance monger; neither do I advocate the interests of India or of England, because I desire both countries to be protected; but if you have charges at one rate for old soldiers, it is not right that you should make these old soldiers to be paid for by India at the larger rate of recruits.

Lord *George Hamilton.*

2431. I think this has arisen from the word "recruit" being used in an improper sense." The word "recruit" applies to drafts sent out to men sent out to keep the regiments in India up to their proper strength?—Yes; men trained four and a half months according to the Tulloch calculation, or seven months according to the present calculation; and it was never contemplated to have men who had been old soldiers paid for under that designation.

2432. But the word "recruit" does not apply to any man who is on the strength of a regiment that is ordered to India?—I should say distinctly that is one of the additional definitions which you might apply to the word "recruit," if those definitions of the Committee which fixed the rate have not properly declared what a "recruit" meant.

2433. Because otherwise the War Office have entire control over the strength of regiments at home, and it might happen that three-fourths of the men in a regiment ordered for India might be recruits, that is to say, men who had not completed a certain term of service; but, according to Sir Henry Havelock's theory, India would have to pay for the whole of those men at the price she pays for the drafts who go to fill up the regiments?—I think that is the result of the questions of the honourable Member.

Mr. *Campbell-Bannerman.*

2434. I understand that you do not complain that those men are absolutely worked out and out of date, but you say that the same class of men who go out in a regiment, with four, five, and six years' service, and are charged as "men on passage," may be sent out in a draft among the recruits?—My answer to that is, that if I were to go over the rolls of the regiments of the men sent out in that form, I have not the slightest doubt that I could prove that the men sent out have not been properly sent out, from giving India a very short service; but my complaint is this (if you choose to say that I do complain at all, which I do not allow), I say that an agreement has been entered into between India and the War Office that you are to charge India for men sent out as recruits who are sent out to keep up the establishment in India, and they have departed from that in the War Office by sending out old soldiers who are not recruits in

Mr. *Campbell-Bannerman*—continued.

Major Gen. Sir *G. Balfour*, M.P., R.A., K.C.B.

30 June 1874.

the sense in which the evidence before this Committee puts it, and that you have included those amongst the men charged for at those high rates.

2435. In this Return there are a certain number of men who you say are not recruits; men who go out with the drafts, but who you say ought not to be counted as recruits; is that so?—No, because you are not putting my views in a correct manner; I myself brought out from the evidence of the Commander in Chief and the Accountant General, a statement of what they meant by recruits, and I say that if you take them as being of ages between 18 and 23, then 9,141 men ought to have been charged for, whereas the number, according to the Return I put in, charged for is 13,592.

2436. So that you consider that any man over 23 is not a recruit, and any man under 23 is a recruit?—I put the question to the Accountant General, and I am keeping within his definition. If you choose to vary it, and say that the ages shall be between 18 and 25, I do not object; but I am showing you how I arrived at the result stated. The Commander in Chief distinctly stated that he did not desire to have very old men sent out as recruits.

2437. Then on that hypothesis, that being taken as the limit of a recruit's existence, namely, when he reaches the age of 23, you say that according to this return there are so many men sent out in drafts in those years who were not recruits?—Yes.

2438. Now, is it the case, as Sir Henry Havelock says, that when a regiment goes out *en masse* to India there are a large number in that regiment who are under 23, and who, by a parity of reasoning, might fairly be charged for as recruits?—Yes; and I answer that by saying that these regiments are inefficient, because we send out young men of less than 20, which the Commander in Chief distinctly stated to be a drawback, and I consider that the British Government do not comply with the agreement with India, as to sending out good and efficient soldiers to maintain India in safety.

2439. Passing that by, I merely wish to know whether you admit that when a regiment goes out there are a certain number of men in it who are under 23 years of age?—Yes; much to the detriment of India, by sending out inexperienced soldiers.

Lord *Edmond Fitzmaurice.*

2440. As I understand shortly, this is what you mean: the disadvantage to India of sending out men too old may to a certain extent be said to be counterbalanced by the advantage to India of other men, of what may be called the average age of recruits going out in regiments; on the other hand, you say that in those regiments there are men who are much too young, and therefore you have in the regiment itself something that balances the advantage to India, and that consequently the balance of disadvantage is against India?—I do say so.

Mr. *Campbell-Bannerman.*

2441. The question of age as to the soldier being too young or too old, does not affect my point; we are not talking of the efficiency of the recruits sent out, or of the regiments; if in the regiments there are men sent out who are under 20, equally on the drafts there are men sent out under 20,

Major Gen. Sir *G. Balfour*, M.P., R.A., K.C.B.

30 June 1874.

Mr. *Campbell-Bannerman*—continued.

and if you object to the one I presume you would object to the other; but you complain that certain men who are sent out in the drafts are charged for as recruits, who are really over 23 years of age, and you consider that a grievance. On the other hand, is it not the case, that when a regiment goes out there are a large number of men charged for at the old soldier rate who are under 23 years of age?—There is no doubt, putting it in that form, that is the case, but without a distinct explanation of what you do then, and what India does, I should mislead the Committee.

2442. But so far as charges are concerned; so far as the question is concerned, whether a man is to be charged as a recruit at the higher rate, or as a man on passage, the question of efficiency does not enter into that?—I disagree with you entirely; the essential point on which the capitation rate was based was, that the Warley depôt was inefficient, by sending out young men without training. Sir Alexander Tulloch distinctly asserted, that the article which came from the Horse Guards was a far more efficient man, and that the extra expense that you were charging for recruits was because of the superiority of the article.

2443. I am talking of the mere matter of account, whether a certain man, Thomas Atkins, shall be charged as a recruit, or a man on passage; and you draw your line apparently at 23 years of age?—No; pardon me, I do not draw the line; it is put forward by supposition, and I am willing to submit the ages and length of service of men to be called recruits to anything you like; I say, admitting 18 to 23 years of age to be the period when men are usually held to be recruits, you then have the following numbers; if you say that my ages are incorrect then I am willing to submit to you.

Lord *Edmond Fitzmaurice.*

2444. You took those ages, 18 and 23, from certain documents before you, and founded your calculations upon them?—Yes.

Mr. *Campbell-Bannerman.*

2445. In the drafts between 1870-1 and 1873-4, as to which you furnished these returns, there are a certain number of men who have gone out over 23 years of age; you say that they should not have been charged for as recruits?—Supposing you assume my age of 23 to be correct, then I say distinctly they ought not to have been sent out as recruits. If you say that my age of 23 is not the right limit, then I am wrong.

2446. I do not dispute your age, but I accept your age of 23?—Then I say distinctly that these were old soldiers.

2447. Then a certain number of men being over 23, and not being chargeable as recruits as you think, how would you charge them?—By the agreement between the two Governments, at 27 *l.* odd.

2448. What system would you apply to a regiment when it goes it?—The agreement between England and India is this: when the War Office choose to say, "We intend relieving a regiment in India," it is the bounden duty of the War Office to send that regiment out, full and complete, up to the establishment then existing with regard to India; but this has not been carried out by the War Office for a long period of years.

Mr. *Campbell-Bannerman*—continued.

2449. So that you think the distinction between a man under 23 and a man over 23 ought to be applied when it tells in favour of India, and ought not to be applied when it tells against India?—I say distinctly that I never did indicate such a distinction as that, and I deny that I advocate in any form or shape that India shall be spared one single fraction which that country ought to pay justly and fairly; but the fact is that in my experience and Lord Canning's experience, and Sir Bartle Frere's and Mr. Laing's, the finances of India, when they were in a bankrupt state, were seriously embarrassed by the mode in which the European troops were supplied from England, and it is as the result of that sad experience in those years that I now desire to see a better system adopted in this country.

Sir *Henry Havelock.*

2450. Was I correct in understanding you to say that in the last four years the battalions that have gone to India have been embarked under their strength?—I have said distinctly that for 1872-3 and 1873-4, the establishment has been kept up more complete than it was before; but as you ask me the question, I will give you an instance. In 1871 the statistics of a regiment embarked, all ranks show 896 strong, which is less than the establishment; that was the 56th Foot; and in 1872 the strength was 877; that is the 68th Foot; and I have already mentioned to you that the last two years the regiments have been kept up much more complete. In 1866 the 37th Foot embarked 699 strong, and I heard the Commander in Chief himself say before the Committee over which Lord Salisbury presided, that he did not know where to turn to find men to complete regiments; but in that year India was charged with the full strength of a regiment of officers with about six-tenths of the men.

2451. But I should like you to answer specifically the question I put, and that is whether, in the case of battalions embarked for India in the last four years, they have or not embarked in their full strength?—I would say they had not, and if I had returns I would show it. In 1872, for instance, the 68th Foot were 877 men strong.

Chairman.

2452. In the last four years the regiments have been up to their full strength you may say. Is not that the result of your evidence?—For two of the years of the period, namely, for 1872-3 and 1873-4, they have been much closer up to their establishment than they were in the former years.

Sir *Henry Havelock.*

2453. Have they been short of their establishment at all?—They have been closer up to their establishment than they were in any former years. The strength of India for 1872-3 and 1873-4 has been very close up to the establishment. I showed that in former years it was far below the establishment.

2454. Then do I understand you to admit that in these battalions which have been embarked in the last four years there have been (I will give the numbers) 5,462 men embarked, whom India has received at the reduced rate, who might, on the recruit theory, have been charged at the higher rate; because, from the returns put in, I show you that they were all men enlisted in that year or the previous year?—I answer that the number

Sir *Henry Havelock*—continued.

number of men embarked with every regiment as a complete body of men are paid for at a rate which has been agreed upon between the two Governments, irrespective altogether as to whether they were recruits or old soldiers; and that no inquiry is made as to the ages or service of these men, but that the numbers are reported by the War Office as an actual number embarked, and the accounts then agreed on. Here are the actual settled rates (*pointing to the Account for the War Office of the Men on Passage*).

2455. Do you deliberately say that no inquiry is made of their age or service?—Not of the embarked regiments.

2456. Are you aware that since Lord Sandhurst raised the objection in the early part of 1871, no soldier has been embarked for India under 20 years of age?—I am speaking of the action of the India Office, and I say that I am not aware of any inquiry by the India Office as to the ages of the men or the service of the men. I say that that is entirely left to the War Office, and that India pays for every man embarked at a fixed agreed upon rate, which is regularly entered in the accounts.

2457. The specific question I asked was, whether you were aware that since Lord Sandhurst raised the objection in the early part of 1871, every soldier sent to India was necessarily 20 years of age, or over 20 years of age. Is that within your knowledge or not?—I speak within my own knowledge, supposing the returns to be correct. You have it in evidence from the Director General that you have a large number of men serving in India who are under 20 years of age. Now, therefore, these men must have been sent out under that age. But I ask the Committee to remember that the arrangements which you speak of are between the War Office and the Horse Guards, and that the India Office has no cognisance of them. It is within the power of the War Office to make any arrangements that they like for sending out men; and it is not within the province of the India Office to inquire the ages of those men.

2458. You have no doubt, I suppose, that the ages at which those men are returned as having embarked are correct?—The medical returns show that a number of men are now in India under the age of 20. When they went out I cannot tell you.

2459. We know that in every regiment there are many bandsmen and drummers who are only 14 years of age; and all those put together would make a large number?—The numbers of men which we received in the Director General's Return the other day, are far too numerous to allow of their being considered exceptions of that kind.

Mr. *Fawcett.*

2460. Your contention, as I understand, with regard to the last part of your evidence, is that there are two agreements between India and the English Government as to the terms on which she shall receive her troops. One agreement is, that she should pay a certain sum per recruit, and that that recruit should have a certain amount of training. You make two observations upon that, namely, that this agreement is disregarded in two distinct ways; first of all, a recruit often does not receive the amount of training for which India nominally pays; and, secondly, a great number of men are sent out who are old soldiers,

Mr. *Fawcett*—continued.

whom India has to pay for as recruits?—That is my contention, that not only are the old soldier and the recruit mixed up together, but even in that roll which is now before you, there were no fewer than 3,930 men, or nearly one-fourth of the whole number, who only received a very small portion of the training that they ought to have had. I see 291 men of the cavalry, instead of 10 months' training, received, on an average of the four years, only four months and nine days; I see that in the horse artillery 105 men in number, instead of receiving 10 months' training, received on the average only four months and 20 days; I see that the artillery, 801 in number, instead of receiving nine months' training, received only four months and seven days; that the infantry, 2,733 men, received three months and 22 days; and that the 3,930 men, making up all that number, received on the average three months and 29 days training.

2461. What is the date of that Return?—That is for the four years since the capitation rate ceased to be paid, and I now hand it in (*vide* Appendix).

2462. That is up to the present time, then?—Up to the present time; up to the time that you have the rolls sent in.

2463. Then, in two particulars, this agreement with regard to the terms on which England supplies India with recruits is not carried out?—It is not carried out; and if India were to pay for all these recruits exactly in the form in which they have been sent out for two years, that over-payment by India is calculated out to be 132,317 *l.*; that is to say, the short training of the men, paid for at the rate at which they ought to have been trained, justifies India in making a demand for a reduction of that amount from the total charges.

2464. Now with regard to the terms on which India receives regiments, I understand the agreement to be this (I am now putting you this question entirely upon the actual agreement, asking for no opinion as to whether it is a just agreement or not): that if a regiment is sent out to India that regiment is supposed to be sent out in a state of efficient equipment, and that a certain sum, which is very much less than the amount charged for a recruit, is charged for each man in that regiment?—It is so; and the charges have been fixed, and though slightly varied of late years, still the amount has been agreed upon by the two Governments and adhered to.

2465. It is about 27 *l.*, is it not?—27 *l.* 7 *s.* 11 *d.* for an infantry soldier.

2466. Therefore, in making that agreement, nothing whatever was said about the length of time that any of the men composing this regiment had been enlisted?—It was understood that the regiment would go out in a complete state fit for service in the field, and in every respect fit for war.

2467. Therefore if the Horse Guards in the War Office attempted to charge for any of the men in a regiment so going out, the larger sum ordinarily paid for the recruit, say 67 *l.* 10 *s.*, on the plea that that man had only been in the regiment the ordinary time that a recruit is, such a charge could not possibly be forced upon India without, in your opinion, constituting a serious breach of an agreement?—And more than that, the auditor of the Indian accounts would not pass the charge, and therefore, as he reports to

Major Gen. Sir *G. Balfour*, M.P., R.A., K.C.B.

30 June 1874.

Major Gen. Sir *G. Balfour*, M.P., R.A., K.C.B.

30 June 1874.

Mr. *Fawcett*—continued.

Parliament, he would refuse positively to pay for these men a fraction more than India agrees to pay for men who are embarked in regiments.

2468. Therefore, what has been described as a set off, namely, that India receives a certain number of men in these regiments who are really recruits, but for whom she only pays 27 *l.* 10 *s.*, is really no set off at all; she pays 27 *l.* 10 *s.*, not as a matter of favour for these men, but in accordance with the agreement entered into between the War Office and the India Office?—Strictly according to agreement; India has never refused to pay the rate agreed upon.

2469. Therefore, if this system were at all broken through, all that would take place would be this: it could not be a set off against that breach of agreement to which you have previously referred, namely, that recruits are sent out imperfectly trained; that old men are sent out as recruits; instead of being a set off, it would simply be adding another breach of another agreement?—It would simply be a departure from an agreement, which we are all anxious to see extended, viz., to ascertain how we can agree to rates and to adhere to them.

2470. Who is responsible for the strength at which regiments are kept up at the present time; during the last two years the regiments have been kept up at their full strength; in previous years they have not been kept up to their full strength; who is responsible for this, the India Office or the authorities at the War Office?—The India Office has never interfered, so far as I know; and therefore I go back to the Secretary of State for War, who certainly, in the controlling administration which he exercises over all branches, is primarily responsible; but there is no doubt the Commander in Chief is directly responsible, as being the highest military executive administrator that we have.

2471. Then as to the partnership which has been described into which India has entered with England in order to have her army supplied to her, one of the terms of this partnership is this, that it is entirely optional with one of the contracting parties, namely, England, at what strength the regiments in India are maintained?—The only instance that I have on record as to the strength to be fixed for the establishment is contained in a correspondence which was laid before Parliament in 1861. In that year, and for two previous years, India had been corresponding with the Horse Guards to endeavour to get the home depôts reduced; and in the course of that correspondence the Commander in Chief practically said, "Very well, I will reduce the depôts by 100 men, but will also reduce the strength in India;" so that practically, whilst the India Office agreed to a reduction of the depôts at home, the India Office may be said to have assented rather to the alteration of establishments in India. Since that date the establishments have been changed at the pleasure of the War Office without, as far as I know, any communication with the India Office until 1870, when the late Secretary of State for War made that excellent and very valuable change connected with India, by which the number of infantry privates in India, namely, 39,000, then forming the fixed establishment for India, should be formed into fewer regiments than then existed; and the late Secretary of State by that change did effect a very considerable money saving for India. At the same time it was his own

Mr. *Fawcett*—continued.

proposal which made that useful arrangement for India, but in modification of a different proposal for India.

2472. But still, as an illustration of the system (that is what I want to get at), the present system is this, that India simply makes a requisition, or whatever it ought to be called, for an army of a certain strength, a certain number of privates; the organisation of the British army determines how many regiments India shall have, and, consequently, how many officers, in order to supply her with an army of the strength that she requires?—Well, I have no hesitation in saying that the influence of India has been very weak in respect to the establishment of regiments; and I would remind you that the proposal to reduce seven regiments of infantry which you find in that Blue Book which you moved for, by raising the 45 regiments which would then remain up to a thousand rank and file as before the mutiny, was not adopted; but the late Secretary of State for War did, I think, make quite as economical a proposal, or nearly so, by altering the regiments from 52 to 50, and reducing the number of companies from 10 to 8; but I am not aware of any influence which the India Office has brought to bear upon the War Office in fixing the establishment of regiments; or, at all events, her influence has, as far as I know, been very little indeed.

2473. But still what I want to know is this: one of the results of this partnership is this, that if India wants, we will say, 40,000 privates, she must obtain those privates according to a certain organisation, which organisation is the organisation, of course, of the English Army?—No; if it had been the organisation of the British Army then we would have had a standard to go by; but in my time the changes in the establishments of regiments have been innumerable, and I think that I counted up no less than 38 establishments of regiments prevailing in the last four years in the British Army; so that we have never had in the British Army any fixed establishment of regiments excepting the one that was agreed upon before Parliament in 1854, on the war with Russia breaking out; then there was a distinct agreement, then come to with Parliament, that the strength of a battalion for service in the field should be a thousand rank and file, and that each company should consist of 125 rank and file, and if that agreement was adhered to, then there would be a fixed British standard for an infantry battalion. I think Lord Hardinge adhered to it after the war with Russia; but if you examine the establishments of regiments since his time you will find that not a year has passed without a variation of establishments, so that no man can say positively what the British establishment is.

Sir *Henry Havelock*.

2474. Is not the establishment fixed for the time being?—I have said that for the last four years I counted up 38 different varying establishments; but within the year, as you have got to lay the Estimates before Parliament, there is no doubt but what that year of itself contains the establishments of regiments; but if you compare the establishments of regiments in one year with previous years, you will find no principle, or any adherence to any principle, in the organisation of our regiments.

2475. I suppose, when you say 38 different establishments, you mean 38 different establish-

ments

Sir *Henry Havelock*—continued.

ments for regiments under different conditions; if you take the establishment of the British Army at this present time, you will, perhaps, find about 25 different establishments?—I mean, in reply to the question which the honourable Member for Hackney asked me, to say, that we have varied these establishments so frequently, that in the course of these four years we have had these 38 variations in the strength of regiments.

2476. Not in one regiment?—I never said it was in one regiment.

2477. For instance, I have a paper in my hand showing that there are at the present moment in the British army about 16 different establishments?—And if you compare those establishments with the establishments of previous years, I think you will have plenty of variations in the number, and that instead of 16 you will have 38.

Mr. *Fawcett.*

2478. You do not seem to think that there was force in the objection of the Commander in Chief, that the reason why recruits were sent out to India imperfectly trained, was that the India Office did not give timely notice to the War Office?—I do not know that the India Office ever interfered. What the Commander in Chief did refer to was this: that he was frequently called upon at 24 hours' notice to send out men; but that was from a different arrangement. The transport of the troops to India is in the hands of the India Office; and they are responsible for filling up the troopships every time they sail; and whenever they find that the numbers embarked are not sufficient to fill up that troopship, according to the numbers originally fixed to be embarked, then after that the India Office comes in and interferes, and says, "You have promised to fill up this troopship and have not done so, and therefore we call upon you to fill it up." But that is merely a transport arrangement, and not a recruit arrangement.

2479. You think that the evil results from the transport arrangements?—My own view is that the Commander in Chief was right when he insisted that he ought to have the means by which he could keep up the regiments, and one of the means would be (I put the question to him) to have an extra number of recruits given him which would be trained and ready for embarkation at the proper season of the year.

Mr. *Campbell-Bannerman.*

2480. I wish to ask you a question with regard to that same topic that we were on before. I agree that what you said is quite true, that there is an agreement between the two offices as to the payment for the men on passage; and that if the War Office proposed to charge for the younger men in a regiment that goes out at the recruit price, it would be an infringement of that agreement; the War Office has never proposed that, nor has anyone suggested that it should. But equally it is an agreement, is it not, that when a draft goes out the men composing that draft should be charged the recruit price; and if any change is made in that charge, it would be equally a breach of agreement, would it not?—There is nothing in the agreement to indicate that it covers both old soldiers and young soldiers. The word "draft" simply means a body of men going out, without indicating that they are recruits; but the agreement between the two

Mr. *Campbell-Bannerman*—continued.

offices is simply that recruits shall be sent, and that recruits shall mean men who have been under training for a certain period.

2481. Then you think that when a draft goes to India it should never comprise any but recruits?—That is the agreement on which India agrees to pay 63*l.* 8*s.* 5*d.* for an infantry recruit.

2482. Can you produce any evidence of that assertion of yours?—Yes; you will find it scattered over all the papers which led to the settlement of that question; and I would specially refer you again to page 11 of the papers about the capitation rate, in Paper No. 165 of 1862, where it is distinctly said that he shall be a recruit, and paid for as such, in the infantry, for a period of training of four and a half months, and the cavalry six months, and the artillery twelve months; and the word "draft" never occurs, so far as I remember, in any of these papers which Sir Alexander Tulloch drew up.

2483. If Mr. Seccombe, General Hannyngton, Mr. Milton, and Mr. Knox were of that opinion, it would be a very intelligible arrangement, if they laid it down that no one was to go out in a draft, and be charged for at that rate, except a man fresh from instruction. But are you aware whether they have laid that down?—The whole of the Papers and Reports of that Committee distinctly show that they speak of recruits, and payments in regard of them, and, in no way of old soldiers, except where they designate the rates to be paid.

2484. Are you aware whether the India Office ever raised any objection on account of those men going to India of whom you have been complaining?—No, I am here for myself, not to speak on behalf of the India Office. It happens from accident that I happened to know something of these things in India, and having known them when I was in official employment in India, I have naturally enough turned back upon the source of information, and have brought it before the Committee.

2485. You are not aware whether, for instance, Mr. Seccombe and General Hannyngton representing the India Office (though you are not authorised to speak on their account), say that they consider it an infringement of the agreement that men returning to India after having recovered their health, should be charged for as recruits?—I have no doubt if you called those two gentlemen before you, they would say so; but I am not authorised to speak on their behalf.

Sir *Henry Havelock.*

2486. Have you ever known any draft whatever, either of the Company's service or of the Queen's service, to go to India without including a certain number of these men who are returning to India for a second time?—I am not going to raise questions connected with a few serjeants and corporals sent to look after recruits on the passage; they would be so trifling as not to be worth calculation, you know; one or two serjeants, old soldiers, and one or two corporals for every hundred men, are all that are required on board ship. Therefore it is not worth while to make any objection about those men.

Mr. *Campbell-Bannerman.*

2487. Does your return include the non-commissioned officers?—Every one.

2488. I see that there were 1,401 men who

Major Gen. Sir *G. Balfour*, M.P., R.A., K.C.B.

30 June 1874.

Major Gen. Sir *G. Balfour*, M.P., R.A., K.C.B.

30 June 1874.

Mr. *Campbell-Bannerman*—continued.

went out in that period over 30 years of age; most of them would be non-commissioned officers, would they not?—No; I have prepared a return to check that. It shows that the number of all ranks above privates and gunners amounts to 968.

2489. But the non-commissioned officers, as a rule, would be the men over 30?—I keep myself simply to the gunners and privates. There are 12,666 of the rank of gunners, drivers, privates, troopers, and sappers; and if you take my service of two years, and my age of 18 to 23, it is clear that these 12,666 gunners and privates could not have been entirely composed of recruits. Of course a further analysis of the returns would bring out the exact number in the rank of gunners and privates who would fall under the designation of old soldiers; but, of course, that analysis I have not gone into.

Sir *Henry Havelock*.

2490. There is a Return which you have put in of the men embarked in the last four years, and I find by this that the number of short-drilled men, the number who had been drilled less than the time in the bargain, was largest in

Sir *Henry Havelock*—continued.

the year 1870–71; in that year they were 1,400?—I am quite aware of that.

2491. That was the year, was it not, when the limitation of age was raised to 20 years of age?—The limitation of age was raised, I beg to say, in my time in India; it has been raised over and over again.

2492. You find further by the same return that the number of those short-drilled men has been decreasing in each successive year, do you not?—Yes; but I wish you to understand with regard to this Return (and I did mention in a portion of my evidence before), that 2,580 are shown here in this Return to have been sent out to India in 1870–71; but I expressly said that these were the numbers of which the India Office had rolls, and that, instead of 2,580 being the actual number, the real number charged for in the accounts of the War Office was 4,646, the difference between the 2,580 and the 4,646 being caused by the want of nominal rolls by which to ascertain the ages and service; therefore, as more men were sent out in 1870–71 than in after years, the proportion will not vary very much upon the total number sent out in 1870–71, and the total number sent out in after years, in reference to the number of short-drilled men.

APPENDIX.

LIST OF APPENDIX.

Appendix, No. 1.

PAGE.

Papers handed in by Mr. John Milton, C.B., and referred to in his Evidence of 12 May 1874:

Return of the Establishment of the Depôts of Cavalry and Infantry Regiments in India, maintained in this Country for Drilling and Training Recruits; of the actual Strength of those Depôts; of the actual Numbers of Recruits sent out thence as Drafts to India; and the actual Numbers of Invalids and Time-expired Men disembarked in this Country, during each of the Seven Years from 1861-62 to 1867-68, both inclusive.—(Question 38) - - - - - - - - - - - 199

Approximate Statement showing the Proportion of the Home Charges for Indian Regiments during the Eight Years of the Capitation Rate that would have been finally borne by Imperial Revenues, had the present Tariff Prices for Cavalry and Infantry Recruits been the Mode of Settlement during that time (1861-62 to 1868-69).—(Question 38) - - - - - - - - - - - - 199

Return of the actual Home Charges, as recorded, and the actual Receipts from India under the Capitation Rate, during the Eight Years from 1861-62 to 1868-69.—(Question 71) - - - - - - - - - - - - - 200

Return of Establishment in India, from 1861 to 1869, compared with Effectives.—(Question 203) - - - - - - - - - - - - - 200

Appendix, No. 2.

Papers handed in by Mr. Milton, and referred to in his Evidence of 15 May 1874:

Return showing the Length of Service of the Non-commissioned Officers and Men remaining at the Depôts of Infantry Regiments in India after the Embarkation of the Drafts for 1868-69, exclusive of the Depôts of the Regiments that Embarked for India during that Period, or were to Return from India during the following Year.—(Question 318) - - - - - - - - - - - - - - 201

Return showing the Length of Service of the Non-commissioned Officers and Men remaining at the Depôts of Infantry Regiments in India, after the Embarkation of the Drafts for 1869-70, exclusive of the Depôts of the Regiments that Embarked for India during that Period, or were to Return from India during the following Year.—(Question 318) - - - - - - - - - - - - - - 202

Return showing the Length of Service of the Non-commissioned Officers and Men remaining at the Depôts of Infantry Regiments in India after the Embarkation of the Drafts for 1870-71, exclusive of the Depôts of those Regiments which Embarked for India during that Period, or were to Return from India during the following Year.—(Question 318) - - - - - - - - - - - - - - 203

Return showing the Length of Service of the Non-commissioned Officers and Men remaining at the Depôts of Infantry Regiments in India, after the Embarkation of the Drafts for 1871-72, exclusive of the Depôts of the Regiments that Embarked for India during that Period, or were to Return from India during the following Year.—(Question 318) - - - - - - - - - - - - - - 204

Return showing the Length of Service of the Non-commissioned Officers and Men remaining at the Depôts of Infantry Regiments in India, after the Embarkation of the Drafts for 1872-73, exclusive of the Depôts of the Regiments that Embarked for India during that Period, or were to Return from India during the following Year.—(Question 318) - - - - - - - - - - - - - - 205

Comparison between the Amounts Received from India, under the Capitation Rate, during the Eight Years ended 31st March 1869, and the Recorded Expenditure of the Home Charges, excluding the Depôt Charges for Artillery, and including the expected Annual Loss on difference of Men on Passage.—(Question 322) - - - - 206

Summary of the Home Charges Recorded on Account of Her Majesty's Regiments serving in India during the Years 1861-62, to 1868-69, compared with the Amounts Received from India through the Capitation Rate of 10 *l.* per Effective Man.—(Question 419) - - - - - - - - - - - - - - 206

Return showing the Number of Rank and File required to complete the Cavalry and Infantry in India on the 1st of August in each Year from 1864 to 1873, the Number of Men estimated to Embark with Drafts, and the Number who actually Embarked during each Year.—(Question 497) - - - - - - - - - - - 207

Return of the Depôts of Cavalry and Infantry Regiments in India, showing the Number of Non-commissioned Officers and Men serving therewith on the 1st April in each Year from 1853 to 1874.—(Question 600) - - - - - - - - - - 207

PAPER furnished by Sir *William Muir*.

Army Medical Department,
19 June 1874.

Sir,

I HAVE the honour to forward, for the information of the Committee of the House of Commons on Indian Finance, Copy of a Return showing the Death-rates at the different ages compared in the Army as a body, from 1865 to 1870, and in newly-arrived regiments from 1864 to 1870, as called for by Mr. H. Campbell-Bannerman at my examination before the Committee on the 16th instant.

I have, &c.
(signed) *W. M. Muir*,
Director General.

The Secretary to
Parliamentary Committee on Indian Finance,
House of Commons.

BRITISH ARMY IN INDIA.

DEATH-RATES at the different Ages compared in the Army as a body, from 1865 to 1870, and in newly-arrived Regiments, from 1864 to 1870 (extracted from "Vital Statistics of Bengal Presidency, for the Ten-year period, 1860-69," by Surgeon Major *Bryden*).

	Exclusive of Cholera.				
	Under 20.	20 to 24.	25 to 29.	30 and upwards.	
Army as a Body, 1865-70:					
Died per 1,000	7·61	13·67	17·41	29·94	
Ratio of liability	11·09	19·92	25·37	43·62	100·00

The Establishment of Gunners and Drivers being 1,826, the Annual Charge due to each Private Soldier is 22 *l.* 9 *s.* 2 *d.*

The proportion due to the Training Period of the Recruit (9 months) is therefore 16 *l.* 16 *s.* 10 *d.*

Appendix, No. 4.

REPORT of the SPECIAL COMMITTEE of the Officers of the War Office and India Office, fixing the Rates to be Charged on India Revenues for Royal Engineers.

Non-Commissioned Engineer Officers and Sappers required for employment in Public Works Department, India.

REPORT.

IN pursuance of our appointment by the Secretaries of State for War and for India as a Committee to determine the sum that should be paid from the revenues of India on account of the supply of Engineer Non-commissioned Officers and Sappers for service in India "on a principle of purchase (including all contingent expenses) on account of each soldier supplied, and the mode in which all charges on account thereof for the future should be made against the Government of India, with the amount to be charged for the men who have already been sent out since 1861",—we have considered the subject, and recommend that the following rates should be charged for each Non-commissioned Engineer Officer and Sapper sent to India since the year 1861, and that the same rates be charged to India so long as the present system of supply shall continue:—

	£.
For each Quartermaster Serjeant - - - -	190
Colour-Serjeant - - -	150
Serjeant - - - -	140
Corporal - - - -	125
Second Corporal - - -	110
Lance Corporal and Sapper -	90

The advance of pay on embarkation, and the clothing then in possession of the men, to be paid for on separate bills.

The number of men who embarked for India in the years 1863, 1864, 1865 and 1866, was 82, and the sum chargeable to India at the rates which we have recommended will be as follows:—

		£.
1 Quartermaster Serjeant - - - - - -		190
2 Colour-Serjeants at 150 *l.* each - - - -		300
5 Serjeants -	140 *l.* „ - - - -	700
17 Corporals -	125 *l.* „ - - - -	2,125
11 Second Corporals	110 *l.* „ - - - -	1,210
46 Sappers -	90 *l.* „ - - - -	4,140
TOTAL - - - £.		8,665

London, 14 March 1867.

Appendix, No. 5.

REPORT of the COMMITTEE appointed by the Secretary of State for War, with the concurrence of His Royal Highness the Field Marshal Commanding in Chief and His Grace the Secretary of State for India, to examine generally the question of the Establishment of the INDIAN DEPÔTS. Appendix, No. 5.

(Referred to in Para. 3 of the Second Report of Mr. *Seccombe's* Committee, dated 24th November 1869.)

President:

Major General Jameson, Auditor of the Home Accounts of India.

Members:

Colonel Egerton, Deputy Adjutant General, Horse Guards.
J. Milton, Esq., Assistant Accountant General, War Office.

THE Committee, having received from the Adjutant General's Office the annexed Returns, numbered 1 to 6, and having carefully considered the same, together with the accompanying explanations, numbered 7 to 10, from certain of the Indian depôts, as to the men remaining at the depôts in this country after the embarkation of the drafts for India of the last season, have agreed to the following Report:—

They are of opinion that very great advantage would result, both in regard to economy and also in regard to the discipline of the recruiting depôts, if the time-expired men and those about to take their discharge—other than as invalids, who are disposed of at Netley—were not sent to the depôts of their regiments on arriving in this country from India, but were quartered at some consolidated depôt, to which they might be sent directly on their arrival, and where they might remain until their discharge documents were prepared, which should, as a rule, be ready on the arrival of the men, or, if not, should be prepared with the least practicable delay.

The men could then be sent direct to their homes or intended places of residence, while those who might be found fit for further service might be forwarded to the regimental depôt until reported medically fit to embark again with drafts.

There can, it appears to the Committee, be no doubt as to the large saving of expense that must arise from such an arrangement, in lieu of the present system whereby men arriving at Portsmouth are sent long distances to their regimental depôts, and thence are sent to their homes, which, in many instances, may prove to be not far distant from the port of disembarkation, whence they had a short time previously been dispatched across the kingdom to their depôt. Moreover, the regimental depôts would, by this arrangement, be restricted more entirely to the object for which they exist, namely, the collection and drilling of recruits for the reinforcement of the service companies in India, and would thus be more susceptible of economical control than under the present system of mixing together men who are entering the service and those who are leaving it.

The Committee would further recommend that, in future, attention should be specially directed to the season best suited for the enlistment of recruits for India, with a view to their being raised at such periods as will secure their being fully drilled in time to be sent out in the drafts of the first season after their enlistment.

The season for embarking drafts for India is from the middle of October to the middle of February.

The season for recruiting to the best advantage is from November to March. Then field occupations are over, and the privations of winter and want of employment aid the recruiting.

The season for drill and training is from the spring to the end of the autumn.

All these three reasons coincide for—

1. Raising the recruits at the best time.
2. Drilling them for seven or eight months.
3. Shipping them, drilled, to India at the fittest season.

Appendix, No. 5.

And, thus arranged, the present depôt system would be sufficient to supply 75 recruits per annum to each battalion of infantry, and yet keep within the depôt establishment.

To work this system of depôts properly, it is only necessary to commence recruiting shortly after the annual draft has embarked, to continue that recruiting for five months of winter, getting during that time a number of recruits equal to the expected requirements of the next year's drafts, plus the expected loss by casualties, say 33 per cent., and then to stop all recruiting for India during the following seven months, except for the regiments about to embark in the ensuing autumn, who are able to take out their recruits with them, after a much shorter period of drilling.

Thus about 20 per cent. of the recruits sent out in drafts would get drilled for about 11 months, 20 per cent. for 10 months, 20 per cent. for nine months, 20 per cent. for eight months, and 20 per cent. for seven months; and upwards of 3,500 recruits in drafts would be available for embarkation for India at the end of the training, being much above the average number of recruits sent out annually during the last eight years, as shown in Appendix 2.

Some of the drafts still proceed to India *viâ* the Cape, and leave this country in July or August. The above arrangements will equally apply to these cases; as for these depôts the recruiting should not re-commence until three or four months after the sailing of the drafts, and then efforts should be made to obtain all the recruits required for such regiments in the earlier part of the recruiting season.

The Committee would suggest that advantage should be taken of the existing system of general enlistment to allot to the Indian depôts the recruits most advanced in age, so as to avoid having to send growing lads to India; and that, if possible, the system of general enlistment should be extended, so as to allow of men being transferred from one corps to another at any time, by which means men whose health had been found to fail in India, or whose constitution had proved not fitted for service in a hot climate, might be transferred at once to regiments serving at home or in a temperate climate abroad, instead of being kept for a lengthened period at the depôt, for the purpose of being again sent to India, where it is found that a very short further period of service causes such men, in general, to be again invalided home.

Annexed is a copy, numbered 11, of a letter from the Horse Guards, showing the minimum periods which, in the opinion of his Royal Highness the Field Marshal Commanding in Chief, should suffice for the efficient drill of recruits of the several arms of the service before being drafted to India. The Committee would recommend that, with reference to these periods, the recruiting for each of the several arms should be so regulated as to secure the enlistment, drilling, and embarking of the recruits at the periods that would best concur, as already pointed out, to prevent an unnecessary collection and retention of recruits at the depôts of the regiments serving in India.

With reference to a question connected with the depôts, and submitted to the Committee by the War Office, respecting the wives of married soldiers of regiments in India, they are of opinion that the fairest way to deal with the matter would be to permit the service companies to maintain a married establishment of 12 per cent. on the drummers and rank and file, and 100 per cent. for serjeants.

A nominal roll of the married men should be sent to the War Office periodically, and the expense of the wives and families of such men should be borne by India, whether with the service companies or with the depôts at home.

With regard to the permament establishment of the depôt, the Committee consider that the number of married men should be in accordance with the rules applicable to the troops generally serving in England, independently of the men who have brought their families with them from India, and who may be sent to the depôt for further service.

Considering the removal from the recruiting depôt of invalids and time-expired men which is above recommended, and, further, that the War Office Letter, 20th February 1841, No. 68,500, fixed the recruiting depôt of infantry at—

1 Captain,	5 Serjeants,
2 Lieutenants,	5 Corporals, and
1 Ensign,	1 Drummer,
1 Colour Serjeant,	

forming one company, when the regiments were of greater strength than at present;

Considering also that with the depôt of 1841 the regiments in India were kept in a state of perfect efficiency;

Also referring to the fact that only one troop of cavalry is kept up in this country for the recruiting purposes of each regiment in India;

Observing also the large number of men now volunteering from regiments about to return from India; and bearing in mind that the whole of the local army of India previous

vious to the Mutiny, nine regiments of infantry, and the whole of the Indian horse and foot artillery, were recruited by a staff at Warley of six officers and 30 non-commissioned officers; Appendix, No. 5.

Two members of the Committee are of opinion that the depôts of infantry should be fixed for the future at one company only, consisting of—

1 Captain,	2 Drummers,
2 Lieutenants,	8 Corporals,
1 Colour Serjeant,	80 Privates,
7 Serjeants,	

as an average strength of the depôt, *including recruits.*

They would further suggest that reductions should be made in the cavalry and artillery recruiting depôts, in such proportion as may be agreed on, in accordance with what they have above proposed for infantry.

Colonel Egerton dissents from the above recommendation regarding the establishments of the regimental depôts, and records the following Minute :—

I cannot concur in recommending the reduction of the Indian depôts to the extent proposed.

1. *Officers.*—So long as the term of service in India is maintained at from 10 to 12 years, it is necessary, as a measure of efficiency as well as of due consideration to the health of the officers, that a proportion of their number should have the opportunity of change of climate to the depôt.

It is not too much to place this proportion at one-seventh of the whole, viz., five out of 36 captains and subalterns.

Without such an opportunity of change, the number of officers who would be absent from head-quarters, either on sick leave to the hill stations in India or to England, would be greater than at present, and their passage to and fro would be an increased source of expense.

2. The duty and discipline of a depôt training 75 recruits per annum, and consisting also of an average of 50 old soldiers, could not be efficiently performed by one company.

Under the system in force from 1841 to 1857, under the War Office Letter, No. 68,500, 20th February 1841, little more was done at the depôt at Chatham than the collecting, clothing, and shipping of recruits. The same may be said of the Indian depôt at Warley. It can hardly be desirable to return to such a system.

The Royal Commission on Recruiting, 1866, recommended "that on the ground of efficiency none but thoroughly trained soldiers should be sent abroad," and to carry out the high training now required, fewer officers than the present establishment would not suffice.

3. Another most important consideration is, that the officers at the Indian depôts form the only reserve of officers for either the British or Indian forces in India that could be at once utilised in event of any emergency.

Non-Commissioned Officers.—I do not see any objection to a reduction of two platoon serjeants and two corporals per depôt, as fewer non-commissioned officers are now required for the recruiting service.

Privates.—Previous to 1857 there was no fixed establishment of privates for the Indian depôts, recruits being collected to the full establishment of the regiments.

After 1857 it was ruled that two companies of 90 privates each were necessary to supply casualties in regiments in India of a total strength of 1,000 rank and file.

In 1861 the depôt strength was reduced to two companies of 45 privates each, but this was found insufficient, and in 1867 it was again increased to 55 privates per company.

Making full allowance for the relief that would be afforded to the depôt establishment by the exclusion of time-expired men, I am of opinion that an establishment of 96 privates is the lowest average from which it can be hoped the service companies of regiments in India may be maintained in a state of efficiency, and complete in numbers.

Commanding Depôt.

Appendix, No. 5.

No. 9.

4th Depôt Battalion, Colchester,
22 June 1869.

Sir,

REFERRING to the letter from the Adjutant General's Department, dated Horse Guards, 18th June 1869, addressed to Colonel Farren, C.B., commanding Eastern District, giving cover to the accompanying list of observations on the muster roll of the depôt, 49th Regiment, for the 1st March 1869, and to your Memorandum on the same, I have the honour to return the enclosure with the required information entered in the column for replies by the officer commanding the depôt of this regiment.

I have, &c.
(signed) *J. Bourke*, Colonel,
Commanding 4th Depôt Battalion.

The Brigade Major, Colchester.

SUBMITTED to the Adjutant General with reference to his Letter of the 18th instant.

THE draft referred to in this correspondence was selected by me, and the case of every man in the depôt was personally inquired into by myself, the information being obtained not only from the draft book (the form of which was arranged by myself several years ago), containing names, date of enlistment, date of joining depôt, cause of joining depôt, if from abroad cause of returning home, whether a duty soldier, whether a recruit, passed musketry instruction, gymnasium, vaccinated, medically fit for foreign service, or some duty as certified by the medical officer, &c., but also from the officers commanding the depôts and companies, the colour serjeants and the depôt orderly-room clerk, all of whom were present when each man's name was called from the book by myself, and thus the circumstances connected with every man, and how he was employed having been ascertained, those for embarkation were told off and noted in the book in my own handwriting.

It will be seen that the replies to the questions in the accompanying documents are now fully given, and that every man named therein is accounted for.

In making selection of men for drafts it has been found indispensable to retain a certain proportion of certain classes of men in order that the duties of the depôt, its interior economy, and the instruction of the young soldiers may be carried on, as well as discipline maintained (such as tailors). At the period in question there were only eight altogether in the battalion, and the annexed statement of the quartermaster of the battalion details the amount of work which had to be accomplished, and what the pressure has been from want of this class of men for several years past. Lance corporals, a proportion, not only required for duty, but to fill up vacancies for the ranks of non-commissioned officers (there has been grave difficulty in sending eligible men, and not unfrequently vacancies have to be kept unfilled for a considerable period from this cause); also a few soldiers likely to become eligible for promotion. Servants to officers,—the difficulties on this head will be apparent by the remarks opposite the names of two men in the return, who are servants, although they had been at one time deserters, there being no other men available and eligible in this capacity; indeed at this moment my own servant is at Languard Fort, and there is no one to replace him.

Men to fill garrison, detachment, and other duties, and provision must be made for casualties occurring at the last moment by sickness or absence at the time of departure.

It was the uncertainty in this respect which caused the application to be made on the 8th February 1869, immediately after the selection of the draft, for authority to send advanced recruits in the event of the men selected becoming casuals; but no soldier embarked who had not completed his course of musketry instruction. It is perhaps unnecessary for me to remark that the observations in that letter are strictly accurate, and I can only account for the imperfect manner in which the replies were given by the depôt under the head "Cause of Detention at the Depôt," in the accompanying document,

by

by the fact that the officer now commanding the depôt was absent on leave at the time of the selection of the draft, that the colour serjeants of both the companies have left the depôt and been replaced by others, that the officer commanding the battalion, the adjutant, the battalion orderly-room clerk, and assistants in the battalion orderly-room are all new, and that the first intimation which reached myself on the subject was the receipt of your letter of the 18th instant. The replies now given have been obtained by my following precisely the same course as that adopted by me when the draft was selected. Appendix, No. 5.

R. T. Farren, Colonel,
Commanding Eastern District.

Colchester, 28 June 1869.

MEMORANDUM.

Colchester, 21 June 1869.

TAILORS of the 49th Depôt employed in the tailor's shop on 22nd February 1869, one corporal, two men.

Total number of tailors employed on that date, eight men, being the whole of the tailors in the battalion available, and which number was totally inadequate to complete the alterations to the annual clothing, and the clothing of recruits by the proper period, viz., 1st April.

Average number of tailors employed in the shop during the last four years, eight men.

Number of suits of clothing obtained during the last four years:—

1865 - - - -	1,217	
1866 - - - -	1,142	
1867 - - - -	1,149	
1868 - - - -	841	The numbers for this year are for five depôts, the 6th Depôt joined the battalion in September last.
TOTAL - - -	4,349	

Yearly average, 1,087.

The number of tailors in the battalion for several years have been quite insufficient to complete the alterations of clothing and the necessary work in a satisfactory manner.

T. Vousden, Lieutenant,
Quartermaster, 4th Depôt Battalion.

49th Depôt.

Observations on Muster Roll, 1st March 1869.

Regimental Number.	Name.	Date of joining the Depôt.	Cause of Detention at the Depôt.	Observations.	Reply.
1,021	Private W. Barber	12th February 1867, from recruiting district.	Sick in hospital	Why kept at depôt two years, and how occupied during that period?	Told off for the draft, but was in hospital when it marched, and was also in hospital at the departure of the previous draft.
3,665	„ J. Bolton	1st July 1865, from regiment	Pioneer	Why kept at depôt over three years, and how occupied?	Pioneer; has been a pioneer throughout.
1,021	„ J. Brand	11th February 1867, head-quarters, recruit.	Lance corporal, kept for promotion.	Why kept at depôt two years, and how occupied?	Lance corporal; was a lance corporal at previous draft, and kept for promotion.
394	„ J. Brown	1st July 1865, from regiment	In custody of civil power	Why kept at depôt over three years, and how occupied?	This man never joined the depôt. He was left in penal servitude by the regiment when it embarked for India, and is still in penal servitude.
1,014	„ Wm. Cullum	28th February 1867, from recruiting district.	Not required for embarkation	Why kept at depôt two years, and how occupied?	Married without leave. In charge of the garrison cricket field and property of the club kept for the sake of the recreation of officers and men of the garrison.
1,063	„ C. Davey	6th June 1868, from recruiting district	ditto	Why kept at depôt eight months?	Was a recruit at drill when previous draft left, and at departure of the last was groom to the major of the battalion.
1,048	„ J. Faux	1st March 1868, from 34th Foot	ditto	Why kept at depôt one year, and how occupied?	Servant to one of the medical officers, and is still a servant.
2,853	„ D. Fitzpatrick	1st July 1865, from regiment	Over 18 years' service	Why kept at depôt over three years, and how occupied?	This man had completed 20 years' service before the draft left, and will be discharged in November next. Unfit for service in India.
2,669	„ M. Flynn	ditto ditto	ditto	ditto ditto	Will complete 21 years' service and be discharged in October next. Unfit for service in India.
914	„ P. Grady	18th October 1865, from recruiting district.	For employment as tailor	ditto ditto	Retained as a tailor, his services being urgently required, and there being only eight tailors with the battalion; and there has always been a paucity of tailors.
2,222	„ D. Green	1st July 1865, from regiment	Over 18 years' service	ditto ditto	This man has been 23 years in the service, and unfit for service in India.
475	„ R. Herron	ditto ditto	Not required for embarkation	ditto ditto	Servant to an officer of the depôt. Joined depôt from desertion, 8th August 1866. Conduct had been good both previous to and subsequent to desertion.
615	„ R. Jackson	ditto ditto	At Kneller Hall	Has any authority been given for this man's detention in this country?	At Kneller Hall; for further training as a musician. Authority of route to go to Kneller Hall, dated 5th September 1868. Enlisted as a boy.
1,018	„ Wm. Jermy	6th February 1867, from recruiting district.	As gymnasium instructor	Why kept at depôt two years?	Was told off for the draft, at the time being on furlough; was written to, and ordered to join for embarkation, but letter, it is stated, did not reach him.
1,062	„ Hy. Jones	5th June 1868, from recruiting district	For promotion	Why kept at depôt eight months?	When draft was selected, had not long been dismissed drill, and was recommended for promotion; therefore retained.
897	„ Owen Keena	2nd August 1865, from recruiting district.	Sick in hospital	Why kept at depôt over three years, and how occupied?	Was told off for the draft, but was found unfit, and was in hospital when the draft left. Has been under medical treatment ever since, and authority received for his discharge as an invalid on the 22nd instant.
2,715	„ Fergus Kelly	1st July 1865, from regiment	Over 18 years' service	ditto ditto	Has been upwards of 20 years in the service, and unfit for service in India.

1,028	„ Patrick Kelly -	1st July 1867, from 83rd Foot - -	Not required for embarkation -	Why kept at depôt 20 months, and how occupied?	Was employed on garrison police. Is a delicate man, frequently in hospital, and, being of good character, was selected for this duty, for which there is often a difficulty in finding eligible men.
1,067	„ G. Maddus -	2nd June 1868, from recruiting district.	- - ditto - - - -	Why kept at depôt eight months? -	Was told off for the draft, he being at the time on furlough; was written to, ordered to join, and arrived on the afternoon of the day on which the draft marched.
3,911	„ J. Monks - -	19th February 1868 - - - -	Had been invalided - - -	Why kept at depôt over one year, and how occupied?	Returned from India in January 1868, as unfit for further service there, and at the time of the departure of the draft was medically reported as fit for home duty only.
437	„ W. Muir - -	1st February 1868, from Netley Hospital.	- - ditto - - - -	- - ditto - - ditto - - -	Returned from India in January 1868, as unfit for further service in that country, and at the time of the departure of the draft was medically reported fit for home duty only. Was a serjeant at the time of the departure of the draft.
1,045	„ H. Parmenter -	31st January 1868, re-enlisted at head-quarters.	Not required for embarkation -	- - ditto - - ditto - - -	Re-enlisted January 1868. Groom to Colonel Farren.
2,053	„ T. J. Platt -	14th May 1868, from recruiting district.	- - ditto - - - -	Why kept at depôt nine months? -	When draft was selected had not long been dismissed drill, and was recommended for promotion; therefore retained.
2,678	„ J. Robinson -	1st July 1865, from regiment - -	Over 18 years' service - -	Why kept at depôt over three years, and how occupied?	Has been more than 20 years in the service; will be discharged in a few months; and when the draft was selected was unfit for service in India.
1,027	„ D. Smith - -	5th June 1867, from recruiting district	For appointment as drummer -	Why kept at depôt 20 months, and how occupied?	A boy, under the age for service in India.
850	„ A. Smith - -	1st July 1865, from regiment - -	Not required for embarkation -	Why kept at depôt over three years, and how occupied?	Was in a state of desertion for some time, and at the selection of the draft was groom to the surgeon major of the battalion. When tried for desertion that was the first offence.
1,074	„ H. Stanherd -	30th July 1868, from recruiting district.	- - ditto - - - -	Why kept at depôt seven months? -	Was told off for the draft; was a re-engaged man from another regiment, and joined in July 1868, and having recently returned from India, and being on a detachment at Landguard Fort, and married with leave, but not on strength, was not recalled to head-quarters.
966	„ C. Thirke - -	28th September 1866, from recruiting district.	At Kneller Hall - - -	Has any special authority been given for this man's retention in this country?	Was at Kneller Hall when draft was ordered; forwarded there under authority of route, dated 1st January 1869. Was enlisted as a boy, to be trained as a drummer or musician. Under the age for service in India.
817	„ R. Thompson -	1st February 1868, from Netley Hospital.	Had been invalided - - -	Why kept at depôt one year, and how occupied?	Returned from India in January 1868, as unfit for further service in India, and when draft was selected was medically reported fit for home service only. At that time was also employed as school assistant, and has since been promoted to corporal.
988	„ T. Watkinson -	8th January 1867, from recruiting district.	For employment as tailor -	Why kept at depôt over two years? -	Was retained as a tailor, his service being urgently required, there being only eight tailors with the battalion altogether.
1,029	„ H. Wilshire -	4th July 1867, from 54th Foot - -	Not required for embarkation -	Why kept at depôt 19 months, and how occupied?	Servant to officer commanding depôt when draft was selected. Was a transfer from 54th Regiment, and had been eight years in India.

W. Watts Corban, Captain,
Commanding Depôt, 49th Regiment.

Sir, Horse Guards, 23 July 1869.

REFERRING to your letters of the 5th and 21st instant, I have the honour, by desire of His Royal Highness the Field Marshal Commanding in Chief, to acquaint you that the following is the minimum time required for training recruits, prior to their embarking for service in India, of each of the following arms, viz.:—

Royal Horse Artillery - - - -	9 months.
Royal Artillery - - - - -	8 „
Cavalry - - - - - - -	9 „
Infantry - - - - - - -	6 „

I have, &c.

(signed) *C. R. Egerton*,
Deputy Adjutant General.

The Under Secretary of State,
War Office.

Appendix, No. 6.

Appendix, No. 6. COPIES of REPORTS of a COMMITTEE appointed by the Secretaries of State for War and for India to make arrangements for adjusting the CHARGES for EFFECTIVE SERVICES of HER MAJESTY'S REGIMENTS on the EAST INDIAN ESTABLISHMENT, on the principle of Actual Charges, and of CORRESPONDENCE Relating to the COST of Raising and Training RECRUITS for those Regiments.

FIRST REPORT of a Committee appointed by the Secretaries of State for War and for India to make Arrangements for adjusting, from the 1st April 1869, the Charges for Effective Services of Her Majesty's Regiments on the East Indian Establishment, on the principle of Actual Charges.

MEMBERS:

T. L. Seccombe, Esq.	Major General Jameson.
H. W. S. Whiffin, Esq.	J. Milton, Esq.

1. IN proceeding to consider the subject committed to them, the committee, after careful inquiry and deliberation, find that considerable difficulty must attend the preparation of an exact account of the charges against India in respect of recruiting the European army in that country, and that it would inevitably involve much correspondence with respect to the sanction of exceptional charges and otherwise, and especially with reference to the charge for artillery recruits, and for volunteers from regiments in England, called for immediately previous to the embarkation of troops for India.

2. In order to lay down, if possible, some plan whereby the constant preparation and examination of such an account might be obviated with due regard to the interests of the British and Indian Exchequers, the committee have considered a suggestion for the settlement of the charge against India on the principle of a schedule of prices per man for regiments, batteries, drafts, and recruits of each arm of the service embarking for India, the War Office making a similar payment to India for each effective man returning to England.

3. The committee are not at present able to submit a schedule of prices, as its preparation would involve an elaborate and careful inquiry and analysis of the charges included therein; and as that inquiry must occupy much time and care, in order to arrive at conclusions which could be expected to prove satisfactory to Her Majesty's Government, the committee venture to recommend that the present system of payment by a capitation rate should be continued for one year from the 1st April 1869 to the 31st March 1870.

4. If this proposition be agreed to the investigation could, during the ensuing year, be fully entered on and brought to a conclusion, so that the committee would be enabled to report the course they would recommend for the consideration of the Secretaries of State, whether by a schedule of prices, as before stated; for the cost of every effective man of each arm of the service embarking for or returning from India, or, if that should prove to be impracticable, by a direct settlement of the accounts of actual charges.

5. In submitting this proposition the committee feel it to be their duty to bring prominently to notice the very heavy charge attending the present system of Indian depôts, as shown in the cost to the Imperial Government of a recruit from the date of his enlistment to that of his embarking for India. This becomes very apparent when a comparison is made of the expenditure under the existing system with that of the Warley depôt, formerly maintained for recruiting the army by the East India Company.

6. The committee feel bound to ask the attention of Her Majesty's Government to the expense of the Indian depôts, in order that it may be ascertained whether the system on which they are at present maintained could not be greatly modified.

7. In confirmation of the opinion above expressed, the committee annex three returns:

(A.) A return of the cost of the depôt at Warley for 10 years, from 1850 to 1859, as shown in the actual accounts in the India Office.

(B.) A statement showing in detail the items composing the charges under each head at Warley, for the years 1854–55 and 1855–56, from which charges the totals in Statement A., and the charge for a recruit, have been deduced.

(C.) A return from the years 1861–62 to 1867–68 of the estimated establishment of the Indian depôts kept up by the Imperial Government for cavalry and infantry, of the actual strength of those depôts, and of the actual number of recruits and drafts sent out thence to India.

8. The

8. The committee would here remark that the War Office depôts include a very large staff, whilst the Warley depôt was conducted by a very small number of commissioned and non-commissioned officers for the supply of recruits to nine regiments of infantry and the whole of the artillery in India, including a small body of Engineers.

9. The figures in the Return C. show a cost of about 205 *l.* for each soldier sent by the War Office to India; but this must be modified as regards one or two exceptional years, during which, although the depôts remained at their full strength, very few recruits were required for India, in consequence of each regiment in that country having been very largely reduced, but the outlay, nevertheless, appears to demand inquiry, with a view to its reduction. Returns A. and B. show that recruits were sent out from the Warley depôt for the years from 1850 to 1859, at an average cost of 19 *l.* 15 *s.* per man only, or, omitting the exceptional years of and after the mutiny, at an average cost of 26 *l.* 7 *s.* 5 *d.* per man for all arms.

10. It is proper to add that the members of this committee representing the War Office are of opinion that, with reference to the statistical statements prepared at the War Office, and laid before the committee, the depôt and recruiting charges of regiments in India have been in excess of the amount repayable to Imperial funds as the capitation grant for the corresponding period, thus leaving a deficit to be borne by the Imperial revenues. The members of the committee representing the India Office are not, however, at present in a position to confirm this view, as they have not had the means of scrutinising those statements, or of arriving at a definite conclusion as to this point; but the committee have no hesitation in expressing their unanimous opinion that the charge for a recruit, as shown in the War Office Return, is susceptible of very great reduction, and that whatever loss has resulted to the Imperial Government must be attributed mainly to the excessive amount of the depôt charges.

11. The committee cannot conclude their Report without bearing testimony to the valuable assistance they have received throughout their inquiries from their Secretary, Mr. Day, in the preparation of the returns and calculations relative to the expenditure in this country. Mr. Day's great intelligence and accuracy call for this recognition, and would be of great value in the prosecution of any further inquiries on this subject.

12. For the reasons given the committee submit,—

That the capitation rate as at present paid shall be continued for one year from the 1st April 1869, and that during that period they should be authorised to consider and report as to the best mode of adjustment of the accounts of the expenditure for future years.

SECOND REPORT of the COMMITTEE appointed by the Secretaries of State for War and for India to make Arrangements for adjusting the Home Charges for Effective Services of Her Majesty's Regiments on the East Indian Establishment, on the principle of Actual Charges.

MEMBERS:

T. L. Seccombe, Esq., Financial Secretary, India Office.
H. W. S. Whiffin, Esq., Chief Auditor, War Office.
Major General Jameson, Auditor of Home Accounts, India Office.
J. Milton, Esq., Assistant Accountant General, War Office.

1. IN their first Report, dated 11th March 1869, the committee recommended that the system of payment for the effective services of Her Majesty's regiments on the East Indian establishment, by a capitation rate, should be continued for one year from the 1st April 1869, in order to afford time for a careful inquiry as to the best mode of settling the claim of the Imperial Government for the home charges on account of regiments, batteries, drafts, and recruits of the several arms of the service proceeding to India, either by a schedule of prices per man, or, if that were not practicable, by a direct settlement of actual charges.

2. The committee in that Report requested the attention of Her Majesty's Government to the very heavy charge imposed on India, and to the very large difference between the expenditure under the existing system, and that which was formerly incurred by the East India Company in recruiting their European artillery and infantry.

3. The recommendation of the committee having been adopted, another committee, consisting of three officers representing the India Office, War Office, and Horse Guards respectively, was appointed to consider to what extent the depôt establishments maintained for regiments serving in India would admit of reduction.

4. That committee recommended certain reductions, but these have not yet been ordered, and their effect cannot therefore be ascertained.

5. Under these circumstances, the committee have not deemed it advisable to attempt to fix a schedule of prices, as it would have to be based entirely on estimate, if the depôt establishments recommended in the Report in question be adopted, and would require modification, if it should be found practicable to carry reduction to a still greater extent.

6. They are, therefore, of opinion that, from the 1st April 1870, the claims of the Imperial Government should be adjusted by repayment of the actual charges on the general principles which governed the settlement of the accounts for recruiting, depôt, and other home services, from the year 1824 to the date of the introduction of a capitation rate.

7. There are, however, certain charges, formerly included in that adjustment, which it would be expedient henceforth to exclude; the payments under the several heads to be in future made direct by the India Office, viz.:

(A.) Pay

(A.) Pay of officers on furlough from India, with the exception of the pay of colonels of regiments and colonels commandants of artillery, which should continue to be issued by the agents, and charged to India through their accounts with the War Office.

(B.) Advances in this country to regiments proceeding to India, which should be accounted for by the paymasters to the local Government in India, the paymasters rendering to the War Office a pay list to the day preceding embarkation.

(C.) Advances in India to regiments returning to England to be accounted for by the paymasters to the India Office, a pay list being rendered to the day preceding disembarkation.

8. Advances to drafts proceeding to, and detachments returning from, India should be adjusted in the mode adopted previous to the introduction of the capitation rate.

9. The committee would also recommend that the remittances from India by officers and soldiers should be paid direct by the India Office, and that the present charge for agency be revised.

10. Excluding the foregoing items, the charges which will have to be adjusted on the principle of actual accounts are detailed in the schedule, Appendix A., and may be classified as follows:

Class 1. Direct charges.
,, 2. Indirect, or assessed charges.

There are certain charges shown under Class 3 to which reference will be made separately.

11. The items in Class 1 do not require explanation.

12. In regard to Class 2, comprising the indirect or assessed charges, in respect of which India is liable for a proportion only, the expenditure for these services should be charged rateably on the net disbursements occurring in each of the several recruiting districts and depôt battalions, in which there may be recruits for India, with the exception of the charges for barrack accommodation, and for difference of numbers of men on passage to and from India.

13. The charge for barrack accommodation should be calculated on the average number of officers and men belonging to regiments on the Indian establishment accommodated in barracks on the 1st of each month.

14. With reference to the charge hitherto made for the difference of numbers of men on passage to and from India, and to a recent communication from the Horse Guards, copy of which is annexed (Appendix G.), respecting the minimum time required for training recruits of the several arms of the service, the committee are of opinion that the following sums, details of which are given in Appendices B. and C., should, for the present, be charged for every non-commissioned officer or soldier embarked, as reliefs for India, with regiments of the line, viz.:

	£.	s.	d.
Cavalry	45	16	10
Infantry	27	7	11

and the Government of India will be entitled to credit, at the same rates, for every non-commissioned officer or soldier disembarked with regiments, who, at the date of disembarkation, shall not be within two years of the completion of his term of service.

15. This adjustment will not apply to drafts sent from this country to India, as India will have paid for them, nor to detachments of invalids or time-expired men returning from India.

16. Assuming that the expenses of the Indian depôts of Royal Artillery will in future be defrayed by the Government of India in the same manner as those for depôts of cavalry and infantry, the committee consider that the amount chargeable for every non-commissioned officer or soldier of artillery embarked for India should be as follows, viz.:

	£.	s.	d.
Horse Artillery	47	10	7
Garrison and Field Artillery	40	11	5

Details showing how these charges are arrived at are given in Appendices D. and E.

17. These rates will be chargeable on the numbers embarked with troops or batteries of artillery as reliefs, and also on such non-commissioned officers or men, if any, as may be sent from troops and batteries not belonging to the Indian depôts, India being re-imbursed at the same rates for every effective non-commissioned officer or soldier disembarked with troops or batteries who shall not be within two years of the completion of his term of service

18. As in the case of regiments of the line, drafts of artillery embarked for India will not be chargeable, nor will India be entitled to credit for invalids or time-expired men returning.

19. The practice at present adopted of not sending out men who have less than two

Appendix, No. 6.

years to serve should be continued; and, in calculating the number on which the prescribed sums are to be paid for effective men going out or returning with their corps, the number of men left with the depôts who may not be within two years of the termination of their period of service should be added to the numbers embarking; and, in like manner, the number of soldiers and recruits of three months' service and upwards, serving with the depôt at the date on which the order was issued for the recall of the regiment from India, should be added to the number of men disembarking in this country with the corps.

20. The rates at present chargeable for non-commissioned officers of Royal Engineers required for special service in India, as fixed in the Report of the Committee which considered the subject in March 1867, should remain in force (Appendix F.).

21. The committee recommend that the above rates, as well as the charges under Class 2, should be subject to revision every three years.

22. On the subject of these charges a separate Minute is recorded by the members representing the India Office on this committee.

23. In regard to the mode of payments, the committee recommend that monthly advances, based on the estimated expenditure, should be made by the India Office. The accounts should be kept distinct for each year, and the balance of each year's account should, if practicable, be declared within nine months of the expiration of the financial year.

24. The final adjustment of each year's accounts would be materially facilitated by the establishment of a system of concurrent audit, on behalf of India, of the direct charges as recorded in the books of the War Office, many of which charges are so well defined that they will hardly admit of objection; and in recommending the adoption of that course the committee consider that the necessary detailed arrangements to carry it into effect might with advantage be left in the hands of the responsible officers of each department charged with the duty of rendering and auditing the accounts.

25. With the view of facilitating the settlement of any questions which may arise in the course of the adjustment of the accounts, the committee recommend that a standing committee should be formed, composed of members representing both the India Office and the War Office, and that the proceedings of the standing committee should from time to time be recorded in a Minute book, to be kept by a gentleman on the establishment of the War Office, who should act as secretary, copies of such proceedings being submitted periodically to the Secretaries of State for War and for India.

26. The charges specified under Class 3 of Appendix (A.), having relation to the army generally, have not hitherto been matter of account between the Imperial Government and the Government of India.

27. The question as to the liability of India to bear a proportion of these charges was discussed by the committee, which arranged the existing capitation rate in 1861, and it resulted in the exclusion of those charges therefrom.

28. The subject has again been considered by this committee, and it appears to them that, in conformity with long-established usage, no adjustment is necessary on this account, such proportion of the expenditure for head-quarter departments, general staff, &c., as might be considered applicable to Her Majesty's regiments on the Indian establishment being, in their opinion, fairly compensated for by the advantages derived by the Imperial Government from the presence of Indian depôts in this country. On this point, however, a separate Minute, by the members representing the India Office on the committee, is added hereto.

29. In concluding their Report, the committee would again refer to the heavy expense of the Indian depôts as at present constituted. They are unanimously of opinion that the present rate of expenditure is too large when compared with that incurred prior to the mutiny in India, and, as shown in their former Report, excessive when compared with the charge incurred by the East India Company in the maintenance of their depôt at Warley.

30. The committee are therefore of opinion that, without any sacrifice of efficiency, it is practicable to effect a very large reduction in these charges.

31. The committee desire again to record their acknowledgments of the very valuable assistance rendered by Mr. Day as secretary to this committee.

(signed) *Robert P. Daye,* Secretary.

24 November 1869.

While concurring generally in the foregoing Report, the members appointed by the Secretary of State for India to serve on this committee feel it to be their duty to represent that they consider that the proposed arrangement is, in one respect, not just towards India.

They

They are of opinion that, as all expenses of raising, training, maintaining, and pensioning the troops whose services are lent to India are paid from Indian revenues, India is fairly entitled to a considerable credit for the value to the Imperial Government of the presence in this country of the staff and men engaged in course of training. The troops are available to meet any emergency for which a home garrison is required, and the resignation by the War Office of any charge for a proportion of the expenses of the general, medical, and commissariat staff, &c., specified under Class 3, in Appendix (A.), as a set off to that advantage, appears to the undersigned to be entirely inadequate.

They are also of opinion that the periods of training, on which the charge for difference of numbers of men is based, are longer than are necessary with reference to the requirements of India; and that, as the East India Company formerly found it safe and expedient to send soldiers to India after very short periods of training, the adoption of a somewhat similar course would tend greatly to reduce the charge on this account, an object that would be further facilitated by a reduction in the number and strength of the depôts.

We have, &c.
(signed) *T. L. Seccombe.*
G. I. Jameson, Major General.

APPENDIX.

(A.)

SERVICES chargeable against the Revenues of India in respect of Recruiting Districts and Depôts of Her Majesty's Regiments on the East India Establishment.

CLASS 1.

DIRECT CHARGES.

VOTE 1.

Pay of regimental officers.
Additional pay of regimental officers.
Allowance in lieu of servants.
Pay of men.
Good-conduct pay.
Beer money.
Command pay.
Non-effective allowance to field officers.
Contingent allowance to captains.
Agency, including allowance for postage and stationery.
Regimental postage, stationery, &c.
Pay of non-commissioned officers and men invalided from India.
Passage pay of officers and men to and from India.
Furlough pay.
Levy money for recruits.
Medical attendance on recruiting parties and recruits.
Marching and travelling allowances.
Cost of conveyance of recruits, escorts, &c.
Good shooting pay, and pay for good sword-manship.
Railway and other expenses (including marching allowances to officers) to troops moved from one station to another on regimental routes.
Rations to men whose pay has been mulct.
Mess allowance.
Payments for certificates of conviction by civil power.

VOTE 2.

Excess cost of bread and meat.
Allowance to wives and children of soldiers separated from their families.

VOTE 3.

Kits issued to recruits, and compensation in lieu thereof to re-enlisted soldiers.

VOTE 4.

Allowances for fuel and light (regimental).
Ditto, in lieu of lodgings to regimental officers.
Ditto, to married soldiers.
Ditto, to men in stationary quarters.

VOTE 6.

Allowance to Acting Deputy Judge Advocates, and to members and witnesses.
Subsistence and expenses on routes for deserters and their escorts, and rewards for apprehension of deserters.
Charge for escorting prisoners to and from civil and military prisons.

VOTE 7.

Payments to private medical practitioners.
Hospital expenses.
(Difference between the stoppage and actual cost of diets.)

VOTE 13.

Cavalry equipments.
Accoutrements.

VOTE 19.

Rewards for distinguished and meritorious service.
Victoria Cross annuities.

Credits.

Pay forfeited by sentence of court-martial.
Contribution from officers in aid of mess on board ship.
Stoppages from officers for rations supplied to themselves and families on board ship.
Ditto, ditto, from men.
Purchase money of soldiers discharged.
Effects and credits of deserters.
Smart money from recruits.

Appendix, No. 6.

CLASS II.

Indirect or Assessed Charges.

Vote 1.

Allowance to riding masters.
Farriery allowance.
Allowances to officers and non-commissioned officers.
Instructors of musketry.
Allowance to non-commissioned officers acting as savings bank clerks.

Cavalry Depôt.

Pay, additional pay, command pay, and non-effective allowance of commandant.
Assistant commandant.
Majors.
Captain instructors of musketry (in addition to regimental pay).
Adjutant.
Paymaster.
Superintendent riding department.
Riding master.
Quartermaster.
Surgeons.
Assistant surgeons.
Veterinary surgeon.
Non-commissioned officers.
Clerks, cooks, &c.
Farriery and riding money allowance.
Incidental expenses of riding school.
Travelling expenses.
Postage and miscellaneous expenses of office.
Instruction in musketry and gymnastics.
Agency.
Mess wine allowance.
Beer money.
Purchase of horses and expenses.
Cost of horse medicines, &c.

Depôt Battalions.

Pay and allowances of staff officers and non-commissioned officers.
Musketry instruction.
Pay of orderly-room clerks of depôt battalions.
Allowance in lieu of servants.
Travelling expenses and contingencies.
Postage and miscellaneous expenses of the office.
Allowance to the general agent for cashing paymasters' drafts.
Agency.

School of Musketry.

Pay and allowances of staff officers and non-commissioned officers.
Ditto, ditto, of rank and file for range duties.
Good service pay and beer money to non-commissioned officers and men.
Allowance in lieu of servants.
Ditto, ditto, lodgings.
Travelling expenses.
Postage and miscellaneous expenses.
Allowance to captains for paying detachments.
Allowance in aid of mess.
Agency.

Recruiting Establishments.

Pay and allowance of staff.
Pay of clerks.
Allowance in lieu of servants.
Rent of recruiting offices.
Travelling expenses and contingencies.
Postage and miscellaneous expenses of the offices.
Allowances and expenses of superintending officers.
Allowances to recruiting sergeants, &c., in stationary quarters.
Allowance to staff officers of pensioners, and pensioners employed upon recruiting services.
Agency.

Vote 2.

Proportion of expense of forage.
Ditto, ditto, commissariat staff.

Vote 3.

Clothing of staff non-commissioned officers of districts, depôt battalions, &c.

Vote 4.

Charge for barrack accommodation.

Vote 5.

Allowance to officiating clergymen for performing Divine service.
Rent of buildings hired for the performance of Divine service.

Vote 6.

Allowance to non-commissioned officers acting as provost sergeants.

Vote 7.

General Hospital, Netley.

Pay and allowances of staff officers and clerks.
Pay and allowances, schoolmasters and schoolmistresses, and contingencies of schools and libraries.
Contingencies.
Cost of medicine.

Vote 13.

Arms and ammunitions supplied for the use of the depôts.

Vote 15.

Pay, allowances, and travelling expenses of—
Schoolmasters.
Schoolmistresses.
Pupil teachers and monitresses.
School orderlies.
Soldier assistants.
Purchase of school material.
Repair of school books.
Allowances to librarians.
Carriage of school books.

Appendix, No. 6.

(G.)

Sir, Horse Guards, 23 July 1869.

REFERRING to your letters of the 5th and 21st instant, I have the honour, by desire of his Royal Highness the Field Marshal Commanding in Chief, to acquaint you that the following is the minimum time required for training recruits, prior to their embarking for service in India, of each of the following arms, viz.:

Royal Horse Artillery	9 months.
Royal Artillery	8 „
Cavalry	9 „
Infantry	6 „

I have, &c.
(signed) *C. R. Egerton*,
Deputy Adjutant General.

The Under Secretary of State,
War Office.

THIRD REPORT of the COMMITTEE appointed by the Secretaries of State for War and for India to make Arrangements for adjusting, from 1st April 1870, the Home Charges for Effective Service of Her Majesty's Regiments in India on the principle of Actual Charges.

MEMBERS:

T. L. Seccombe, Esq., C.B., Financial Secretary, India Office.
H. W. S. Whiffin, Esq., Chief Auditor, War Office.
Major General Jameson, Auditor of Home Accounts, India Office.
J. Milton, Esq., Assistant Accountant General, War Office.

IN compliance with the desire expressed by the Secretaries of State for War and for India, in a letter from Sir E. Lugard to the Under Secretary of State for India, dated the 4th January 1870, and the reply thereto of the 5th January, the committee have re-assembled for the further consideration of the subject of the payment by the Government of India of the home charges for Her Majesty's troops serving in India.

Since the date of the committee's second Report, important changes have been proposed in the constitution of the army in India, and propositions have also been made for recruiting the army on a new principle, which involves the breaking up of the cavalry depôt and infantry depôt battalions, attaching in lieu of the former a home troop of each regiment on service to a regiment of similar equipment at home; and of the latter, two companies of each battalion abroad to a battalion at home, eight companies to be on foreign service and 12 companies on home service.

A battalion of infantry in India would then consist of eight companies, each company having one captain and two subalterns; and there would be in respect of every battalion two companies at home, each with one captain and one subaltern, these two companies forming the depôt, and being attached to a home battalion of 10 companies.

The recruits annually required for each regiment of cavalry in India are estimated at 32, and for each battalion of infantry at 60. As under the proposed arrangement there would be nine regiments of cavalry and 50 battalions of infantry in India, the annual drafts required would be 288 cavalry and 3,000 infantry recruits.

The committee have not before them at present any definite information as to the artillery.

The propositions placed before the committee are, that 10 months is to be regarded as the average period of training of each cavalry, and seven months of each infantry, recruit; and that payment should be made from Indian revenues for recruits, at rates per man to be calculated with reference to those periods.

It is proposed by the members appointed by the Secretary of State for War that a proportion of the staff charges of each regiment or battalion should be included in the calculation; but this is objected to by the members appointed by the Secretary of State for India, on the ground that the staff charges in question would not be increased in consequence of one troop or two companies being attached to each regiment or battalion, and that the object to be kept in view is the repayment to Imperial revenues of expenditure incurred for the purposes of the Indian Government, and not the relief of the Imperial Exchequer from charges which it would incur independently of any Indian requirements.

The committee have, therefore, submitted two statements, one exclusive, the other inclusive, of the regimental or battalion staff.

Appendix, No.

Proceeding to ascertain the charge of a cavalry recruit under the arrangements above indicated, the committee have taken into account the following items:—

	£. s. d.	£. s. d.
Pay for 10 months, at 1 *s.* 5 *d.* per diem -	21 10 10	
Beer money for 10 months, at 1 *d.* per diem -	1 5 4	
Marching money and cost of conveyance of recruits, &c., 16 per cent. on pay - -	3 8 11	
Recruiting staff charges - - - -	2 19 1	
Barrack accommodation for 10 months, at 6 *l.* 2 *s.* 11 *d.* per annum - - - -	5 2 5	
Excess cost of bread and meat for 10 months -	1 4 5	
Charge for accoutrements for 10 months -	– 1 4	
Charge for practice ammunition - - -	– 8 1	
Clothing for 10 months, at 4 *l.* 8 *s.* 9 *d.* per annum - - - - - - - -	3 14 –	
Hospital expenses, at 17 *s.* 7 *d.* per annum -	– 14 7	
Forage for 10 months, providing one horse for three recruits - - - - -	11 2 8	
Levy money - - - - - -	2 11 –	
Cost of free kit - - - - - -	4 3 1	
		58 5 9
The charge of the troop depôt:		
1 captain - - - - - - - -	266 2 11	
1 lieutenant - - - - - - -	164 5 –	
2 troop sergeant majors - - - -	121 13 4	
3 sergeants - - - - - - -	136 17 6	
1 trumpeter - - - - - - -	28 17 11	
1 artificer - - - - - - -	38 – 5	
10 rank and file - - - - - -	258 10 10	
Beer money - - - - - -	25 17 1	
Agency - - {Allowance £. 16 14 7 / Poundage - 2 13 9}	19 8 4	
Contingent allowance - - - - -	41 – –	
Postage, &c. - - - - - -	7 – –	
Mess allowance - - - - - -	25 – –	
Forage for 17 horses, at 1 *s.* 10 *d.* - - -	568 15 10	
Cost of remount horses - - - -	98 – –	
Forage for five officers' horses, at 1 *s.* 1½ *d.* a day each - - - - - - -	102 18 1	
For 43 recruits - - - - - £.	1,902 2 3	
At per recruit - - - - - -	- - -	44 4 8
If the proportion of the pay of the regimental staff in England be added, viz.:		102 10 5
1 lieutenant colonel - - - - -	419 15 –	
1 major - - - - - - -	351 6 3	
1 paymaster - - - - - -	228 2 6	
1 adjutant (allowance) - - - - -	45 12 6	
1 quartermaster - - - - - -	155 2 6	
1 surgeon - - - - - - -	273 15 –	
1 assistant surgeon - - - - -	182 10 –	
1 veterinary surgeon - - - - -	182 10 –	
Command allowance - - - - -	54 15 –	
Non-effective allowance - - - -	40 – –	
Special allowance to quartermaster - -	30 – –	
Agency (1½ *d.* per £ on 1,963 *l.* 8 *s.* 9 *d.*) -	12 5 5	
Forage for 21 officers' horses, at 1 *s.* 1½ *d.* a day each - - - - - - -	431 3 1	
	2,406 17 3	
For one troop (one-eighth) - - - -	300 17 2	
For each recruit for 10 months - - -	- - -	5 16 8
The rate per recruit would be - - -	- - -	108 7 1

On the same principles the charge for infantry recruits would be as follows:— Appendix, No. 6.

	£. s. d.	£. s. d.
Pay for seven months, at 1 *s.* 2 *d.* per diem	12 8 5	
Beer money for seven months, at 1 *d.* per diem	- 17 9	
Marching money, cost of conveyance of recruits, &c. (16 per cent on pay)	1 19 9	
Recruiting staff charges	2 19 1	
Barrack accommodation for seven months, at 3 *l.* 2 *s.* 11 *d.* per annum	3 11 8	
Excess cost of bread and meat for seven months	- 17 1	
Accoutrements for seven months	- 1 -	
Practice ammunition	- 8 1	
Clothing for seven months, at 3 *l.* 1 *s.* 8 *d.* per annum	1 16 -	
Hospital expenses for seven months, at 17 *s.* 7 *d.* per annum	- 10 3	
Cost of free kit (exclusive of extra articles formerly in the kit, but now issued as clothing)	2 9 3	
Levy money and bounty	2 11 -	
		30 9 4
The charge of the two depôt companies:		
Pay of 2 captains	422 15 10	
„ 2 subalterns	237 5 -	
„ 2 colour sergeants	97 6 8	
„ 6 sergeants	237 5 -	
„ 4 drummers	91 5 -	
„ 6 privates	127 15 -	
Beer money	27 7 6	
Contingent allowance	36 10 -	
Postage and stationery	14 - -	
Mess allowance	50 - -	
Agency	18 5 -	
Ditto poundage	8 7 9	
For 80 recruits	1,368 2 9	
Or, per recruit	- - -	17 2 -
		47 11 4
If a proportion of the pay of the regimental staff in England be added, viz.:		
1 lieutenant colonel	310 5 -	
2 majors	584 - -	
1 paymaster	228 2 6	
1 adjutant (allowances)	63 17 6	
1 instructor of musketry (allowances)	45 12 6	
1 quartermaster	118 12 6	
1 surgeon	273 15 -	
1 assistant surgeon	182 10 -	
Command allowance	54 15 -	
Non-effective allowance	40 - -	
Special allowance to quartermaster	30 - -	
Forage for seven horses	234 4 2	
Agency	13 10 7	
	2,179 4 9	
For two companies (one-sixth)	363 4 1	
For each recruit for seven months	- - -	2 12 11
The rate per recruit would be	- - -	50 4 3

In the above calculation no provision is made for deaths or desertions among the recruits, nor for those who are unable, through ill health, to embark for India. Under the system hitherto existing, the charge on this account has been very heavy, as shown in the accompanying memorandum; but in future, as the recruits would form part of a home regiment or battalion, instead of a depôt battalion, it may be anticipated that their association with a larger body of trained men would reduce materially the extent of desertion.

Appendix, No. 6.

The committee are of opinion that if to the expense of each recruit, as already shown, a sum equal to one-third thereof be added, adequate provision would be made for the charge consequent on deaths, desertions, or inability of recruits to proceed to India. The charge for each cavalry recruit would thus be 136*l.* 13*s.* 11*d.*, and for each infantry recruit 63*l.* 8*s.* 5*d.*, or 144*l.* 9*s.* 5*d.* and 66*l.* 19*s.*, if the regimental staff charges are to be paid by India.

In regard to invalids or time-expired men awaiting their discharge, it appears to the committee that the expenditure actually incurred on that account should not be included in the rate per recruit.

They understand that all invalids will in future be sent to the Invalid Hospital at Netley, or to a consolidated depôt near the port of disembarkation, and they consider that the maximum period of remaining there should be six months; that at the expiration of that time, at the latest, the soldiers should either be discharged or brought on the strength of their regiments at home, the time-expired men and those incapable of further service being discharged as soon as possible after arrival in this country.

A statement of the charge on this account should be annually furnished by the War Office, and, after examination by the officers of the Secretary of State for India in Council, should be paid independently of the charge for recruits.

The charge for difference of men on passage should remain as specified in the second report of this committee, an addition of 10*l.* –*s.* 5*d.* per man being made on account of forage to the charge for each cavalry soldier, which was inadvertently omitted in the calculation annexed to the second Report.

In addition to the above charges, India would have to pay directly the colonels' allowances and furlough pay.

In this Report the committee have shown what would be the estimated cost of recruiting cavalry and infantry regiments in India under certain conditions placed before them. They have not entered upon the question how far those conditions are consistent with a due regard to economy. But they desire to express their concurrence in the view taken by the committee presided over by Major General Jameson, in their Report, dated 5th August 1869, that, for the purpose of raising and training the number of recruits required for battalions of infantry in India, it is not necessary to maintain more than one company with the depôt in this country.

In a subsequent report the committee, when supplied with information as to the artillery, will be prepared to recapitulate their recommendations as to the mode of adjustment of the several claims.

(signed) *Robert P. Daye,* Secretary.

India Office, 28th February 1870.

We have agreed to the foregoing report, as showing the cost of cavalry and infantry recruits under certain prescribed conditions, which include the following charges:

For Cavalry Recruits.—The pay of two officers, seven non-commissioned officers, and 10 rank and file for each cavalry regiment, as well as the levy money, free kit, pay, and all allowances of 43 men for 10 months, in order to provide 32 recruits for India.

For Infantry Recruits.—The pay of four officers, 12 non-commissioned officers, and six rank and file for two companies of infantry, as well as the levy money, free kit, pay, and allowances for 80 men for seven months, in order to provide 60 recruits.

We consider that the mere enumeration of the strength in officers and men, with reference to the number of recruits to be provided, is sufficient to show that any scale of charges based thereon must be excessive; whereas among the advantages specified in the confidential "plan for carrying out certain reductions of expenditure upon the army in India, and organising a system for training recruits for battalions serving abroad," it is expressly stated that the plan "affords a more economical mode than that now existing of training and supplying drafts."

How far the charge involved in the propositions before the committee may be justified by other considerations than the best and cheapest mode of training recruits it is not our province to consider. But we feel it to be our duty again to refer to the fact, stated in the first report of the committee, that the East India Company were able to send efficient artillery and infantry recruits to India at a cost of 26*l.* 7*s.* 5*d.* per man, instead of 136*l.* 13*s.* 11*d.* for cavalry and 63*l.* 8*s.* 5*d.* for infantry recruits, as now proposed.

We are fully aware that the changes made in the terms of enlistment, pay, clothing, &c., would have increased the charge as incurred by the East India Company; but the proposed establishments for, and the periods of, training which have formed the bases of this third Report of the committee appear to us to be enormously in excess of what can be possibly required for the purpose of properly recruiting the British army in India.

G. I. Jameson, Major General.

Appendix, No. 6.

FOURTH REPORT of the COMMITTEE appointed by the Secretaries of State for War and for India to make Arrangements for adjusting the Home Charges for Effective Services of Her Majesty's Regiments on the East Indian Establishment, on the principle of Actual Charges.

MEMBERS:

T. L. Seccombe, Esq., C.B., Financial Secretary, India Office.	J. Milton, Esq., Accountant General, War Office.
Major General J. C. Hannyngton, Bengal Army.	R. H. Knox, Esq., War Office.

THE committee have been unable, until the present time, to obtain the necessary data for determining the charge to India for artillery recruits. Having now obtained that information, they submit the following rates as chargeable for those recruits, the time of training being taken at 10 months for the Royal Horse Artillery, and nine months for the Royal Artillery, those periods, in accordance with the plan adopted in regard to cavalry and infantry recruits, being one month in excess of the minimum time required for training recruits as laid down in the letter from the Deputy Adjutant General at the Horse Guards to the Secretary of State for War, dated the 23rd July 1869, which formed Appendix G. to the second Report of this committee.

Royal Horse Artillery.

	£.	s.	d.
Pay for 10 months, at 1 *s.* 7½ *d.* per diem	24	7	10
Beer money for 10 months, at 1 *d.* per diem	1	5	3
Marching money and cost of conveyance of recruits, &c. (16 per cent. on pay)	3	18	1
Barrack accommodation for 10 months, at 6 *l.* 2 *s.* 11 *d.* per annum	5	2	5
Excess cost of bread and meat for 10 months	1	4	5
Accoutrements for 10 months	–	–	10
Clothing, at 3 *l.* 5 *s.* 9 *d.* per annum, for 10 months	2	14	10
Hospital expenses, at 17 *s.* 7 *d.* per annum, for 10 months	–	14	7
Levy money	1	8	–
Charge for practice ammunition	1	–	–
Cost of free kit (exclusive of extra articles formerly in the kit, but now issued as clothing)	3	7	8
Recruiting staff expenses	3	1	–
Depôt expenses	30	9	9
£.	78	14	9

An additional sum of 13 *l.* 11 *s.* being charged for each man who shall be certified to have passed through the riding-house establishment and been dismissed his drill.

Royal Artillery.—Mounted Men.

	£.	s.	d.
Pay for nine months, at 1 *s.* 5½ *d.* per diem	19	13	6
Beer money for nine months, at 1 *d.* per diem	1	2	9
Marching money, cost of conveyance of recruits, &c. (16 per cent. on pay)	3	3	–
Barrack accommodation for nine months, at 6 *l.* 2 *s.* 11 *d.* per annum	4	12	3
Excess cost of bread and meat for nine months	1	2	1
Accoutrements for nine months	–	–	9
Clothing, at 3 *l.* 4 *s.* 6 *d.*, for nine months	2	8	4
Hospital expenses, at 17 *s.* 7 *d.* per annum, for nine months	–	13	1
Levy money	1	8	–
Charge for practice ammunition	1	–	–
Cost of free kit (exclusive of extra articles formerly in the kit, but now issued as clothing)	4	1	3
Recruiting staff expenses	3	1	–
Depôt expenses	16	16	10
£.	59	2	10

An additional sum of 13 *l.* 11 *s.* being charged for each man who shall be certified to have passed through the riding-house establishment and been dismissed his drill.

Appendix, No. 6.

Royal Artillery,—Dismounted Men.

	£.	s.	d.
Pay for nine months, at 1 *s.* 5¼ *d.* per diem	19	13	6
Beer money for nine months, at 1 *d.* per diem	1	2	9
Marching money, cost of conveyance of recruits, &c. (16 per cent. on pay)	3	3	–
Barrack accommodation for nine months, at 6*l.* 2*s.* 11*d.* per diem	4	12	3
Excess cost of bread and meat for nine months	1	2	1
Accoutrements for nine months	–	–	9
Clothing, at 3*l.* 4*s.* 6*d.*, for nine months	2	8	4
Hospital expenses, at 17*s.* 7*d.* per annum, for nine months	–	13	1
Levy money	1	8	–
Charge for practice ammunition	1	–	–
Cost of free kit (exclusive of extra articles formerly in the kit, but now issued as clothing)	3	7	8
Recruiting staff expenses	3	1	–
Depôt expenses	16	16	10
£.	58	9	3

The system under which artillery recruits are trained in this country with the depôt brigade of the Royal Artillery differs materially from that under which recruits are trained at the depôts of regiments of cavalry or infantry. At the depôt brigade of artillery recruits are trained for other brigades as well as for those in India, and any recruits found unfit to embark for India are, in a very short period, fit for duty with a brigade stationed elsewhere, and do not remain at the depôt waiting for the embarkations of the ensuing year. The charge on that account is consequently so small that it does not call for any increase to the ascertained cost of the recruits sent to India. The committee are, therefore, of opinion that any such addition as that made to the cost of a cavalry or infantry recruit, on account of deaths or desertions at the depôt, or for recruits who are unable, through ill-health at the time of embarkation, to proceed to India, should not be made in regard to artillery recruits.

The committee now proceed to recapitulate their several recommendations as applicable to the settlement of these claims.

That, estimating the charge for difference of men on passage to and from India, according to the minimum period of training prescribed by the letter from the Deputy Adjutant General to the Under Secretary of State for War, already referred to, the charges will be as follows:

	£.	s.	d.	£.	s.	d.
Cavalry	45	16	10			
Add for forage	10	–	5			
				55	17	3
Infantry				27	7	11
Royal Horse Artillery				47	10	7
Royal Artillery				40	11	5

These rates to be chargeable on the numbers embarked with regiments of cavalry and infantry and troops and batteries of artillery as reliefs, and also on such non-commissioned officers or men, if any, as may be sent from regiments, troops, and batteries not belonging to the Indian depôts, India being reimbursed at the same rates for every non-commissioned officer or soldier disembarked who shall not be within two years of the completion of his term of service.

The practice of not sending out men who have less than two years to serve should be continued, and in calculating the number on which the prescribed sums are to be paid for effective men going out or returning with their corps, India will not receive credit for men who have not less than two years to serve.

That the charge to India for recruits, based, so far as regards cavalry and infantry, on the principle of maintaining a troop for each regiment of cavalry, and two companies for each regiment of infantry, for the purpose of recruiting, and adding one month to the minimum period of training as already referred to, will be:

	£.	s.	d.	
For each Cavalry recruit	136	13	11	
„ Infantry recruit	63	8	5	
„ Royal Horse Artillery recruit	78	14	8	With an addition of 13*l.* 11*s.* if the recruit shall have passed through the riding-house establishment.
„ Royal Artillery mounted recruit	59	2	10	
„ Royal Artillery dismounted recruit	58	9	3	

That the rates at present chargeable for non-commissioned officers of Royal Engineers required for special service in India, as fixed in the Report of the committee which considered the subject in March 1867, should remain in force.

In

In addition to the above charges, India will pay directly the colonels' allowances and furlough pay.

In regard to invalids or time-expired men awaiting their discharge, it appears to the committee that the expenditure actually incurred on that account should not be included in the rate per recruit. They understand that all invalids will in future be sent to the Invalid Hospital at Netley, and they consider that the maximum period of remaining there should be six months; that at the expiration of that time, at the latest, the soldiers should either be discharged or brought on the strength of their regiments or depôts at home, the time-expired men, and those incapable of further service, being discharged as soon as possible after arrival in this country.

A statement of the charge on this account should be annually furnished by the War Office, and, after examination by the officers of the Secretary of State for India in Council, should be paid independently of the charge for recruits.

The committee recommend that the foregoing rates should be adopted in the settlement of the War Office claims for the years 1870–71 and 1871–72. As great changes are being made in the constitution of the army, the committee are of opinion that the rates should be re-considered, and, if necessary, revised in regard to the year 1872–73 and subsequent years.

The committee desire to record their acknowledgments of the valuable assistance rendered by Mr. Day, as secretary to this committee.

(signed) *Robert P. Daye*, Secretary.

London, 12 April 1872.

Having agreed to this Report, which shows the sums chargeable to India under the special conditions placed before the committee, and which recapitulates the recommendations contained in their previous reports, we consider it necessary to refer to the observations of the members appointed by the Secretary of State for India, which were attached to the committee's second and third Reports, and to repeat that we entertain serious objections to the arrangements herein referred to, especially as to the charges for cavalry and infantry recruits.

1st. As regards cavalry, we consider that, for the purpose of providing annually 32 recruits for each cavalry regiment in India, it is not necessary that India should bear the whole charge of two officers, seven non-commissioned officers, and 10 rank and file, as well the levy money, free kit, pay, and all allowances of 43 men for 10 months.

2nd. As to the infantry, we do not consider that, in order to provide 60 recruits for each regiment, it is necessary that India should bear the pay of four officers, 12 non-commissioned officers, and six rank and file for two companies of infantry, as well as the levy money, free kit, pay, and all allowances for 80 men for seven months.

We are also of opinion that, as these several troops of cavalry and companies of infantry are entirely at the disposal of the Secretary of State for War, and are available to meet any emergency for which a home garrison is required, a considerable portion of the charge on their account should be defrayed by the British Exchequer.

We also desire to draw attention to the observations contained in the first and third Reports of the committee as to the cost of recruits provided by the East India Company and the rates referred to in this Report, and we consider that, after making every allowance for changes in the terms of enlistment, pay, clothing, &c., the difference between those rates clearly indicates that it is not necessary, if Indian interests alone be considered, that recruits should be supplied under so expensive a system as that now existing.

J. Hannyngton.

Appendix, No. 6.

REPORT of the COMMITTEE appointed by the Secretaries of State for War and for India to make Arrangements for adjusting the Home Charges for Effective Services of Her Majesty's Regiments on the East Indian Establishment on the principle of Actual Charges.

MEMBERS:

T. L. Seccombe, Esq., C.B.	J. Milton, Esq.
Major General J. C. Hannyngton.	R. H. Knox, Esq.

IN pursuance of the reference made to this committee by the letters from the Under Secretary of State for War to the Under Secretary of State for India, dated the 30th January 1872, and the reply from the India Office, dated the 6th March following, the committee have considered what would be the best mode of adjusting the charge which will arise in consequence of the promotion of British colonels to be major generals, in succession to vacancies caused by the deaths of Indian general officers.

The committee have referred to the Royal Warrant of the 27th December 1870, Articles 24 to 27, an extract of which is annexed, and they find that under the arrangement therein ordered it was estimated that a number equal to 1 in 28 of the Staff Corps officers, or about 90 in all, would be eventually added as major generals to the Imperial list.

Up to the present time 48 Staff Corps generals have been transferred to the Imperial list, and four British colonels have since been promoted in succession to Indian vacancies. So far as an estimate can be formed, about 150 British colonels must be promoted before another Staff Corps colonel can succeed to the vacancy of a major general.

There are two plans on which the varying charge for the pay of these major generals can be adjusted with due regard to the interests of the British and Indian Treasuries:—

1st. That British revenues should bear the charge for each British colonel, and that Indian revenues should bear the charge for each Staff Corps colonel promoted to be a major general on the Imperial list; or,

2nd. That Indian revenues should bear the charge for each British colonel promoted under the Royal Warrant, in excess of the fixed establishment of 275 general officers; India receiving hereafter the unattached pay of 25*s.* a day for each Staff Corps colonel promoted to be a major general.

Under the first plan the British Exchequer would for a time have to bear a somewhat larger expenditure in consequence of the amalgamation, but it appears from calculations that have been made that this excess would be repaid in subsequent years. This plan would have the advantage of securing to officers of the British army the whole of the sum voted from Imperial revenues for unattached pay, and the British and Indian Governments respectively would be in a position to remedy any exceptional cases of officers, of either the British or Indian establishment, who might be deprived for a time of a fair share of advancement.

If the second plan were adopted, the Indian Treasury would have to bear at first an increased charge, which would be repaid in subsequent years when a number of Indian Staff Corps officers in excess of 1 in 28 will have succeeded as major generals on the Imperial list.

The committee recommend that the first of the two plans be adopted; that accordingly the pay of each British colonel promoted be paid from British revenues, and the pay of each Staff Corps colonel promoted be paid from Indian revenues. Also that the system in force under which India pays the capitalised value of the proportion chargeable on account of Indian service of the non-effective charge for British general officers on the unattached list be continued, and that it be applied to those who may temporarily be in excess of the British portion (275) of the fixed establishment.

J. Hannyngton.
John Milton.
Ralph H. Knox.

(signed) *Robert P. Daye*, Secretary.

London, 26 July 1872.

Appendix, No. 6.

EXTRACT from ROYAL WARRANT, dated 27th December 1870.

Art. 24. WHEN a vacancy shall occur on List A. to which a colonel of the Staff Corps on List B. would have succeeded, had promotion to List A. been continued, an addition of one shall be made to the Guards and Line establishment of general officers of the British Army, by the promotion to it of the senior qualified colonel of that branch on List B., whether he be a British officer or an officer brought in from the Staff Corps. This shall continue until the number of general officers added to the British establishment, including the first transfer, shall be one for every 28 combatant officers in the Staff Corps of the three Presidencies.

Art. 25. On the first addition being made under Article 24, the general officers of the Staff Corps on List A. shall be transferred to the British establishment, which shall be increased by the same number as the Indian establishment will be diminished by such transfer.

Art. 26. Promotion into List A. shall, after the transfer provided for in Article 25, be limited to officers of cavalry and infantry of our late Indian army who shall not have joined our Indian Staff Corps.

Art. 27. As the number of general officers on the Guards and Line establishment of the British army increases, under the operation of Article 24, the establishment of generals, lieutenant generals, and major generals shall be from time to time so adjusted as to maintain, as nearly as may be, the proportions now existing in the British service; but any reductions that may be requisite shall be made only by gradual absorption of every third vacancy amongst supernumeraries in the higher grade.

LETTER to the Under Secretary of State, War Office, dated India Office, 8th September 1871, No. 652 W.

Sir,

1. WITH reference to Sir E. Lugard's letter to this office, dated the 24th October 1870, and its enclosure, and to previous correspondence upon the subject therein referred to, I am directed by the Secretary of State for India in Council to request that you will inform the Secretary of State for War that the attention of the Duke of Argyll has been again called to the very high rate which it has been proposed to charge against the revenues of India on account of recruits sent to that country for the cavalry and infantry, and to the remarks made thereon in a Report by a committee appointed to consider the question, dated the 28th February 1870, and to the further remarks made in a postcript to the same Report by the two members of the committee representing this office.

2. The remarks of the committee, which consisted of two gentlemen representing the War Office and two representing the India Office, were as follows: "In this Report the committee have shown what would be the estimated cost of recruiting cavalry and infantry regiments in India, under certain conditions placed before them. They have not entered upon the question how far those conditions are consistent with a due regard to economy; but they desire to express their concurrence in the view taken by the committee presided over by Major General Jameson, in their Report dated 5th August 1869, that, for the purpose of raising and training the number of recruits required for battalions of infantry in India, it is not necessary to maintain more than one company with the depôt in this country."

3. While the further remarks, signed by Mr. Seccombe and Major General Jameson, concluded with the following passage: "We are fully aware that the changes made in the terms of enlistment, pay, clothing, &c., would have increased the charge as incurred by the East India Company, but the proposed establishments for, and the periods of, training, which have formed the basis of this third Report of the committee appear to us to be enormously in excess of what can be possibly required for the purpose of properly recruiting the British army in India."

4. In Lord Northbrook's letter of the 25th May 1870, it was stated that the "arrangement under which two depôt companies are to be provided for out of Indian revenues, having formed part of the general arrangements which were made by Her Majesty's Government, in consequence of the reductions urged by the Government of India in the autumn of last year in the establishment of Her Majesty's forces serving in India. These arrangements were framed in concert with the India Office, and involve other considerations than those which relate solely to the number of officers required for the training of recruits, and the Army Estimates for the present year have been framed on the understanding that the cost of two depôt companies will be borne by Indian revenues"; and it was intimated that some further claims for contribution from the revenues of India would be made by the War Office.

5. The Duke of Argyll, therefore, having in view the heavy burden which the people of India have to bear at the present time in the item of army charges, considers it necessary

Appendix, No. 6.

to call Mr. Cardwell's serious attention to the following facts, and to urge upon him the absolute necessity of making some arrangements by which the recruiting of the British forces in India may be effected at a cost more suited to the financial resources of that country, and less strikingly in excess of the cost at which the same end was accomplished under the East India Company.

6. According to the present arrangement, which has been accepted by the War Office provisionally, the charge against the revenues of India is to be—

	£.	s.	d.
For a cavalry recruit - - - - -	136	13	11
For an infantry „ - - - - -	63	8	5

that for an artillery recruit being under consideration.

7. The mode in which the above charges have been arrived at will be sufficiently shown by reference to the calculation made by the committee in the case of an Infantry recruit.

	£.	s.	d.
The pay and personal expense of the recruit for seven months is estimated at - - - - - - - - - -	30	9	4
Charge for two depôt companies - - - - - - - -	17	2	—
	47	11	4
One-third of the amount allowed for death, desertion, &c. - -	15	17	1
£	63	8	5

8. The committee stated in the same Report that the annual average number of recruits required for an infantry battalion in India would be 60, and the total number required would be 3,000; allowing, however, the very liberal proportion of one-third for death and desertion, there would be in the aggregate 4,000 men for seven months of the year, or its equivalent, 2,333 recruits for the whole year, with an establishment of—

100 captains,	300 sergeants,
100 subalterns,	200 drummers,
100 colour sergeants,	300 privates,

maintained at an aggregate cost per annum of 68,406*l.* 17*s.* 6*d.*, being something more than half of the pay and personal expenses of the men themselves.

9. This arrangement gives 200 combatant officers for 2,333 men, or about one officer to 12 men, and one non-commissioned officer to every six men, while the proportion of combatant officers to rank and file in a battalion on actual service in India, where they are still far short of a war establishment, is only 28 combatant officers and 43 non-commissioned officers to 820 rank and file, or one commissioned officer to every 29 men and one non-commissioned officer to every 19 men.

10. The Duke of Argyll does not consider it within his province to call in question the propriety of any regimental arrangements which the military authorities in this country may deem it necessary to adopt, with a view solely to the efficient organisation of the army at home, some of which arrangements are probably recommended by those "other considerations" referred to in Lord Northbrook's letter of the 25th May 1870. But his Grace cannot consider it either politic or just to lay upon the revenues of India the entire cost of an organisation for furnishing recruits to that country which experience has shown to be far beyond what is needed for that particular purpose. The subject, important as it is at the present moment on account of the large annual payment which India is called upon to make for this purpose, becomes still more important in view of the possible effect of the new system of enlistment under the Army Enlistment Act* of last year, by which the annual number of recruits for India will be considerably augmented.

*33 & 34 Vict. c. 67.

11. The Duke of Argyll is desirous, therefore, of urging upon Mr. Cardwell's consideration the possibility of introducing a different and more economical system for the enlistment and training of recruits for India.

12. With this view, it appears to his Grace that general depôts might be established with special relation to the regiments in that country, and that one such depôt would suffice for the artillery, one for the cavalry, and three for the infantry branch.

13. The contrast between the cost of recruits under the system which I have now reviewed and the cost at which the East India Company formerly recruited its European regiments is very striking. Mr. Cardwell is probably aware that the establishment of officers at the Warley depôt under the East India Company consisted of five combatant officers, four of whom constituted a permanent staff, while the fifth was usually an officer on furlough from India.

14. With this staff, and a suitable establishment of non-commissioned officers, a force consisting of nine regiments of infantry, and of about 7,000 artillery, was maintained and supplied regularly with recruits at an average cost of 26*l.* 7*s.* 5*d.* per man.

15. Recognising

Appendix, No. 6.

15. Recognising the importance of having able and experienced officers at depôts of this nature, the Duke of Argyll assumes that the number of commissioned officers may be, in proportion to the men, far smaller than with a regiment, the proper drilling and instruction of the men being dependent mainly upon the presence of an efficient staff of non-commissioned officers, and he presumes, therefore, that the establishment of commissioned and non-commissioned officers for such depôts would be regulated accordingly.

16. As an argument in favour of regimental depôts, it has been stated that "so long as the term of service in India is maintained at from 10 to 12 years, it is necessary as a measure of efficiency, as well as of due consideration to the health of the officers, that a proportion of their number should have the opportunity of change of climate to the depôt;"* while again, much importance is attached by some authorities to the recruits of each regiment being commanded and drilled by officers of that regiment.

* Remarks by Colonel Egerton, see Report of General Jameson's Committee, 5th August 1869.

17. The Duke of Argyll cannot admit that there is force in either of these arguments.

18. With regard to the question of health and efficiency, the experience of the Indian Government in the Military Department does not establish the necessity of giving to British officers serving in that country, in addition to the ordinary leave within their reach, the privilege, with a view of retaining their health and efficiency, of having a tour of duty in England for two years, and (as it may be) more than once during a service of 10 or 12 years abroad, while it may be added that the expense of relieving these officers from time to time is very large.

19. With regard to the second argument, that the present expensive system is necessary because recruits should be from the first with officers of their own regiments, his Grace thinks it can hardly be maintained that the efficiency of the men as soldiers can be in any degree affected by such a consideration, and that the fact of a young man having learnt his drill and duty as a soldier under one set of officers, provided they are well fitted for imparting such instruction, during the seven months prior to joining his own corps, can in the least degree affect his value upon joining his proper battalion.

20. Moreover, the system now introduced and encouraged of enlisting men for general service, necessarily leads to the men undergoing the whole of the preliminary training in many cases before it is determined what regiment they shall be ultimately attached to.

21. I am further desired to add, with reference to this point, that while in the artillery the battery may be taken as the unit of organisation, corresponding with the battalion in the infantry, the recruits for this arm of the service are trained and instructed at a general depôt, under officers appointed for that duty, without any reference to batteries, and without any reasonable expectation that these officers and the recruits they are instructing will ever serve in the same batteries, or meet again in the course of their career.

22. His Grace considers that a further argument might be found in favour of the proposed system of general depôts in the fact that service in India is believed to be popular with the army, and that the assurance that in presenting themselves at such depôts they would be enrolled for that service would promote enlistment generally, and tend to facilitate the completion of the battalions in India to their proper numbers with men of suitable age and qualifications.

23. Lastly, such a system would tend greatly to simplify the question of expenditure as between the Home and Indian Governments, as there could be no doubt as to the expenditure of establishments framed and maintained solely for Indian purposes.

24. In conclusion, I am directed by the Duke of Argyll to urge this question on Mr. Cardwell's most serious and immediate attention. The abolition of a local European army in India was a measure dictated by considerations of Imperial policy. But it is questionable whether that measure could have been so easily carried if it had been fully known how great would be the additional burden thrown upon the Government of India. Part of that addition was unavoidable, and may not be too great a price to pay for the expected advantages. But the Duke of Argyll is confident of Mr. Cardwell's support in his desire that this additional cost should be kept within the limits of real necessity, and should not be aggravated by the maintenance of a system of recruiting which appears to be extravagant, and to have no reference to the exigencies of Indian service.

(signed) *J. P. Thom,*
For the Military Secretary.

Appendix, No. 6.

LETTER from the War Office, dated 14th April 1872, No. 7023/436, to the Under Secretary of State for India.

Sir,

I AM directed to inform you that Mr. Secretary Cardwell has had under his most careful consideration the subject of the payments which may properly be demanded by the Imperial Government from Indian revenues on account of the British military forces supplied to the Indian Government for service in India, especially as regards the cost of raising and training recruits for India with reference to the letter of the late Mr. Pattison Thom, dated the 8th September 1871.

In that letter the views entertained by the Secretary of State for India in Council relative to the cost of raising and training recruits for India are stated in detail, founded on the most correct and precise data of the organisation and numbers of the recruiting establishment in this country.

But Mr. Cardwell regrets that he is unable to concur in the conclusions arrived at by his Grace the Duke of Argyll, as Mr. Cardwell is clearly of opinion that the cost to this country of supplying British soldiers to maintain the establishment of European troops in India is by no means represented by the disbursements made on the several individual soldiers or recruits drafted to India.

It is the policy of the Indian Government to keep the numbers of the European troops serving in that country at the lowest strength consistent with the safety of the Indian Empire in time of peace; while the troops in Great Britain or in her colonies serve as reserves to which the Government of India looks for reinforcements of troops in the case of any emergency, and it is only through the existence of these available reserves that Indian revenues are spared the vast expense that would arise were the troops in India always maintained at their maximum instead of their minimum requirements.

The maintenance, therefore, of these available reserves forms, in Mr. Cardwell's opinion, an important item in the actual disbursements out of British revenues, for repayment of which Indian revenues are directly liable; and whatever may be the strength or organisation of the British army as determined by Her Majesty's Government to be most conducive to the maintenance of the constant efficiency of the troops, the Government of India is directly interested in the keeping up of that strength and that organisation, as involving the question, so important to that Government, whether the reserves on which it depends for the immediate conversion of the peace establishment in India to a war establishment in case of emergency are at all times available to be drawn upon at any, the shortest, notice.

Moreover, Mr. Cardwell is unable to overlook the fact that, in providing British troops for service in India, the civil population of this country is called upon to give to the army a number of men, which represents a very considerable portion of the numbers available for military service, and to that extent India competes at all times with this country in obtaining from the civil population the numbers of recruits required for the military forces of the Crown, adding to the difficulty, and consequently to the cost, of raising each individual recruit.

Mr. Cardwell is therefore of opinion that Indian revenues are justly liable to bear, in the widest sense of the term, their full proportion of the cost of the reserves of effective soldiers maintained in this country as well as their proportion of the cost of the whole machinery for drawing recruits from the civil population, and of training them for efficient service abroad by whatever organisation or system may be adopted by Her Majesty's Government as being most conducive to the strength and efficiency of the British army.

That the organisation and system so adopted shall be at all times carried out with the utmost possible regard to economy, so far as is compatible with real efficiency, is the anxious care and constant object of Her Majesty's Ministers in the discharge of their duties in the Government of this country, while at the same time the Secretary of State for War has always acted on the principle that Indian financial considerations ought not to be overlooked in dealing with questions of military expenditure.

Mr. Cardwell is therefore unable to concede the position apparently assumed in the letter from the India Office, that the charges for British recruits sent to India are extravagant or unfair in their demand upon Indian revenues.

The expenses disbursed on recruits for India are subjected to the same minute and unvarying control as are those incurred for the recruits for home and colonial service, and in no way could Mr. Cardwell consent to a diminution of the charges, founded as they are on ascertained expenditure, without unfairly throwing upon British revenues expenses incurred solely for Indian purposes.

In the foregoing remarks I have, by the Secretary of State's direction, confined myself mainly to the matter of the charges for recruits, being the subject matter of the India Office letter, but Mr. Cardwell desires me to take this occasion to state that, in his opinion, there still remains a considerable amount of expenditure on the army in this country by which Indian revenues are relieved, and for the reimbursement of which no provision is made in the terms by which the Indian Government is able to draw on the British army at home in case of emergency.

Of these indirect charges the following may be instanced:

The cost of the military staff and head-quarter departments at home.

The regimental staff of the corps to which the Indian depôts are attached or affiliated.

The

The full assessed cost of raising and training the soldiers who proceed, not as drafts or recruits, but as relieving corps, allowing to India for such efficient men as return with relieved corps.

The full cost of the educational establishments for officers and for men.

The cost of experiments in arms and ammunition.

The cost of rewards to inventors of military weapons or machines.

And, in every case in which India calls for an augmentation of the number of what may be termed the professional branches or departments, such as artillery, engineers, and medical officers, such sums as may be determined on as representing the cost that has been incurred by British revenues to prepare such professional officers for the efficient discharge of their duties.

The object which Mr. Cardwell has in view in this letter is not to take any action or to propose any change in the subsisting arrangements which, however, he reserves to himself the full liberty of proposing at any time, but merely to point out to the Secretary of State for India in Council, that the pecuniary advantages at present derived by India from those arrangements are much greater than appears to be contemplated in the letter now under reply.

I have, &c.,
(signed) *H. Campbell.*

LETTER to the Under Secretary of State, War Office, dated India Office, 9th August 1872, No. 367 W.

Sir,

Para. 1. I AM directed to inform you that the Secretary of State for India in Council has had under his serious consideration Mr. Campbell's letter of the 24th April, being a reply to a letter from this office, of the 8th September 1871, upon the subject of the rates at which the cost of recruiting for the European regiments employed in India is charged to the revenues of that country.

2. In his letter of the 8th September 1871, the Secretary of State in Council pointed out that the cost of recruiting appeared to be swelled by needless expenditure on the organisation of depôts; that is to say, by expenditure which did not seem to be required for the efficient training of recruits. The Secretary of State for India in Council further thought it his duty to suggest a plan for recruiting, by which much of this unnecessary expenditure might be saved, and which at the same time would tend to simplify the system by which the share of recruiting expenses due from India is annually ascertained.

3. Mr. Campbell's letter passes over these representations and suggestions altogether. It takes no other notice of them than to admit that all the facts are accurately stated. It does not defend the depôt organisation as necessary for the efficient training of recruits; nor does it state that there is any objection, so far as the efficiency of training is concerned, to the cheaper system which had been suggested from this office. The charges made against India for recruiting are indeed defended, but they are defended not upon the ground that they are required for the purpose for which they are nominally paid, but upon the ground that they are required for a totally different purpose—the purpose, namely, of making India contribute towards what is called an army of reserve, that is to say, for the purpose of making India pay towards the cost of the home garrison of England, on the plea that some part of it, at some future time, may possibly be required in India.

4. Mr. Campbell's letter further intimates that the same principle on which this charge is defended would equally justify many other charges which are not now actually made, but which it is distinctly said Mr. Cardwell reserves his right to bring forward at any future time. Of these other charges Mr. Campbell's letter furnishes a list.

5. The Secretary of State for India in Council entirely concurs with Mr. Cardwell that the principle laid down in Mr. Campbell's letter would cover many other charges which have never hitherto been either made or contemplated; and he doubts whether even the list of them which is indicated in that letter exhausts the contributions which, on the same principle, India might be called upon to make. But taking that list alone, it would appear that, in Mr. Cardwell's opinion, India may be justly called upon to pay a proportion (quite undetermined) of the total cost of the whole military staff and head-quarters' department of the army at home; a like proportion of the regimental staff of all the regiments which have, though serving in England, a nominal connection with the recruiting depôts; a like proportion of all home educational establishments; of all experimental outlays at Woolwich and other arsenals; and of all rewards to inventors.

6. It is not easy to see why this list of heads under which India may be called to pay direct tribute to the Imperial Exchequer should stop here. A share of the cost of every home establishment, or institution of whatever kind, to which the Indian Government affords custom or employment, or which has any contact, direct or indirect, with the administration of that country, might be claimed upon the same principle and under the same plea. If India, besides defraying the whole cost of the India Office, as it now does,

Appendix, No. 6.

is to be required to pay also largely to the cost of the establishment of the Horse Guards and of the War Office, the principle on which this claim is made, would not stop with the demands of the particular department on behalf of which Mr. Campbell writes. In like manner the navy may possibly be required in the defence of India. Therefore the revenues of that country ought to defray part of the expenses of the department of the Admiralty, of all the naval arsenals, of all the naval stations, and probably, also, of all the Mediterranean garrisons.

7. If such a scheme for exacting tribute from India towards the maintenance of Imperial establishments, both at home and abroad, is to be entered upon, it is better that it should be pushed at once to its logical results. It is only in the light of those results that its real character can be appreciated. The most injurious system which can possibly be adopted is the system of asserting the principle, but of leaving it to be applied gradually, as successive Governments may from time to time find it convenient to apply it, to relieve their Parliamentary Estimates, and yet so as not to alarm too much the people of India, or shock too much the conscience of the public at home.

8. The problems of Indian finance are difficult enough already, but they will be rendered infinitely more difficult if the Indian Government is to be kept in complete uncertainty as to the extent to which "indirect claims" are to be raised for Imperial subventions.

9. The Secretary of State for India in Council, therefore, cannot allow the principle of such claims to be laid down for the first time in an official letter from the War Office, without entering against it his formal protest. The principle is certainly a new one. He believes it to be illegal, and he is satisfied that it is unjust.

10. As, however, the gravity of this question is apparent, and as Mr. Campbell's letter sets forth the arguments on which Mr. Cardwell relies for establishing the justice of such claims, the Secretary of State for India considers it his duty in like manner to explain the grounds on which he holds these arguments to be fallacious.

11. The argument of Mr. Cardwell begins with, and mainly rests upon, the assertion that it is the policy of the Government of India to maintain the smallest possible amount of European troops in that country, to rely habitually on reinforcements from the army at home, and thus practically to lean upon that army as an army of reserve.

12. The Secretary of State for India regards this assertion as not only incorrect, but as completely inverting the real facts of the case.

13. It would be much nearer the truth to affirm that the Imperial Government keeps in India, and quarters upon the revenues of that country, as large a portion of its army as it thinks it can possibly be required to maintain its own dominion there; that it habitually treats that portion of the army as a reserve force, available for Imperial purposes; that it has uniformly detached European regiments from the garrison of India to take part in Imperial wars, whenever it has been found necessary or convenient to do so; and, more than this, that it has drawn not less freely upon the native army of India, towards the maintenance of which it contributes nothing, to aid it in contests outside of India, and with which the Indian Government has had little or no concern.

14. The extraordinary case of the great mutiny of 1857-58 is the only case which gives even plausibility to Mr. Campbell's representation of the facts upon this subject.

15. In that case, altogether unprecedented in the history of British India, the Imperial Government was compelled, under the imminent risk of losing its empire in the East, to make one of those great efforts which are at times inseparable from Imperial power and Imperial obligations. It must be remembered, however, that, if similar exertions had been called for by war in any other part of Her Majesty's dominions, not only must the same effort have been made, but the burden of it must necessarily have been borne, in great part at least, by the Imperial Government. But in regard to the Indian mutiny, no part of the cost of suppressing it was allowed to fall on the Imperial Exchequer. The whole of it was, or is now being, defrayed by the Indian taxpayer.

16. Since the period of the mutiny, the Imperial Government has largely increased the portion of its army which it keeps in and at the expense of India; and both before and since that event it has been in the habit of drawing upon that portion of its army, as an army of reserve for Imperial wars, whenever occasion required. The Secretary of State need not now refer to the celebrated case of the expedition to Egypt in 1801, further than to observe that, in any similar contest which may occur in future, it is more certain than ever that the Indian army would be drawn upon as an army of reserve, and that the maintenance of a large force in that country, available for operations in the intervening regions, must always be one of the main elements to be considered by an enemy in estimating the danger and the difficulty of hostile operations against Great Britain in that direction.

17. The expeditions to Mauritius and Java, in 1810 and 1811, are further instances of aid derived from India during the great French war.

18. But without dwelling on these cases, and looking back no further than the history of the last 30 years, there have been only two occasions, besides the mutiny, on which reinforcements were sent for Indian wars, whilst during the same period there have been no less

less than seven different occasions on which India has been called upon to supply either whole armies, or considerable reinforcements, for the Imperial purposes.

19. The two occasions referred to on which reinforcements to India were sent from home were the Sutlej campaign of 1846, when one regiment of cavalry and three regiments of infantry were sent from England. and the Punjaub campaign of 1849, when five regiments of infantry were similarly supplied.

20. Against these occasions, when India has borrowed troops from England, are to be set the following occasions when England has borrowed troops from India: *

In 1842, the China expeditionary force, consisting of two battalions of artillery, three companies of sappers, four regiments of European infantry, six regiments of native infantry, and all the staff of the army.

In 1855, two regiments of cavalry and two regiments of infantry were sent from India to reinforce the Crimean army.

In 1856–57, the Persian expedition was drawn from India, to the extent of—

2 troops, 3 battalions, and 5 companies of artillery,
2 companies sappers,
1 regiment European cavalry,
3 regiments European infantry,
3 regiments and 3 squadrons native cavalry,
8 regiments native infantry, and
Commander and staff.

In 1859–60, another China expeditionary force was reinforced from India by four batteries of artillery, a company of engineers, a company of sappers, six regiments of European infantry, two regiments of native cavalry, 11 regiments of native infantry, and a considerable portion of the staff.

In 1860, two regiments were sent from India to New Zealand.

In 1861, another regiment was afforded to the same colony.

In 1867, the army for the invasion of Abyssinia was (mainly) drawn from India, including—

5 batteries artillery,
1 company engineers,
6 companies sappers,
1 regiment European cavalry,
4 regiments native cavalry,
4 regiments European infantry,
8 regiments and 1 company native infantry,
Coolie corps,
Army works corps, and
Commander and staff.

21. As regards this list of occasions on which India has been drawn upon as affording an army of reserve for Imperial purposes, it may possibly be alleged that these wars were all Indian wars. In the House of Commons, in 1857, Mr. Gladstone did indeed denounce this plea, in respect to the Persian war, as one which "could not be advanced by any fair or candid man"; but the Secretary of State is aware that, nevertheless, it is a plea which is sure to be put forward on behalf of the Imperial Exchequer. It is certain, however, that all these wars were dictated entirely by the Imperial Government, and that the interests of British commerce, the grievances of British merchants, or the honour of the British Crown, were the determining considerations in them all. The policy of charging the Persian war in largest proportion to Indian revenues was severely commented on in Parliament, and led to a statutory enactment limiting such uses of Indian revenues for the future.

22. If it be argued only that India, as a part of the empire, has had its own share of interest in these wars, the plea may be admitted, but only in the proportion in which the same plea is admitted as against the Imperial Exchequer in respect to wars within the limits of India. Many of these have been wars dictated from home, and have been undertaken with reference to Imperial policy. In view of this fact, the Secretary of State in Council sees much force in the declaration of Sir R. Peel, quoted and adopted by Mr. Gladstone in the same speech, which has already been referred to, "that there is a virtual connection between Indian expenditure and British liability." Community of interests within certain limits may fairly be alleged; but it must not be alleged only when it tells in favour of the Imperial Exchequer, and repudiated when it tells in favour of the Indian taxpayer.

23. The fact of India having been so continually drawn upon as an army of reserve for Imperial wars is a conclusive answer to Mr. Campbell's letter on this part of the subject, whatever may have been the system of account by which the charges for that army have been adjusted. But in this matter also it is the duty of the Secretary of State in Council to remind Mr. Cardwell what that system has been.

Appendix, No. 6.

24. In every instance in which reinforcements from home have been sent to India, the whole pay of the troops so sent has been charged to India from the moment of their departure from the shores of England. On the other hand, when India has been called on to provide troops for foreign expeditions, it has been the general practice to continue to charge the ordinary pay of the troops to the Indian Exchequer during their absence from India. In the very last case (the Abyssinian war) the ordinary pay of the troops, both European and native, furnished to that expedition was paid out of Indian revenues.

25. These facts are a sufficient comment on the fairness of an attempt to charge India for Imperial military establishments at home on the plea that they furnish to India an army of reserve, without any notice whatever being taken of the much more numerous cases in which India has been drawn upon as affording an army of reserve for the Imperial Government.

26. And here I am directed to observe, that it would make no difference in the argument now maintained, even if it were true, that all this had been done with the consent of the Court of Directors or of the India Office. In so far as that consent may be supposed to represent, however roughly, the consent of the people of India, it only shows that the authorities specially charged with the interests of India have taken a higher and more generous view of the relations which ought to exist between the two Governments than prevails in Mr. Campbell's letter. On the other hand, in so far as these charges have been thrown on India by the power or influence of the Imperial Government, it shows that the Imperial Government has habitually assumed, not merely that India should furnish an army of reserve, but also that India should furnish the pay of that reserve even when serving out of India, and when, therefore, it was useless to the Government of that country.

27. In regard to another argument used in Mr. Campbell's letter, namely, that the Indian empire, by increasing the total number of soldiers which require to be raised from the civil population at home, competes with the Imperial Government in the recruiting market, and thus raises the total price of the recruit, I am instructed to point out to Mr. Cardwell that this is an incident of wide Imperial dominions, and that, even if India is to be considered in no other light than as the cause of an increase in the total cost of troops, India pays its full share of that total cost when it pays for those troops in the proportion in which it actually recruits and actually employs them.

28. But I have further to point out that all arguments which imply that India is nothing but a burden, and a cause of embarrassment in military affairs, are arguments inconsistent with many notorious facts—with the anxiety of officers to secure Indian employment, and with the advantages which Indian exigencies afford in the way of augmentations and promotions in the army. It is well known that India offers the best, if not indeed the only, training ground for the British army in time of European peace; that as Indian pay and allowances are much higher than those given to the army either at home or when employed elsewhere abroad, Indian service is highly popular in the army, and that in consequence of the liberal treatment which, up to the present time, the Government of that country has been enabled to bestow upon the officers and men, it has contributed one great inducement to numbers of both classes to enter the British army; and, moreover, that under the new army organisation by which Her Majesty's Government hope to augment the military power of the country, and to save the expense of pensions by the introduction of a short service system and the establishment of a reserve, a very large, and certainly not the least valuable, portion of that reserve will consist of men whose entire military training and experience will have been acquired at the expense of the people of India.

29. For these reasons, the Secretary of State in Council is of opinion that the adoption of any new principle of charge founded on the pleas set forth in Mr. Campbell's letter would be unjust to the people of India.

30. I am instructed to add that, in the opinion of the Secretary of State in Council, the adoption of any such principle would require the sanction of an Act of Parliament, as being entirely novel and at variance with the principle laid down in the existing law.

31. That principle is laid down in the 2nd clause of the Act 21 & 22 Vict. c. 106, which directs that Indian revenues shall be expended "for the purposes of the Government of *India* alone;" and also in the 52nd clause, which directs the auditor to report on the accounts, "specially noting any case in which it shall appear to him that any money arising out of the revenues of India has been appropriated to other purposes than those of the Government of India, to which alone they are applicable."

32. In the application of this principle to particular cases of charge there is room, no doubt, for a reasonable latitude of interpretation; and this latitude is largely made use of when, for example, such a position as that of Aden is maintained at the sole expense of the people of India. But, allowing for such latitude of interpretation, the general scope and import of the principle seem sufficiently apparent, namely, that India cannot be justly charged with any expenditure which would have to be maintained if the Indian empire did not exist. The word "alone" negatives the application of the revenues of India to any such mixed purposes, and it is deprived of all force and effect if the Indian revenues may be applied to such expenditure. It is not easy to conceive for what purpose a word so distinct and emphatic should have been introduced, if it was not to exclude the application of those revenues

revenues to such purposes. No expenditure in respect to which it cannot honestly be said that it is incurred on behalf of India can possibly come within the description of expenditure for Indian purposes alone.

33. As regards the novelty of the charges referred to in Mr. Campbell's letter, it is enough to say that the Imperial Government has supplied India with recruits and soldiers for nearly a century; but during the whole of that time, notwithstanding the comprehensive words used in the Acts of Parliament directing payment of the expenses incurred for "raising, transporting, and maintaining such forces," and "raising and supplying recruits for the same," and appropriating the revenues of India to defray "all the charges and expenses of raising and maintaining the forces, as well European as native,"* no attempt has ever been made until now to render the Indian finances liable to such charges.

* 28 Geo. c. 8, s. 1; 33 Geo. 3, c. 52, ss. 128, 149. 53 Geo. 3, c. 155, s. 55.

34. In conclusion, I am instructed to say that this general question of re-constructing the whole system on which Indian charges have hitherto been regulated stands in no necessary or even natural connection with the immediate subject of the cost of recruiting. The Secretary of State for India does not contest the necessity of India paying for its recruits under whatever system is determined upon at home as necessary for the efficiency of military training; and if the present expenditure be defended on this ground, the Secretary of State for India can only represent his views on possible economies in the system, in order that these representations may be considered by the Secretary of State for War. But if the cost of recruiting be swollen by artificial system of charge, so as to include outlays which have really nothing to do with the cost of training, but are connected entirely with the organisation of the home garrison of England, he must record, as he now does, his protest against the principle involved, namely, that of charging India with any outlay which cannot fairly be said to be occasioned by the service of India.

I have, &c.
(signed) *T. T. Pears*, Major General,
Military Secretary.

LETTER to the Under Secretary of State, War Office, dated India Office, 14th April 1874.

Sir,

IN a letter from the War Office, dated the 1st July last, No. 7023/509, Mr. Campbell-Bannerman informed the Secretary of State for India that Mr. Secretary Cardwell concurred in the fourth Report of the Committee appointed by the Secretaries of State for War and for India to make arrangements for adjusting, from the 1st April 1870, the home charges for effective services of Her Majesty's regiments serving in India, on the principle, as far as possible, of actual charges.

In that Report, dated the 12th April 1872, the committee, while recommending that the rates of charge specified therein should be adopted in the settlement of the War Office claims for the years 1870–71 and 1871–72, expressed their opinion that, as great changes were being made in the constitution of the army, the rates should be re-considered, and, if necessary, revised, in regard to the year 1872–73 and subsequent years.

In a previous Report, dated the 24th November 1869, that committee recorded their unanimous opinion that the then existing rate of expenditure for effective services was excessive when compared with the charge incurred by the East India Company in the maintenance of their depôt at Warley, and "that, without any sacrifice of efficiency, it was practicable to effect a very large reduction in those charges;" and the members of the committee appointed by the Secretary of State for India stated that, in their opinion, India was entitled to a considerable credit for the value to the Imperial Government of the presence in this country of the staff and men engaged in course of training, as those troops are available to meet any emergency for which a home garrison is required, and that they considered that the periods of training on which the charge for difference of numbers of men was based were longer than was necessary with reference to the requirements of India.

In another Report, dated the 28th February 1870, the same committee, when stating what the charge for each cavalry and infantry recruit would be under the conditions which had been placed before them, and which included charges for 10 months for the training of each cavalry, and seven months for each infantry recruit, as well as the cost of two depôt companies for each battalion of infantry, added that, in their opinion, it was not necessary to maintain more than one company with the depôt in this country; and the India Office members of the committee, in agreeing to the Report, stated that they considered that "the proposed estimate for, and the periods of training which formed the basis of that Report, were enormously in excess of what can be possibly required for the purpose of properly recruiting the British army of India.'

The Secretary of State for War did not consider that it would be right to deduct from the rate for the infantry recruits the cost of one depôt company, and in a letter, dated the 15th October 1870, Mr. Stansfeld stated that the Lords of the Treasury did not admit the soundness of the reasons urged by the India Office members of the committee for a reduction of the charge.

The practicability of introducing a different and more economical system for the enlistment and training of recruits for India was, as the Secretary of State for War is aware, strongly

Appendix, No. 6.

urged on his consideration by the Secretary of State for India in Council, in a letter from this Office, dated the 8th September 1871. That letter was replied to in a letter from the War Office, dated the 24th April 1872, in regard to which a further communication was sent from this office on the 9th August 1872, to which no reply has yet been received.

The question is, therefore, still undecided. No arrangement has been determined on as to the final adjustment of charges for effective services subsequent to the year 1871–72, and the Secretary of State for India in Council considers that the charge to which India is to be subject on this account ought no longer to remain in doubt.

In a military letter, dated the 15th May last, the Government of India referred to the several Reports of the committee above mentioned, and to the fact that, in the face of the opinions expressed therein, the charges against India had increased, and they observed that, as the depôt system in England is undergoing revision, and the nature and extent of the duties assigned to depôt centres have been clearly specified, it would seem to be a convenient time to re-consider the charges made against India for maintaining battalions and regiments serving in India, and to re-adjust charges which in the opinion of that Government are out of proportion to the service for which they are paid.

Of that letter I am directed to forward a copy herewith.

The Secretary of State for War will observe that the objections of the Government of India in regard to the charge for recruits are of a twofold nature, viz.:

1. To the charge for the depôts engaged in training recruits which is imposed on Indian revenues.
2. To the period of training on which the charge for each recruit is based.

In regard to the depôt charges, which are ascribed to recruiting purposes, the Government of India point out that the duties rendered by the depôts are of a very varied character, and chiefly for purposes foreign to Indian services, that it cannot now be maintained that the depôts of Indian regiments are retained exclusively for Indian purposes, or that the Imperial Government derive no advantage from their presence and duties at home, and should bear no portion of their cost. They accordingly suggest that the relative values of the depôt services should be ascertained, and that the revenues of India should be charged only with the cost of services rendered to India.

They further observe that, under the new system, recruits will be trained at the depôt for three months, when they will be passed into and become part of the home battalion, and that it is not apparent why India should pay for the training of recruits beyond the period when the depôt training ceases.

The Secretary of State for India is not fully informed as to the existing arrangements in regard to the duties of the several depôts, but, assuming that the classification in paragraph 8 of the military letter from the Government of India is correct, he is of opinion that, even if it could be admitted that the maintenance of a separate depôt for each battalion of infantry in India is necessary, the arrangement under which the rate of payment by India was agreed to for the years 1870-71 and 1871-72 cannot, in justice, be maintained in regard to subsequent years.

The period* of training on which India has been charged for recruits is open to equally grave objections. If the statements of the Government of India that, under the new system, recruits will be trained at the depôt for three months, and will be then passed into and become part of the home battalion, from which men required for the battalion on foreign service will be drawn be correct, it appears to the Secretary of State for India that the principle of charging India for a longer period of training than three months would be unjust.

* Recruits for Cavalry - - 10 months.
„ for Horse Artillery - 10 „
„ for Artillery - - 9 „
„ for Infantry - - 7 „

That a longer period of training is not, in the opinion of the authorities at the War Office and Horse Guards, absolutely necessary, is proved by the fact that numerous recruits have been in recent years, and still are, sent to India after a much shorter training.

For instance, on the 13th January 1874 a draft of 133 men proceeded on Her Majesty's ship "Crocodile" to join the 8th Brigade, Royal Artillery, in India. It included 68 men of less than three months' training, and of those 42 embarked in less than two months, and nine in less than one month, from the date of their enlistment. On the same day a draft of 76 men proceeded to join the 73rd Regiment at Bombay. It included 37 men of less than two months' training, and of those no less than 26 embarked within one month of the date of their enlistment.

The charge for difference of men on passage is open to similar objections, and it is, moreover, obvious that, under the new system of short service, the rule hitherto in force, under which India receives no allowance for men who land with less than two years to serve, cannot justly be maintained.

The Secretary of State for India in Council desires again to press upon the attention of the Secretary of State for War the importance of introducing a different and more economical system for the enlistment and training of recruits for India, as advocated in the letter from this office of the 8th September 1871. Pending, however, a definite arrangement of that nature, I am directed to express the earnest hope of the Marquis of Salisbury that Mr. Gathorne Hardy will recognise the necessity for a revision of the rates of charge in regard to years subsequent to 1871–72, and, as the best means of effecting that object, will agree to refer to the Committee on Effective Charges the reconsideration of the payment under the several heads, on a principle similar to that which has been suggested by the Government of India, viz.:

That, in regard to the home depôts of regiments serving in India, the value should be

be ascertained of the service of raising and training recruits for India, of the other general services of the depôt, and of the presence of the troops in this country; and, Appendix, No. 6.

That the charge for each recruit should be based on a three months' training at the depôt.

If, however, Mr. Hardy should be of opinion that the matter in issue will be more authoritatively determined by a decision independent of both offices, I am instructed to say that Lord Salisbury will cordially concur in the reference of the principles in dispute to some impartial arbitrator.

I have, &c.
(signed) *Louis Mallet.*

Enclosure.

(Separate.)

(Military Department.—No. 94 of 1873.)

To His Grace the Duke of *Argyll*, K.T., Secretary of State for India.

My Lord Duke, Simla, 15 May 1873.

We have had under consideration the three Reports* of the joint committees appointed by the India and War Offices to "make arrangements for adjusting the charges for effective services of Her Majesty's regiments on the East Indian establishment on the principle of actual charges," the first two of which formed an enclosure to your Grace's Despatch, Financial, No. 14, of 20th January 1870.

* Dated 11th March 1869. 24th November 1869. 28th February 1870.

2. The charges made by the Secretary of State for War against this country for recruits, as per margin,† are so out of proportion to the expense incurred under the East India Company, as per margin,‡ that the difference is clearly not mainly attributable to the enhanced pay and allowances of the soldier, to his more perfect training, or to the increased cost of his equipment, but to the altered system under which regiments are recruited, and to the manner in which the cost of troops stationed in the United Kingdom is apportioned to India.

† 136 *l.* 13 *s.* 11 *d.* for Cavalry.
63 *l.* 8 *s.* 5 *d.* for Infantry.
78 *l.* 14 *s.* 8 *d.* for Royal Horse Artillery.
59 *l.* 2 *s.* 10 *d.* for Royal Artillery, mounted.
58 *l.* 9 *s.* 3 *d.* for Royal Artillery.

‡ Average for 10 years ending 1859 for all arms, 19 *l.* 14 *s.* 10¼ *d.*

3. Before reviewing in detail the charges which are enumerated in the Reports quoted, it is necessary to consider the principle on which the "actual charges" are assessed, with a view to ascertain how far it is equitable to make the whole cost of the home depôts of regiments serving in India chargeable to India, on the ground that some portion of their service is given to raising and training recruits for their battalions in India, while they actually form a part of the home garrison and perform duties of a local and Imperial character. It is assumed that the sums reclaimed by the War Office from this country should only comprise the expenditure entailed on Imperial funds for raising and equipping troops for India, and that the contributions levied on this account should not be based on the cost entailed by the distribution of troops at home, when that distribution is made for Imperial purposes, and is not necessarily involved in the provision of troops for India.

4. The system under which recruits were formerly procured at Warley, and that, much resembling it, under which the Guards are at present recruited, illustrate the minimum establishment requisite for the provision of recruits. In both cases the establishment was framed solely for the purposes to be achieved, and in deciding what is the necessary actual cost of a recruit a somewhat similar establishment should alone be included. When establishments are maintained not only for recruiting, but also for the fulfilment of other duties, it is evident that, if the whole expense be charged to recruiting, the cost of the recruit is unduly enhanced, while the cost of the other services is unduly diminished, and when the former charges fall on one Government and the latter on another, it is clear that the incidence of the charge is unequally divided.

5. Under the system of depôt battalions, and subsequently of affiliated depôts, which existed until the establishment of the depôt centre system, the depôts, though nominally maintained solely for recruiting purposes, were available for, and actually performed, other general duties. It was the unanimous feeling of the committees, reiterated in each of their reports, that the expenditure incurred for recruiting, that is, for the depôts, was in excess of the amount which, if devoted solely to that one purpose, would have produced the same number of recruits. In para. 10 of the first Report, after stating that the depôt and recruiting charges were then in excess of the capitation allowance of 10 *l.*, it is added, "but the committee have no hesitation in expressing their unanimous opinion that the charge for a recruit, as shown in the War Office return, is susceptible of very great reduction, and that whatever loss has resulted to the Imperial Government must be attributed mainly to the excessive amount of the depôt charges." Notwithstanding this expression of opinion the charge against Indian revenues was increased, thus throwing on this country, as the cost of a recruit, the expense of a system which the financial authorities of the War Office had declared to be unnecessarily expensive. In para. 29 of the second Report the committee again refer to the excessive charges. They state, "in concluding their report, the committee would again refer to the heavy expenses of the Indian depôts as at present

Appendix, No. 6.

constituted. They are unanimously of opinion that the present rate of expenditure is too large when compared with that incurred prior to the mutiny in India, and, as shown in their former report, excessive when compared with the charges incurred by the East India Company in the maintenance of the depôt at Warley. The committee are therefore of opinion that, without any sacrifice of efficiency, it is practicable to effect a very large reduction in these charges." In the face of this reiterated opinion the charges against India were again increased.

6. Now that the whole depôt system of the army at home is undergoing revision, and the nature and extent of the various duties assigned to depôt centres have been clearly specified, it would seem a convenient time to re-consider the charges made against this country for the depôts retained in England of regiments serving in India, and to re-adjust charges which, in our opinion, are out of proportion to the service for which they are paid.

7. In order to arrive at the proportion of the total depôt charges which may be fairly ascribed to recruiting purposes, it is necessary to review the duties on which the officers and men of the various depôts are to be engaged. This is clearly laid down in the Report of the Committee, presided over by Major General McDougall, on the "Organisation of the various Military Land Forces of the Country," and confirmed by the Secretary of State for War, in his speech on the introduction of the Army Estimates of 1873–74.

8. The duties to be performed at the depôt are thus stated:

(1.) Training of recruits both for the line and the militia.
(2.) Training of infantry militia.
(3.) Training of rifle volunteer corps.
(4.) Registry, payment, and training of army reserve and enrolled pensioners.
(5.) Recruiting.
(6.) Care of arms and stores of regular and auxiliary forces.
(7.) Military instruction to officers of auxiliary forces.

9. These duties, it will be observed, are of a very varied character, and chiefly for purposes foreign to Indian services, and we consider that only that portion of the establishment which is necessary for the raising and drilling of recruits for India should be charged to India.

10. It cannot now be maintained that the depôts of Indian regiments are retained exclusively for Indian purposes, or that the Imperial Government, deriving no advantage from their presence and duties at home, should bear no portion of their cost, and it seems very desirable that the question should be finally settled as to what portion of the expense of the depôt establishments under the new system may fairly be assigned to home service generally, and what portion to recruiting purposes alone.

11. It is impossible here, from the absence of detailed information as to the relative values of the different services assigned to the depôts, to state what amount should be apportioned to recruiting. This can be more easily determined at home in communication with the War Office, the calculation being based on the principle that the revenues of India can only be applied to services rendered to India, and that no portion of its revenues should be indirectly applied to the cost of the defences of Great Britain.

12. The details of the charges made for infantry recruits will now be considered and reported upon, as far as the information available in this country will permit.

13. Even assuming that the principle on which the depôt establishment charges have been assessed be correct, it appears to us that the details charged under that principle have been calculated adversely to the interests of India. The first item is for pay. It was determined in a letter from the Deputy Adjutant General, Horse Guards, dated 2nd July 1869, published with the committee's second Report, that the period of recruit training should be for—

Cavalry - - - - - -	9 months.
Infantry - - - - - -	6 „

But in fixing the schedule of prices in their third Report ten and seven months have been taken as the basis of calculation, on what authority is not stated.

14. It is true that a recruit is a better soldier after a long training; but on the same principle it might be argued that he is not a perfect soldier under one or two years' service, and the charges might on such grounds be indefinitely increased. In comparing the present with the former cost of recruits, it is admitted that those now sent to India are for the most part more perfectly trained, and consequently more valuable than the half-trained recruits formerly sent to this country, and that, other conditions remaining the same, India might justly be debited with an enhanced charge for their provision.

15. It must, however, be remembered, in dealing with this question, that the terms of enlistment have undergone an important change. Formerly recruits were enlisted for long service, and India, when she incurred the expense of raising recruits, had the advantage of their services for many years. Now, while the cost of the recruit has been increased, the term of his service has been diminished. India, therefore, for a larger charge, receives a less service; while Great Britain will receive from India, as recruits for the army reserve, young

young, thoroughly trained, and seasoned soldiers, immediately available for service if required. It may be argued that the army reserve is equally valuable to the Indian and to the Imperial services, but we do not think that this argument will bear examination. The existence in Great Britain of the army reserve enables her to reduce the strength and cost of the battalions on the home establishment to a minimum, as she can at any moment recruit them from the reserve, while that reserve is too remote to have any such effect on the strength and cost of the Indian battalions. Again, if soldiers be recalled from the reserve to replenish a home battalion, its ranks are completed at a comparatively trifling outlay, whereas, if they are recalled for the purpose of reinforcing the Indian establishment, India will be called upon to bear the full charge for the increased strength. Soldiers discharged from Indian service will therefore be of no further value to India, but they will form a highly trained and valuable portion of the home reserves. If the whole cost of their recruitment and training be charged to India, while so valuable a portion of their service is devoted to Great Britain, the revenues of India will indirectly be made to contribute towards the military expenditure of Great Britain, a course which would be contrary to law and to the policy of the Imperial Government.

16. Under the new system recruits will be trained at the depôt three months, when they will be passed into and become part of the home battalion. These recruits will not necessarily proceed to India. In the first Report of General McDougall's Committee, it is proposed that after their training recruits shall be drafted from the depôt into, and form the lower stratum of, the home battalion, and the supplies of men required to feed the foreign battalion shall be drawn off from the upper stratum of the home battalion.

17. Under these circumstances, it is not evident why India should pay for the training of recruits beyond the period of three months, when their depôt training ceases, and they join the home battalion. The arrangement under which recruits will swell the ranks of the home battalion, while older soldiers will be sent to India, will in itself be advantageous to the Home Exchequer and disadvantageous to India, inasmuch as India will bear the cost of training a man who has, say, five years and nine months to serve with the colours, and receive one who may have only four or five years to serve, and will thus bear the maximum charge for training a soldier, and get the minimum amount of service from him. Great Britain, on the other hand, for the cost of training one recruit, will obtain the full service of one man and a portion of the service of another, making in all more than the full period of service of one man, without incurring any extra expense for establishment to train the recruit who replaces the older soldier in the home battalion.

18. It is true that India has the advantage of getting a more highly trained recruit than she gives; but this, as stated in the preceding paragraph, entails no extra expense on the home Government, and is counterbalanced by the increased service obtained. We, therefore, cannot admit that India should bear a greater charge for its recruits than is incurred for the full period they are required to remain at the depôt, and the period of seven months should, in our opinion, be reduced to the period of actual training at the depôt.

19. The next item requiring remark is that for marching money and cost of conveyance of recruits, 16 per cent. on pay.

20. The average number of recruits annually raised from 1865 to 1870 would appear to have been about 15,000. The average amount voted for marching money and conveyance of recruits was 11,666 *l.*, being about 15 *s.* 6 *d.* per recruit, while the charges made against India for the service are—

	£.	*s.*	*d.*
For Cavalry - - - - - - - - - -	3	8	11
For Infantry - - - - - - - - - -	1	19	9

These charges would appear to be very excessive, but no detail is given by which it can be ascertained how they have been arrived at.

21. The item for recruiting staff charges, 2 *l.* 19 *s.* 1 *d.*, is not understood, as the whole expense of the recruiting agency, *i.e.*, the depôt, is separately charged.

22. The manner in which the barrack and hospital charges are arrived at is not stated. They appear excessive, and apparently require investigation and reduction.

23. In addition to these charges and to the whole cost of the depôt is added one-third, or 33 per cent. on the total charge, for recruits who desert, die, or are unable through ill-health to embark for India.

24. It is not stated how this proportion was arrived at, the memorandum referred to in the committee's Report not having accompanied it; but we believe, from a reference to army statistics, that this charge is out of proportion to the contingencies for which it is supposed to provide.

25. It must be remembered that the committee were dealing with recruits, and therefore that the casualties amongst recruits should alone have been considered. From the Report of the Commissioners on Recruiting, it appears that the average loss on the whole army during the five years from 1861 to 1865, from death, desertion, and invaliding, was 5·29 per cent. This would, however, not be a fair average to take, as the desertions in the first year of service are in much larger proportion than in later years.

Appendix, No. 6.

*See Army Medical Report, 1870, p. 36.

26. The average loss by desertion during the seven years ending in 1865* of men of one year's service and under was 12·16 per cent. The average deaths of cavalry, infantry, and artillery soldiers under 20, ·18 per cent. The number of invalids discharged during the first year of service was, for the same arms, an average of 1·28 per cent., making in all 13·62 per cent. This average is not given as perfectly correct. It is probably approximately so, and sufficiently near the truth to show that the average of 33 per cent. charged to India is excessive. Even 13·62 per cent. would be excessive, as it includes, on the one hand, the desertions and invalidings of a whole year, instead of for 7 and 10 months already referred to, and deaths up to 20 years of age, an age exceeding that of most recruits; while, on the other hand, no credit appears to have been given to India for smart or discharge money paid by recruits.

27. The charge for agency should, in our opinion, be withdrawn, as it is believed that such a charge is no longer incurred, or has been greately reduced, and is in course of extinction, and that no expense which could be charged to Indian revenues has been entailed in suppressing the system under which it was paid.

28. The proposal to charge a portion of the cost of the staff of the regiments to which depôts were affiliated requires no remark. It was not adopted at the time, and the system under which it was proposed is no longer in force.

29. The preceding remarks have reference, principally, to the charge for infantry recruits, as there is not before us sufficient information to enable us to discuss separately those made for the other arms of the service, but, with the necessary modifications, they will no doubt be found applicable to the charges made for all recruits sent to this country.

30. We would now beg to recommend—

1st. That the charge for the home depôts of regiments serving in India should be divided into two parts, the one representing the value of the presence of such troops at home, and of the general service rendered by them, the other representing the value of the labour of raising and training recruits for the battalions in India. The latter may be fairly charged to this country, while the former should be borne by Imperial revenues.

2nd. That the charge for the cost of training the infantry recruit should be limited to three months, during which he remains at the depôt.

3rd. That the items of charges which are arrived at by general averages should be supported by detail statements showing how they are arrived at.

31. There now only remains to consider the question of the charges for the difference of the number of men on passage.

32. The remarks which have been made as to the charges for recruits will apply equally to the payment for the difference in number of men on passage; but it is necessary in connection with this service to re-consider the drawback which should be paid to India for men landed in England with less than two years to serve.

33. Even under the old system of enlistment the rule of giving no drawback for men landed with less than two years' service was often inequitable. The whole expense of recruiting such men, and a large portion of their pension charges, fell on India, while the Home Government had the advantage of their services as enrolled pensioners. Such men were practically not discharged; they were simply transferred from one branch of the service to another, and their value in that other branch should have been credited to the Government which bore the expense of their enrolment and a portion of the expense of their pensions. Under the new system of short service with the colours, and subsequent service in the army reserve, India should receive, on the disembarkation and discharge of soldiers for home service, such a drawback of enrolment charges as may be considered to represent their value as recruits to the army reserve, an amount which would vary in proportion to the period served in India and to that remaining due to the Imperial Government for service with the colours or in the reserve.

34. The charges made for both effective and non-effective services have increased, and are increasing so rapidly, that it is very important these questions should be finally adjusted, and that every charge made by the War Office against the revenues of India should be fully substantiated, and shown to be fairly chargeable in principle, and to be just and reasonable in amount. We have, since 1869, reduced the military expenditure in this country to the extent of 1,000,000*l.* sterling, and hope to effect still further reductions, and to this end we trust that Her Majesty's Government will not fail to give that careful consideration to the questions in controversy between the India Office and the War Office as will relieve India from expenses which we cannot regard as properly chargeable.

We have, &c.

Friday, 2nd May 1873.

Ordered, THAT the Committee have power to report their Observations from time to time to The House.

REPORT - - - - - - - - - - - - - - p. iii

PROCEEDINGS OF THE COMMITTEE - - - - - - - p. iv

FIRST REPORT.

THE SELECT COMMITTEE appointed "to inquire into the FINANCE and FINANCIAL ADMINISTRATION of INDIA," and who were instructed to consider and report whether the Indian Financial Year which now terminates on the 31st March, should be altered to the year ending on the 31st December, in order that the Secretary of State for India may be enabled to make his Financial Statement to the House before the Easter Recess;——HAVE made progress in the Matters to them referred, and have agreed to the following FIRST REPORT:—

THE practice of making the Indian Financial Statement appears to have been revived in 1853, when the President of the Board of Control, in submitting to the House the measure which subsequently became law, for improving the administration of the Government of India, proposed that the President should make an annual statement to the House on the finances of India. On the 9th of August of the following year, the House having resolved itself into a Committee of the whole House on the Accounts of the Indian Revenues for the year ending the 30th of April 1852, the President of the Board of Control made a comprehensive exposition of the financial condition and prospects of India, and concluded with moving a series of Resolutions recording the total amounts of the receipt and expenditure of the Government of India, of the several subordinate Governments, as well as of the Home Government, for the year ending 1852, a period of more than two years before the Resolutions were passed.

The same [redacted] adopted yearly until 1857, when it was suspended; but in the meantime [redacted] of the annual accounts had been accelerated, so that the Committee [redacted] consider those of the year preceding its appointment.

The transfer of the Government of India to the Crown then engaged the attention of Parliament, and the measures then adopted materially affected the relations of the House of Commons to the revenues of India. It was provided by the Act passed in 1858 that the expenditure of the revenues of India, both in India and elsewhere, should be subject to the control of the Secretary of State for India in Council, and no grant or appropriation of any part of such revenues or of any other property coming into the possession of the Secretary of State in Council, was to be made without the concurrence of a majority of votes at a meeting of the Council. In 1861 the powers of the Legislative Council of India were greatly extended, and the power of disallowing any laws which might be passed, was reserved to the Queen.

In 1860, a member of the Council of the Governor General was charged with the superintendence of the finances of India, and undertook the duty of making an annual statement of the condition of the Indian finances, and proposing in the Legislative Council such measures as might be necessary to provide for the public expenditure on account of the Government of India.

In the years 1859, 1860, and 1861, the Secretary of State made an exposition of the condition of the finances of India in proceeding with Bills for the purpose of raising monies to meet the increase of expenditure which had been incurred in repressing the disturbances in India. It was not until 1862 that the practice

of the House resolving itself into a Committee of the whole House was resumed. In 1866 the general resolution recording the totals of the whole revenue and expenditure in England and in India was substituted for the several resolutions formerly passed by the Committee. In 1867, the period for which the accounts were made up, was changed from the 30th of April to the 31st of March, and the resolutions of the Committee of the House have since been passed upon the accounts for the financial year ending the 31st of March preceding the commencement of the Session.

The audited accounts on which the Resolutions of the House have been based have been accompanied by approximate accounts, known as the regular Estimate, for the following financial year; and in order to enable them to be revised at the close of that year, as well as to admit of the Secretary of State obtaining an estimate of the probable income and expenditure for the ensuing year, known as the Budget Estimate, and embracing it in his financial statement, it has been the practice to defer the financial statement in the House of Commons until after the month of April; but in consequence of the precedence given by successive Governments to other business, the time for the appointment of the Committee of the House has not been fixed before the last days of the Session. In 1871, in consequence of the repeated complaints at the lateness of the period when the affairs of India were brought under the notice of the House, the Under Secretary of State undertook to make his financial statement at the commencement of the Session, based upon the audited accounts for the year ending in March 1870, the estimated accounts for the year 1871, revised as far as was practicable, up to the 21st of February 1871, and on such further information respecting the financial policy for the ensuing year as could be obtained.

Your Committee are of opinion that no arrangement will prove satisfactory which does not admit of the appointment of the Committee on the Indian Accounts within the first three weeks of the Session, so as to afford adequate time for the discussion of Indian affairs without interfering with the other business which engages the attention of the House later in the Session; but it appears to your Committee that this object can be best attained by adhering to the course pursued by the Under Secretary of State in 1871, and they therefore recommend that there should be laid on the Table, and distributed to Members, on the opening of the Session, the audited accounts for the financial year ending on the 31st March preceding, together with the estimated accounts for the current financial year, revised as far as circumstances will admit, and that the House should resolve itself into a Committee on the [illegible] within three weeks after the commencement of the Session. [illegible]s, with such information respecting the financial conditi[illegible]e Secretary of State may be enabled to communicate to [illegible] to enable the Committee to discu[illegible] no doubt be found sufficient administration of its af[illegible]ss the state of the finances of India, and the [illegible]airs.

Entertaining these views, your Committee have deemed it undesirable to pursue an inquiry into the expediency of altering the period of the financial year in India. It cannot be doubted that such an alteration would be attended with inconvenience and embarrassment, and if the close of the year were altered from the 31st of March to the 31st of December, as suggested by the instruction to your Committee, there would be no efficient guarantee that the accounts for the year ending the 31st of December preceding the opening of the Session, or that the Estimates for the ensuing year would be laid upon the Table of the House at the commencement of the Session, without which no advantage would be gained by the proposed change. But whilst the House can, by altering its own arrangements, without inconvenience to itself, afford a sufficient opportunity for an adequate discussion on the finances and affairs of India, your Committee think it would be unreasonable to require that an important change should be made in the financial administration of India, and they do not, therefore, recommend that the Indian financial year should be altered to the year ending on the 31st of December.

PROCEEDINGS OF THE COMMITTEE.

Tuesday 29th April 1873.

MEMBERS PRESENT:

Mr. AYRTON in the Chair.

Mr. Dalrymple.	Mr. Cross.
Sir T. Bazley.	Mr. Birley.
Mr. J. B. Smith.	Sir C. Wingfield.
Lord E. Fitzmaurice.	Mr. Lyttelton.
Sir G. Balfour.	Mr. Fawcett.
Mr. Eastwick.	Mr. Hermon.
Sir Stafford Northcote.	Mr. Candlish.
Mr. Bourke.	Sir J. Elphinstone.
Mr. R. Fowler.	Mr. Cave.
Mr. Crawford.	

Motion made, and Question proposed, That the Committee do now proceed to consider the Draft Report proposed by the Chairman.

Amendment proposed to leave out from the word "That," to the end of the Question, in order to add the words: "in order to comply fully with the instruction given to them by the House (to consider and report whether the Indian financial year should be altered to the year ending 31st December), the Committee shall hear the arguments that can be adduced for or against the expediency and practicability of the suggested change, and shall proceed to examine gentlemen now in England who have held high financial position in India, and ask the Secretary of State for India to favour them with his views, and those of the Government of India, on the subject"—(*Sir C. Wingfield*)—instead thereof.—Question put, "That the words proposed to be left out stand part of the Question."—The Committee divided:

Ayes, 9.	Noes, 8.
Sir D. Wedderburn.	Sir T. Bazley.
Mr. Dalrymple.	Lord E. Fitzmaurice.
Sir G. Balfour.	Mr. Grant Duff.
Mr. Lyttelton.	Mr. Crawford.
Mr. Eastwick.	Mr. Cross.
Sir Stafford Northcote.	Mr. Birley.
Mr. Bourke.	Sir C. Wingfield.
Mr. R. Fowler.	Mr. Smith.
Mr. Fawcett.	

Main Question put, and *agreed to*.

DRAFT REPORT, proposed by the Chairman, read the first time, as follows:—

"The present practice of making the Indian Financial Statement appears to have originated in 1853, when the President of the Board of Control, in submitting to the House the measure which subsequently became law, for improving the administration of the Government of India, proposed that the President should make an annual statement to the House on the finances of India. On the 9th of August of the following year, the House having resolved itself into a Committee of the whole House on the Accounts of the Indian Revenues for the year ending the 30th of April 1852, the President of the Board of Control made a comprehensive exposition of the financial condition and prospects of India, and concluded with moving a series of Resolutions recording the total amounts of the receipt and expenditure of the Government of India, of the several subordinate Governments, as well as of the Home Government, for the year ending 1852, a period of more than two years before the Resolutions were passed.

"The same course was adopted yearly until 1857, when it was suspended; but in the meantime the completion of the annual accounts had been accelerated, so that the Committee of the House could consider those of the year preceding its appointment.

"The transfer of the Government of India to the Crown then engaged the attention of Parliament, and the measures then adopted materially affected the relations of the House

of Commons to the revenues of India. It was provided by the Act passed in 1858 that the expenditure of the revenues of India, both in India and elsewhere, should be subject to the control of the Secretary of State for India in Council, and no grant or appropriation of any part of such revenues or of any other property coming into the possession of the Secretary of State in Council, was to be made without the concurrence of a majority of votes at a meeting of the Council. In 1862 the powers of the Legislative Council of India were greatly extended, and a member of the Council of the Governor General who was charged with the duty of superintending the finances of India, was appointed a member of the Legislative Council for the purpose of making an annual statement of the condition of the Indian finances, and proposing in the Legislative Council such measures as might be necessary to provide for the public expenditure on account of the Government of India, the power of disallowing any laws which might be enacted being reserved to the Queen.

"It was not until 1862 that the practice of making an annual statement of the financial condition of India in a Committee of the House was resumed by the Secretary of State for India. In 1866 the general resolution recording the totals of the whole revenue and expenditure in England and in India was substituted for the several resolutions formerly passed by the Committee. In 1867, the period for which the accounts were made up, was changed from the 30th of April to the 31st of March, and the Resolutions of the Committee of the House have since been passed upon the accounts for the financial year ending the 30th of March preceding the commencement of the Session.

"The audited accounts on which the Resolutions of the House have been based have been accompanied by approximate accounts for the following financial year; and in order to enable them to be revised at the close of that year, as well as to admit of the Secretary of State obtaining an estimate of the probable income and expenditure for the ensuing year, and embracing it in his financial statement, it has been the practice to defer the financial statement in the House of Commons until after the month of April; but it has then been found impracticable, in consequence of the pressure of other business, to fix a time for the appointment of the Committee of the House before the last days of the Session. But in 1871, in consequence of the repeated complaints at the lateness of the period when the affairs of India were usually brought under the notice of the House, the Under Secretary of State undertook to make his financial statement at the commencement of the Session, based upon the audited accounts for the year ending in April 1870, the estimated accounts for the year 1871, revised as far as was practicable, and on such further information respecting the finances for the subsequent year as could be obtained.

"Your Committee are of opinion that no arrangement will prove satisfactory which does not admit of the appointment of the Commitee on the Indian Accounts within the first three weeks of the Session, so as to afford adequate time for the discussion of Indian affairs without interfering with the other business which engages the attention of the House later in the Session; but it appears to your Committee that this object can be best attained by adhering to the course proposed by the Under Secretary of State in 1871, and they therefore recommend that there should be laid on the Table, and distributed to Members, on the opening of the Session, the audited accounts for the financial year ending on the 31st March preceding, together with the estimated accounts for the current financial year, revised as far as circumstances will admit, and that the House should resolve itself into a Committee on the accounts within three weeks after the commencement of the Session. These accounts, with such information respecting the financial condition of India as the Secretary of State may be enabled to communicate to the House, will no doubt be found sufficient to enable the Committee to discuss the state of the finances of India, and the administration of its affairs.

"It is, however, deserving of consideration, whether it is expedient to continue the practice of passing a resolution in Committee, recording merely the results of bygone accounts. Parliament having delegated to the Legislative Council of India the supervision over the receipt and expenditure of the Government in India as incident to its legislative functions, in providing the means required to meet the expenditure, the House of Commons is not called upon to record the results of the financial proceedings of the Governor General in Council; but the position of the Secretary of State for India in Council is entirely different. It appears that he has to perform the duty of dealing with public monies in this country, with the aid of his Council, amounting to upwards of 12,000,000 *l.* yearly, in regard to which they are subject to no control or supervision. It would therefore be more consistent with the proper functions of the House of Commons, that it should pass a resolution not merely recording the result of these accounts, but exercising some control over them. Your Committee therefore recommend that the resolution to be passed in the Committee on the Indian Accounts should be limited to the Home Accounts, stating the result of them, and expressing the approval of the Committee or any other opinion thereon.

"Entertaining these views, your Committee have deemed it undesirable to pursue an inquiry into the expediency of altering the period of the financial year in India. It cannot be doubted that such an alteration would be attended with inconvenience and embarrassment, and if the close of the year were altered from the 31st of March to the 31st of December, as suggested by the instruction to your Committee, there would be no efficient guarantee that the accounts for the year ending the 31st of December preceding the opening of the Session, or that the Estimates for the ensuing year would be laid upon the

the Table of the House at the commencement of the Session, without which no advantage would be gained by the proposed change. But whilst the House can, by altering its own arrangements, without inconvenience to itself, afford a sufficient opportunity for an adequate discussion on the finances and affairs of India, your Committee think it would be unreasonable to require that an important change should be made in the financial administration of India, and they do not, therefore, recommend that the Indian financial year should be altered to the year ending on the 31st of December."

Draft Report proposed by the Chairman, read a second time, and considered paragraph by paragraph.

Paragraphs 1—5, amended, and *agreed to.*

Paragraph 5.—Amendments made.—Another Amendment proposed, to leave out the words "pressure of," in order to insert the words "precedence given by successive Governments to"—(Sir *Stafford Northcote*)—instead thereof.—Question put, That the words proposed to be left out stand part of the paragraph:—The Committee divided:

Ayes, 4.	Noes, 14.
Sir T. Bazley.	Mr. Hermon.
Mr. Grant Duff.	Sir D. Wedderburn.
Mr. Crawford.	Mr. Dalrymple.
Sir C. Wingfield.	Lord E. Fitzmaurice.
	Sir G. Balfour.
	Mr. Lyttelton.
	Mr. Eastwick.
	Sir Stafford Northcote.
	Mr. R. Fowler.
	Mr. Fawcett.
	Mr. Cross.
	Mr. Birley.
	Mr. Candlish.
	Mr. J. B. Smith.

Words inserted.—Paragraph, as amended, *agreed to.*

Paragraph 6.—Amendments made—Question, That this paragraph, as amended, stand part of the proposed Report:—The Committee divided:

Ayes, 18.	Noe, 1.
Mr. Hermon.	Sir C. Wingfield.
Sir D. Wedderburn.	
Mr. Dalrymple.	
Sir T. Bazley.	
Lord E. Fitzmaurice.	
Sir G. Balfour.	
Mr. Lyttelton.	
Mr. Eastwick.	
Mr. Grant Duff.	
Sir Stafford Northcote.	
Mr. R. Fowler.	
Mr. Fawcett.	
Mr. Crawford.	
Mr. Cross.	
Mr. Birley.	
Mr. Candlish.	
Sir J. Elphinstone.	
Mr. J. B. Smith.	

Paragraph 7, *agreed to.*

Paragraph 8, *agreed to.*

Question, That this Report, as amended, be the First Report of the Committee to the House,—put, and *agreed to.*

Ordered, To Report.

[Adjourned till Friday next, at Twelve o'clock.

SELECT COMMITTEE

ON

EAST INDIA FINANCE;

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE

Upon Tuesday, the 29th April 1873.

Ordered, by The House of Commons, *to be Printed,*
2 *May* 1873.

179.

Under 1 *oz.*

THIRD

REPORT

FROM THE

SELECT COMMITTEE

ON

EAST INDIA FINANCE;

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE,

MINUTES OF EVIDENCE,

AND APPENDIX.

Ordered, by The House of Commons, *to be Printe*
28 *July* 1873.

Friday, 7th February 1873.

Ordered, THAT a Select Committee be appointed "to inquire into the Finance and Financial Administration of India."

Monday, 10th February 1873.

Ordered, THAT the Committee do consist of Thirty Members.

Committee nominated of—

Mr. Ayrton.	Mr. Beach.
Mr. Stephen Cave.	Sir Thomas Bazley.
Mr. Crawford.	Mr. Hermon.
Mr. Baring.	Mr. M'Clure.
Mr. Fawcett.	Mr. Cross.
Mr. Beckett Denison.	Mr. John Benjamin Smith.
Sir Charles Wingfield.	Mr. Grant Duff.
Mr. Eastwick.	Mr. Robert Fowler.
Mr. Dickinson.	Mr. Haviland-Burke.
Mr. Bourke.	Mr. Charles Dalrymple.
Mr. Candlish.	Sir Stafford Northcote.
Sir James Elphinstone.	Lord Edmond Fitzmaurice.
Mr. Lyttelton.	Mr. Baillie Cochrane.
Mr. Birley.	Sir George Balfour.
Sir David Wedderburn.	

Ordered, THAT the Committee have power to send for Persons, Papers, and Records.

Ordered, THAT Seven be the Quorum of the Committee.

Friday, 21st March 1873.

Ordered, THAT Mr. *Campbell-Bannerman* be added to the Committee.

Tuesday, 1st April 1873.

Ordered, THAT it be an Instruction to the Committee to consider and report whether the Indian financial year, which now terminates on the 31st March, should be altered to the year ending on the 31st December, in order that the Secretary of State for India may be enabled to make his Financial Statement to the House before the Easter Recess.

Friday, 2nd May 1873.

Ordered, THAT the Committee have power to report their Observations from time to time to The House.

Tuesday, 15th July 1873.

Ordered, THAT the Order that "Seven be the Quorum of the Committee" be read and discharged, and that Five be the Quorum of the Committee.

THIRD REPORT.

THE SELECT COMMITTEE appointed "to inquire into the FINANCE and FINANCIAL ADMINISTRATION of INDIA:"——HAVE made further progress in the matters to them referred, and have agreed to the following THIRD REPORT:—

1. YOUR Committee have proceeded with their inquiry, and have received evidence respecting the nature and extent of local taxation in India, and its great increase in recent years, as well as its relations to Imperial taxation. They have also received evidence of the military expenditure, and of its increase and decrease under various heads during the last few years, showing on the whole a very large increase of expenditure in proportion to the diminished numerical strength of the army.

2. They have also examined Lord Lawrence and Sir Charles Trevelyan respecting the general administration of the Finances of India, and some other witnesses on particular branches of receipt and expenditure.

3. Your Committee have received a communication from Her Majesty's Government that steps will be taken to provide for the expenses of natives of India who may be selected by the Government, and approved by the Committee, to attend before them for the purpose of giving evidence, in accordance with the recommendation contained in their former Report; and arrangements are being made for the attendance of these witnesses before the Committee at the commencement of the next Session. Two natives of India, of whom one, Mr. Nowrozjee Furdoonjee, was deputed by the British Indian Association of Bombay, have already given evidence of opinions entertained in India respecting its financial affairs.

4. It may also be found expedient to examine several witnesses who have filled high positions in connection with the administration of the Government of India, in addition to the witnesses expected from that country; it is therefore desirable that your Committee should be re-appointed in the next Session, when they trust their inquiry will be brought to a close.

28 *July* 1873.

PROCEEDINGS OF THE COMMITTEE.

Thursday, 13*th February* 1873.

MEMBERS PRESENT:

Mr. Ayrton.	Mr. Lyttelton.
Sir Stafford Northcote.	Mr. Cross.
Sir George Balfour.	Mr. Robert Fowler.
Mr. Fawcett.	Mr. Eastwick.
Mr. Grant Duff.	Mr. M'Clure.
Mr. Baillie Cochrane.	Mr. Charles Dalrymple.
Sir David Wedderburn.	Mr. Hermon.
Mr. John Benjamin Smith.	

Mr. AYRTON was called to the Chair.

The Committee deliberated.

[Adjourned till Tuesday next, at Twelve o'clock.

Tuesday, 18*th February* 1873.

MEMBERS PRESENT:

Mr. AYRTON, in the Chair.

Mr. Lyttelton.	Mr. Crawford.
Mr. Birley.	Mr. Fawcett.
Lord Edmond Fitzmaurice.	Sir Charles Wingfield.
Sir David Wedderburn.	Mr. Cross.
Mr. Eastwick.	Mr. Baillie Cochrane.
Sir Thomas Bazley.	Mr. Grant Duff.
Mr. John Benjamin Smith.	Mr. Dickinson.
Sir George Balfour.	Mr. Bourke.
Mr. Charles Dalrymple.	Mr. Beckett Denison.

Colonel *Crommelin* was examined.

[Adjourned till Friday next, at Twelve o'clock.

Friday, 21*st February* 1873.

MEMBERS PRESENT:

Mr. AYRTON, in the Chair.

Mr. Cross.	Sir James Elphinstone.
Sir Thomas Bazley.	Mr. Hermon.
Mr. Eastwick.	Mr. John Benjamin Smith.
Mr. Bourke.	Sir Charles Wingfield.
Sir George Balfour.	Mr. Beckett Denison.
Mr. Fawcett.	Mr. Robert Fowler.
Mr. Lyttelton.	Mr. Dickinson.
Mr. Charles Dalrymple.	Mr. Grant Duff.
Sir David Wedderburn.	

Sir *Charles Trevelyan* was examined.

[Adjourned till Tuesday next, at Twelve o'clock.

Tuesday, 25th February 1873.

MEMBERS PRESENT:

Mr. AYRTON, in the Chair.

Mr. Charles Dalrymple.	Sir David Wedderburn.

Mr. Eastwick.	Mr. Candlish.
Sir George Balfour.	Mr. Fawcett.
Mr. Beach.	Mr. Baillie Cochrane.
Sir James Elphinstone.	Sir Stafford Northcote.

The Committee deliberated.

[Adjourned till Tuesday next, at Twelve o' clock.

Tuesday, 20*th May* 1873.

MEMBERS PRESENT:

Mr. AYRTON, in the Chair.

Mr. Grant Duff.	Sir James Elphinstone.
Mr. Candlish.	Mr. Lyttelton.
Sir Thomas Bazley.	Mr. Bourke.
Sir George Balfour.	Sir David Wedderburn.
Mr. Cross.	Mr. Dickinson.
Mr. Fawcett.	Mr. Campbell-Bannerman.
Mr. Birley.	Mr. Beckett Denison.
Mr. Beach.	Mr. Stephen Cave.

Mr. *T. L. Seccombe* and Mr. *Harrison* were examined.

[Adjourned till Tuesday, 10th June, at Twelve o'clock.

Tuesday, 10*th June* 1873.

MEMBERS PRESENT:

Mr. AYRTON, in the Chair.

Mr. Lyttelton.	Mr. Grant Duff.
Mr. Candlish.	Mr. Fawcett.
Mr. Hermon.	Sir David Wedderburn.
Mr. Bourke.	Mr. Beach.
Lord Edmond Fitzmaurice.	Sir Charles Wingfield.
Mr. Eastwick.	Sir George Balfour.
Sir Stafford Northcote.	Mr. M'Clure.
Mr. Stephen Cave.	Mr. Fowler.
Mr. Cross.	Mr. John Benjamin Smith.

Lord *Lawrence* was examined.

[Adjourned till Friday next, at Twelve o'clock.

Friday, 13*th June* 1873.

MEMBERS PRESENT:

Mr. AYRTON, in the Chair.

Mr. Hermon.	Sir George Balfour.
Sir Stafford Northcote.	Mr. Fawcett.
Mr. Charles Dalrymple.	Sir James Elphinstone.
Mr. Cross.	Mr. Stephen Cave.
Mr. Baillie Cochrane.	Mr. Bourke.
Mr. Beach.	Sir Charles Wingfield.
Mr. Candlish.	Mr. Eastwick.
Mr. John Benjamin Smith.	Mr. Grant Duff.
Sir Thomas Bazley.	Mr. Lyttelton.
Mr. Birley.	Mr. Fowler.
Lord Edmond Fitzmaurice.	

Lord *Lawrence* was further examined.

[Adjourned till Tuesday next, at Twelve o'clock.

Tuesday, 17*th June* 1873.

MEMBERS PRESENT:

Mr. AYRTON, in the Chair.

Sir James Elphinstone.	Lord Edmond Fitzmaurice.
Mr. Hermon.	Mr. Dickinson.
Mr. Bourke.	Sir Charles Wingfield.
Mr. Lyttelton.	Mr. Stephen Cave.
Mr. Eastwick.	Sir David Wedderburn.
Sir Stafford Northcote.	Mr. M'Clure.
Mr. Cross.	Mr. John Benjamin Smith.
Mr. Fawcett.	Mr. Grant Duff.
Mr. Beach.	Mr. Robert Fowler.
Mr. Baillie Cochrane.	Mr. Birley.
Mr. Beckett Denison.	Mr. Candlish.

Mr. *Nowrozjee Furdoonjee* was examined.

[Adjourned till Friday, 20th June, at Twelve o'clock.

Friday, 20*th June* 1873.

MEMBERS PRESENT:

Mr. AYRTON, in the Chair.

Mr. Birley.	Sir Charles Wingfield.
Mr. Beach.	Mr. Fawcett.
Sir David Wedderburn.	Mr. Lyttelton.
Mr. John Benjamin Smith.	Mr. Candlish.
Lord Edmond Fitzmaurice.	Mr. Grant Duff.
Sir George Balfour.	Mr. Robert Fowler.
Mr. Hermon.	Mr. Bourke.
Mr. Crawford.	Mr. Charles Dalrymple.

Mr. *Nowrozjee Furdoonjee* was further examined.

[Adjourned till Wednesday next, at Twelve o'clock.

Wednesday, 25*th June* 1873.

MEMBERS PRESENT:

Mr. Grant Duff.	Sir George Balfour.
Mr. Beckett Denison.	Mr. M'Clure.
Sir James Elphinstone.	Mr. Robert Fowler.
Mr. Campbell-Bannerman.	Mr. Birley.
Mr. Charles Dalrymple.	Sir David Wedderburn.
Mr. Fawcett.	Lord Edmond Fitzmaurice.
Mr. Dickinson.	

In the absence of Mr. *Ayrton*, Mr. *Denison* was called to the Chair.

Mr. *Nowrozjee Furdoonjee* was further examined.

[Adjourned till Friday next, at Twelve o'clock.

Friday, 27*th June* 1873.

MEMBERS PRESENT:

Mr. AYRTON, in the Chair.

Sir David Wedderburn.	Mr. Charles Dalrymple.
Sir James Elphinstone.	Mr. M'Clure.
Sir Thomas Bazley.	Mr. Candlish.
Sir George Balfour.	Mr. Cross.

Mr. John Benjamin Smith.
Sir David Wedderburn.
Sir Charles Wingfield.

THE RIGHT HON. ACTON SMEE AYRTON, IN THE CHAIR.

Colonel WILLIAM ARDEN CROMMELIN, R.E., C.B., called in; and Examined.

Col. *W. A. Crommelin*, R.E., C.B.

18 February 1873.

1. *Chairman.*] WILL you be good enough to state what office you hold in India, and what office you have held for some time past?—At present I am Inspector General of Military Works, and Deputy Secretary to the Government of India in the military branch of the Public Works Department.

2. What office did you hold before that?—Chief Engineer in Oude.

3. Have you directed your attention particularly to the barrack accommodation afforded to the troops in India?—I have.

4. Can you give the Committee a general view of the nature of the barrack accommodation in India before 1857?—The very oldest accommodation consisted of low, narrow buildings, very slightly raised from the ground, and unprotected by verandahs.

5. Were they in large buildings, or small scattered buildings over a large area?—They were in long buildings generally. Immediately succeeding that kind of building were upper-storied barracks, in the Province of Bengal, in which both floors were occupied as dormitories by the men. These barracks were not arranged according to present ideas, but they were not altogether unsatisfactory.

6. What accommodation was provided for married soldiers?—The married soldiers were originally accommodated in the barracks of the unmarried men, but in compartments specially screened off for them. Subsequently, separate barracks were provided for them, in which each family was allowed one room; but before the time in question, that is 1857, the Government had built them quarters with an allowance for each family of two rooms, with a bath-room attached. But the accommodation for the unmarried men that I have mentioned in the preceding answers does not include all that existed before 1857. As time passed, and more barracks were required, a better description altogether of building was adopted, with high walls, fairly raised from the ground, and protected by verandahs. About the time when Sir Charles Napier was Commander in Chief in India, he considered the barrack accommodation very defective, and recommended the Government to build very lofty buildings. These buildings have been constructed all over the Punjaub, and their chief characteristics are, that they are exceedingly lofty and broad, and that they provide separate messing accommodation for the men. In former days the men had always messed in their sleeping-rooms, that is to say, sitting either on their beds or at tables between the rows of beds.

7. They had but one room for all purposes?—Yes; in the Punjab barracks there were separate rooms, which were provided in what may be called enclosed verandahs or corridors. The sleeping-rooms were generally arranged in long central wards; outside these were the enclosed verandahs; one verandah being occupied by beds, and the other for messing purposes, the whole being protected by outer open verandahs. In addition to those barracks, the Government of India had also provided in Fort William a very lofty barrack, of three storeys; and in the Allahabad Fort, at Sir Charles Napier's particular suggestion,

Col. *W. A. Crommelin*, R.E., C.B.

18 February 1873.

tion, the large barrack called the Ellenborough Barrack was built; that is also a double-storied building.

8. When you speak of there being lofty barracks in the Punjaub, do you mean that the rooms were lofty, or that there were several storeys?—That the rooms were very lofty, some of them being 35 feet in height.

9. Were they only one storey?—Only one storey in the Punjaub. At Allahabad, and Fort William, they were two-storied buildings.

10. Were the rooms as high in those cases as 35 feet?—The rooms were not quite so high as that.

11. The statements which you have made are entirely referring to the barracks for Europeans?—Entirely.

12. Were the barracks for natives of a very primitive character?—They very rarely existed. The natives generally hutted themselves.

13. What occurred in consequence of the great increase of European troops in India since 1857?—At first they were provided for in every possible way; for instance, all existing barrack accommodation was taken advantage of. Then in certain large towns where troops were quartered, such as Lucknow, Lahore, and Delhi, existing buildings (palaces in some places) were taken possession of, and adapted for the purpose; in other cases, standing camps were formed, in which temporary huts were erected; and in some cases the huts themselves were simply covered in with a roof of thatch.

14. Can you give any idea of the regular barrack accommodation, of the good and bad kinds, before 1857?—I am not prepared to state the exact extent of the accommodation; it would require some time to search into records for it. However, I may say, that the barrack accommodation was by no means complete for the garrison of India as it existed before the Mutiny. There were barracks under construction then. Old temporary barracks that had been hurriedly thrown up immediately after the Punjaub campaigns were being replaced; and at Cawnpore, there was a double-storied barrack in progress, which I remember. What I mean to convey, generally, is, that the accommodation was not then complete, even for the existing force in the country.

15. The Government at that time were in the course of gradually improving the barracks, bringing them up to the standard which was then considered requisite?—Precisely so.

16. When did the Government direct its attention to the necessity for making more permanent barrack accommodation to provide for the increase of the European troops?—When the permanent strength of the force to be quartered in India began to be determined, and when the makeshift portion of the existing accommodation had nearly served its time, the Government then found that it would be necessary to provide permanent accommodation for the additional number of troops that had been thrown into the country, and that were to form its permanent garrison.

17. Do you recollect what was the estimate of the accommodation that had to be provided, according to the number of men or otherwise?—The additional force that was thrown into the country at that time was about 20,000 men; but besides that, as I have stated before, there was some accommodation still to be provided for the old force.

18. What steps did the Government take to meet this want?—I will read the first Resolution to which they came, and which is dated the 2nd of July 1863: "His Excellency the Governor General having under his consideration the importance of taking all reasonable precautions to secure the economical application of the large expenditure that seems likely to be necessary for completing the permanent barrack accommodation of the Indian troops in India, and at the same time to provide for the adoption of the best possible designs for the buildings to be erected, and the selection of the most suitable sites for all new barracks, has been led to the conclusion that it will be expedient to nominate an officer, specially qualified for the purpose, to assist the Government of India in dealing with the various questions that may arise in connection with the points above adverted to."

19. Were you the officer so appointed?—I was the officer then appointed.

20. Consequent upon that Minute, was there any search and further investigation into the subject, as to the principles upon which the barracks ought to be built?—A very searching inquiry took place. I was directed to take particular care to pass in review all that had been already done from time to time by the Government of India, to see that no past regulations on the subject were thrown aside in any way; and to bring under the especial notice of Government any changes that seemed desirable.

21. When you speak of past regulations, you mean past regulations then in force?—Yes. Anything new that was proposed to be done was to be carefully brought forward; and I was particularly desired "to secure a proper regard for all substantial and recognised requirements of the military force, and at the same time to pay the greatest attention to the demands of economy. All superfluity of accommodation, all provision of separate quarters, &c. where a combined building will meet the real wants of the case with increased economy, should be eliminated. The simplest and least expensive style of workmanship should be adopted, consistent with the durability and cleanliness of the buildings. Decoration of any sort should be very sparingly admitted." These instructions were dated the 9th of July 1863.

22. Now had they before that, or was there consequent upon that, any medical investigation as to the best mode of providing for the health of the European troops?—The object was, first, that I should collect all the evidence and put it forward in as complete a shape as I could. This I did in a series of Memoranda. The first was upon Barracks for Unmarried Men; another was upon Barracks for Married Men; then followed that upon Hospitals. These Memoranda were then circulated to all local governments, to the several commanders in chief, to all the Indian sanitary commissions, to various military and medical officers, and, in fact, to every authority whose opinion was likely to prove of any use. When the reports of these several authorities were received, the Government took my general proposals into consideration in connection with them, and then passed a Resolution in December 1864, which concisely detailed, first, all the proposals that had been made by myself, then a general summary of all the opinions of the authorities consulted, and finally the conclusion of the Government of India upon each point of detail.

I should

I should mention that the points of detail were very considerable. They referred generally to the determination of what have been generally understood as standard plans, that is to say, the general plans which should be adopted, and in detail to the magnitude of the barrack buildings, the size of the barrack rooms, the number of storeys (whether the buildings should be single or double-storied), the space per man in barrack rooms, what the unit of a barrack room should be, the size of mess rooms, and so forth.

23. What is the date of that resolution?—The 16th of December 1864.

24. Now, without going into any technical questions connected with the construction of the barracks, can you give a general description of what was deemed necessary, so far as it bears upon the expenditure required to carry out your views or the views of the Government, so as to enable us to understand how far any increased expenditure became necessary in the construction of the barracks?—The plans that were eventually decided upon, after consultation with the authorities to whom I have referred, did not differ much in their general character or design from what had been already decided upon by the Government of India before this question was specially taken up. There was, however, one point of material difference as regards the occupation of the buildings, and it was this, that although in previous days double-storied barracks had been built (of which examples existed all over India), still, in those barracks, both storeys, the upper and lower, were occupied as dormitories. But in the case of the new buildings the Government of India, guided by the general advice that had been tendered, and looking also to the extreme necessity of diminishing as much as possible the high death-rate amongst the European troops, which had been so prominently brought to light in the report of the Sanitary Commission upon the Indian army, decided that as a rule throughout the plains of India the upper storeys of the barracks should only be occupied as dormitories, the lower storeys being set apart for day rooms, and for the various auxiliary requirements of regiments, such as reading rooms, recreation rooms, libraries, &c.; guard rooms and canteens were excluded from the general arrangements.

25. Would not the effect of that be, that though the design itself was not more expensive, yet the barrack would hold very much fewer people?—The upper storey would be alone used for dormitories, but at the same time the lower storey would furnish the auxiliary accommodation which would otherwise have to be provided in separate detached buildings.

26. Then may we understand that the cost of the plans that you finally arrived at was not greater per man than the cost that had been sanctioned immediately before the mutiny?—In this way the cost would be greater. I have said before that the auxiliary accommodation was to be placed in the lower floors; this arrangement did, of course, do away with the necessity of providing that accommodation in separate buildings; still the space required in upper floors to provide sleeping accommodation for the men gave greater area than was required absolutely for the auxiliary purposes in the lower floors; and not only that, the arrangement also involved a superior style of accommodation to what was absolutely necessary for the auxiliary purposes. I will explain that by saying, that in a sleeping-room, of course, a certain width is required; we will say 24 feet, as was eventually decided upon. Now such width as 24 feet was not necessary for reading-rooms, or for a great deal of the auxiliary accommodation. The consequence was, that there was not only an excess of auxiliary accommodation provided, but that accommodation was of a style superior to that which was actually necessary for the purpose.

27. Then, in effect, you put fewer men within the same area under the new system than you did under the old?—No, that can hardly be said; the sleeping accommodation was precisely the same.

28. But I mean in the whole area that you constructed?—The whole floor area constructed for all purposes would be larger than formerly, certainly.

29. Can you give an idea of the actual or percentage cost of the new system as compared with the old immediately preceding it?—I estimated at the time that the new system would add one-seventh to the cost.

30. What was the resolution of the Government of India consequent upon the investigation and report made by you?—It is comprised in this resolution that I have alluded to already, of the 16th of December. The resolution in question conveys the decision of Government upon each of my proposals which, as already stated, relate to numerous details. Then, after that, specimen plans, based upon the decisions of the Government, were prepared for guidance, viz., such as might be suitable to different parts of the country. These plans, the resolution of Government, and all the accompanying reports, were sent to England to the Secretary of State, by whom they were laid before the Army Sanitary Commission. The Army Sanitary Commission expressed their general assent to all that had been proposed, and the work then proceeded.

31. The Government of India then directed that all future barracks should be built upon these views; is that the conclusion?—Yes.

32. And can you state how far they went on in India, accordingly, at what rate, or to what extent?—The works then proceeded as rapidly as the estimates could be submitted and sanctioned, and as fast as the executive engineers had power to carry on the works.

33. So as to house all the additional troops?—So as to house all the additional troops as rapidly as possible.

34. And was any resolution taken with reference to old barracks not in accordance with the principles laid down?—Yes, the whole of the old serviceable barracks were to be utilised; accordingly, although they did not come up quite to the new principles, still all old and serviceable barracks were either made use of or modified; for instance, in the case of many of the Punjaub barracks, little or nothing has been done to them; the barracks built in Oude immediately after the Mutiny, but before this resolution was passed, remain to this day; and other large barracks were altered and modified. There was nothing whatever thrown away, except in some few stations which were abandoned. I mean nothing serviceable was thrown away simply because it was of no use in itself.

35. Has the work been completely carried out, or does much remain to be done?—A considerable amount of work still remains to be done.

Col. *W. A. Crommelin*, R.E., C.B.

18 February 1873.

36. Do you know what extent, either measured by the number of men, or by the expenditure?—I have tried to make a calculation, but the returns from Bombay and Madras were not sufficiently complete to enable me to compile a statement for all India. Just before leaving India I prepared a return to show what accommodation we had in Bengal, with reference to the pending question of the redistribution of the army; and this return shows, that as far as the new barracks are concerned, there was completed accommodation for about 6,621 men; and in progress, and very nearly completed (probably completed by this time, as this report is now two years old), accommodation for 4,780, giving a total completed, and in progress at that time, for about 11,401 unmarried men. I see that I have noted at the commencement of my report that all new barracks in progress had been calculated as if completed with two storeys, except in a few cases where the progress in the lower storeys had been trifling. I conclude, therefore, that by this time the accommodation would be complete for the number I have mentioned.

37. What is the date of that?—March 1871. In addition to that accommodation for unmarried men, there was the following accommodation for married men, viz., completed, 4,650; in progress, 351; that is as nearly as possible 5,000 married men, for about one-half of which number the accommodation may be in new buildings.

38. Mr. *Fawcett.*] How much of the accommodation for the 11,000 unmarried men, that was completed or in progress, was in new buildings?—The whole in new buildings only; besides that, there was accommodation in old buildings for 25,554 men. These figures, however, allude only to the cantonments under the immediate management of the Government of India; that is to say, the cantonments which are known as those belonging to Bengal proper, and to the administrations which are ruled directly by the Government of India; they do not include the returns of the Bombay and Madras armies.

39. *Chairman.*] Can you give us any view of the Bombay and Madras barrack accommodation?—I have tried to obtain that, and have not succeeded.

40. Can you tell us how many troops remain to be provided with proper accommodation?—That I have also tried to get at, and stating it approximately it is just possible that throughout India we may require accommodation for 5,000 men.

41. On what standard is that based; upon the former one or the present one?—Upon the present one. My calculation is a very rough one, but, I rather think, it will eventually be found that we shall still require accommodation for 5,000 men.

42. For all India?—For all India. I base my calculation upon this: my Return shows that we have accommodation available of all sorts in old and new buildings, in the stations immediately under the Government of India, for 41,956 men; that was two years ago; and I calculate roughly the strength of the force distributed at the several stations noted in the return to be 44,588; the difference between those two would show what was still required in Bengal; that amounts to 2,632. Allowing for a margin, and for the requirements of Bombay and Madras, I consider that it would not be safe to estimate future requirements for all India under the figure I have stated, viz., 5,000 men. I have mentioned the peculiarity of the order relative to the exclusive occupation of the upper storeys of the new barracks as dormitories. But the Government of India, two years ago, just before I left India, rather modified this order. They resolved, on the 14th of December 1870, that, "Save at exceptional stations in damp climates and low-lying localities, the rule quoted in the second paragraph of this resolution" (that is the rule regarding exclusive occupation of upper floors as dormitories throughout India) "shall no longer be in force, and that the plans of barracks to be built hereafter under ordinary circumstances shall be modified," the modification being that it would not be necessary in these dry climates to build upper-storied barracks, and that in all these dry climates, with regard to barracks already built or in progress, the lower floors might be occupied as dormitories.

43. Can you explain why, after all the researches that you made, that was not discovered at the beginning, instead of near the end of the operation?—I think it is only a matter of opinion; whether the measure will be attended with satisfactory sanitary results remains to be shown. I merely say that the particular order which tended to increase the expense, has been to a certain extent modified.

44. You have not stated what was the estimated expenditure either per man or in gross for the system of barracks which was sanctioned in 1863?—There was an estimate framed to give some idea of what the cost would be in January 1865.

45. I want to know whether you could give us the estimate upon which the Governor General proceeded in 1863?—The estimate for the whole of India was not made originally.

46. I mean whether per head, per man, or per barrack, any estimate was made in 1863, when the Governor General sanctioned the new scheme of accommodation?—At the first start no distinct estimate was made. It was thought that the cost would be much the same as before, allowing for the increase of rates, and for that addition of one-seventh that I have mentioned before.

47. But can you tell us what was the known figure at that time, and what was the supposed increase of rates?—No, I have not got that information; I have no statement of the costs of the former accommodation.

48. Sir *C. Wingfield.*] The total amount was, I think, estimated by the Government of India, because it was originally proposed to borrow money for it, and the Secretary of State refused to sanction that?—Yes, an estimate was made which I was about to describe, of the new works; but I understood the Chairman to refer to the estimated cost of barrack accommodation before this period.

49. *Chairman.*] I want to know upon what estimate the Governor General gave his sanction in 1863 or 1864?—There was no estimate made then; the estimate was made subsequently in 1865.

50. Will you give us that, if you please?—There is an estimate which amounted on the whole to ten millions of money; but that estimate included not only barracks but all other military works connected with military stations.

51. Now will you give us, if you can, the estimate that was made with reference to barracks per man, taking it either per married and unmarried

married man, the general average, or for each class?—The distribution of that ten millions is as follows, as nearly as I can make it: new buildings for new barracks, four and a half millions; alterations of old barracks, two and a half millions; other military works, one and a half millions; and establishments, one and a half millions, making a total of ten millions for all military works.

52. Then the other military works are wholly irrespective of barrack accommodation?—They comprised general cantonment works, temporary accommodation for troops, ordnance and commissariat buildings, quarters for native troops, &c.

53. For how many men was the four and a-half millions to be spent?—I have already stated that the increase to the force was about 20,000 men. Supposing (I can only suppose this) that 5,000 men had still to be provided for under the original scheme that the Government of India was engaged upon at the time of the Mutiny, the expenditure of the four and a-half millions may be calculated, I think, upon 25,000 men.

54. Sir *C. Wingfield.*] Do those four and a-half millions include subsidiary buildings, racket courts and wash-houses, for instance?—Yes.

55. *Chairman.*] Everything connected with the barracks?—Yes.

56. Can you state how far that estimate has been borne out by the progress of the works since?—When my estimate was made, I was guided by the existing rates. There is no doubt that the proportion of work done has not been done at the rates set down in my estimate.

57. According to the figures that you have given us in gross, it would seem to be at the rate of about 180 *l.* per man, taking the married and unmarried together and throwing them into an average?—The rate for actual construction is more, I think, than that; that would be the rate according to the original estimate.

58. Does that include the quarters for the officers proportioned to the men?—It does not include quarters for officers. In those days officers were not provided with quarters; and, in fact, they are only provided with them now to a small extent.

59. Then to what extent has the rate been exceeded since then, and can you explain the cause of the excess?—That estimate has been arrived at merely upon the supposition that the force to be provided for then was 25,000 men. I cannot say that that is absolutely correct; it is as near as I can make it. I have a return here that shows the cost per man at various stations, calculated partly with reference to work done, and partly with reference to detailed estimates for particular stations. This return shows the cost per man in various details. It shows it for the stations of Lucknow, Morar, Nusseerabad, Allahabad, Saugor, and Mhow. The total rate per man, including everything, hospitals, married men's quarters, and auxiliary accommodation, varies from 189 *l.* to 286 *l.*; and there is one exceptional station, Mhow, where, owing to a scarcity of labour and the necessity of importing it, and also the very high price of materials, the cost is as high as 425 *l.* a man; that is quite exceptional.

60. Mr. *Fawcett.*] What is the cost of Saugor per man?—£. 286.

61. And would you give the cost for Allahabad and Nusseerabad, and the others?—I will state it, first of all, simply for the barracks of the unmarried soldiers, and then for the total accommodation, to show that the soldier could be provided for in his barrack only for just about half the sum that is required for his total accommodation that is to say, that it takes as much to give him all the auxiliary accommodation, such as quarters for the married men, his canteens and hospital, and so forth, as it does, simply, to house him in his barrack. The returns relate to Lucknow, Morar, Nusseerabad, Allahabad, Saugor, and Mhow. The cost per man for the barracks only of the unmarried soldiers is, at Lucknow, 100 *l.*; Morar, 109 *l.*; Nusseerabad, 110 *l.*; Allahabad, 134 *l.*; Saugor, 147 *l.*; and Mhow, 230 *l.* The total cost, including everything, is 189 *l.* per man for Lucknow; Morar, 211 *l.*; Nusseerabad, 225 *l.*; Allahabad, 253 *l.*; Saugor, 286 *l.*; and Mhow, 425 *l.*

62. Have you Jubbulpore there?—No.

63. How is that?—This is not a return prepared especially for the present investigation, but a return made out by me some time ago for Lord Mayo; he wished to know the average cost per man, and I took the stations that seemed to give a fair average throughout India. I did not take Jubbulpore, but it could have been easily ascertained.

64. Mr. *J. B. Smith.*] Do you think that Jubbulpore was more expensive than the others?—Certainly not more expensive. (*The Return was handed in*, vide *Appendix.*)

65. *Chairman.*] Can you state now what has been the total expenditure up to this time under the new system?—The last Progress Report that I have applies to the year 1869-70; that is to say, down to April 1870; but it includes the Budget allotments for 1870-71.

66. When you speak of the last Progress Report, do you mean your last Progress Report?—Yes; it shows a total expenditure on military works of all kinds, of 6,272,713 *l.*

67. How much of that is on account of barracks and their auxiliaries?—The figures for Bombay and Madras are in lump sums, and not in detail; but, out of the above six millions and a quarter, the expenditure at the close of 1870–71 on new barracks, including rest-houses on lines of railway, amounted to 3,152,069 *l.* for all India.

68. Sir *G. Balfour.*] From what date is that?—That includes the expenditure of 1864–65.

69. *Chairman.*] That would be on account of barracks complete and barracks then in progress?—Yes.

70. So that we cannot infer from that any rate per head of expenditure?—I have attempted to show it for Bengal. The total expenditure in Bengal at the close of 1870–71 was 2,540,644 *l.*, including rest-houses.

71. But was that an expenditure for completed barracks, or for barracks completed and in progress?—For new buildings completed and in progress.

72. Can you give us up to any point the total expenditure for barracks completed, so that we may see what has been the average rate of the whole?—I am afraid that that cannot be given in detail.

73. I want it *in toto*?—Nor *in toto*; the expenditure on buildings completed and on those in progress is so mixed up that I cannot subdivide it accurately.

74. Then you are not in a position to tell us now what is the practical result of the operation as regards the expenditure per man for new barracks?

Col. *W. A. Crommelin*, R.E., C.B.

18 February 1873.

racks?—I can give an approximate idea with reference to the buildings that have been constructed in Bengal. At the close of 1870–71 the expenditure on new barracks only was 2,540,644 *l.* I will add to that the Budget grants for 1871–72 and 1872–73, so as to bring us to the present date; that addition is 450,000 *l.*; therefore the total expenditure on new buildings to the present date in Bengal is 2,990,644 *l.*, say three millions.

75. Would that be for barracks completed up to this time?—It would be for new barrack accommodation completed, or nearly so. With regard to the number of men, I must refer for that to the occupation return which I have already quoted, which states the number for which we have got accommodation. I believe by this time the number may fairly be represented by 12,000 unmarried men and 2,500 or 3,000 married men. The rate struck on these figures would be only 200 *l.* per man, but the buildings are not quite completed. Supposing that we have to complete for 5,000 men, I would assume a rate of 250 *l.* per man; that is lower than some of the rates quoted in that other statement which I have handed in; still, allowance has to be made for the reductions that the Government of India have ordered in the style of the construction; so that if 250 *l.* per man be the cost, and 5,000 the number of men still remaining to be provided for, an expenditure of one and a quarter million has still to be contemplated.

76. Can you explain, generally, what has been the cause of the increase of expenditure above your estimate; has it arisen from the increase of prices?—Increase of prices with reference to both labour and material; they have largely increased since the time of the Mutinies.

77. With regard to some of the barracks, for instance, at Mhow, it would seem that you did not appreciate the difference in rates in Western India as compared with Bengal?—That is quite an exceptional rate at Mhow, and it is for that reason that I put it in the return.

78. Are we to take it that the last orders of the Governor General represent the present rate of expenditure, and regulate the expenditure for the future?—The last orders of the Governor General will regulate it, and I must state that further economical steps have been taken. It has been thought that, with a view to economy, an inferior description of building altogether may be provided at hill stations.

79. Has there been much question raised in India respecting the character of this expenditure, as to its being excessive and unnecessary?—I do not recollect any official complaints upon that score.

80. But do you think that the expenditure has been economically conducted, supposing that the system of the barracks was a right one?—I think so.

81. Has any controversy arisen respecting the scale of accommodation?—None whatever. As regards "scale," I understand that to mean the room, the space that is provided for the soldier, and none has arisen on that. I may say that we have given even less space than was suggested to us by the Army Sanitary Commission in England.

82. Mr. *Crawford.*] You advised the Government, in the first instance, upon the general plan?—Yes.

83. Were you afterwards employed in carrying that plan into operation?—I was so far employed that I made reports to the Government of India upon all projects which came from the several stations, and I was the general adviser of the Government.

84. Were you, so to say, then, responsible for what was done?—I was responsible as regards the general scheme of operations which was carried out, but not as regards constructive or executive details.

85. Will you describe as shortly as you can the method by which these plans were carried out, as regards construction?—The local governments, who had the charge of all constructive details, having received the resolution of Government which laid down the principles that should be followed, and having received also certain specimen plans which had been prepared in view to illustrate these principles, then submitted their detailed plans and estimates to the Government of India; these plans were reviewed in the first instance by me, and then submitted to the Government of India for final orders and sanction.

86. After the sanction was given, were the buildings erected under the responsibility of executive officers in the department?—Executive and superintending officers in the department acting under the orders of their local governments.

87. Each executive officer being responsible, I suppose, for the buildings that were erected under his direction?—Yes.

88. And what was the method generally adopted; was it done, as it is called in India, departmentally, or in any case done by contract?—Both.

89. As a general principle, was it done partly departmentally in each case, and partly by contract, or was it done according to the circumstances of each case?—It was done according to the circumstances of each case.

90. Now take a particular case: take the case of Allahabad, how was it done there?—It was done partly departmentally and partly by contract.

91. Has there not been a considerable failure in the buildings at Allahabad?—I do not recollect any official report of any failure; there have been defects at Allahabad, but nothing in the shape of failure, as regards barracks. There was a failure in an ordnance building there some two years ago.

92. Then has that been the case generally with regard to all military buildings which have been erected, that there has been no failure in the carrying out, as regards the structure, of the designs of the Government?—Generally speaking, the work has been very fairly done. Two notable failures have occurred at Nusseerabad and Saugor.

93. In what respects have those failures taken place?—Those failures have been in the malconstruction of the masonry. It so happens that in these two places the masonry is what is understood as rubble masonry; that is to say, roughly quarried stones, of irregular shapes and sizes, set in mortar, the strength of the work depending mainly upon the quality of the mortar used, and the care bestowed upon bond and coursing.

94. These failures have occurred from default in the use of the material that was at hand?—Certainly.

95. Were they cases where it was done by the department or by contractors?—It would be upon

upon the responsibility of the department in both cases.

96. In one case there would be a remedy; in the case of the contractor, you could go back upon him, I suppose, to replace that which he had done so badly?—I do not think so, if the work had been once accepted.

97. Then are we to understand that these failures were found out, or arose, after the work had been examined and passed, and the contractor had been released?—Yes, and after the buildings had been occupied.

98. What was the nature of the defects?—Generally symptoms of cracking appeared in some of the arches and piers, consequent upon the malconstruction of the masonry.

99. Was it due wholly and entirely to defective mortar?—In the case of Nusseerabad, I can answer for the work, because I was there and saw it, that it was from the bad construction of the masonry generally; sometimes bad mortar, sometimes badly bonded and coursed masonry.

100. Who inspected those works as against the contractor during the period of construction?—I am not positive upon the question of agency, whether the work was done by contractors or daily labour, as we call it. I think it was by daily labour; because no contractors were, to the best of my recollection, ever called into question.

101. In the cases which you refer to, how is it that these defects were not seen during the course of construction, because, I suppose, you had overseers or foremen of the works as we have here?—They were not seen.

102. They overlooked it, in point of fact?—It was overlooked. I may say that this rubble masonry is not at all a usual work in India. Imported labourers were brought to the work, and no doubt they were not skilled in that particular kind of work.

103. Mr. *Grant Duff.*] And was it the case that you had young and inexperienced officers who looked over it?—The officers who looked over it were inexperienced.

104. Because a very great and unusual strain had been put upon the department, to which it was not equal?—Yes; not only for military works, but for works in general.

105. Mr. *Crawford.*] Are these military buildings generally of one and the same character, built of stone, or were they in any case built of brick?—They are of the same character generally, but the dimensions of walls would be different, the rubble masonry walls would be thicker than walls built of brick.

106. Generally speaking, you have had stone at command, have you not?—No; as a rule, all these buildings have been built with brick; it is only in exceptional instances that stone has been used; and it so happens that the failures have occurred where the rubble stone has been used.

107. Have you had any instances of default in the case of buildings built of brick, or in the case of those parts of the buildings where brick has been used?—No; the only building in regard to which we have received any complaints as to structural defects is at Allahabad; but these were not of any serious importance, and have long since been remedied: there was nothing very dangerous brought to light.

108. You were speaking just now of the increase in the rates; that applies equally to material and to labour, does it not?—To both.

109. In speaking of material, is there any one particular description which has risen more in price than any other?—Perhaps the price of wood has increased more than anything else.

110. You have met with competition from the railways, I suppose, there?—Yes, great competition.

111. Were you not employed in the Railway Department at one time?—For a short time I was in the Railway Department.

112. About what time?—Just immediately preceding the Mutiny.

113. Then you are able to form a very good judgment as to the effect upon prices caused by the Mutiny?—I can only speak generally on that point, that there has been a great rise. I know this, that at Allahabad we could do masonry, for instance, for 15 rupees per 100 cubic feet; that price has now doubled.

114. That was before the Mutiny?—Yes. I do not say that these rates have increased because of the Mutiny, but simply that since the Mutiny a rise has occurred.

115. What I mean is, that in consequence of the Mutiny these public works of the Government and railway construction have been simultaneously pushed on at a very rapid speed?—Precisely.

116. And the effect of that has been to raise the wages of labour, and also the cost of materials used both in the railways and in the Government works?—Precisely.

117. In point of fact, railways have been to a certain extent competitors with the Government for labour and material?—Decidedly.

118. The same circumstance, then, that has caused a great increase to the cost of the Government works, must have added very much also to the cost of the railways for that period?—I have no doubt of that; since 1857 I have had nothing to do with the railways, and I really cannot answer as to them; but I have no doubt that they are paying very much higher for work now than previously to the Mutiny.

119. That is to say, the railways could not have got their labour or material on cheaper terms than the Government since then?—No.

120. Do you think they have paid more?—I cannot say.

121. Was there anything like an active competition between them?—No; everybody was wanting labour, and of course the works on both sides were open to the labour market, but there was no antagonistic competition that I know of.

122. In the case of the large supplies of timber required by both, was there any competition in obtaining those in the places where the timber is produced, and from which it is brought?—I can give no satisfactory answer to that question.

123. How do the Government buy their timber?—It is done in various ways; by contractors on the spot who obtain it from the places where it is grown, or the Government send and cut it themselves by their officers.

124. What is the principal source of supply?—It depends upon the part of India in which the works are being built; the Oude forests and those on the neighbouring hills are one principal source.

125. *Chairman.*] You mean for the whole of the Ganges valley?—They provide a great deal of the timber used in that valley.

126. Mr. *Crawford.*] Upon the whole, I suppose

Col. *W. A. Crommelin*, R.E., C.B.

18 February 1873.

pose it may be assumed that if the Mutiny had not occurred, and the necessity for large public works had not arisen, the wages of labour, and the price of materials would have remained without any very considerable advance?—Probably.

127. Lord *Edmond Fitzmaurice.*] Have there not been cases in which the defective construction of barracks has rendered them almost uninhabitable at certain seasons of the year?—There are no official reports to that effect that I am aware of, except for Saugor and Nusseerabad.

128. You have never heard of anything of that sort?—No new barrack has ever been rendered uninhabitable, except in those two instances.

129. I do not say totally uninhabitable, but very unwholesome?—No, certainly not.

130. Is there not a great deal of difference of opinion in India, on the policy of raising buildings, and especially barracks, more than one, or at the outside, two storeys high?—I have seen in the public press supposed complaints against the so-called exceptionally costly buildings.

131. Have not those exceptionally costly buildings been attached on the ground that they are comparatively bad, considering the great cost?—They have been, but without any valid grounds.

132. What are the grounds on which they have been attacked in the public press?—They have, as a rule, been attacked with general assertions.

133. Unsupported, in your opinion?—Unsupported, in my opinion, on valid grounds. The complaints have been taken into careful consideration by the Government, and it has been ascertained that their causes were not attributable to the particular style of building, but to certain structural details. For instance, the barracks were occupied long before they were really complete, in consequence of the pressure for want of accommodation, and before they were properly fitted for the men. Thus the broad openings of the verandahs which were intended at certain times to admit the air freely, admitted the sun also, and as the barracks were occupied before these openings had been protected by means of venetians, or blinds, therefore, of course, the sun beat in, and there was excessive heat; but that was a defect that was applicable to any description of building, either old or new, either one storied or two storied.

134. And the defect was, in fact, a temporary one?—Yes, an entirely remediable defect, and not special to the buildings.

135. Mr. *Fawcett.*] I understand from your evidence that you were especially charged in 1863 to look after the economic construction of these barracks?—Yes.

136. And you think that generally they have been economically constructed?—I think they have; that the orders of the Government have been very fairly carried out.

137. You had to look after, not only the construction of barracks, but the military works?—Yes.

138. And your general description as to economy applies to the barracks, and the military works, I suppose?—Yes.

139. You remember perfectly well, I presume, the Minute that was issued by Lord Mayo in 1870, containing probably the severest reprimand ever contained in an official document with regard to the waste of money that there had been owing to malconstruction of military works?—I should be glad to see that.

140. But you have seen it, have you not?—I do not understand precisely what document you mean.

141. *Chairman.*] Have you got the Minute of Lord Mayo sent to the Military Works Department on the manner in which military works had been carried on at Allahabad?—I know that order, certainly.

142. Mr. *Fawcett.*] I am not using any exaggerated description, I think, when I say (it is often described as such) that it would have been impossible almost to have employed more severe language than Lord Mayo employed in that despatch?—That despatch was written with reference to one particular set of buildings, that is to say, some ordnance buildings at Allahabad.

143. But those are buildings which I understand you to say come under the description of military works, which it was your duty to look after, and which you classify under the general description of having been economically constructed?—They were economically constructed.

144. Then why, if they were economically constructed, did Lord Mayo think it necessary to pass the reprimand he did upon the engineers and others responsible for the construction?—Because some of the buildings were proved to have been badly constructed, and the officers charged with the construction of these buildings naturally received a reprimand, and were punished.

145. Then do you think that buildings so badly constructed that they were almost useless, can be spoken of as economical in their construction?—They were not economical in the sense that a portion of them had to be reconstructed.

146. They had to be to a very great extent, had they not?—Very little was reconstructed.

147. The fact remains that this building was so badly constructed that without very great repair it was very nearly useless?—The particular building referred to was a long ordnance shed, a building of no great importance; and a portion of this fell down during its construction; it was never distinctly known what caused its fall, but a committee who reported upon the same stated that generally the work in the walls had been badly constructed.

148. *Chairman.*] Were the walls constructed of brick?—Yes; and it was supposed that the contractor engaged in the work had mixed soap refuse with the lime.

149. Mr. *Fawcett.*] But then the Government of India, in reprimanding the Government officers, must have thought, must they not, that they were responsible for the tumbling down of these walls?—Yes, the officers who were charged with the duty of construction. May I ask whether your questions refer to me personally?

150. No, it was a general reprimand, was it not?—To the officers concerned on the spot, certainly, but not a general reprimand to the department.

151. Of course we can draw our own conclusions as to whether the department was responsible; now taking another case, the Saugor Barracks have been found the most expensive in India, have they not?—They have been very expensive.

152. They have cost 286 *l.* a man, according to you?—I gave that as an estimate; what they have cost more or less I cannot say.

153. Are you aware that a committee was officially

officially appointed to investigate those barracks? —I am.

154. And they published their report last November?—Yes.

155. And they said that those barracks had been so badly constructed that they were entirely useless and unsafe for any human being to live in?—That was the conclusion, or nearly so, of the committee, but it was in opposition to the opinion of the chief engineer, who was responsible for them.

156. But then they were overhauling his work? —But I understand that the Government of India have since sent an officer to see the barracks and examine them officially, and report further as to the possibility of utilising them.

157. That report is not yet published, is it?— No.

158. As far as we know officially, these barracks which were some of the most expensive in India when they were constructed, were denounced by an official committee appointed by the Government, as being unfit for human occupation?— They at present remain under that stigma.

159. These works were entirely constructed by the Public Works Department, were they not; no contractor was employed?—I cannot state that positively, but that is my impression.

160. Therefore the department is reponsible, and this stigma, until it is removed, rests upon the Public Works Department?—It does.

161. The executive engineer officer who was in charge of these works was Captain Faber, R.E.? —Yes.

162. Captain Faber was not a young officer? —No, not young in years.

163. He was an experienced officer?—He was an inexperienced officer.

164. How long had he been in the service; more than 20 years, had he not?—I cannot say.

165. Who were the two people who were under him?—I cannot speak from recollection.

166. They were a Mr. Wilkinson, and a Sergeant Herbert, and these barracks were masonry barracks, and it was proved that these two persons were employed under Captain Faber, but neither one of the three had the slightest acquaintance with masonry works; this was brought out in the report, was it not?—It was.

167. In addition to that, there was Mr. Campbell, was there not, who was the engineer of the district?—He was the superintending engineer of the district.

168. He visited these barracks once during their construction, did he not?—But to the best of my recollection Mr. Campbell could not have seen much of the work whilst it was in progress; I think it was begun before his time.

169. They were only visited once either by Mr. Campbell, or the other person who you say is responsible?—No; they were visited oftener, but I cannot speak positively to that without referring.

170. Are you aware whether in the report it is stated that they were only visited once?—I am not.

171. In addition to that, there was Colonel Pollard, was there not?—There was.

172. He visited the works only once?— Yes.

173. This fact was brought out, was it not, in the report of the committee, that the whole thing was done so carelessly that one of the committee poked his stick into these rotten walls, and the mortar came out like corn out of a sieve? —I have not read that document with any special purpose beyond seeing what the merits of the case generally were, and I cannot answer with any precision.

174. You are aware, are you not, that they stated that the walls were so rotten that there was no difficulty whatever in poking a walking stick into them?—Yes, I am aware that something to that effect was said, and probably precisely that.

175. And, therefore, when you say in your general statement that so much barrack accommodation has been provided at a certain cost, you included in that estimate these barracks which have been officially pronounced to be unfit and unsafe for any human being to enter?— I think I can only answer to that, the old saying, "that accidents will happen in the best regulated families."

176. But you read out a list of the cost of several barracks; and what has happened at Saugor has to a certain extent happened at Nusseerabad, has it not?—Yes; those are the two stations that I have mentioned already where accidents have happened.

177. You have given a list of six; and I have only had time to look into these two out of the six; two of them rest under that stigma?—Two of those particular six that I have mentioned do; but there are new barracks over a great many other stations in India besides.

178. But will not the same remark also apply to barracks which you have not mentioned; to the Jubbulpore barracks, for instance?—There have been complaints about the Jubbulpore barracks, but none of a very serious nature.

179. Have you the official documents here relating to that case?—I have not.

180. *Chairman.*] Have you read them?—I have read them, but it was some years ago.

181. Mr. *Fawcett.*] Have you read anything recent?—I have read nothing recent.

182. Therefore you cannot state from your own knowledge, that very serious complaints have not been made against those barracks?—No, I cannot.

183. These barracks at Saugor cost 165,000 *l.*? —I have not got the price here; I cannot say exactly what it was.

184. Then we may come to the conclusion that contractors had nothing to do with those, and that they were constructed entirely by the Public Works Department?—Yes.

185. I want to fasten the responsibility upon some one; who was the head of the Public Works Department in India while this was going on?— The head of the Public Works Department in the Province itself, the officer responsible for that work, was the Chief Engineer in the Province, Colonel Pollard, whose name you have already mentioned.

186. But who was the head of the Public Works Department; General Strachey was, was he not?—For the Military Branch, I must myself be taken as the senior.

187. Is your authority co-ordinate with that of General Strachey?—The Secretary to the Government for the time being was senior to myself, and everything passed through the Secretary to the Government.

188. And who was the secretary whilst this construction was going on?—There were two secretaries.

Col. *W. A. Crommelin*, R.E., C.B.

18 February 1873.

189. But who were they; the barracks were in construction four and a half years (I am referring now to Saugor), from the time when they were begun till they were completed, and this investigation took place, was four and a half years; who was the Secretary of the Public Works Department during that period?—General Strachey for a portion of the time, and Colonel Dickens for the other.

190. Colonel Strachey the latter part, was he not? — General Strachey was originally appointed, and he then left for a time, and was re-appointed; it is difficult to state the precise periods without referring to documents.

191. Then you are aware, if this may be used as an illustration, that this same department which is responsible for the construction of these Saugor barracks have proposed to the Government that they should undertake the erection of great works in India which involve the expenditure of something like sixty or seventy millions?—Yes.

192, The works to be carried out by this department?—Yes.

193. Mr. *Birley.*] Are the barracks that have been built and are being built in India now, consequent on the order of the Government of India in 1863, constructed upon a uniform design, or do they vary?—It happens that they have been generally constructed upon a uniform design, but that merely follows because the designs that were submitted as specimens have generally been accepted by the executive engineers and local Governments as the best that they could devise. It was distinctly stated in the very first Resolution of the Government of India, to which I have so often referred as their resolution upon the principles to be adopted, that officers might deviate from those designs. I think I had, perhaps, better read the conclusion. My proposal was, "That the preparation of the detailed design for the barracks to be constructed at each station be left to the local officers, the several rules and principles of design being laid down for their guidance, and specimen plans of barracks suitable for different localities being furnished to them." That was generally approved by the authorities who were consulted. The conclusion of the Government of India is as follows:—"Having in view the instructions of Her Majesty's Secretary of State for India in regard to standard plans, as conveyed in his Despatch, No. 27, dated 16th June 1864, and especially in that portion of it (paragraph 5) which relates to the adaptation of such standards to local circumstances; and taking into consideration the impossibility of determining one or even several standard plans that shall meet every requirement over all parts of our Indian Possessions, the Government of India is of opinion that if the general rules and principles to be observed in barrack construction be laid down, and if specimen plans suitable for different localities be provided, the preparation of designs for particular barracks may be properly left to the local officers. All such designs will, of course, be reviewed by the local governments or administrations before sanction is given for carrying them out, and the ordinary rules that determine the authority by which the estimates may be passed will be attended to; and if a deviation from any of the general principles be desired by any local government, a reference on the subject must be made to the Government of India." That gave full authority to any officer or any Government to submit any proposals of their own. It was the intention to court such proposals, because it was impossible that from any one source perfection could issue, and the Government of India would have been only too glad to receive proper information from other quarters. Of course, the specimen plans that were issued were prepared with a very great deal of care. They had received the general approval of the Sanitary Commission in England, and it resulted, perhaps as a consequence, that, although authority was given for the proposal of any deviations that the authorities might wish, still they were generally followed. But there are stations where that was not the case. For instance, take the extremes of India, Peshawur, for example; the barracks there have been a great deal modified to suit the circumstances of the position, and the earthquakes which occur there. In British Burmah, again, the new barracks are on a plan totally different from what is understood and said to be the standard. The Government did what they could to avoid encouraging the idea that the barracks were to be uniform generally; because, when the plans were issued for guidance, the designation "specimen" was used, and not "standard." Then in remodelling old buildings over different parts of India, the adaptations have been carried out according to what seemed necessary in each particular case without adhering strictly to the conclusions laid down for general guidance in the erection of the new buildings.

194. Then do I rightly understand that, in your opinion, the specimen plans are carefully modified according to the circumstances of locality and climate throughout India? — But the circumstances are not so very varying as to require any very different styles of building. One of those Indian barracks would answer very well in this country as far as the mere plan is concerned.

195. Have you a copy of the specimen plans?—I am afraid there is none here, but I can easily obtain them if they are required.

196. In the construction of buildings, what are the arrangements in regard to specification for the contractors or the Department; how are the specifications prepared? — An estimate is prepared in detail in the office of the executive officer, and the specification is given to the contractors.

197. *Chairman.*] Do you prepare a complete specification of all the work in detail before the contractor undertakes the work? — Yes. Of course the precise wording depends upon how the contract is given, whether it is given in a lump sum or whether it is given on a schedule of rates.

198. But supposing that it is on a schedule of rate, do you still prepare a complete specification of the whole work, whether you proceed on a schedule of rate or a sum in gross?—Yes; a complete specification.

199. Mr. *Birley.*] Are there supervisors of the work?—Yes.

200. And the supervisor has to take care that there is a proper strength of material, and so on? — Yes, under the order of the executive engineer.

201. And that system is uniformly carried out?—Yes.

202. Sir *D. Wedderburn.*] The original estimated expense of barracks throughout India was ten millions sterling, was it not?—It was.

203. We

Col. *W. A. Crommelin*, R.E, C.B.

18 February 1873.

203. We were informed by General Strachey, that up to the end of the financial year 1872–73 we should have expended nine millions in barracks?—But I am not aware what his figures include; my figures are prepared under my own instructions in my office in India, and the figures that I have given are precisely those that I have quoted from the reports prepared by myself.

204. My reason for asking that question is this: if we have spent nine millions, and ten millions is the original estimate, may we infer from that, that there is only one million more to be expended?—I arrive nearly at the same result, but in a different way. I have already stated in my evidence that I think we require about a million and a quarter to complete the works.

205. You have said that these two-storied barracks, with one or two exceptions, are built of brick; now is it not the case that two-storied brick houses are very exceptional in India?—No, certainly not; the whole of Calcutta consists of houses three or four storeys high.

206. That is the exceptional case?—In native towns there are plenty of such houses all over India.

207. I refer to Europeans; do you mean that they inhabit such houses?—To natives. There are also double-storied buildings scattered all over India for Europeans, but they are not general.

208. It is not customary for Europeans to build two-storied houses, is it?—Because the accommodation on the ground floor is generally sufficient; but wherever upper-storied buildings are constructed they are generally very much approved of. I myself lived for a long time in an upper-storied building in Lucknow.

209. Do you find that the average temperature in the upper storey is higher or lower than on the ground floor?—That depends on structural details. I believe, speaking generally, that whatever be the description of building constructed (setting aside, of course, structural details, and looking to the general design only), whether they be one, two, or three storied, or whether broad or narrow, the average temperature in the several buildings, and in the different parts of each building, will be nearly the same. But of course structural details will have a great effect upon the internal temperature; for instance, whether we have tight-fitting doors or windows, and whether we have proper venetians and proper roofs; but these will apply to any description of building that is constructed.

210. Would you not say that any brick house was, as a rule, hotter than a house of the ordinary native construction?—No, certainly not; we have no proof whatever. It has been stated that what we understand as sun-burnt bricks remain very much cooler than kiln-burnt bricks. I have exposed both to the sun, and taken thermometrical observations, and I found little or no difference. Whatever difference there was might have been due to colour, but not, I believe, to the mere material.

211. Then do you consider that the reason why Europeans of the upper classes do not build themselves brick bungalows, or two-storied houses, is the expense?—Partly that, and partly that they do not want the accommodation in private houses, because sufficient is gained by the lower floor.

212. You used the expression "daily labour;" I should like to understand what you meant by that; you used it in contradistinction to "contract"?—In a contract you deal with lump sums and quantities; a contractor would build a certain amount of barrack work, and would be paid according to the work done. By "daily labour" we mean this; that the departmental officers employ as many labourers per day as they require for their work; and at the end of the day pay at once the daily wage, reservations being made in order to adjust final payments at the end of certain periods, when the work can be measured to test whether a fair amount had been done for the money to be paid.

213. In the case of certain public works in a native state which failed, the allegation, or excuse, was that they had been thrown down by an earthquake; has that excuse ever been alleged on behalf of the Public Works Department?—I have never heard it. With reference to your question regarding the temperature of the upper-storied barracks, perhaps I might read something which bears on that. As I said before, certain representations were made to the Government of India that these upper-storied barracks were very much hotter than others. I felt quite certain, from my own experience and from the result of information that I had derived from executive engineers, that such representations were not founded on valid grounds; and that, in truth, as I have already stated, the particular description of building had nothing to do with the question of temperature. However, at my suggestion, Lord Mayo requested that a number of thermometrical observations might be taken throughout India, in all descriptions of barracks; the upper-storied ones, the lower-storied ones, and other buildings. These thermometrical observations are in course of being made. Up to the time I left India very little had been recorded, but something had been done; and that supported the view that I have taken, viz., that the temperature was much the same whatever the buildings might be. I would refer to an abstract of the Report by the Sanitary Commissioner for India for 1870. It is the last that has been published. "The returns of thermometrical observations in barracks, although not very reliable, are not unfavourable to the new buildings, the mean temperature being somewhat lower than in the others, and the range between maximum and minimum smaller."

214. Mr. *Eastwick*.] Does it state the mean temperature?—No, it is only a general observation. I have ascertained since, that the Reports now coming in from Bombay give a more satisfactory account than that; still I claim nothing on account of the reduction of temperature for the upper-storied barracks; I believe that it will prove that there is no sensible difference in this respect between them and other buildings. There are other circumstances, however, to be considered with reference to temperature. It is generally well understood that at the time when we require to be very cool, namely, at night, in order to get good sleep, the higher you go the cooler the temperature will be.

215. Sir *D. Wedderburn*.] But the cooler at night, the hotter during the day, I presume?—Of course, if you go upstairs, and have not a good roof over your head, there will be radiation of heat, and the upper storey will naturally be hotter than the lower; but if the roof is properly constructed, and there is a proper ceiling, there will be no difference in the average temperature of the two storeys during the day.

Col. *W. A. Crommelin*, R.E., C.B.

18 February 1873.

216. You mentioned just now the average cost per man in the permanent barracks; could you estimate at all the average cost of a bungalow such as an officer inhabits in India?—I cannot; but the cost would not be at all comparable with that of our permanent barracks, because the officers' bungalows generally are of temporary construction, requiring constant repairs and renewals.

217. It is a very low cost, is it not?—I do not think it would be now; officers are very shy of building houses now, and mainly on account of the expense.

218. Sir *C. Wingfield.*] Did all these specimen plans of barracks that were sent comprise an upper floor?—No; plans of single-storied barracks were also sent, but the ground plans for a single and for an upper storey would be nearly the same; it is simply putting one storey on the top of the other.

219. Was it optional to the local governments to have recommended a single storey?—No; because the Resolution of the Government distinctly says, with regard to the storeys, that "double-storied barracks, in which the upper floors only are used as dormitories and the lower ones as day rooms and for auxiliary purposes, should be adopted as a rule in all parts of India"; that was the principle laid down.

220. Then they had no discretion to vary from that plan, from the scheme of an upper storey?—Certainly not; that scheme has since been modified.

221. Therefore, had they been of opinion that an upper storey was unsuitable to the dry, hot climate of those particular localities, they would not have been able to urge that single-storied buildings should be adopted?—Every local government was consulted at the beginning, and they could have then given their opinions in any form they liked.

222. But when they were consulted at the beginning, had then the plan of an upper storey been resolved upon?—No; the only thing that then existed was my Memorandum suggesting the principles that should be followed; but the relative merits of single and upper storeyed barracks constituted one of the points brought forward for discussion in that memorandum.

223. But then, inasmuch as upper-storied barracks had never been built in Upper India, it probably would not have occurred to the local governments to object to such a plan?—But upper-storied buildings had been built in India, and existed; for instance, at Allahabad.

224. Not in recent times?—Yes; the Ellenborough Barrack was commenced in Lord Ellenborough's time.

225. That was inside the fort?—Yes.

226. And on account of the limitation of the space it was necessary to have an upper-storey barrack?—Yes.

227. But you can mention no instance where space to any extent was available where barracks with an upper storey had been built out of Bengal?—Well, I do not think I can; but it must be remembered that they had been proposed; for instance, the barracks at Cawnpore were half built when the Mutiny occurred; they were absolutely designed as double-storied barracks.

228. Were those barracks which were in course of construction at the time of the Mutiny upper-storied?—They were finished up to the lower storeys only; but they were designed, and intended to be completed, and have since been completed, as upper-storied buildings.

229. You have lived in an upper-storied house yourself, you say?—Yes.

230. Did you live in the upper storey in the hot months in April, May, and June?—I slept there in the hot months.

231. Then your personal experience is not unfavourable to an upper storey?—It is favourable.

232. You are acquainted with the house that I lived in?—I am.

233. And you know that my experience is decidedly the reverse?—That might have been entirely attributable to structural arrangement. Your house was ill ventilated; there was not sufficient ventilation in the upper rooms.

234. As it was under your charge, I wonder you did not inform me of that?—My recommendation originally was that that house should have been abandoned.

235. Now, you have stated that in one case the barracks cost 425 *l.*, and in another 286 *l.* per man; the accommodation for the soldier comes to that high price; is it not the case that a gentleman, a civilian, or military man, could build himself a very good bungalow for 250 *l.*?—In olden days it was very possible to build cheap bungalows, and probably they might have been built for the price that you mention. I am quite sure that that could not be done now-a-days. As I said before, if the barracks had been built on the same construction as those old bungalows, we should have been perpetually repairing them.

236. I am not recommending the Bengal system for barracks on account of the thatched roof, which would, of course, be dangerous; but comparing the relative cost, it seems a prodigious sum that the accommodation of each man has cost in these barracks?—I have no doubt it is a high sum, but we have a good article for it, except in the cases of failure which I have mentioned.

237. Is it not a prevalent opinion among the official community in Upper India that a bungalow made of unburnt brick is a cooler thing than a house of burnt bricks?—I have often heard the idea expressed, but I have never seen it supported by facts.

238. But you admit that it is a prevalent idea?—I admit that.

239. And founded, I presume, on experience?—I do not know on what it is founded; I think it has got no foundation. It has been my duty to consider the subject particularly, and I have given in previous answers the result of my experience.

240. However, you acknowledge that it is the prevailing opinion among English officials?—I do. But the question of roofs must also be taken into consideration. Of course a thatched roof will give a cooler house than any other description of roof that we know of.

241. Are these barracks made with flat roofs, or are they tiled?—The roof coverings vary, but there are none thatched; I believe that we have lately conquered the difficulty in respect to internal heat from roofs by making double coverings in a peculiar way, by which we get an air space between the two coverings. I found in a barrack at Barrackpoor, in which the roof covering was constructed in this way, that the thermometer in contact with the under side of the roof only read

read one and a half degrees higher that at a point six feet above the floor level. I think that the whole of these things are to be remedied entirely by care in the structural arrangements.

242. You said, I think, that there was only one building made with burnt bricks that had failed?—That is all that I know of; I do not say that that has failed, but that structural defects have been brought to notice.

243. It was an ordnance building at Allahabad? —That has failed, of course; I thought your remarks referred to barracks.

244. Has not also the gun-carriage building at Futteeghur? — The gun-carriage factory at Futteeghur is old; it is about to be abandoned; perhaps you are mixing up the two, because it is one of the gun-carriage buildings at Allahabad that did fail.

245. You said that those barracks that were built immediately after the suppression of the Mutiny, and were called the semi-permanent barracks, have most of them been utilized?—Yes; you are aware that all at Lucknow have been utilized, but you are aware also that those in the station of Roy Bareilly in Oude, and also in Seetapore in Oude, have been abandoned by troops, but they are occupied for civil purposes.

246. Also the station at Gondah?—Yes.

247. But only so much of them as might be made use of for civil purposes has been utilised? —Yes.

248. Is the money that has been spent on the Saugor Barracks and the Nusseerabad Barracks totally lost, then?—No, certainly not as to the Nusseerabad Barracks; I went down there myself and reported on the whole case to the Government of India. I do not know what measures have been taken on my report, because it was only delivered just as I left India, but I believe that it has been acted upon. A great deal of the work will be lost; I cannot say how much. At Saugor, as far as we know at present, the barracks have been entirely condemned; of course, there is the value of the materials still remaining, a very considerable sum, and I think it is quite impossible that the whole of the buildings can be so useless as they are said to be; I have read the Committee's report, and paid a great deal of attention to it, and I think that they have rather overdrawn their case in the total condemnation of the buildings. I have no doubt we shall find that a great part of the buildings can be utilised, not only for ordinary purposes, but for the troops themselves.

249. Are the new Allahabad Barracks occupied by troops?—Yes, they have been for some time.

250. Were not complaints made of the excessive heat?—As regards that, the barracks were incomplete when first occupied; they have now been provided with venetians, and care has been taken, I think, to paint the roofs white. I have not heard anything further in the way of complaint.

251. I think the East India Railway was completed and opened to Delhi by the year 1865, was it not?—It must have been opened then, I think.

252. And you did not commence the construction of these permanent barracks till 1865, did you?—Yes; they were commenced in 1864.

253. But very little progress was made in 1864 or 1865?—Not much, certainly.

254. Therefore, there could have been at that time no such very active competition between the railway and your department for materials or workmen, as the Honourable Member for London imagines?—Yes; the commencement of the rise was long prior to that particular time; any data which we have will be old data, with regard to old buildings, but the rise in rates commenced to take place before the Mutiny.

Col. *W. A. Crommelin*, R.E., C.B.

18 February 1873.

255. The rise in rates that took place no doubt has been going on gradually with the rise in rents and prices in everything throughout India; but there is no necessary connection between the works of the East India Railway and the barracks, as regards their effect on raising the rates, for one was completed when the other began?—All that can be said is, that the rise in rates has been in accordance with the ordinary series of events; I could not attribute it to any one particular cause; the railways of course have had a material influence on that rise.

256. Mr. *Dickinson.*] Have any of these stations at which these permanent barracks have been built been abandoned, or thought ineligible?—No, not where they went on the new system.

257. Mr. *Beckett Denison.*] Is not the annual cost of repairs of barracks a very formidable item indeed?—It is a formidable item.

258. I mean, that the proportion of the cost of annual repairs is a very considerable percentage of the original cost; is it not, or has been? —It has been, certainly.

259. And do you fancy that the annual repairs of these new barracks will be less costly?—That is one of the reasons why the Government determined to construct permanent buildings, viz., to reduce the enormous expenditure in repairs.

260. Do you think that that result will be attained?—Yes.

261. Mr. *Bourke.*] When did you leave India? —I left India at the beginning of 1871.

262. Have you seen the barracks at Dalhousie? —No.

263. Do you know officially anything about them?—I know nothing whatever of them.

264. Do you know that within the last 18 months, huts have been made of a single storey at Dalhousie, the walls of stonework and the roof of slate?—I have not heard of the fact, but I have no doubt of it, because the Government have determined, as a measure of economy, in the hill stations to build a different style of building altogether, as I said before.

265. Do you know at all the comparative cost of those huts and the new barracks per man?—I do not, because I do not know what has been determined upon.

266. Then you cannot give at all the comparative cost of those barracks with the new barracks? —No.

267. Now, in your opinion, would it be possible to build single-storied buildings of an equally permanent character with those large new buildings?—Only by reducing the accommodation.

268. But you can make these huts of stone and slate equally permanent with large barracks like those at Allahabad?—You can make the buildings equally permanent, but they will not be cheaper unless on a smaller scale; I do not quite understand the bearing of the question.

269. The bearing of the question is this: there

Col. *W. A. Crommelin*, R.E., C.B.

18 February 1873.

are new barracks built at Dalhousie, and these barracks have been built in the last few months, and they are one-storied houses made of stone and slate. I was informed by the engineer on the spot, that whereas the accommodation per man under the system of large barracks would cost 2,000 rupees per man, you could build accommodation that was equally permanent and equally good under that system of huts for 70 rupees per man?—I do not know to what he alludes; I should like to see on a question of that kind what was really compared; the thing is incomprehensible.

270. Sir *C. Wingfield.*] He alludes to those huts that were made probably for the troops immediately after the Mutiny?—There may be plenty of huts, but they do not give the same space. A great many huts have been built throughout the hills, but then they are merely huts. In the opinion of the executive engineer, the huts might be as good as other buildings, but it would simply be his opinion.

271. Mr. *Bourke.*] When the new barracks were originated first, after the Mutiny, there was a Sanitary Commission established, was there not, to consider the best style of barracks for India generally?—There was a Sanitary Commission for general purposes, but not for the barracks alone; I was the officer charged with the duty of making the proposals for the new designs, and these designs were submitted to all the Sanitary Commissions in India, who passed their opinion upon them, and their advice was received and generally accorded with the Resolutions. In that particular case of upper storeys, of which so much has been said, the Sanitary Commissions generally recommended the adoption of the upper-storied barracks.

272. Did the designs originate with the Sanitary Commission, or with your department?—They were prepared by me; that is to say, I first made my proposals, then, after all the advice of the authorities who were consulted had been received and considered, the Government recorded their conclusions. Then I made the specimen plans, which embodied the conclusions. These plans were approved by the Government and sent home to England, and then passed under the review of the Army Sanitary Commission, and received their approval.

273. So that your department is, after all, responsible for the plans of the buildings in the first instance, and your opinion was backed up by the Sanitary Commission in India and then afterwards by the Government at home; is that the case?—Yes.

274. Mr. *Lyttelton.*] What led the Government to modify their plans so as to allow men to sleep on the ground floor?—Simply, I believe, on the ground of economy.

275. The double-storied building was in consequence of a direct recommendation by medical authorities?—The double-storied building was generally approved of by all the authorities consulted, and was adopted in the first place by the Government of India. The Government have now modified their original order to a certain extent, namely, that they will allow single-storied buildings in dry stations, and the occupation of lower storeys as dormitories at such stations.

276. Then it is not on account of anything reported from medical authorities that that modification has been made?—No; there are no fresh statistics at this present moment, as may be understood from another extract from the Sanitary Report, which I have before quoted, viz.: "The returns designed to show the protection from disease afforded by upper storeys were too scanty to afford ground for generalisation." There is no additional evidence now to show that the lower storeys may be occupied with advantage; there is no fresh information, I mean, based upon statistical returns.

277. Have any barracks been completed under that modification?—Yes. With reference to the foregoing answer, I wish to explain that I was at the office of the Sanitary Commission yesterday, and was given to understand that returns are coming in now from Bombay, which show that the admissions into hospital have been less from the upper floors than from the lower floors.

278. Under the new system?—Yes.

279. That rather points to a probable remodification, does it not?—It would be impossible to say that favourable effects in a sanitary point of view will not arise from the exclusive occupation of upper floors or dormitories; I think that there can be no question about the success of such occupation. The measure modifying the new system is a decidedly economical one, but it remains to be proved whether it will turn out satisfactory or otherwise on sanitary grounds.

280. A return to the former system will involve a double expense, will it not?—I think not; nothing, at any rate, materially in excess of the expenditure involved in the original Resolution.

281. Are any one-storied houses being constructed now?—There may be, consequent on this order; but I cannot say from my own knowledge.

282. Sir *G. Balfour.*] We have been anxious to ascertain from you the cost of the outlay upon the barracks for the troops, and you state that accommodation for 15,000 men has been completed, and for 5,000 remains to be completed, at the cost of one and a quarter million?—These are rough calculations.

283. You said also that 20,000 troops now represent the increase of the European force as compared with the force before the Mutiny?—In round numbers; I tried to get the information as well as I could; I could not get to any precise return; but I think that may be accepted practically.

284. The present establishment of the troops being 61,000, or thereabouts, the establishment of the European force in India would therefore have been about 41,000 before the Mutiny?—I believe that the force thrown into the country in consequence of the Mutiny, that is to say, prior to the determination about these barracks, was as much as 75,000. Before the Mutiny the force was about 45,500; and in 1865, when the new barrack plans were taken into consideration, the force was 66,500. Precise information upon these points, no doubt will come from some other source; I would not give those as the precise figures.

285. For the sake of completing these numbers the establishment before the Mutiny was 45,000; at the suppression of the Mutiny, say in 1862, it was 75,000; in 1866, it was 66,000; and now it is 61,000?—About 61,000 or 62,000, I think.

286. Before the Mutiny we had, therefore, barracks equal to a force of 45,000?—No; I have already explained that it was not complete for that number.

287. The

287. The effective force was very much below the establishment?—When we started upon this new scheme we had not only to provide for the additional force, because prior to the Mutiny the Government was still providing accommodation for its original garrison.

288. The object now is to get the precise number at the present time for which we ought to have barracks?—And it was to further that object that I drew out the return now in my hand. I prepared this return in order that it might be useful when the question of the redistribution of the army was under consideration with reference to the extent of barrack accommodation that existed and that remained to be provided. The return shows the amount of accommodation we had at the close of 1870-71 for the troops quartered at stations under the direct control of the Government of India.

289. Then, according to your view, as we had an establishment of 45,000 men, we ought to have had barrack accommodation of some kind or other for that force located in India?—But I have pointed out that we were still building at the time that the Mutiny set in.

290. Then the barrack accommodation completed was for about what number of men before the Mutinies?—I am not able to give the number, but can only state generally that barracks were still being constructed, and were required.

291. At the beginning of the examination to-day we had an account from you of the bad state of the barrack accommodation before the Mutiny?—Of only a part of the accommodation; a great deal of the accommodation was very good.

292. I will read you a closing Minute of Lord Dalhousie's Administration: "The lodging of the soldier has been greatly improved, and no nation can show better or more appropriate quarters for the troops than the Government now provides for European soldiers in the East"?—That is so; all we have done since is to improve the general details of the buildings. I could illustrate that, as I said before, by what occurred at the time when Sir Charles Napier was Commander-in-Chief; the style of barrack which was adopted throughout the Punjaub was an extremely good one: it consisted of a central ward in which the beds were, and an enclosed verandah on either side, in one of which the men slept, and in the other messed.

293. *Chairman.*] The error in the paragraph seems to be in stating that this has been done, whereas it should have stated that a scheme had been resolved upon?—No, a great deal had been done; the present barracks might be challenged as to whether they are much better. The new plans only alter the arrangements in details; the only great difference is in the exclusive occupation of the upper stories.

294. Sir *G. Balfour.*] Lord Dalhousie states that "within eight years new barracks have been built, or are being built, at Peshawur, Noushera, Rawulpindee, Sealkote, Lahore, Rangoon, and Thayetmyo." He also added, "Old barracks have been replaced, or are being replaced, by new buildings at Ferozepore, Sabothoo, Kussowlee, Umballah, Agra, Cawnpore, Fort William, Moulmein, and Hyderabad in the Deccan"?—Quite so.

295. Therefore, in different parts in India, before Lord Dalhousie gave up his administration, we had extensive barracks, of a new description, built for the troops?—Certainly.

296. Having therefore completed that extent of barracks, and these barracks being of a very excellent description, as you have stated, the improved barracks to be completed for the additional force were merely for 15,000 men?—That is all that we have done up to the present time.

297. If we therefore take 250 *l.* as the cost per man for building these new barracks, the amount will have been three and three-quarter millions?—I have stated it as having been 3,152,069 *l.*

298. Then 3,750,000 *l.* ought to have been the cost for the barracks, if the accommodation for the 15,000 will have been completed at 250 *l.* per man?—Supposing that 250 *l.* per man to be the correct rate.

299. We ought to have spent, therefore, in 1864-65, according to your own statement, the sum of 3,750,000 *l.* for the new barracks for the 15,000 men; but on examining the finance accounts laid before Parliament, I see that we have spent altogether, for military buildings and fortifications, the sum of 8,933,089 *l.*?—Yes; but that includes military works of all kinds; I have explained that.

300. Therefore, upwards of 5,000,000 *l.* has been expended for other military works besides barracks?—Besides new barracks.

301. Could we have any statement upon what works that large sum has been expended?—I can give it you up to a certain time only.

302. *Chairman.*] Are you responsible for superintending not merely the barracks but all the military expenditure on works?—All expenditure upon military works.

303. Since 1863?—Yes.

304. Your appointment was not confined merely to the barracks, but applied to the general supervision?—Yes, but it had nothing to do with financial considerations beyond the fact of seeing that projects were economically devised; I do not think that the exact information that is required could be given without a reference to India; my returns for all other works I see, up to the close of 1870-71, show six and a quarter millions of expenditure; I have the details of that, but then there are charges for other works to be added.

305. Sir *G. Balfour.*] You stated, I think, that 4,500,000 *l.* had already been spent upon new buildings, and that 2,500,000 *l.* remained?—They are both estimates. On the new barracks in Bengal the actual expenditure was 3,000,000 *l.*, including the Budget allotments for 1871-2 and 1872-3; it was from that that we derived our rate per head.

306. Then besides that 3,000,000 *l.* already expended on account of the 15,000 men we have got one and a quarter million more to spend for the 5,000?—Upon a rough calculation.

307. That is 4,250,000 *l.*?—Quite so, for Bengal.

308. Then whatever further expenditure is shown in the public accounts must be for other works?—Yes; and I think I noticed this discrepancy before between my statements and the general statements; they are not so different as would appear at first sight, because I say that I can account at once to the close of 1870-71 for six and a quarter millions, and if we add the budget grants for two years the total will amount to something very much approaching to the general statement; probably the Bombay Harbour Defences have entered into that account, because it appears to include both buildings and fortifications; therefore if the Bombay works were

Col. W. A. Crommelin, R.E., C.B.

18 February 1873.

entered, I dare say the discrepancy would nearly disappear.

309. A question was also put to you by one honourable Member with regard to the expenses of repairs, as to whether the repairs have not been very extensive during the last two years?—They have been very extensive.

310. Are you aware that, although we have been erecting new barracks since 1864-65, the cost of repairs has been at the highest 249,000 *l.*, and the lowest 201,000 *l.*?—But these figures do not, I think, relate to the new buildings, but to the old barracks and military works of all kinds.

311. Still the amount has been larger of late years, necessarily upon the more extensive accommodation of the troops, as compared with former years?—No doubt; but the "repairs" include a good deal, periodical painting, and everything of that kind. "Maintenance" as well as repairs.

312. You spoke of barracks generally throughout India; did you include the Bombay and Madras Barracks?—I have never visited any of the barracks in Bombay and Madras.

313. Therefore your experience is limited to Calcutta?—Everything directly under the Government of India.

314. Have you the accounts for these things in Bombay and Madras?—No.

315. Are you aware that the expenditure in Madras is very much less than in Bombay?—Yes; I know the Bombay expenditure to be very high, but at Madras there is not much work to be done.

316. Are you responsible in any way for the classification of the expenditure in the public accounts?—In no way whatever.

317. Could you give us a statement of the military stations at which the expenditure has been going on?—I could give a list of stations; which would comprise almost every military station in the Bengal Presidency.

318. And if we had these stations before us would you be able to place opposite them the civil provinces in which the military stations are situated?—Yes, it is all done here in this statement; Bengal, North Western Provinces, Punjaub, Oude, British Burmah, and so on.

319. Would you also give us the strength of the troops in each of those military stations?—It is roughly stated here.

320. Would you hand in that return?—Yes; this return is a "Statement showing the progress made to the end of the year 1869–70, in providing barrack accommodation for European troops throughout India on the present improved scale, and in the erection of other military works." I should say that it is a document for which I alone am responsible, although it was prepared in consultation with the Accountant General of the Public Works Department.

321. Is the same document prepared for a later date than that?—This is the latest; it is said in a letter relating to it, that "the original programme is of so old a date, and differs so much from what it is now intended to carry out in many details, as well as in respect to the strength of garrison, that we have resolved not to bring it forward again in detail in future reports. When the new distribution of the Army, now under consideration, is decided upon, a new programme will be framed for the current and future years." That means a new programme for the works still to be done, and then progress returns would be made to correspond with it. I question whether anything has been done yet.

322. Have you any information with regard to the amount of money that has been expended out of loan in regard to the construction of barracks?—No.

323. Mr. *Eastwick.*] When you were directed to make a general inquiry with a view to the erection of new accommodation for the European troops, did you go into the question of the expediency of sites; did you consider whether it was desirable to have barracks upon the hills, or to continue the barracks in the plain stations?—No; although that question came under my notice from time to time; it was not a special question for me to take up. My duties mainly related to the plans of the buildings. As deputy secretary to the Government in the Military Works Branch, all questions regarding site and so forth came under my cognizance, but those questions were mainly decided in the Military Department.

324. You did not go into the general great question as to whether we should have stations in the hills for the European troops instead of in the plains?—No.

325. There are barracks at Raneekhet and Chuckrata, are there not?—Yes.

326. Not huts such as were described by the honourable Member for King's Lynn, but regular barracks?—They are a good style of temporary barracks.

327. With an upper storey?—There are two barracks of a permanent character with upper storeys; but the others are single storied.

328. What number of troops are accommodated at those two stations?—I think only a regiment of infantry at each.

329. Was it found that the expenditure on those barracks was less than the expenditure in the plains?—Yes; the general plan was much the same, but it was very much reduced in the proportions; the cost was less in consequence of the plan having been reduced, and because the buildings are of inferior character.

330. That is to say, you gave less space?—In the hills less space has always been arranged for than in the plains.

331. Would you, if you please, state the number of cubic feet in the plains?—Ninety superficial feet in the plains, and 77 in the hills. We have generally thrown cubic feet out of the calculation; for this reason, that in order to avoid radiation from the roof, and for other structural reasons, ventilation, and so forth, we have generally found that the height of our barracks to meet those conditions must be so great that the superficial space would be too little if we allowed the height to rule the allowance of cubic feet per man. For instance, I believe that 1,500, or from 1,000 to 1,500 cubic feet is all that has ever been desired. Thus the height being fixed at 20 feet, the superficial space would not be more than 50 or 75 superficial feet, and this would not be enough. We have proceeded on the principle of elbow-room required, and that has resulted in giving 90 superficial feet per man; that multiplied by the height, 20, would give 1,800 as the number of cubic feet per man.

332. I want to ask you whether you think that the expense, supposing that the Government had decided to do away with the barracks in the plains and to place the European soldiers in the hills, would

would have been much less as regards the building accommodation?—If the whole force had been put in the hills, and supposing that an inferior description of building, such as has now been ordered for the hills, had been decided upon, of course the expense would have been very much less; but supposing we had given the same substantial character of building, allowing of course smaller dimensions and less space, I do not think that there would have been any difference in the cost. But the idea now is, that we can afford to build for the men in the hills an inferior description of building; and of course the first cost of that would be very much less. It was considered that in the plains it would not be desirable to build anything that was not thoroughly good, and that therefore everything done in the plains should be done in the most substantial manner; but in the hills it is now thought (I do not say that I endorse the idea at all) that less substantial buildings will suffice.

333. Would the price of labour be greater in the hills?—It would vary; the price of materials, lime in particular, would be very much higher. I came to the general conclusion that, supposing we had kept to the original scheme, the barracks in the hills would not have been less expensive; of course if the style of construction is altered there, as I have pointed out, a much smaller expense would be incurred. We have instances at various places in the hills of inferior or semi-permanent barracks falling into decay; and my own opinion is that it would be much better to build at once (if we can get money to do it), proper barracks in the hills; that it would eventually prove the most economical course.

334. With regard to the upper-roomed barracks, I want to ask you when you use the upper rooms as dormitories, what do you use the lower rooms for specifically?—A portion of the lower floor is used as a dining-room generally, one-half of the floor, so that three-fourths of the whole barrack is given up to the soldier. There remains, then, one quarter of the whole building, or half the lower storey, which is set aside for what we call auxiliary purposes, such as orderly-room, recreation-room, store-rooms, libraries, and so forth.

335. The soldiers are not in the upper storey during the heat of the day at all, I suppose?—There was at one time an idea that the soldier should be forced to leave the upper storeys during the day and come downstairs; and of course the arrangement admits of that being carried out; but unless there is such a distinct order as that, of course the soldier can remain either up or downstairs, as he pleases.

336. Which would be the best in a sanitary point of view, in your experience?—I think to allow him to do as he pleases.

337. You do not think that it would be necessary to bring him down during the heat of the day?—No; because that would be assuming that the upper storeys are hotter than the lower ones. I do not admit that.

338. With these new roofs you think they are cooler?—I think so, at certain times; but we have no thermometrical observations to prove that that is the case.

339. Could you give the average temperature in the Return which you are going to furnish?—I must refer again to the quotation from the Report of the Sanitary Commissioner, for 1870, in which he says: "The returns of thermometrical observations in barracks, although not very reliable, are not unfavourable to the new buildings, the mean temperature being somewhat lower than in the others, and the range between maximum and minimum smaller." The temperature of the upper floor depends mainly upon the roof; if the roof is bad it will be hotter in the upper floors at certain times.

Col. *W. A. Crommelin*, R.E., C.B.

18 February 1873.

340. You cannot give us any idea with regard to Sir Charles Napier's barracks at Hyderabad?—No.

341. They were said to be extremely hot, you are aware, and so much so as to be almost uninhabitable by the soldiers?—I cannot say that I have heard that with reference to any particular barracks that were originated by Sir Charles Napier.

342. Did you consider at all whether mud barracks, supposing that you had the walls very thick, would not be cooler than these brick and stone barracks?—I did; I think the temperature would be the same whether mud walls or the regular brick walls are used.

343. I am speaking of mud roofs?—The same general answer applies; the coolness depends mainly upon the thickness of the roof covering. I do not think a covering of earth would be cooler than a covering of tiles or burnt bricks of the same thickness. A thickness of nine inches or a foot will, I believe, resist any sun.

344. You are aware that in Upper Scinde, which is supposed to be the hottest country in the world, and certainly the hottest part of India, the roofs are of that description?—Yes, the roofs are of that nature; but the layer of earth used is very thick, and of course it is a cheap way of getting a cool roof covering.

345. You are aware that the natives in Upper Scinde always build their houses in that way, though some of them are very wealthy men?—The result is this: I believe that, as already stated (setting aside thatch, or any perishable material of that sort), the power of any roof covering to resist the sun, depends mainly upon its thickness. Thickness involves weight. In consequence, although you may get your superstructure cheaper, the moment you add weight you add immensely to the cost of the timber or the iron supports of the roof, which are amongst the most costly items in barrack construction. And with reference to mud, you at once introduce decay from white ants. Every detail of that kind was carefully considered.

346. I suppose you never thought at all of the underground rooms?—Certainly; but my experience of them (we lived in them in Peshawur a good deal) is, that they are extremely unhealthy. Some misconception probably arises in regard to the different conditions of private abodes for individuals and abodes for large bodies of men; you see that that idea of the Tahkkana principle is entirely upon the basis of what you may call bottling up a certain amount of cool air, and there keeping it, and constantly breathing it. One or two individuals might fairly live in a Tahkkana for a considerable time; but if you put a number of soldiers there with only the space per man considered necessary for them, they would soon foul the air in it. Remarks have often been made as to the coolness of officers' bungalows when compared with the heat of soldiers' barracks; that simply means that the barracks are ventilated

Col. *W. A. Crommelin*, R.E., C.B.

18 February 1873.

and the bungalows are not. An officer's bungalow has four or five rooms, and he has a large amount of air in those rooms; before sunrise he throws open the doors, and takes in a supply of cool air for the day, and he takes care not to admit another supply until the following morning; but to attempt to carry out that for barracks for large numbers of men would be impossible.

347. You had some of those underground rooms at Peshawur?—For officers.

348. Not for the private soldier?—No.

349. A great part of the expense under the head of repairs is for thermantidotes; are thermantidotes tried at times?—They have been largely tried; they are merely fans, and have no effect in cooling the air except when they can be used in connection with wet tatties or grass mats during favourable conditions of the atmosphere; there is no difficulty about distributing cool air when you get it; but the difficulty is to manufacture cool air at a moderate cost at all times. New thermantidotes are not charged to repairs.

350. But by the thermantidote you merely pass it?—Yes; at certain seasons of the year, when the hot wind is blowing, and rapid evaporation from the wet mats takes place, they have a great effect; but during the rainy season, the suffocating period, all that the thermantidote does is to supply air; the great problem for us is how to manufacture a large amount of cheap cool fresh air. There is no process yet discovered to do that at an economical cost. We have a committee in India who are considering all those questions of cooling barracks.

351. Sir *C. Wingfield.*] Can you have that cooling apparatus in an upper storey?—Yes; it is very simple.

352. Are they used to the same extent as in the single storeys?—Yes; it is a mere matter of expense.

353. Mr. *Eastwick.*] Are the roofs watered?—No; I am afraid that the supply of water required for that would be beyond economic considerations.

354. I suppose that the building of these permanent barracks in the plain stations will be one inducement to keep the troops in those localities?—Of course, wherever expense has been incurred, there will be a reluctance to lose the money.

355. Can you say whether there is any disposition now to locate a great number of European troops in the hills, to follow up the example of Raneekhet?—There is certainly a greater disposition to occupy hill stations than there was when this scheme was first started; but I believe that there are many opponents of the measure proposed for occupying the hills largely, not so much on the sanitary as on the strategical question where the army ought to be; that is a question for decision in the Military Department.

356. Were any of these barracks, for instance, the barracks at Peshawur, constructed with a view to defence?—The Peshawur Barracks were constructed distinctly with a view to defence, the main object being to reduce the military garrison at that station to a minimum, that is to say, the European portion of the garrison; and in order to effect this it was necessary to put that minimum garrison into a defensible position against our refractory neighbours. It has always been thought that one of the chief causes of the illness at Peshawur was to be traced to the excessive amount of duty at that station; particularly the night duty during the autumn, when fevers prevailed. It is now arranged that by placing a minimum garrison in a sort of fortified inclosure, not only will there be a minimum of men exposed to the climate generally, but the smallest possible proportion of that number of men will be exposed to night duty.

357. Would these places themselves be equally desirable, in a sanitary point of view, as the barracks?—The barracks are designed upon the general plan; the only differences are that the walls of the lower floors have been made considerably thicker, so as to withstand light artillery, and that arrangements have been made whereby the upper verandah openings can be made defensible; the barracks thus modified are distributed and connected by slight works of fortification, so as to form a large inclosure (for it is something very large), which can be guarded at a few points, and when complete, no doubt it will be an extremely strong position.

358. And is the air shut off much by the inclosure?—No; it is really not an inclosure that will exclude air.

359. In your estimate for the accommodation of European soldiers, did you take into account fortifications where a certain number of men might be placed; the fortifications of Bombay, for instance?—No, the Bombay fortifications were quite apart. A small sum only was set down in the original estimate for fortifications.

360. *Chairman.*] Was that with reference to the barracks?—That which I have mentioned is the only fortified barrack, except one at Hydrabad, in the Deccan.

361. Mr. *Eastwick.*] There is a fortified barrack there?—Yes; that is to say, the barracks of one of the regiments have had a fortified inclosure arranged all round them, so that in case of emergency, the block might be used as a defensive post.

362. *Chairman.*] Has that added much to the expense of the barrack?—Of course, it is a distinct fortification in itself.

363. You do not include it in the expense of barracks?—No.

364. Mr. *Grant Duff.*] An impression has gone abroad that we are building large uniform structures all over India as barracks; is there any truth in that?—I have already explained that the specimen plan, although it was [illegible] absolutely insisted upon everywhere, has generally been accepted at the different stations in India; and, therefore, it may be said that in all parts of India we have got these new barracks much upon the same plan. Still, at Peshawur there has been a different description of barrack, and at Burmah, again, a different description.

365. Would it be true to say that we have some 20 different kinds of barracks in India, the plans being modified according to the particular places where the barracks may be?—Yes, I think so.

366. Sir *C. Wingfield.*] Deviations and modifications were allowed, but always on the assumption that there must be two storeys; is not that the case?—Yes, as far as the new buildings are concerned.

367. Mr. *Grant Duff.*] Then it has very frequently been said that the barracks are palatial; is that true in any sense whatever?—They are large, inasmuch as they accommodate considerable numbers of men; but in no sense are they palatial.

368. In

368. In respect of being large, are they larger than many of the barracks that preceded them?—No.

369. It has frequently been said that they are sun traps; is that true?—I have already endeavoured to explain that they are not so.

370. They have been said to be exceptionally costly; do they compare favourably with other barracks that have been built under the War Office, or under other authorities in other hot climates?—The only tropical barrack of which I have been able to obtain particulars is the one built in China, at Kowloon, for 48 men and two sergeants, with a narrow verandah all round and an ablution room at each end, giving only 1,000 cubic feet per man. The climate there is very different from that which we have to provide for; that barrack gives no separate messing room as we do, and the cost is 86 *l.* per man. But the comparison must be made with the rates of our barracks in India, which include the auxiliary accommodation; and these vary, as I have explained, from 100 *l.* to 147 *l.* per man.

371. Then do they compare favourably with our English barracks, if you make allowance for the very different kind of climate which you have to provide for?—I think so. The cost of the new barracks at Chelsea, including all the auxiliary buildings, was 168 *l.* per man; that is to go against 250 *l.*; but then in those barracks there are no messing rooms, and no verandahs, and they are for an English climate.

372. Is there any statement that you could put in with reference to that?—I could put in this statement which I now hold in my hand.

373. *Chairman.*] Can you make any comparison between work in India and in England, when workmen in England are paid 6 *s.* a day and in India only 1 *s.*, or even less?—Yes; but we have also to bear in mind the differences of the requirements, *e.g.*, the height that we require in India, &c. The only satisfactory comparison is with the one in China.

374. Is it not the case that precisely the same effect, physically, is produced, whether you have a sufficient air space between the roof and the ceiling, or whether you make your barracks without that air space of an enormous height?—We consider it desirable to have the height as well as the space between the roof and the ceiling; we have considered it necessary to give a height of 16 feet for the lower storeys and 20 feet for the upper.

375. What is that height given for; what purpose does it serve?—It serves against effects of radiation and for efficient ventilation.

376. You mean the sun radiating through the roof?—Yes.

377. Can the sun radiate through a roof and a ceiling, if the ceiling is properly stopped, and there is sufficient air space between the roof and the ceiling?—I do not think it ought to do so, certainly.

378. It cannot physically, can it?—We are now getting up experiments to see whether there is much radiation. Then, again, we have a verandah to provide for, and the height in some measure is regulated by that; the outer opening of this should be considerably higher than the door, say nine feet. If you have a sloping roof, and a 12-feet verandah (which width is supposed to be necessary to keep the sun well off the walls), and if you carry that slope up, you will find you get to a height of 16-feet at once; and then after that a certain height is required in order to introduce a clerestory window for ventilation purposes.

379. Is that clerestory window an absolute necessity?—We think so.

380. Would not precisely the same effect be produced if you ventilated through the verandah?—No, the verandah itself requires ventilating.

381. Supposing that there is a ventilator in the upper part of the verandah, is not that sufficient?—No; we attach the greatest importance to that clerestory window for ventilation.

382. Mr. *Fawcett.*] Since the improved barracks have been erected, has the average mortality of the troops increased?—We have this Report of the Sanitary Commissioner, which I have already quoted, and which states that "the returns designed to show the protection from disease afforded by upper storeys were too scanty to afford ground for generalisation." But I have ascertained from some returns that have lately come from Bombay, that the admissions into hospitals from upper storeys are considerably fewer than from the lower storeys.

383. You refer to a great many experiments that have been made with great care, as to whether these high rooms are necessary, and the advantage of having double ceilings?—Not to test the necessity of the height, but the comparative temperature of the two storeys.

384. But I thought you said that experiments were being now made as to the effects of radiation?—Yes; thermometrical observations are being taken, and they will test the extent of radiation.

385. But it would be more advisable, would it not, that they should have been taken before the buildings had been made, instead of after; one or two buildings might have been made by way of experiment?—But it never struck anybody that the upper rooms would be hotter than the lower ones. We had already upper-storied barracks, and never had complaints about them before; we rather had evidence the other way, that they were cooler.

386. These experiments are being made in consequence of complaints that were made?—Yes.

387. Do you know anything of the barracks at Mount Aboo?—No.

388. You could not give any evidence on that point, and say whether they have been pronounced unsatisfactory?—No.

389. Sir *D. Wedderburn.*] In selecting stations in the plains, for building permanent barracks, a good many were chosen, were they not, which had not previously been used as stations for European troops?—I do not think that European troops had ever been permanently quartered, certainly not in any number, at Morar.

390. Or at Allahabad and Nusseerabad?—Allahabad and Nusseerabad were not occupied before permanently by any number of European troops; there had been batteries of artillery located there.

391. What means were used for ascertaining that these were suitable stations for Europeans?—They were mainly decided upon strategical grounds. The precise sites were selected by committees appointed for the purpose, consisting of members representing the military, civil, and sanitary authorities.

Col. *W. A. Crommelin*, R.E., C.B.

18 February 1879.

392. Has there not been reason to think that in some instances, at Morar in particular, those sites have not been judiciously selected on sanitary grounds?—I can answer with regard to Morar, that it was decided that that cantonment should be near the capital of Gwalior; and a committee very carefully examined the ground to a distance of 12 miles all round, and submitted a very long report upon every possible site, and eventually decided upon the site that has now been fixed upon, which happened to be close to the site of the former native cantonment.

393. And which has not proved very healthy, has it?—It is not likely to prove healthy anywhere in that part of the country.

394. Sir *C. Wingfield.*] You say, as regards the upper storey, the question is very much one of the thickness or solidity that you give to the roof; but if you make a very solid roof to the upper storey, does not that lead to very considerable expense, because you must then make the lower storey proportionably strong to sustain the weight of this solid roof on the upper storey?—Of course, the more solid you make everything, the more costly it is.

395. But it is not confined to the roof; you must proportionately strengthen your lower storey to sustain this roof?—The walls of a building would not be sensibly affected by a little extra weight in the roof; the walls of a building generally would take 50 or 60 times the amount of weight put upon them.

Friday, 21st February 1873.

MEMBERS PRESENT:

Mr. Ayrton.	Sir James Elphinstone.
Sir George Balfour.	Mr. Fawcett.
Sir Thomas Bazley.	Mr. Robert Fowler.
Mr. Bourke.	Mr. Hermon.
Mr. Beckett Denison.	Mr. Lyttelton.
Mr. Dickinson.	Mr. M'Clure.
Mr. Grant Duff.	Mr. John Benjamin Smith.
Mr. Charles Dalrymple.	Sir David Wedderburn.
Mr. Eastwick.	Sir Charles Wingfield.

THE RIGHT HON. ACTON SMEE AYRTON, IN THE CHAIR.

Sir CHARLES EDWARD TREVELYAN, K.C.B., called in; and Examined.

Sir *C. E. Trevelyan*, K.C.B.

21 February 1873.

396. *Chairman.*] WILL you be kind enough to state what offices you have held latterly in India?—I had 12 years' service in India, from 1826 to 1838, during which I filled various offices at Calcutta and in the Upper Provinces. I was Deputy Secretary in what is now called the Diplomatic Department. I also had charge of a district of the Delhi territory, and was employed for a considerable time in the measures preliminary to the abolition of the transit and town duties, and afterwards upon a Commission for revising the Customs' system in India. After that I had 19 years' service at the Treasury in London. Then I had 14 months' service as Governor of Madras in 1859 and 1860. Then I served as Financial Member of Council for India, from January 1863 to April 1865.

397. In your latter capacity you have directed your attention much to the general financial state of India?—Yes; I had it all before me for three years.

398. Would you like, first, to give your general view as to the changes that have taken place in the financial condition of India?—Well, my general view is, that Indian Finance is substantially sound and sufficient for every necessary purpose, and that the embarrassments which have been experienced of late years are owing to the want of proper management and manipulation. My reason for holding this opinion is, from observing the rapidity with which, whenever Indian finance has become deranged, it has been restored. There are many examples of that. The first, just outside my personal experience, but quite within my personal knowledge, was the derangement of the finances consequent upon the Marquis of Hastings' wars in Central India. Lord Amherst, during the early years of his administration, made great exertions to reduce expenditure, and the consequence was that, during the later years of Lord Amherst's administration, there was a perfect plethora of money; they did not know what to do with it; they actually sent a circular round to all the Civil servants asking the amount of their debts, with a view to pay them off, and to relieve them from debt. Then came the Burmese War, which was a very expensive affair, and threw the finances into derangement again. After that came Lord William Bentinck, and set it all right again; by the mere reduction of expenditure he restored the finances. Then, quite of late years, there have been two remarkable instances. The greatest derangement of Indian finance that ever occurred was in consequence of the War of the Mutiny. The moment serious attention was paid to the reduction of expenditure during Mr. Laing's administration of the finances, with the assistance of General Balfour (for it was almost entirely military expenditure), the finances were restored, and a surplus was established. The latest instance of all was the other day, when Lord Mayo seriously applied himself to reduce expenditure, and a surplus was immediately brought about. There is a reason for this sound normal state of Indian finance in the nature of the people; they are an exceedingly docile and industrious people, and it is an observation as old as the time of Alexander, that the husbandman goes on ploughing his field, or reaping his corn, and the artizan working at his loom, while the hereditary fighting caste is settling the matter in the field. So it has been under all well-regulated Native Governments. The Native Governments, whether Mahomedan or Hindoo, have made it a point of policy to have a select band of soldiery attached to their own interests, and the expenses of Government were so slight, and the people so docile, that they had, as a rule, large treasures, as is perfectly well known; all well-regulated governments had a large reserve. It was an old observation under the East India Company, that Indian finance was not elastic, which really meant that the Company, following its hereditary cautious policy, did not like to impose new taxation; it was always reducing taxation, and scarcely ever imposed a new tax. But since the Mutiny, Indian finance has shown extraordinary elasticity, and has come up to the standard of the most flourishing European countries in that respect. It has increased, I imagine, on the average since the year 1857, at the rate of about three quarters of a million a year.

Sir *C. E. Trevelyan*,

21 February 1873.

399. Mr. *Fawcett.*] Is that increase one which has arisen from the natural growth of the revenue, or from new taxes; the Income Tax, for instance?—Chiefly from the natural growth of the revenue. When we come to the Income Tax, I think we shall find that the Income Tax has had very little to do with it.

400. *Chairman.*] Do you consider that there has been any greater weakness in recent times in the finances of India than there was formerly?—Yes, much greater; and the main point for consideration is this; assuming that the normal state of Indian finance is, as I suppose it to be, sound and satisfactory, whence have arisen the derangements and embarrassments of late years?

401. And to what do you ascribe the difference?—I ascribe the former satisfactory state of things mainly to this circumstance, that the East India Company, whatever faults it may have had (and I do not mean to make a general comparison), had these great merits—it was frugal, it was independent, and it was resistant to exacting external influences.

402. By that description, do you mean that that was its condition up to the time of the Mutiny, or up to 1834?—Up to the time of the Mutiny; and I will briefly state my reasons for that opinion; I ascribe it chiefly to the mercantile origin of the Company.

403. Mr. *Fawcett.*] May I ask, when you say that the Company was independent, and not subject to external influences, do you mean independent of claims made upon it by the British Government?—Yes, that is my meaning; it was a double Government, and it opposed a stout persistent resistance to any claims which it considered were unduly pressed. The opinion which I have given may be illustrated by a few observations. The East India Company was entirely, in its origin, a mercantile body, and the mercantile habits attached to it to the very last. When I entered the service, I entered it as a writer. I afterwards rose to be a junior merchant. I believe before I became a senior merchant the whole thing was changed.

404. Mr. *Hermon.*] You do not mean that you traded on your own account, when you say that you were a junior merchant?—No; only that the old mercantile nomenclature stuck to the system.

405. Some people traded on their own account, I believe?—No.

406. Not the uncovenanted servants of the Company?—Absolutely not the covenanted, with the single exception of the medical officers in charge of civil stations. With the help of Mr. Foster and Mr. Whiffin, who were lent to the India Government by the Secretary of State to revise the accounts, I assisted at the obsequies of the old mercantile account system of the Company, and very characteristic it was. Every item of expenditure was reported to the India House, to the smallest *minutiæ*; and every year in the annual accounts there professed to be a stocktaking, not only of money in the treasury, and so forth, and claims, but actually of the value of Government House and of Fort William, and of the entire dead stock throughout the country. I mention that to show how completely the old mercantile character clung to it. Then the constituent body of the Company was the Court of Proprietors; the very name is characteristic. Although there were disadvantages in the double government, yet it had its virtues, it had its advantages. The problem was, how to check the action of one country in spending the money of another; and it was fairly solved by the system that prevailed under the East India Company. Although the Company looked coldly on roads and education, and in fact made hardly any roads, yet it was economical of the money of its subjects. It was extremely cautious and indulgent in taxing its subjects, and it was a vigilant guardian of those under its protection.

407. *Chairman.*] Are we to consider this description as extending up to 1858 or only to 1833 or 1834?—I consider it as extending to the Mutiny, and that introduced a new *régime*.

408. Can you state precisely to the Committee what the exact relation of the Board of Control was to the Court of Directors previous to 1858, with reference to the expenditure of money in India; do you recollect whether the Board of Control could originate a Despatch or not?—No; the control of the revenue rested entirely with the East India Company, and the Board of Control was constantly checked in its endeavours to order expenditure.

409. But could not the Board of Control, if a Despatch was originated in the East India Company's Office, and once sent to it, introduce any change in the expenditure, and insist upon the Despatch being sent out whether the Court of Directors liked it or not?—That was a moot question; but, speaking generally, the control of the revenue and expenditure rested with the East India Company, and the East India Company was a deeply-rooted, solidly-established representative of the influential mercantile middle class of England, and they were able to hold their own in general; and they carried cases even to the Court of Queen's Bench. I recollect Mr. Grant, as President of the Board of Control, suing out a *mandamus* against them in the Court of Queen's Bench to force them to pay debts said to be due to British subjects by the Nabob of Oude. To send out a revised Despatch, ordering their payment, that is to say.

410-411. And do you recollect whether they did send it out when that application was made?—I think not; but even supposing that they were overruled in that particular instance, still the normal state of things was what I describe, that the Court of Directors kept a strict guard over the money-box.

412. Then is it your opinion that that control of theirs facilitated a resistance to any demand that might be made in this country by the Board of Control for expenditure of Indian finance?—Yes, greatly so. I had personal experience of that, for, during nearly the whole of the 19 years that I was at the Treasury, I had to settle with Mr. James Cosmo Melville, the general secretary of the India Company, and Mr. Phillip Melville, the military secretary, the annual accounts for military and other expenditure; and it was by far the severest task I had; it was cat-and-dog work; and I was constantly overruled. No English official department then had any power of drawing upon India or of increasing the Indian expenditure; and so certainly of the two, I should say that India got off best.

413. But did the Court of Directors, however ready to embark as in matters that suited themselves, embark as freely in expenditure as other governments?—Well, their magnificence was chiefly shown on the mercantile side. It was an observation

observation of those days, that while the mercantile spirit prevaded every part of their territorial government, they conducted their trade in the spirit of territorial grandeur, the ships and establishments, and so forth.

414. That they traded like princes, and governed like merchants?—Exactly so; that states it briefly.

415. Do you think that since the direct administration of affairs by the Secretary of State for India in Council, there has been a greater disposition to give way to demands for expenditure of Indian finances?—Yes, no doubt. The Queen's Government has shown itself profuse and squeezable; but I must enlarge a little on that, that I may not do injustice. The Queen's Government has been earnestly desirous to do justice to its great task; but it has entered upon its charge with something of the excess of zeal of a person who has come into office with a strong impression that a great arrear of improvement has to be brought up. Whenever a clear case has been made out for any administrative improvement however expensive, it seems to have been accepted quite as a matter of course that it should be done, and done at once, without much regard to its effect upon the finances. In short, the spirit of the new *régime* has been high-minded, open-handed, munificent; and it is remarkable that all this was foreseen, and safeguards were attempted, but in vain.

416. Do you refer to the powers specially given to the Council in regard to the expenditure?—I refer to the great point that was made in the transfer of the government, of building up the personal independence of the members of the India Council by a life tenure of office, and the arrangement that was made to continue in the Council the exclusive control over payments out of the revenue which had attached to the East India Company. But, as regards expenditure, it has all gone for nothing. Perhaps the great fear of those days was that the Queen's Government would abuse the patronage of India, and on that point the safeguards certainly have been effectual, in the main. But, as regards expenditure, a state of things has arisen which could not have been foreseen at that time. The truth is, that our English Government is a highly popular Government; it is based upon a popular assembly, and the influences which press upon the Government in that assembly, and the influences which press upon the Government outside, through the press, and through their influential supporters, have altogether been too strong, and every safeguard has been overborne.

417. *Do* you ascribe in any way what may be called the inefficiency of the Indian Council to carry out that policy which you have indicated to the circumstance that it has somehow or other been constituted entirely of official people, or persons drawn from the public services in India, and not from any class of society independent of official life in India?—No, I think not. I think that, however the Council might have been constituted, the influences which I have alluded to would have been too strong for the Government. We have been serving our novitiate in the Government of India under a new state of things. If all this could have been foreseen, it would have been provided against, no doubt; but it was not foreseen, and the direct action of the popular Government of England, brought to bear immediately upon the administration of India, has been altogether too strong. When people spend their own money they generally look well after it; when they spend other people's money they are generally inclined to be liberal; and that is what has taken place here. It is the English Government spending the money of the people of India under all these influences, and the new machinery of Government has provided no effectual check against it; and therefore I state, as the first and most powerful cause of the deranged state of Indian finance of late years, that no sufficient barrier exists against official or popular pressure, or against the greed of class interests.

Sir *C. E. Trevelyan*, K.C.B.

21 February 1873.

418. Now will you be kind enough to give the Committee some illustrations of the general views that you have stated to show how far they are sustained by the facts?—First of all, under the official head, every now and then a fever, a sort of epidemic, takes possession of the public mind; the *idée*, the mania of an individual, becomes intensified when it seizes upon the public mind. Well, we had a fever of sanitation a few years ago, and one result of that is, that the people of India have been let in for an expenditure of 10,000,000 *l.* or 11,000,000 *l.*, much the largest portion of which has been entirely thrown away, in new barracks. In the first place, I believe that the greater part of it was totally unnecessary; they were seized with a fit of providing an entirely new outfit of military buildings, according to the last new-fangled fashion. And in the next place, the particular kind of buildings, two or three stories high, presenting large surfaces of stone and brick and tile to the Indian sun, was totally unsuited to the circumstances of the country; the true model is the Indian bungalow, made of thatch and mud.

419. And in which you put your buildings in the shade?—Yes; private people in the Upper Provinces always reside in houses of that sort; and what was really wanted for the troops was large bungalows, which they had to a great extent.

420. Do you consider that that great movement originated in this country, or amongst the official classes in India?—Entirely in this country; it was the consequence of orders from England.

421. But did the movement originate or not in India?—No; in this country. Of course, it was a very valuable movement; I am only speaking of its excess and misapplication.

422. But supposing the movement were misapplied in India, where are we to look for the misapplication of it; to the administration of Indian affairs in this country or to the administration of those affairs in India?—In this country entirely. The Government of India were merely obeying orders in constructing these magnificent palatial barracks.

423. But would it not rest with the executive officers of the Government of India, supposing the principle to be laid down that it was desirable and economical to have certain sanitary improvements, to apply the sanitary principles in the proper mode?—No; the orders of the Home Government came out with such a completeness of detail, and with such an authority, that the Indian Government had no choice at all. I assisted in the deliberation of the Council of India on the subject, and the only question was where these barracks were to be erected, and for what force. There were some minor details that

Sir *C. E. Trevelyan.* K.C.B.

21 February 1873.

that they were open to decide for themselves, but in the main they took the plans that were sent out to them from England.

424. In arriving at these plans with this completeness, would you ascribe such action as that on the part of the Secretary of State for India in Council to the fact that he was surrounded by a large Council of persons, all of whom had been Indian officials in these places, and therefore thought themselves as competent as anybody else to deal with the matter?—Well, the Council themselves were overborne. Probably I may best describe my view of the matter by saying that the old East India Company never would have done it; they would have fought it *à l'outrance* before they would have laid out 10 or 11 millions in rebuilding all the barracks of India on that magnificent scale.

425. Do you think it was in consequence of the different constitution of the Court of Directors that it was very much a settled policy with them never to give any detailed orders to the Government of India, but to make the Government in India work out the details according to the conditions of the climate and of the people?—Yes; they were much more reserved in their directions to the Government of India. Their principle was that India was to be governed mainly on Indian principles, according to Indian experience and habits and feelings, and according to the actual state of things, including finance; they rarely gave any positive out-and-out instruction, but left it more or less to the decision of the Indian Government. I am quite sure that both for that reason, and with reference to the inherent merits of the case, the old Company never would have done this.

426. Did the old company communicate more with the several Governments, and therefore leave them less to their own discretion, than the Secretary of State does?—They left the several Governments much more to their own discretion than the Secretary of State does. Through the new arrangements India and England have been brought, as it were, side by side, and the influences of the Government of England, including Parliament, and including also that obscure but still very powerful government which goes on in the interior of English society itself, through the press, are brought to bear immediately and directly upon India without any barrier, without any buffer at all.

427. Then in recent times, has there been a tendency to centralisation in the Governor General of the details of administration; I am not speaking of the immediate changes that took place recently, but up to within a very short time, was there a growing tendency to vest the administration in detail in the Governor General?—No doubt a very great tendency, but I propose to deal with that under a separate head afterwards. I will go on now to give another example.

428. It might be convenient to tell you that the gentleman who was examined here last time gave us rather a different view of the extension of the barracks, and led us to suppose that the whole of the details involving this enormous expenditure resulted from the general expression of official opinion in India; although the Home Government sanctioned it, yet that the official circle in India was responsible, as well as the Governor General, for the high scale of expenditure?—I am under the necessity of gainsaying that. I know that the estimate first of all was 8,000,000 *l.*, and then it soon rose to 10,000,000 *l.* and 11,000,000 *l.*, that was the estimate which was accepted in India; and I took part, as I said, in repeated deliberations of the Council in India in settling the barracks in different parts of India, Allahabad, Peshawur, and elsewhere, and I know that the standard plans of model barracks (that was the name by which they were known), that is, a certain model for the construction of these barracks, after having undergone great consideration and revision in England, were sent out as the perfect standard, and that was accepted quite as a matter of course by the Government of India; and what remained was merely matters of detail, where the officers' quarters should be, and whether the barracks should be fortified; whether they should be placed in this place or that, and so on.

429. Do you recollect whether the standard that was then finally settled was very much upon the basis of a standard that had been arrived at and carried out in the Punjaub before that change took place, before the barrack question was again raised?—That I really cannot say. All I can say is that we heard nothing about it in the repeated discussions in the Council. The Council gave a great many sittings to it, at the whole of which I was present.

430. Will you give any further illustrations of official influence on expenditure?—The next illustration that I would give is the unrestrained liberality with which the amalgamation of the Queen's and Company's army was effected. Now, that amalgamation was an indispensable measure; but there are two ways of doing everything, and that was done in the most expensive manner possible. I would especially call attention to what are commonly known as the colonels' allowances. Now, from time immemorial it has been an established principle of administration to fix an establishment, as it is called, according to the supposed wants of the service, and to promote only to vacancies on that establishment, so that there is a self-acting check against excessive expenditure; and also there is great uncertainty about the officer's promotion, and those who do not feel that they have a call for the service, or who have a wish to enter upon other pursuits, retire from time to time in considerable numbers. But on the occasion of this amalgamation the extraordinary step was taken (it was a perfectly novel invention; nobody ever heard of it before) of prescribing that the officers of the different grades should be promoted to the next higher grade after a fixed period of service, so that every officer in the service, even the youngest, could calculate with the utmost certainty the time when he would arrive at this liberal scale of allowance, about 1,100 *l.* a year. Well, this has led to a wonderful promotion, an unheard of promotion. We already, in fact, have an army of field officers with very few subalterns. I also say generally, that far too great a disposition was shown to stop the mouths of the Indian officers with sweetmeats. As regularly as a new claim was made it was satisfied, and that laid the foundation for other claims, till at last they found that such an extraordinary measure of promotion had been given to Indian officers that the Queen's officers began to call out; that was the first check given to these wholesale concessions. Then I would

call attention to the contrary practice we have pursued in England. Quite as fundamental a change, although of a somewhat different sort, has lately been made in the English army by the abolition of purchase. Now the officers of the old Queen's army have begun to call out in the same way, but they have made a mistake, because, instead of spending the money of the Indian taxpayer, the Government, in reference to the question of purchase, would have to spend the money of the British taxpayer, and so I do not think that they will make much way.

431. Do you think that the pressure that was brought to bear came from England or from India in these transactions which led to such a great increase of expenditure to carry out the amalgamation?—They mainly came from India. The claims of the Indian officers were constantly put forward in the House of Commons as a case of grievance, and I am afraid that the counter-claims of the Indian taxpayer were not urged with equal zeal. I am old enough to remember all that took place about half batta; that was a very small matter indeed compared with what we are talking about, only about 150,000 *l.* a year at the very outside, and yet for the sake of that 150,000 *l.* a year the East India Company and the Government of India withstood the whole body of its officers to such a degree that they were on the verge of mutiny.

432. But do you recollect whether the mode in which the amalgamation was carried out was first settled by a committee or commission composed chiefly of Indian officers of experience?—Very likely; but that was setting the wolves to guard the sheep.

433. Still, do you recollect whether the whole of this expenditure was not the result of the first step that was taken; that one step led to another?—No, by no means. I assisted in that first step. I gave strong evidence before a large Commission, which reported in favour of the amalgamation, and nothing of this sort was in the least contemplated. It was never supposed that anything more would be done than to maintain the Indian officers on an exact equality with what they were before. Whereas, the fact [illegible] we have gone a great deal further.

[illegible]4. That is so; but do you recollect that [illegible]n the amalgamation had been determined [illegible]pon by the Government, a scheme was set on [illegible]ot for creating what was called a staff corps, [illegible]d giving the officers on that staff corps a posi[illegible]on entirely different from that which they had [illegible]reviously held, and which you say you did not [illegible]ntemplate being changed when you re[illegible]mmended the amalgamation?—The staff [illegible]rps was a perfectly right measure.

[illegible]35. Do you recollect that the conditions [illegible]xed to that staff corps were the cause of [illegible]e subsequent claims?—They may have been [illegible]casion. I cannot admit that they were [illegible]use. My belief is that if the matter had [illegible]properly managed, the amalgamation might [illegible]been effected with at least as much economy [illegible]e abolition of purchase.

[illegible]6. Supposing the conditions had been right, [illegible]view would follow; but were not the con[illegible]s that were laid down, such as rendered [illegible]sary all the subsequent steps, by giving to [illegible]fficers who joined the staff corps relative [illegible] and position, very much superior to that [illegible]h the rest of the army considered them entitled to?—The formation of a staff corps was a necessary and proper measure; but the annexing to the staff corps as a condition that the officers should rise in the way I have described, entirely according to length of service, giving them the strongest possible inducement to hold on till they got 1,100 *l.* a year, was quite unnecessary, and was altogether wrong, in my opinion.

Sir *C. E. Trevelyan*, K.C.B.

21 February 1873.

437. Was it not the foundation of all the subsequent claims?—It was, no doubt.

438. Can you tell the Committee where the suggestion came from, that this should be the condition of the staff corps; was it not a suggestion that came from India, and was pressed upon the Government of this country?—It may be; all I can say is, that I never heard of it till it was done. It may have come from India, but that was no excuse, because such a proposal, coming from the officers interested, ought rather to have induced caution.

439. I do not know whether it came from India or not; I am only assuming in the ordinary course of things that it would?—I think that as a matter of history it would be interesting to find where such a proposal did come from.

440. Would you be good enough to give any further illustration of your general views?—I had to settle the army recruiting expenses with the two Melvilles every year. The actual recruiting the Company managed for themselves. They had a single depôt at Warley in Essex, with a small establishment of officers, and their recruits cost a very moderate sum indeed; I do not know how much less than 30 *l.*; 25 *l.* perhaps a head; they were put on board ship at 25 *l.* a head, say something of that sort; whereas now, instead of having one depôt, there are as many depôts as there are regiments of the British Army, two company depôts, a considerable portion of the expense of which is charged to India, and the result is, that it costs upwards of 80 *l.* to put every recruit on board ship. That seems to me to be an example of the pecuniary interests of India being sacrificed to English official pressure, backed by the natural desire which people have to save money in Parliament and elsewhere. And in this recruiting there is no excuse at all, because the Indian military service is highly popular, it always has been, and it still is; and I believe that if the Indian service was eliminated from the general recruiting of our army, it would be found that there would be much more difficulty in getting recruits than there is now.

441. You think that if the Government entered into a contract for the troops now at 25 *l.* a head for India, they could get them?—Circumstances have changed, wages have gone up, but I am perfectly convinced that they would get them, and well-trained recruits, too, for half what they give now.

442. Do you attach any weight to the recruits going out to India in a more advanced military condition than they used to do formerly when they left this country?—Not much. No doubt the recruits are better trained now than they were under the Company. But how they fought under the Company! What British regiment ever fought better than the 2nd Madras Fusiliers?

443. Do you think that now that they go overland, and arrive very soon, instead of having the discipline of a voyage round the Cape, it is important that the troops should be kept longer

Sir *C. E. Trevelyan*, K.C.B.

21 February 1873.

in this country and become more disciplined before they are allowed to land in India?—I do not think that the voyage round the Cape contributed much to their military efficiency except so far as they were under orders; indeed, it was not a state of life favourable to discipline. I think it may be struck out of the account. I went out with a party of recruits myself, and I am sure that they got no good from it.

444. Do you ascribe this more expensive arrangement entirely to what may be called the pressure of the English army administrators upon the India Office?—I ascribe it to the fact of the principle of our official connection with India being changed, to Indian interests being brought quite alongside of English interests, and to there being nobody of sufficient importance like the old East India Company to stand up for the interests of India.

445. But do you think that there has been no equivalent advantage gained in having this considerable force in England kept in a good state of health, and with less risk of mortality, which could be sent to India at a moment's notice?—We had that advantage before. How was India reconquered? Only by reinforcements from England. There is a great advantage in having these two-company cadres ready to fill up, but then the advantage is not for India but for England; it adds greatly to our defensive force in England.

446. Would you give another example of your views?—The last I will give under the official head is the new annual subsidy to the navy. Now, under the East India Company the principle was that India was on the same footing *quoad* the British navy as Canada, the West Indies, the Cape of Good Hope, Australia and China, and all the world. The British navy is maintained by the people of England to preserve the peace of the seas, at probably more than their share of the expense, compared with other nations; I suppose that they have a larger interest; but, however, that is the general principle. Well, the sole exception that has been made to that principle is quite of late years, since the transfer of the Government of India to the Crown, against India, and it seems to me to be altogether wrong. If it is right, it should equally apply to Australia, the Cape of Good Hope, the West Indies, and Canada: in fact, the expense of the navy should be apportioned among all the different members of the empire.

447. Had not the Court of Directors of that day set up this principle of the necessity of a special navy by establishing finally, after various modifications, the Indian navy?—Yes; but before the East India Company came to an end it was found to be a complete mistake, and the first thing that was done after the transfer of the Government was to get rid of the separate Indian navy. If the Company had a pet job it was that of their navy.

448. And a very costly one to the people of India?—Yes.

449. Though very agreeable in the Cinque Ports, and other ports in this country?—Yes.

450. Was not the scheme for supplying a special naval service in India considered to be the result of the abolition of the Indian navy, and as taking its place?—No, I think not. I was in India when the Indian navy was abolished; it formed part of my first and second budget, in fact, all three; and I am cognisant of all the circumstances; and at that time there was not the slightest idea, at least not in India, of subsidizing the navy. The only excuse for anything special in the way of a naval force in India is a gunboat or two in the Persian Gulf; that is all; it was understood that that would be provided by the navy; and I remember the arrangements that were contemplated, if not actually made, that those two gunboats were to be in great proportion manned by natives, and so on.

451. As a matter of finance, taking the charge for the subsidy that is now given to the British Navy, is not the arrangement more economical than that which obtained in the old Indian Navy?—No; because, owing to the manner in which the whole affair has been mismanaged, we have got, in the shape of transports and passage-boats, and gunboats, and above all, floating batteries, at least an equivalent for the expense of the Indian Navy, and this subsidy in addition. I am not speaking of the English and Indian transport service, but of the local marine which has been maintained. I should like to give separate evidence on that; it is a very important point. The local naval expenditure at Bombay of all sorts is equal, or nearly so, to that of the old Indian Navy, and we have this subsidy into the bargain; and, of course, the transport service between England and India in addition. That is all I have to say under the head of official instances; there is another head which I would call sentimental.

452. Will you be good enough to give some illustrations of what you consider the sentimental influence over the Indian administration leading to increased expenditure?—I now refer to a head which in the main is sentimental. It is very pleasant to be generous, and it is pleasanter still to be generous at the expense of other people. Now I am confident that the extraordinary liberality with which the descendants of Tippoo Sultan were dealt with under the immediate action of the Government of this country could never have happened under the East India Company; and the same with the descendants of the Nawaub of the Carnatic. The entertainment to the Sultan is a small matter, but still it is significant.

453. In that case did not the British P[arlia]ment vote an addition to the Civil List fo[r the] year to enable Her Majesty to entertai[n the] Sultan?—It may be so; but I am quite sur[e] the East India Company never would have [given] 10,000*l.* in entertaining the Sultan.

454. Mr. *Fawcett.*] You refer to the ent[er]tainment at the India Office?—Yes.

455. Which was paid for entirely by the peo[ple] of India?—Yes.

456. *Chairman.*] I understand your vie[w] that the Government here was liberal w[ith] money of the people of India; but was th[ere] an equal liberality with the money of this c[ountry] in voting sums for entertainments for that [purpose] —I cannot speak positively; my impres[sion] that it was not corresponding to that whi[ch was] shown by the Indian Government; and I [would] be understood that in the evidence I a[m] giving I do not profess to mete out pra[ise or] blame, but I have been asked to state the [causes] of the derangement of the Indian finances, [and I] state these. The biggest case of all is [that of] Mysore.

457. To what extent do you consider that the liberality to Tippoo Sultan's family was profuse?—I am perfectly familiar with all the circumstances connected with Tippoo Sultan's family. I lived for many years at Calcutta in daily intercourse with them, and there were some highly respectable members of it, and they had all settled down without any idea of any great advance in fortune; but Nawaub Golam Mahomed, a highly respectable gentleman, finding that the government was transferred to the Queen, thought it would be a good speculation to go to England and see what he could get. I suppose he was advised that there was a strong sentiment in England about the famous old family of Hyder Ali and Tippoo Sultan which we had destroyed, and that possibly he might get something; and he worked that sentiment very ably, and was helped. And then, in all these things, there is a good deal of agency, as it is called; heavy sums are paid under that name by the native families interested to English people, perhaps less in this than in other cases of the same sort. It reminds us of the worst times of the Roman Empire, when the different African and Asiatic sovereign families used to come to Rome for similar purposes. I am not prepared to go into the details of what they had before, and what was given to them. I do not at present remember, but at the time I was familiar with them, and I received a very strong impression that it was money entirely thrown away.

458. Can you give the date when the thing was settled?—It was 1863, or 1864 or 1865. A portion of them remained in Madras at Vellore, where I was in communication with them as Governor of Madras; but the majority of the family had settled at Calcutta, and had become [illegible]gular inhabitants, and mixed with society as [illegible]established inhabitants, and their condition in [illegible]as fixed, and such a windfall as this they [illegible] for a moment dreamed of; but, however, [illegible]tried their luck, and succeeded at the ex[illegible]e of the taxpayers of India.

[illegible]9. Now with reference to the Nawaub of [illegible]arnatic?—The same with the Nawaub of [illegible] Carnatic. There by a decision of Lord [illegible]housie's Government, supported by the Home [illegible]vernment, the Musnud of the Carnatic had [illegible]n declared to be extinct; but there was a [illegible]ephew, a Nawaub Azimjah, who was discontented, and made claims, first of all, to the Musnud, and when he found that he could not get that, he tried how much money he could extract. When I was governor of Madras I thought the matter was settled. I remember I called upon him and conferred with him, and suggested to him that it would be well for him to take up the position of the first subject of the Madras Presidency, the highest noble of the South of India; and he came to a Government entertainment in the banqueting house, and I thought it was all settled; but, however, seeing that Tippoo's descendants had fared so well, he thought he would try his luck too; and he employed the same machinery with the same results. He got a large increase of stipend himself, and a very large sum to pay his debts, and 15,000 *l.* a year added to the incomes of his numerous dependents, who live there in idleness at the expense of the ryots of India.

460. Mr. *J. B. Smith.*] Was the sum that was given to him an annuity for a term of years or in perpetuity?—I believe chiefly for life. I do not think he has children; however, there was a very large sum given for paying his debts; whereas I thought the debts were all settled. In fact, they were settled twice over; first of all a settlement was made on a moderate footing; and when I was governor of Madras, that settlement was still maintained, and was supposed to be final; and a great deal was going on about it; but all that was superseded, and a much more magnificent settlement of his debts was made: a very large sum of money was paid, and his stipend was very much increased, and 15,000 *l.* a year added to the smaller stipends of his followers.

Sir *C. E. Trevelyan*, K.C.B.

21 February 1873.

461. *Chairman.*] Now, will you give us your views with reference to the arrangement made for Mysore?—I will not enter upon the general question. I have a strong opinion. I may say that I have a right to an opinion, because I drew the original despatch of Lord William Bentinck's Government ordering the sequestration of Mysore. I was then deputy secretary in the Political Department as it was called, now the Diplomatic, and I was cognisant of all the discussions that took place, and knew the whole thing, and I have watched it since from time to time, and my own opinion is that we ought not to have relegated that noble country to the chances of a new Native Government, not an established Government, but a mere boy picked up at hazard and manufactured for the occasion, and that the true thing would have been to have absorbed it, to have accepted the lapse, to have added the million a year which is the revenue of Mysore to the Madras revenue, and to have acted with all the more liberality to the whole of our subjects in the South of India and everywhere else, enlarging the employment and the salaries of the natives, and dealing more liberally with roads and railways, and in every way whatever; that would have been the true thing. But, assuming for the moment that it was proper not to absorb Mysore, even so, I maintain that it was a very extravagant arrangement financially; for the peculiarity of Mysore is, that it is a glorious tract of fertile country entirely surrounded by our country, so that they partake to the full of the advantages of our military protection; they can have no external enemy whatever, and there are many other indirect advantages from our post-office and our telegraphs and railways, and a good many other advantages; so that, even supposing the native government had been revived, we ought to have made a new financial arrangement suited to the new circumstances. There was an old arrangement made in Lord Wellesley's time, by which they had to maintain a certain number of irregular horse—that was all; that was suited to the circumstances of the time; because the object was to put a local Hindoo government in the place of the former Mahomedan government of Hyder Ali and Tippoo, and to oppose it to the Mahrattas, and so on. That was suited to the circumstances of that time; but if we choose to revive the native government of Mysore under the entirely new circumstances of the present time, we ought to have made a new financial arrangement, and have taken a proportion of the Mysore revenue, suited to the advantages which they derive from us.

462. Then do you ascribe this new policy to the influence of English feeling on the Secretary

Sir *C. E. Trevelyan*, K.C.B.

21 February 1873.

of State for India in Council?—Yes, entirely so; it was done in the House of Lords under the influence of a brilliant oration, and there was no *quasi* independent body like the East India Company to say nay, and so it was accepted as a matter of course. The people of England did not understand the subject; they thought it a very fine thing to be self-denying, and give back what we had taken, and so on.

463. Do you attach any weight to the general policy of preserving a number of native independent states?—Yes, the greatest possible weight; but they ought to be integral substantive national states, and not merely manufactured artificial states like Mysore. Not many years before, Mysore had been for three generations under a Mahomedan Government, and the restored Mysore family had no real hold upon the country whatever; it was in no sense a national government, and I firmly believe that if, instead of making it all depend upon a limited number of interested officials immediately connected with the administration of Mysore, who pulled the strings with their petitions sent to Calcutta at the expense of 500 rupees (which I remember it cost to telegraph a single petition to Calcutta), and with the large sums paid for agency in England, and interest made by them in all sorts of ways, the whole of the people of Mysore, that is the ryots (for it is mainly an agricultural country), had been polled, the decision would have been in favour of their continuing under the direct English administration; for it must be remembered, that ever since the year 1832, I think, when Lord William Bentinck sequestrated Mysore, it had been under English administration, and it prospered under it, and the benefits of it were highly appreciated by the ryots.

464. Are there any further illustrations that you wish to give of what may be called English influence on Indian financial affairs?—I come now to the last head of illustration, which is the mercantile and stock jobbing interest. I do not use the words "stock jobbing" in an invidious sense.

465. Stock dealing you mean?—Yes, the stock dealing interest. The first instance I will give is the most excusable of all, the Indo-European Telegraph Company. It was considered a great object to establish a direct telegraphic communication with India, and the plan then in vogue was to carry a telegraph down the Red Sea and the Indian Ocean, and it was settled to be done at the joint expense of England and India, but from the first it was a failure; so that from the first, without having had any use of it at all, or having either suggested it or had anything to do with the arrangements for making it, India was let in for a perpetual charge of, I think, 25,000 *l.* a year. Now I repeat that in saying this I am not blaming anybody; I am only illustrating the great change which has taken place. Under the East India Company such a thing could not have been.

466. Did the English Government suffer an equal loss?—Yes.

467. Then it was a joint operation between the English Government and the Indian Government?—Yes.

468. Do you know whether the loss originated from the nature of the transaction itself, or from the faulty way in which the contract giving effect to the transaction was carried out?—Well, I should say from the faulty way in which the contract was carried out. It was managed by England for India. We know from a large experience that deep-sea lines can be very well laid down; however, that failed.

469. Are we to ascribe the failure to what may be called English influence, or to the fact that the officers employed on the joint account of the British Government and the Indian Government rather mismanaged the business?—The affair was mismanaged undoubtedly. It was rather early in our experience of deep-sea telegraphs; we were then buying our experience. I do not blame the officers. Friends of mine were on the direction who I know did their best; I am only mentioning it as an illustration of the great financial change which has taken place.

470. You probably have heard that the mode in which that contract was carried out has been very much questioned?—Yes, I have heard that.

471. And it has some how or other resulted in the fact that the contractors received all their money and gave a perfectly useless telegraph cable in return?—That is perfectly true. It was mismanaged, no doubt.

472. But supposing that that mismanagement had not taken place, have we reason to suppose that the arrangement was not one as desirable and beneficial as anything else for maintaining communication between the two countries?—At the time I considered the arrangement a beneficial one; I am only contrasting the new state of things with the old. If this matter had come up in the time of the East India Company, I will answer for it that the Melvilles would have looked sharp after it, and have got value for their money.

473. You mean that the Melvilles would have been much better representatives than the offic who did represent the two Governments the direction?—Yes; I attribute grea portance to the absence of any distinct rep tation of Indian interests in matters of this which was supplied by the East India C pany.

474. But in this case, if I recollect right, contract was made with a company, and cer representatives were put on the board of t company to see that the contract was prope carried out; and those representatives rep sented both England and India on the board; and then the board very much mismanaged the business?—Yes.

475. Mr. *J. B. Smith.*] Would you say that the East India Company were better practical men of business than the persons who have had the management of Indian affairs since?—Well, I think it is more a question of motive and view than of actual practical experience. In these matters that I have been referring to connected with the Public Departments, the War Department and the Naval Department, nobody can say that the officers of the War Office and the Admiralty are not able men of business. What I object to has arisen from Indian interests being placed at their disposal to be dealt with pretty much as they please.

476. But was not this matter a matter of business. You said that the Melvilles would not have allowed such a state of things to have existed?—I am perfectly convinced that if the East India Company had survived a few years longer, and the same question of establishing a telegraph between

between England and India had arisen, it would have been done with a much closer and more effectual protection of Indian interests.

477. *Chairman.*] Did not the two Governments proceed exactly on the footing that had been laid down by the Court of Directors for their transactions with the railway companies, namely, to make a contract with the railway company, and appoint nominees to sit at the board and see that the contract was properly carried out; was not that the principle which the Court of Directors laid down for managing the business?—That is true, certainly.

478. Only in their case they had Sir James Melville to be their representative?—Yes.

479. And probably you would think Sir James Melville was rather a remarkable exception, as regards his capacity, to other people?—Sir James Melville was a true representative of the thrift and close attention to business of the East India Company.

480. Will you proceed to mention any other illustration that occurs to you?—The next illustration I will give is Port Canning and the South Eastern Railway, which was established to connect it with Calcutta. Now, Port Canning was established on the speculation that a second port, including all the appurtenances of a port, docks, warehouses, brokers, bankers, wholesale merchants, and everything else could be successfully established within 40 miles of Calcutta, and that the two could go on together. Now the whole history of mercantile affairs shows that that is [illegible]ly impossible. We know that Liverpool, to [illegible]miliar example, is absorbing, not only the [illegible]port and import trade of the west coast [illegible]d, but also the whole general and foreign [illegible]land, and that it is starving Bristol and [illegible]; and, in fact, there is such virtue in [illegible]ration of mercantile machinery under [illegible]eads that I have mentioned, that it was [illegible]mpossible that a second port of that sort [illegible]have been established. But a company [illegible]ormed, and powerful monied interests were [illegible] upon that foundation; and they prevailed, [illegible]only to obtain large subsidies for the establ[illegible]ment of the place itself, but also for the con[illegible]ction of a railway between Calcutta and Port [illegible]nning; the only justification for which was, [illegible]t it was to be subsidiary to this new port. [illegible]hen I was last at Calcutta the matter was in a very advanced state. The stage at which it had arrived was, that the representatives of this company were pressing upon the local government that unless they assisted them with subsidies, all the money that had been spent upon Port Canning, and all that had been spent upon the railway, would be thrown away; and I contended as well as I could that it was only throwing good money after bad, and that the whole thing was moonshine. But, nevertheless, it was done; and it went on to the end till the thing became so absurd that they were forced to throw it up. I observed that, in a collection of Papers laid before Parliament on this subject, certain minutes of mine to the general effect of what I have now been saying were not included.

481. But do you know whether this project originated chiefly in Calcutta and was brought forward under Indian influence, or whether it was a project that originated in England and was brought forward under English influence?—Although it may have been brought forward originally in Calcutta, yet it was through English mercantile and monied influence; it was not a project of the Indian Government.

482. Mr. *Hermon.*] Was not one of the pleas made by the mercantile community in Calcutta the dangers of the navigation of the Hooghly?—Certainly; we had long been familiar with the good and bad qualities of the Hooghly, and that was one of the reasons given for establishing a second port on the Mutlah.

483. *Chairman.*] Do you know whether this project was much admired by Lord Canning, or was the name of Lord Canning given to it in consequence of his opposition to this project, or of his great admiration for it?—I took no part in the early proceedings. I was not at Calcutta at the time; but judging from all I have heard and all I have seen of the papers (because I went into them pretty fully), it was entirely an English mercantile and monied enterprise, originating, no doubt, at Calcutta, because Calcutta mercantile and monied interest is really London and English mercantile and monied interest; the former act as agents of their principals in this country.

484. Was there not a Port Canning Company apart from the Guaranteed Railway, which was entirely an Oriental Company, and was established in Calcutta and Bombay?—There was a Port Canning Company, and when the great cotton development took place at Bombay, the Port Canning Company was very largely reinforced from Bombay, and an additional pressure was brought to bear upon the Government of India.

485. Was not the seat of that company in India?—The seat of that company was in India, no doubt, but still it was in its springs and character an English mercantile and monied affair; it was not a Native Indian affair; it was not an Anglo-Indian official affair; the Anglo-Indian officials looked coldly upon it; it was forced upon the Government of India by the pressure of the English mercantile and monied interest, including the home pressure, because the railway was all got up at home.

486. Do you happen to know whether the railway was very much advocated by the Government of India in Lord Canning's time, in the first instance?—I believe not; I believe he was opposed to it; I believe that Lord Canning all through was really opposed to the plan, but he had to swim with the tide; that is my impression; I am sure it was the case with the majority, in fact, I may say the whole of the Indian officials. The records of the Government of India are full of remonstrances against it, some of them I believe nearly as strong as mine; Mr. Laing strongly protested against it, but it was pressed and forced upon the Government of India by the Port Canning and railway companies and their supporters; a local municipality (for they had what they called a municipality), was vested with borrowing powers, as I know to my cost as Finance Minister; and then this company was enlarged by a large reinforcement from Bombay at the time of the cotton mania; they took an extraordinary number of shares. Bombay held out the hand to Calcutta; and then there was the railway at home; and the whole together, including the shareholders in the railway, were too strong for the Government of India.

487. Has the whole affair collapsed?—It has turned out a disgraceful failure.

Sir *C. E. Trevelyan*, K.C.B.

21 February 1873.
